The next great revolution that occurred in our science was, of course, that brought about by Lister. In attempting to estimate the position of the exponents of medicine seventy-five years ago, when they became aware that they were living in the middle years of a progressive science, we must remember, it seems to me, certain things which counterbalance each other. On the one hand, we have the rise in general learning that had taken place, especially in physiology, associated with names, from Hunter onwards, that need not be recapitulated, and this made the acceptance of the new learning easier. But, on the other hand, the challenge was more direct, and here the position of the acknowledged leaders of medicine, when their fundamentals had altered, was rendered much harder, because of the medium of profuse literature and the rapid intercourse which had taken place between populations, national and international. These had changed all the circumstances of the world. In Harvey's time slow infiltration of new knowledge was the only method for its spread, but in the middle of the nineteenth century gospels could be propagated with remarkable speed, and the medical mind had to be made up quickly. This was very difficult for those who might have been compared with Lister in professional standing—his coevals—or those who were a little senior to himself, some of whom had been his teachers. While they had pursued their profession in accordance with traditional doctrine, he had been working intensively and for many years with his theory before him. They did not know, or at any rate had not followed in any detail, that work; while he, when he delivered his great message, had not perfected his technique, and had not envisaged wholly what his discoveries might imply. Few people, indeed, among his seniors or contemporaries had the training to enable them to put the new doctrines to proof, even when they understood what was their aim; while Lister and his personal lieutenants were instructing the modern medical world, there was no one to instruct those whose education had ceased when the discoveries in Glasgow and Edinburgh became widely known.

The attitude taken up by the medical profession, save for a very short space of time and with very little dissent from those whose opinion really counted, was commendable. The senior men, educated along traditional lines, laboured under the drawbacks of unfamiliar procedure, and even when unable to become scientific exponents of the practice they realized its ideals and were insistent upon it in theory and word. Speaking of surgeons alone, with their great heritage behind them and their responsible work to do at the leading hospitals of the world, the extended scope of treatment was welcomed; depreciation was found only in a few quarters. Certain practical criticisms were met by alteration in the original tenets, and the only sign among any of the seniors of a sense that they were being supplanted was manifested by their tendency to point to their own good results before the introduction of antiseptics.

We should recall these facts for two reasons, one of which is more important than the other. The unimportant reason is that to some extent the medical profession is damaged even now by the persistent and ignorant assertion made by all critics of our profession—and heaven knows we have enough—that Lister was impeded systematically and relentlessly by the medical profession in his work; in short, that antiseptic and aseptic surgery arrived in spite of, and not because of, the medical profession. It is usual for our critics at this point to make great play with the fact that Pasteur was not a doctor. He was not; he was an extraordinarily able chemist, and his researches came as a

revelation to Lister in some cases because they indicated the support of discoveries made by himself quite independently of Pasteur. Pasteur both inspired and confirmed Lister; we have here a perfect illustration of the convergence of science, and no question of priorities arises. Such opposition as there was in the medical profession against the teaching of Lister was limited and, considering the sweeping nature of the changes which adherence to his doctrines postulated, lasted for an extraordinarily short time.

But depreciation of the medical profession is unimportant, because it is so volatile. The second reason why it is well to remember the open-mindedness with which the medical profession received the teaching of Lister is a very solid one. We may all find ourselves in the position of those who, in the sixties, threw in their lot with what they could not thoroughly understand, because they could appreciate the honesty of the work and the splendour of the prospect opened out.

The main difference, then, between the reception of the new teaching of Harvey and the new teaching of Lister was determined by the circumstances of the world's general progress. In the days of Harvey intercommunication was slow; in the days of Lister it had already become quick and easy. The consequence was that a more highly educated class of medical men, familiar with the results of a vastly improved chemistry and a greatly extended biology, was rapidly made acquainted with Lister's claims and called upon to take a side with regard to them before any slow permeation of their meaning was possible. Thus, there were places of individual opposition, not necessarily all occurring exactly at the same moment or with regard to exactly the same points; and in this way intelligent doubt, which was legitimate at the time, came to be regarded as obscurantism when it persisted.

#### THE RECEPTION OF PROFESSIONAL CHANGES.

It is in the obituary notices of Lister's immediate seniors and of some of his contemporaries, as they from time to time occurred, that the frequent appearance may be noticed of the epithet "old-fashioned"; but I cannot recall that it had to be said of any of them, save on one or two occasions, that they were more than old-fashioned. They did not continue to remain opponents of the germ theory of disease, and so become obsolete: They obtained the epithet not because they had resisted the new learning, and thus become obsolete, but because the lines of their practices continued to run in accordance with the more leisurely methods of their early training. They continued to place before themselves as the pattern for the conduct of practice the family doctor, from whom they had received their earliest professional upbringing as apprentices. It was not so much the new developments of therapeutics or the vistas of operative surgery or preventive medicine with which they found themselves in ill accord, as the dislocations of daily habit brought about by social progress. A confusion was produced in this way, for men who were looking back at the past in matters of daily habit were held to be unable to look forward in matters of learning. Those who argued in such a way would have been wrong at this date, though usually right. Revolutions in thought commonly bring revolutions of conduct in their train, but it happened that, for the medical profession in the nineteenth century, the professional changes preceded, as well as accompanied, the scientific ones. Before Lister's doctrines had been published numerous practitioners had found themselves unable to appreciate the public benefits which had followed upon the passage of the Medical Act. The virtues of legislation here were so patent that real opposition ceased almost as soon as it had begun, but for many years the falling into desuetude of the apprenticeship system, the prolongation of the medical curriculum and, later, the abolition of unqualified assistants, and finally the Act for the registration of midwives, produced qualms among many. All these things seemed to them to detract from the status of the general practitioner as they had estimated it, honestly believing that the substitution in a measure of hospital teaching and of multiplied examinations for the training given to

pupils or apprentices by individual practitioners was not adding to the wisdom of the profession or turning out a higher class of public servant. There was much that must command our sympathy in these views, for many excellent practitioners were bred on the old pattern, just as we must sympathize with those who see to-day in the encouragement by the State of public medical activities a regrettable limitation to the influence exercised by the practitioner, despite official manifestations to the contrary. The broad purposes for the future escape attention, although they are directed to making medicine a co-operative career, with the public taking its share of responsibility as well as of benefit. Those who advocate a State medical service as a remedy for certain undeniable hardships do not trust the course that progress is taking. A rapidly changing milieu compels us always to accommodate ourselves not only to a new scientific outlook, but also to new professional habits—to face changes in the conduct of practice: “one dam thing after another.” Now, in the latter half of the nineteenth century many doctors found their professional life as much the subject of change as their scientific equipment. Their own knowledge and sincerity, and the passage of time, dealt swiftly with the scientific dilemma, so that opposition to Lister quickly became negligible; but changes in professional life were harder to meet. When the *Medical Register* was established and the General Medical Council came into being all the medical men in the United Kingdom who had earned their position as doctors by acquiring a degree or a diploma from a university or a corporation were entered upon a roll call, on which, in the eyes of the law, there was no difference between themselves and a large body of practitioners who had not undergone the ordeal of professional examination. This they resented, though the hitherto unqualified men had conducted their practices according to traditions received from the masters to whom they had been apprenticed; they had walked hospitals, and as in their day there was no great competition for a qualifying hall-mark, its non-possession, though a bar to any exalted position, was no bar whatever to the earning of a reasonable income. This many of them were obtaining when their professional recognition came under the Act, mainly in the position of unqualified assistants. And if many practitioners disliked parts of the great Medical Act, in hospital circles it also had its critics. Here measures directed to the suppression of competitive quackery had been desired rather than a higher standardization of general medicine. The educational reform entailed by the Medical Act was viewed with mixed feelings by many members of hospital staffs. Although a period of active reform had set in here, and appointments were no longer given in a barefaced manner to young relatives or to fee-paying apprentices, many ornaments of the metropolitan medical schools, at any rate, must have considered little short of shocking their inability to mould the educational activities of the institutions with which they were connected in accordance with their own ideas of what was right. In fact, much of the public value of the Medical Act escaped the attention of the whole profession in those days, and it seems that it still escapes the comprehension of many who write to-day about the disciplinary functions of the General Medical Council. Those who considered that things had been running smoothly, and noticed that many additions had been made to the profession's general wisdom and technical skill, did not allow that the point was reached at which standardization was necessary. But with the passage of the Act many abuses which had previously run side by side with the general progress became patent; the need for confining practice to those who had received, and could prove that they had received, adequate professional training was recognized, and the grievance against the admission of unqualified persons to the first *Register* quickly died down. To-day, the person who makes it a hardship that he or she cannot practise before gaining a legal status because of the mere drawback of having had no professional education is thought silly—except in those silly circles where it is still believed that the healer who works by the light of nature possesses some knowledge that is unrevealed to those who simply attend hospitals and pass examinations.

Those who continue to point out that because the apprenticeship system had its virtues we should return to it are a little in similar case. There is no doubt that the system worked well before medical education was standardized, and there is equally no doubt that, from the day when the General Medical Council came into existence, with the responsibility of admitting to the *Register* only those who could prove the regularity of their training, the system was doomed. The Council took over the inspection of the examinations which gave access to the roll which it was its function to keep at its proper standard. This it was perfectly able to do when dealing with universities and corporations, anxious to co-operate in raising medical education to a high general level and in preventing any downgraded competition between their various selves, but it would be entirely impossible for a similar scrutiny to be instituted of the teaching which apprentices derived from masters of varying capacities and ideas.

So the men of the sixties were faced with vast alterations in fundamentals, both in science and practice; they met the situation bravely, and progress in both directions proceeded, wherever possible, with their active support. The occurrence of grievances and sometimes of real hardships must be common to these revolutions. Many were offended at the inclusion of non-qualified practitioners upon the first *Register*; many were seriously embarrassed by loss of apprentices and later by the inability to employ unqualified assistants; and, later still, many felt that the registration of midwives was an encroachment upon professional territory. It is fair, also, to remember that those who had been practising medicine without qualification, and who proved unable to obtain the necessary testimonials, found exclusion from the first professional roll a severe blow. The necessity which all men feel to-day for the co-operation of the public in the progress of medicine—and this is a prime object with the Ministry of Health—is presenting us now with problems of a similar sort; and will present us with more. These are things which, every whit as much as startling advances in science, recall us to the fact that we are living in Middle Years.

I will bring to your attention one man, because his scientific and professional attitude was typical of that assumed by the best practitioners of the day throughout the country, while he would inevitably have been called old-fashioned by those who judge from exteriors, or who write careless obituary notices. When I first joined the staff of the *Lancet*, now over thirty years ago, what might be called the ethical side of medical practice was watched over for us by Dr. James Grey Glover. Glover, of small stature, with large mobile features framed in side whiskers, wore always the customary black suiting of the professional classes in the sixties and seventies, and drove to the office in a typical doctor's phaeton on certain appointed days. He was courteous in manner, precise in speech—no word of slang ever soiled his lips. His leading articles—he wrote one every week for more than a quarter of a century—were solemn, for he took his responsibilities seriously, but his judgements were charitable even though his tolerance did not extend to certain classes of offenders. On Saturdays he played bowls on a beautifully kept lawn in the suburbs. It would have been impossible for the casual observer to guess that this exterior went with great clinical knowledge carefully kept up to date, with an unerring appreciation for the professional difficulties of colleagues, and with an intimate perception of the circumstances which brought these difficulties about. Glover sat upon the General Medical Council as one of the direct representatives of the profession from the year 1886, when they were first appointed, until his retirement fifteen years later, and during the whole of that time he showed himself able to appraise correctly the changes that were taking place. In welcoming the measure for the registration of midwives he was held by many of his constituency to have misrepresented their views, but Glover was firm in believing that the interests of the medical profession were only vested when it was clear that to disturb them would also be opposed to the public weal, and he pointed out that the midwifery service of the country was a scandal, to remove which many sacrifices would be properly endured. Those of us who had to read the *Andria* for matriculation,

or who happened to see the Westminster play this year, well know that nearly two thousand years ago the midwife's habits were held to be a source of grave danger to Roman women, so that legislation to deal with grosser abuses at the close of Queen Victoria's reign cannot be called hasty. Glover found that it had been unduly delayed. He was a perfect example of the way in which the medical men of his day met a difficult situation, where, in the cause of the public good, they had to press forward in trying circumstances and overcoming logical reluctance. In attitude and manner he was of the older school, but from the beginning he was an ardent convert to scientific progress, and gradually he became a champion of professional reform. We may want such men in the coming time.

#### THE RECEPTION OF FUTURE REVELINGS.

May I pull together the threads of a rambling discourse? I have attempted to point out that medicine has gone always forward, but that this continuity has been marked by fits and starts, which especially bring home to us that we are ever in the middle years of progress. These may react painfully upon us, through troubles both in scientific work and professional routine. The practitioner has responded finely, realizing that he was receiving proofs, if painful proofs, of progress; and where it has proved impossible for him fully to appreciate the significance of the changes, there has been no long resentment of them; on the whole they have been welcomed enthusiastically, and many who remained old-fashioned on the surface were among the heartiest converts to new doctrines. We have had fine examples, and it may behoove us to imitate them in circumstances that will bring us similar troubles.

It is an error to hold that any period in the world's course has been unprogressive, although sometimes the progress has been unnoticed because unpermeated by any striking happenings. As far as physics, physiology, and their medical accompaniments are concerned, a real period of stagnation occurred in the Dark Ages: what is usually termed the Middle Ages being the time when the world woke up, not only to a sense of the past, but a vision of the future. Even in the Dark Ages, however, the cause of medicine was bettered indirectly by the progress that had been always going on in society generally, for inquiring and philosophic minds were encouraged thereby. We receive here a proof, if one were wanted, that the science and art of medicine draw sustenance from all knowledge, general or special. Progress is noted whenever the evolution proceeds by a short cut or mutation, and then those bred of the older doctrines may find it hard to adjust their views. But often their scientific adaptation is more rapid than their acceptance of new professional methods, and we must be careful to discriminate between the old-fashioned man and the one who is positively unresponsive of scientific revision.

Those are the things I have attempted to bring out, and particularly for this reason: Many wise and thoughtful persons believe, from work with which they are personally concerned, that we are on the edge of big things, and it may be difficult to estimate their significance solely by knowledge that we ourselves may have acquired. We shall have to recognize more fully the signification of the growing connexion between chemistry—that is, biochemistry—biology, and psychology as they may be reflected in therapeutics. Much which we consider to be medicine proper may take its place in a large synthesis, when we must be willing to make use in a fuller way of the additions to knowledge made by workers along other special lines than our own. Such work we must regard as reinforcements, not encroachments. Lister had a better field than Harvey, because the medical constituency was better educated. We should do better even than Lister's contemporaries.

That the middle years in which we live, and in which the progress has been steady, and indeed wonderful, may shortly be marked by another such move forward as the seventeenth and nineteenth centuries saw is the strong conviction shared by many scientific men. The sort of convergence between physics, biology, and psychology to which allusion is being made must influence both thought and social custom, if it occurs; for its significance is nothing less than a belief that we are clearing up mysteries on the

way to the solution of basic problems of life. Investigations into inanimate matter have hitherto constituted practically all our researches, but it would seem that when we look into the nature of the processes which underlie radiation and chemical combination we may be enlarging the scope of our inquiries indefinitely. Whatever the inquiries may lead to in which physicists are at present engaged when studying the emission of light by the atom the results may have a message to biologists, and thus to those whose researches are directed towards the central nervous system; while psychologists are attempting to analyse the structure of mind by procuring evidence obtained from the messages of light to the brain. May I refer you to *Archimedes*, the latest volume of the admirable To-day and To-morrow series, wherein Mr. L. L. Whyte sets out the daring aspirations of modern physics. This small volume indicates that the fundamentals of physics and psychology are being disturbed in the same way as the fundamentals of medicine and surgery were disturbed by the work of Harvey and Lister. We may have a harder task than either the contemporaries of Harvey or of Lister, because of the little time that may be left for hesitation and the wide range of knowledge that will be presented for assimilation. To Harvey's contemporaries the news filtered through slowly, and they adjusted themselves slowly. To Lister's contemporaries it was presented more rapidly and in greater volume, but they were prepared to receive it by the levelling up of their scientific equipment in their own subjects. But if the new jump comes, as some predict, the information will reach us through channels where medical learning, as we now define it, will not suffice for its appraisement. Old-fashioned then we may become, but let us not be found resisting the truths as they emerge, and as we become painfully aware that we are in middle years.

### Association Notices.

#### PROPOSED BUXTON DIVISION.

NOTICE is hereby given to all concerned of the following proposal made by the Council of the Midland Branch:

That there be formed a Buxton Division of the Midland Branch, of area as follows: The municipal borough of Buxton; the urban districts of New Mills and Bakewell; and the rural districts of Chapel-en-le-Frith, Bakewell, and Hayfield; and that the area of the Derby Division be modified accordingly.

Written notice of the proposal has been given to the Derby Division, and the matter will be determined in due course by the Council of the Association. Any member affected by the proposed change, and objecting thereto, is requested to write, giving reasons therefor, to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than February 21st, 1928.

#### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BATH AND BRISTOL BRANCH.**—A meeting of the Bath and Bristol Branch will be held at the University of Bristol on January 25th at 8 p.m. A debate on hospital policy will be opened by Professor E. W. Hey Groves, and the opposition will be led by Dr. B. G. A. Baskett. The motion is: "That the needs of the community require a better hospital service than that provided by the voluntary system." The chair will be taken by Professor Francis Francis, Pro-Vice-Chancellor of the University of Bristol.

**BIRMINGHAM BRANCH: COVENTRY DIVISION.**—A meeting of the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, February 7th. Dr. Brailsford (Birmingham) will read a paper on cholecystography.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—A meeting of the Nuneaton and Tamworth Division will be held at the Nuneaton General Hospital on Wednesday, February 8th. Mr. G. A. Raison will read a paper on surgical conditions of the biliary tract.

**BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.**—The next meeting of the Dumfries and Galloway Division will be held in the Royal Infirmary, Dumfries, on Friday, January 27th, at 4 p.m., when finance, hospital accommodation, ethical questions, medical charities, and other important matters will be considered. The Executive Committee will meet at 3 p.m. Professor Bramwell has fixed February 21st as the date of his lecture, the subject of which will be announced later.

**BORDER COUNTIES BRANCH: ENGLISH DIVISION.**—A meeting of the English Division will be held at Maryport on Friday, January 27th. Dr. J. N. Douglas Smith will read a paper on the early treatment of puerperal sepsis.

**ESSEX BRANCH: NORTH-EAST ESSEX DIVISION.**—A clinical meeting of the North-East Essex Division will be held in the out-patients' hall in the Essex County Hospital, Colchester, on Thursday, January 26th, at 8.15 p.m. Professor W. E. Dixon will give an address on the known effects of alcohol in the human body.

**FIFE BRANCH.**—A clinical meeting of the Fife Branch will be held in the Maternity Home, Town-end Crescent, Kirkcaldy, on Thursday, January 26th, at 3.30 p.m. Sir David Wallace will give an address on orthopaedic treatment and organization in the East of Scotland.

**KENT BRANCH: DARTFORD DIVISION.**—A meeting of the Dartford Division will be held at the King Edward Hospital, West Hill, Dartford, on Wednesday, January 25th, at 3 p.m. Dr. Lindsay W. Batten will give a British Medical Association Lecture on the medical aspects of child welfare clinic work.

**LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.**—A clinical meeting has been arranged by the Hyde Division for Thursday, January 26th, at 8.30 p.m., in the Hyde Child Welfare Centre, when cases will be shown by members of the Division. It is hoped that every member will endeavour to show at least one case and, if possible, more; they need not necessarily be rare cases, a well marked type is often of greater clinical interest. To facilitate the arrangements members are requested to notify the secretary not later than Saturday, January 21st.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, February 7th, at 9.30 p.m. Dr. H. C. Semon will discuss diagnostic pitfalls in dermatology.

**METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, February 7th, at 8.45 p.m. Dr. F. M. R. Walshe will give a lecture on finth healing.

**METROPOLITAN COUNTIES BRANCH: HAMSTEAD DIVISION.**—A meeting of the Hampstead Division will be held at the Hampstead General Hospital on Thursday, February 9th, at 8.30 p.m. Dr. S. Monekton Copeman, F.R.S., will discuss inoperable cancer.

**METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.**—A meeting of the Lambeth and Southwark Division will be held at the Lambeth Carlton Club, Coldharbour Lane, S.W.9, on Wednesday, January 25th, when Dr. A. G. G. Thompson, the newly appointed medical officer of health for Lambeth, will read a paper on the Schlick test.

**METROPOLITAN COUNTIES BRANCH: NORTH MIDDLESEX DIVISION.**—At the meeting of the North Middlesex Division to be held on Wednesday, January 25th, Mr. T. H. C. Benians will read a paper on local immunization and antiviral therapy.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAZ DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, February 14th, at 9 p.m. Dr. Alfred Cox, O.B.E., Medical Secretary to the British Medical Association, will give an address on "The medical man in public life: his duties and responsibilities."

**METROPOLITAN COUNTIES BRANCH: WANDSWORTH DIVISION.**—A meeting of the Wandsworth Division will be held at Stanley's Restaurant, Lavender Hill, on Thursday, January 26th, at 8.45 p.m., when Dr. Brineker, senior medical officer in charge of the infectious diseases department of the London County Council, will lecture on diphtheria and diphtheria immunization.

**NORTH OF ENGLAND BRANCH: BISHOP AUCLAND DIVISION.**—A meeting of the Bishop Auckland Division will be held at the Cottage Hospital, Bishop Auckland, on Friday, January 27th, at 8 p.m. Dr. J. C. Spence will give a lecture on medical emergencies in children.

**NORTH OF ENGLAND BRANCH: STOCKTON DIVISION.**—At the meeting of the Stockton Division to be held on Friday, January 27th, Dr. W. H. Dickinson (Newcastle-on-Tyne) will read a paper on the diagnosis of pulmonary tuberculosis.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—The annual dance arranged by the Sunderland Division in aid of B.M.A. Charities will take place on Thursday, February 2nd.

**OXFORD AND READING BRANCH: OXFORD DIVISION.**—A meeting of the Oxford Division will be held in the Radcliffe Infirmary on Wednesday, January 25th, at 2.30 p.m. Dr. T. Izod Bennett will lecture on recent advances in pernicious anaemia.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—A meeting of the Portsmouth Division will be held on Thursday, February 9th. A British Medical Association Lecture will be delivered by Professor Hugh Maclean on renal disease and high blood pressure.

**SURREY BRANCH: CROYDON DIVISION.**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, January 25th. Dr. H. W. Southgate will give a lecture demonstration on modern laboratory methods as an aid to clinical medicine. Preceded by tea at 4 p.m.

**SURREY BRANCH: GUILDFORD DIVISION.**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, February 2nd, at 4 o'clock. Sir D'Arcy Power will give an address on the history of medicine. Tea at 3.45 p.m.

**WEST SOMERSET BRANCH.**—A clinical meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital on Tuesday, January 24th, at 3.30 p.m. A paper open to discussion will be read by Dr. W. H. Maidlow (Ilminster) entitled "A to Z. Subjects of interest to the general practitioner." Tea will be served at 4.30 p.m.

**YORKSHIRE BRANCH: DEWSBURY DIVISION.**—A meeting of the Dewsbury Division will be held at the Dewsbury Infirmary on Friday, February 3rd, at 8.15 p.m. Dr. G. Cooper (Leeds) will read a paper on radiotherapy.

**YORKSHIRE BRANCH: LEEDS DIVISION.**—A meeting of the Leeds Division will be held in the General Infirmary, Leeds, on Friday, February 17th, at 8 p.m. Dr. John Parkinson will give a British Medical Association Lecture on common difficulties in cardiac diagnosis. Lantern slides will be shown, and there will be a discussion after the lecture.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Great Bull Restaurant, Westgate, Wakefield, on Thursday, February 9th. Mr. A. Gough, surgeon to the Women's and Children's Hospital, Leeds, will lecture on menstrual diseases and the menopause. Snapper (2s. 6d.) at 7.45 p.m. will precede the lecture.

## Meetings of Branches and Divisions.

### CAMBRIDGE AND HUNTINGDON BRANCH: CAMBRIDGE AND HUNTINGDON DIVISION.

#### Discussion on Facilities for Maternity Work.

The last general meeting of the Cambridge and Huntingdon Division was held at Addenbrooke's Hospital, Cambridge, on December 23rd, 1927, when Dr. ARTHUR WEBB presided. It was called primarily to discuss the provision of new facilities for the treatment of maternity cases in the town and county of Cambridge. Owing to the stormy weather there was only a small attendance.

After some discussion arising out of the minutes of the last meeting, Dr. STEVENSON opened the discussion on maternity treatment by moving:

That this Division favours a public maternity home, not in connexion with the hospital, for the treatment of maternity cases in the town of Cambridge.

Dr. YOUNG formally seconded the motion. Dr. STEVENSON urged the necessity of a move being made by the Division in a matter about which public feeling was very strong in Cambridge. He outlined a scheme which he thought would meet present requirements, although probably the county would have to make special arrangements.

Dr. ELLIS moved the following amendment:

That this Division favours an arrangement between the public health authorities concerned and Addenbrooke's Hospital for the provision of an ante-natal department and maternity home, to which may be admitted for confinement those cases in which abnormality is expected or is known to exist, plus cases from homes which are considered insanitary or otherwise unsuitable.

He favoured one single scheme for town and county (although the two resolutions were not necessarily antagonistic), and went on to describe past and present conditions, and the futile efforts which, at different times, had been made to improve them.

Dr. ARTHUR WEBB formally seconded.

Dr. CANNY (honorary surgeon in charge of the gynaecological and obstetrical department at the hospital) gave his views, and urged that nothing should be done in a hurry. He admitted the past and present unsatisfactory arrangements for treatment of pathological cases at hospital, but prophesied a big improvement within the next few months. The basis of any scheme was the ante-natal clinic, and his ideal would be a home, run in connexion with the hospital (not of necessity within its precincts) with about twenty beds, a pre-natal department, and an "out"-district, so that students and midwives could be trained. The expenses should be divided among the authorities concerned according to treatment received (or beds occupied).

Dr. ROBINSON described the Oxford scheme, which seemed to work well. It was an essential part of the Radcliffe Infirmary. He advised making use of existing institutions before beginning to build. Both he and Dr. LAIRD had no desire to see the work taken out of the "family doctor's" hands, and they urged that any scheme should be limited to "the treatment of necessitous, abnormal, or filthy cases," roughly.

Most of those present took part in the discussion. It was pointed out that the Ministry of Health would favour, and help to support, a scheme run in connexion with the hospital.

The general feeling was in favour of Dr. ELLIS's resolution, but as the attendance was so poor, and as the question was important and merited more interest being taken in it, on the motion of the CHAIRMAN the discussion was adjourned until January 17th.

### NYASALAND BRANCH.

A well attended meeting of the Nyasaland Branch was held at the Masonic Hall, Zomba, on November 5th, 1927. Interesting papers were read by Dr. W. MILNE TOUGH on some suggestions for the improvement of the African in Nyasaland, from the medico-economic point of view; by Dr. W. McFARLANE on the treatment of malaria by intravenous injections of quinine; and by Dr. H. M. SHELLEY on recent theories on the biochemical pathology of nephritis. It is hoped to hold regular meetings of the Branch every three months.

### SOUTHERN BRANCH: PORTSMOUTH DIVISION.

The annual dance arranged by the Portsmouth Division in aid of medical charities took place at the Savoy-Café, Southsea, on January 10th, when there was an attendance of about 450. The function was in every way a striking success, and the Association's Charities Fund will benefit in consequence.

## BIRTHS AND DEATHS REGISTRATION ACT, 1926.

### PROCEDURE FOR DELIVERY OF DEATH CERTIFICATES.

As a result of the Births and Deaths Registration Act, 1926, inquiries have been made by members of the British Medical Association as to what risk, if any, they ran if they handed death certificates to informants instead of observing the usual method laid down in the Act—namely, of sending the certificate by post in a sealed envelope to the registrar of births and deaths.

The Medico-Political Committee of the Association decided to ask the Registrar-General to furnish a statement on the subject for publication in the *BRITISH MEDICAL JOURNAL*, and he has complied with that request. The statement is as follows.

### STATEMENT BY THE REGISTRAR-GENERAL.

The Births and Deaths Registration Act, 1926, requires that a certificate of cause of death given by a certifying medical practitioner shall be "delivered forthwith" by him to the registrar. The Act does not, however, prescribe the means or method of delivery, or limit a practitioner as to the course which he may adopt for discharging his obligation to deliver. He is presumably entitled, therefore, to employ any means available to him of delivering the certificate—for example, by handing the certificate in person to the registrar, by employing a messenger, or by posting it.

It has, however, been generally taken for granted that the method of postal delivery is that which practitioners would normally adopt; and for this reason representations were made during the passage of the bill on behalf of the medical profession that free postage should be conceded in respect of the postal transmission of such certificates. This concession was accordingly made, and arrangements are in force for the supply to practitioners of postage-free envelopes. But, as already indicated, practitioners are not restricted by law to delivery through the post; and it is thus open to them to adopt other means, provided that such means do in fact discharge the practitioner's duty of delivering the certificate forthwith to the registrar.

Cases have, however, occurred in which it has appeared that the normal method of postal delivery might involve some hardship to the relatives of the deceased, and that such hardship could be obviated if the relative, on visiting the practitioner immediately after the death, could receive the certificate and convey it at once to the registrar. In such cases the Registrar-General has expressed the opinion that there is nothing to prevent a certifying medical practitioner, if he thinks fit to do so, from making use of the relative as his messenger for the delivery of the certificate. Emphasis has, however, been placed upon the fact that the responsibility for "delivery forthwith" will still remain with the practitioner, for the following reasons:

Where this course is adopted the procedure will bear a strong superficial resemblance to the procedure in force prior to the 1926 Act. Under the pre-existing registration law the duty of a certifying medical practitioner was strictly limited to a duty to hand the certificate to the relative or other person qualified to be informant of the death. A separate duty was placed upon the person receiving such certificate to deliver it in his turn to the registrar. It has thus appeared possible that if a practitioner adopts a means of delivery so closely resembling the old procedure an erroneous impression might arise that his legal duties in the matter were identical with those under the old law. This is not, however, the case. Under the old law the practitioner's responsibilities were at an end upon his handing the certificate to the relative. Under the present law, however, if in the circumstances described above the practitioner hands the certificate to the relative, he merely entrusts it to him as to his agent, and himself remains responsible for the delivery "forthwith" of the certificate to the registrar by his agent.

With regard to the consequences of any failure in the prompt delivery of the certificate, the Registrar-General is advised that where delivery is by post, Section 41 of the Births and Deaths Registration Act, 1874, would apply. The effect of that section is that the date on which the letter containing the certificate would be delivered in the ordinary

course of post to the registrar is to be deemed to be the date on which it is received; and a practitioner who proves that the letter was "pre-paid, properly addressed, and put into the post" at a date which satisfies the requirement as to "forthwith" is thus protected against any postal miscarriage of the certificate. No such protection attaches, however, to any other methods of delivery; and in this sense a practitioner adopting any other method does so at his own risk. If he commits a breach of his obligation to deliver forthwith, he is liable on summary conviction under Section 11 of the 1926 Act to a fine not exceeding forty shillings. But the question whether he took reasonable steps to ensure delivery forthwith would doubtless be one of which full account would be taken before any proceedings were instituted, and which the court, in the event of proceedings being taken, would consider in deciding what was the appropriate penalty.

The Registrar-General has expressed the hope that practitioners would adopt the method of delivery through the informant in particular cases where hardship would arise if delivery were made by the normal postal method. He has thought it necessary to draw attention to the legal aspects of the adoption of the alternative method, however, for two reasons. In the first place, it has seemed desirable that practitioners adopting that method should not be misled by the similarity between that procedure and the procedure prescribed by the pre-existing law. Secondly, it has appeared undesirable that, owing to any such misapprehension or for any other reason, the profession should be gradually led to adopt that method in normal circumstances in preference to the method of postal transmission. The system contemplated by the Act under which the certificate reaches the registrar from the practitioner without the intervention of the relatives is one which has long been advocated by the medical profession, and is supported by weighty advantages. Moreover, the present form of certificate, it will be remembered, contains some provisions which depend for their utility upon direct transmission. It would thus be regrettable, in the Registrar-General's opinion, if postal transmission as a normal practice in ordinary cases were substantially departed from in favour of delivery through the informant, however necessary and desirable that course may be to avoid inconvenience and hardship in occasional instances.

## Correspondence.

### Ophthalmic Benefit under the Insurance Act.

SIR,—It is high time that finality should be reached in this matter; and, above all, the scheme must be simple. This is essential for smooth working.

The half-guinea fee would no doubt be agreeable to the approved societies, and would immediately solve their problem. But would it satisfy the oculists? I think not. A large number of the best men object to anything less than one guinea; a larger number still would be satisfied with the half-guinea on one condition—that every case was referred to the oculists.

I do trust that no clinics will be established. They will cost money; they will have all the disadvantages of the out-patient department of the hospital—namely, loss of time and wages to the workers and "members," leading to noise and confusion, to haste and hurried work. I trust the choice will be in favour of "clinical evenings" at the oculists' own rooms, which are already in existence, and are comfortably and fully equipped. Six cases would be quite enough for an evening clinic, considering that both patient and doctor have already had a hard day's work, and are looking forward to rest and a meal. Thus the extra expense of a clinic would be saved, and this saving could be added to the fees.

The oculists are already placed fairly conveniently for the patients throughout the kingdom, and patients do not care to be dragged to clinics away from their homes; it adds to the cost and inconvenience. On these clinical evenings the fee would be the flat fee, but any patient desiring to make an appointment at other times should be allowed to, on condition that he personally makes up the flat fee to one guinea. Many would avail themselves of this advantage, as it would save their time and allow them the privilege of a fuller examination, if necessary.

As there must be cases (though few in number) which require a consultation with a second oculist, a separate panel of the highest authorities in ophthalmology should be made, and these oculists should be paid a higher fee, say £2 2s. They should all be on the honorary full staff of the great hospitals, and be recognized as the "highest tribunal." They could also belong to the ordinary panel, if they so decided.

Then I think the pure oculists should be on a separate panel from the general practitioner oculist. It must be obvious that men making a side-line of ophthalmology can hardly be equal to those who spend their whole lives on their speciality. Some will claim, doubtless, the reverse; but we must remember that every medical man (specialist or general practitioner) has had a full education in the whole range of medicine and surgery.

As regards the higher fee for the highest authorities; at present they are doing these consultations at the hospitals, without fee, and I think it is unfair on them and ungenerous of prosperous societies to accept this charity. At all events, the first consultation should be paid for. I may add I am not one of these authorities, in case anyone may think I am pleading my own cause; but I am ashamed of getting their help without any fee being paid them, for under no condition can these societies be described as "poverty stricken," and the highest members of the profession certainly deserve their reward.

To sum up, I advocate that:

(1) No clinics be established. They will fall into the hands of some corporate body, and probably end up by being absorbed into the hospital system, as the London County Council school clinics have been in many cases, to the loss of freedom of the medical officer.

(2) Clinical hours to be arranged at oculists' houses to suit the convenience of the local insured (probably evenings). On these evenings the flat fee to be charged.

(3) By special appointments (at the desire of the patient) at convenient times, the patient to bring up the flat fee to one guinea. No oculist to use any kind of pressure.

(4) A special class of consultants to be formed for extreme cases needing a second opinion, to be paid a higher fee, and these consultants to be drawn from the honorary staffs of the hospitals.

(5) Lastly, the advantage of having opticians present at the same time as the oculist is, I think, greatly exaggerated. There is little extra trouble in going afterwards to the nearest optician on the panel; he can be seen at all hours of the day. I do not think it would help the oculist much to have him always present.

—I am, etc.,

London, W.

ERNEST C. ARNOLD, F.R.C.S. Eng.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Captain J. R. Muir is placed on the retired list with the rank of Surgeon Rear Admiral.

Surgeon Captain W. W. Keir, C.M.G., to the *Tamar* for R.N. Hospital, Hong-Kong. (Amended appointment.)

Surgeon Commanders L. R. Warburton, O.B.E., to the *Victory* for R.N. Hospital, Haslar; A. G. Taylor to the *Cyclops*; J. R. A. Clerk-Hall to the *President* for Medical Department, temporary, supernumerary; G. D. Walsh to the *Columbian* for Port Edgar Base; A. G. Malcolm to the *President* for course at R.A.F. Medical Officers' School of Instruction. Surgeon Lieutenant Commander A. H. Harkins to the *Delhi*. Surgeon Lieutenants J. G. Holmes to the *Harbell*; F. W. Hesley to the *Broke*.

### ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon Sublieutenants T. F. Tierney to the *Calliope* for training; A. F. Davey to the *Ark Royal* for training.

### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel D. S. Skelton, D.S.O., from the seconded list, is restored to the establishment.

Captain J. H. Bayley, M.C., to be Major, May 1st, 1927, with precedence next below R. R. Thompson, M.C. (substituted for notification in the *London Gazette* of July 12th, 1927).

Lieutenant W. D. Speedy resigns his commission.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant (Honorary Squadron Leader) E. F. N. Currey relinquishes his temporary commission on completion of service.

Flight Lieutenant F. K. Wilson is transferred to the Reserve, Class D II. Flying Officers L. I. Hyder and J. Magner to be Flight Lieutenants. Flying Officer G. T. O'Brien to Home Aircraft Depot, Henlow.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel R. G. H. Tate ceases to belong to the Reserve of Officers on account of ill health.

Lieut.-Colonel H. B. G. Walton, having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers.

### INDIAN MEDICAL SERVICE.

The services of Captain T. R. Khanna are placed temporarily at the disposal of the Government of Madras for employment in the Jail Department. The services of Captain G. H. Fraser are placed at the disposal of the Government of the United Provinces.

Lieut.-Colonel J. C. H. Leicester, C.I.E., V.I.S., has retired from the service.

### TERRITORIAL ARMY.

#### ROYAL AIR FORCE MEDICAL CORPS.

Major J. Wallace, O.B.E., T.D., from T.A. Reserve of Officers, to be Major, with precedence as from October 6th, 1925.

Captain (prov.) R. N. Craig is confirmed in his rank. To be Captains: Captain W. W. Brown, late R.A.M.C. (Special Reserve), with precedence as from April 30th, 1926; Lieutenants A. C. Crawford, D. R. Owen, and C. E. W. Bower.

Lieutenant R. Walkingshaw, M.C., resigns his commission.

To be Lieutenant: C. C. Ryan.

Supernumerary for Service with O.T.C.—Captain J. F. Smith resigns his commission.

### COLONIAL MEDICAL SERVICES.

Dr. W. E. Burton appointed Principal Medical Officer, British Honduras. Dr. C. T. McCarthy appointed Medical Officer, Federated Malay States. Dr. D. Duff appointed an Assistant Director of the Medical Service, Gold Coast. Dr. S. L. Brohier appointed a Senior Medical Officer, Gold Coast. Dr. K. K. Grieve appointed a Senior Medical Officer, Nigeria. Dr. W. E. Glover appointed a Senior Medical Officer, Nigeria. Dr. R. B. Hawes, M.R.C.P., appointed Professor of Medicine in the College of Medicine, Singapore. Dr. V. L. Ferguson to be Chief Medical Officer, St. Lucia.

The following appointments have been made by the Secretary of State for the Colonies during the month ended December 31st, 1927: Messrs. J. P. M. Donnelly, W. S. Thomas, and A. Reid appointed Medical Officers, West African Medical Staff. Dr. A. V. G. Price appointed District Medical Officer, British Solomon Islands Protectorate. Messrs. E. C. Morris and W. E. Holmes appointed Medical Officers, Federated Malay States. Miss V. E. K. Stuart appointed Lady Medical Officer, Federated Malay States. Lieutenant E. L. Robert appointed Medical Officer, Straits Settlements.

### VACANCIES.

BIRMINGHAM GENERAL HOSPITAL.—Casualty House-Surgeon (male). Salary £100 per annum.

BIRMINGHAM CORPORATION.—Senior Assistant Medical Officer of Health. Salary £1,100 per annum.

BLYTH BOROUGH.—Medical Officer of Health, School Medical Officer, and Port Medical Officer. Salary £800 per annum, rising to £950.

Bournemouth: Royal Victoria and West Hants Hospital.—Medical Officer to the Venereal Diseases Treatment Centre. Salary £900 per annum.

BRIGHTON: ROYAL SUSSEX COUNTY HOSPITAL.—(1) Honorary Dental Surgeon. (2) Honorary Assistant Dental Surgeon.

Bristol GUARDIANS.—Second Assistant Medical Officer at the Southmead Hospital. Salary £200 per annum.

CAMBRIDGE: ADDENBROOK'S HOSPITAL.—(1) House-Surgeon (male). (2) House-Physician (male). Salary at the rate of £130 per annum.

CARDIFF ROYAL INFIRMARY.—(1) House-Surgeon—Surgical. (2) House-Surgeon—Physician. Salary at the rate of £50 per annum.

COVENTRY CITY.—Deputy Medical Officer of Health. Salary £750 per annum, rising to £1,000.

DERHAM COUNTY COUNCIL.—Medical Officer of Earl's House Sanatorium for Boys. Salary £150 per annum, rising to £500.

EDINBURGH: ROYAL EDINBURGH HOSPITAL FOR SICK CHILDREN.—Honorary Assistant Aural Surgeon.

ELIZABETH GARRETT ANDERSON HOSPITAL, Euston Road, N.W.—(1) Assistant Radiologist (part time); £100 per annum. (2) Assistant Pathologist (part time); £150 per annum. Women.

EVELINA HOSPITAL FOR CHILDREN, Southwark, S.E.1.—House-Physician (male). Salary at the rate of £120 per annum.

GERMAN HOSPITAL, E.R.—Honorary Assistant Surgeon.

GREAT OUSEBURN ISOLATION COMMITTEE.—Medical Officer of the Isolation Hospital. Retaining fee £5 per annum and £1 for each case admitted.

GREAT OUSEBURN UNION.—Medical Officer and Public Vaccinator for the Acomb District. Salary £43 15s. per annum and vaccination fees.

HEMEL HEMPSTEAD: WEST HANTS HOSPITAL.—Resident Medical Officer. Salary £150 per annum.

HOCKLEY PROVIDENT DISPENSARY, Birmingham.—Medical Officer (male). Emoluments last year £90.

KILMALLIE PARISH COUNCIL.—Medical Officer and Public Vaccinator. Salary £100 per annum.

LEICESTER ROYAL INFIRMARY.—Casualty House-Surgeon. Salary at the rate of £125 per annum.

LOCHARNON PARISH COUNCIL, Ross-shire.—Medical Officer and Public Vaccinator. Salary £133 per annum.

LONDON FEMALE LOCK HOSPITAL, 283, Harrow Road, W.9.—Second House-Surgeon. Salary £150 per annum.

MANCHESTER ROYAL INFIRMARY.—Assistant Medical Officer. Salary £35 per annum.

METROPOLITAN HOSPITAL, Kingsland Road, E.8.—Ophthalmic Surgeon.

OXFORD: RADCLIFFE INFIRMARY AND COUNTY HOSPITAL.—(1) Honorary Assistant Orthopaedic Surgeon. (2) Assistant Surgeon at the Wingfield Orthopaedic Hospital, Headington; salary £600 per annum.

PRESTON: ROYAL INFIRMARY.—House-Surgeon (male, unmarried). Salary £150 per annum.

ROYAL WATERLOO HOSPITAL FOR CHILDREN AND WOMEN, Waterloo Road, S.E.1.—Non-Resident Casualty Officer for Out-patient Department. Salary £150 per annum.

ST. ALBANS: HILL END MENTAL HOSPITAL.—Second Assistant Medical Officer (male, unmarried). Salary £450 per annum, rising to £500.

ST. BARTHOLOMEW'S HOSPITAL, E.C.—Assistant Surgeon.

ST. JOHN'S HOSPITAL, Lewisham.—Assistant Physician.

ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN, Plaistow, E.13.—Resident Medical Officer and Assistant Resident Medical Officer. Salary at the rate of £175 and £130 per annum respectively.

ST. PANCRAZ PARISH.—Junior Assistant Medical Superintendent at the Highgate Hospital. Salary £325 per annum, rising to £375.

SALFORD CITY.—Medical Officer of Venereal Diseases Treatment Centre. Salary £750 per annum.

SHANGHAI MUNICIPAL COUNCIL.—Assistant Radiologist in the Public Health Department. Salary 700 taels a month.

SHEFFIELD ROYAL HOSPITAL.—Resident Anaesthetist (male). Salary £80 per annum.

SOMERSET COUNTY COUNCIL.—(1) Assistant Tuberculosis Officer. (2) Tuberculosis Officer for Bath City. (3) Tuberculosis Officer for Western Area. Salary £600 per annum each.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE ROYAL INFIRMARY.—(1) Honorary Assistant Surgeon. (2) Honorary Anaesthetist. (3) Honorary Assistant Aural Surgeon. (4) Honorary Assistant Orthopaedic Surgeon.

TOXBIDGE UNION.—Resident Assistant Medical Officer at the Institution at Pembury (unmarried). Salary £275 per annum, rising to £350 and fees.

**TRURO:** ROYAL CORNWALL INFIRMARY.—House-Surgeon. Salary £170 per annum.

**WOLVERHAMPTON AND MIDLAND COUNTIES EYE INFIRMARY.**—House-Surgeon. Salary £200 a year.

**WOOLWICH AND DISTRICT WAR MEMORIAL HOSPITAL.**—(1) Radiographer. (2) Dispenser.

**CERTIFYING FACTORY SURGEONS.**—The following vacant appointments are announced: Islay (Argyll and Bute) (Berkshire), Fyvie (Aberdeenshire), Portree (Highland), and Whitehead (Cumberland). Applications to the Chief Medical Officer, Home Office, Whitehall, S.W.1.

**MEDICAL REFEREE UNDER THE WORKMEN'S COMPENSATION ACT** for the Bath, Calne, Chippenham, Devizes, Frome, Hungerford, Malmesbury, Marlborough, Melksham, Newbury, Swindon, Trowbridge, and Warminster County Courts (Circuit No. 52). Applications to the Private Secretary, Home Office, S.W.1, by January 31st.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

### APPOINTMENTS.

**PAGE, Miss Hilda W., M.R.C.S., L.R.C.P.,** a member of the Honorary Medical Staff of the Wilkesden General Hospital, Harlesden Road, N.W.10.

**BOUMASKY, A., M.B., Ch.B., Leeds, F.R.C.S.,** Assistant Ophthalmic Surgeon, London Jewish Hospital, Stepney Green, E.

**STALLMAN, J. F. H., M.B., B.S., F.R.C.S.,** Honorary Surgeon, Children's Hospital, Kingsholm, Gloucester.

**WESTMINSTER HOSPITAL.—House-Physician:** S. Segal, M.R.C.S., L.R.C.P. **House-Surgeons:** P. M. Robottom, M.R.C.S., L.R.C.P., and P. A. M. Soutter, M.R.C.S., L.R.C.P.

**CERTIFYING FACTORY SURGEONS.**—S. Bolton, M.D.Ed., for the Halifax District, York; R. W. Davies, M.B., Ch.B.Ed., for the Rushden District, Northampton; L. C. J. Edwards, M.R.C.S., L.R.C.P., for the Braintree District, Essex; C. P. Oliver, jun., M.B., B.Ch.Camb., for the Maidstone District, Kent; G. H. Warner, M.D.Lond., for the Southwell District, Nottingham.

### DIARY OF SOCIETIES AND LECTURES.

**ROYAL SOCIETY OF MEDICINE.**

**Section of Odontology.**—Mon., 8 p.m., Mr. Arthur Bulleid: Apical Infection. Mr. H. P. Baylis: Necrosis of the Mandible. Mr. W. Rushton: An Abnormally Small Premolar.

**Section of Medicine.**—Tues., 5 p.m., Discussion: Cardiac Infarction (Coronary Thrombosis). To be opened by Drs. John Parkinson and Evan Bedford, followed by Drs. Carey Coombs, Geoffrey Hadfield, J. A. Ryle, and B. T. Parsons-Smith.

**Section of Tropical Diseases, Dermatology, and Comparative Medicine.**—Wed., 5 p.m., Special Discussion: Cutaneous Mycoses in the Tropics. To be opened by Mr. J. Ramsbottom (Tropical Diseases) and Dr. A. Whitfield (Dermatology).

**Section of Bacteriology.**—Thurs., 5 p.m., Dr. Adolph Schott (Bad Nauheim): Carbon Dioxide Thermo-saline Springs in the Light of Modern Research.

**Section of Urology.**—Thurs., 8.30 p.m., Clinical Pathological Evening.

**Section of Disease in Children.**—Fri., 4.30 p.m., Cases.

**Section of Epidemiology.**—Fri., 8 p.m., Dr. J. E. McCartney and Dr. William C. Harvey: Observations on Diphtheria Carriers.

**ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.2.**—Mon., Wed., and Fri., 5 p.m., Hunterian Lectures by Sir Arthur Keith: Factors concerned in the Growth of the Human Body.

**MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.1.**—Mon., 8.30 p.m., Discussion: The Treatment of Pernicious Anaemia. To be opened by Professor F. R. Fraser, followed by Sir William Wilcox and Dr. Herbert French.

**MEXICO-LEGAL SOCIETY, 11, Chandos Street, W.1.**—Thurs., 8.30 p.m., Mr. F. Llewellyn-Jones, B.A., LL.B.: Drunkenness and Civil and Criminal Responsibility—a Study in Comparative Law, to be followed by a discussion.

**St. John's Hospital DERMATOLOGICAL SOCIETY, St. John's Hospital, Leicester Square, W.C.2.**—Fri., 4.15 p.m., Clinical Cases. Tea at 4 p.m.

### POST-GRADUATE COURSES AND LECTURES.

**FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.**—Lecture at Medical Society, 11, Chandos Street, W.1, Mon., 5 p.m.: Mental Defect and its Importance to the Community. **Queen Mary's Hospital, Stratford, E.15.** Mon., 2 p.m., General Surgical Demonstration. **Royal Eye Hospital, Southwark, S.E.1.** Mon., 3 p.m., Clinical Demonstration. The above lecture and demonstrations are open to members of the medical profession without fee. **Bethlem Royal Hospital, St. George's Fields, S.E.1.** Course in Psychological Medicine, Lecture Demonstrations, Tues. and Sat., 11 a.m. Proportionate fees payable, and syllabus sent on application.

**CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.**—Mon., 1.30 p.m., Examination of the Pharynx and Naso-Pharynx. Wed., 1.30 p.m., Examination of the Nose. Fri., 4 p.m., Multiple Nasal Sinusitis.

**EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.**—Thurs., 4 p.m., Some Congenital Deformities.

**HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.**—Thurs., 4 p.m., Rectal Prolapse in Childhood.

**LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.**—Tues., 5 p.m., Exfoliative Dermatitis. Thurs., 5 p.m., Electrotherapeutics.

**NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.**—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 6 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

**ROYAL INSTITUTE OF PUBLIC HEALTH, 37, Russell Square, W.C.1.**—Wed., 4.30 p.m., Tests for Drunkenness, particularly in relation to Motor Accidents.

**ROYAL NORTHERN HOSPITAL, Holloway Road, N.**—Tues., 3.15 p.m., Indigestion.

**WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.6.**—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations. Wards; 2 p.m., Surgical Wards, Gynaecology. Tues., 10 a.m. to 1 p.m., Medical Ward Visit. Diseases; 2 p.m., Medical Wards, Throat, & Wed., 10 a.m. to 1 p.m., Children's Medical Out-patients; Medical Wards, Demonstration in Medical Pathology; 2 p.m., Surgical Wards, Eye Department. Thurs., 10 a.m. to 1 p.m., Neurological Department, Demonstration of Fractures; 2 p.m., Eye and Genito-urinary Departments, Gynaecological Ward. Fri., 10 a.m. to 1 p.m., Gynaecological Operations, Dental, Skin, and Electrical Departments; 2 p.m., Throat, Nose, and Ear Department; 4.30 p.m., Carbohydrate Tolerance Tests (Demonstration). Daily: Operations, Medical and Surgical Out-patients at 2 p.m.

**GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.**—At Eye Infirmary: Wed., 4.15 p.m., Cases.

**MANCHESTER: ST. MARY'S HOSPITALS (WHITWORTH STREET WEST BRANCH).**—Fri., 4.30 p.m., Intestinal Indigestion in Children.

**SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.**—At the Royal Infirmary: Fri., 3.30 p.m., Eye Cases.

### THE PUBLIC HEALTH SERVICE MINIMUM SALARY SCALE.

#### ATTITUDE OF THE BRITISH MEDICAL ASSOCIATION.

Our contemporary *Education*, the official organ of the Association of Education Committees, in its last week's issue printed a leading article headed "Education and medicine: a question of remuneration," which shows a surprising forgetfulness of history, and some misunderstanding of the facts of the case, which is perhaps not so surprising. It may therefore be of some advantage to take note of the article in question, in order that the position may be more clearly understood.

The British Medical Association's present "Scale of Minimum Commencing Salaries for Medical Officers in the Public Health Service" is not a wanton, illogical, hastily conceived scheme adopted merely with a view to enhancing the material interests of such officers, or of members of the Association. On the contrary, it is the result of very prolonged, almost painful, consideration in all its details. The first official move by the Association in the direction of improving the salaries of these medical officers was taken in November, 1918. The matter was brought definitely before the Representative Body in the following year, in 1920, in 1923, and in 1924, and it was not until 1925 that the scale was finally adopted. Those unfamiliar with the British Medical Association's machinery may be informed that, in accordance with the Articles of Association, on all these occasions the operative resolutions had been given two months' public notice and received endorsement by a two-thirds majority. The scale, moreover, within the profession, has received the unqualified approval and support of the Society of Medical Officers of Health, of the Women's Medical Federation, and of influential and independent persons connected with the medical press.

Moreover, throughout the whole of their deliberations, extending over this period of six years or more, and since, the Council and Representative Body of the Association have had even more regard to the interests and requirements of public health than to the emoluments of the officers concerned for their own sakes. Indeed, it was in part the anxiety of the Ministry of Health as to the class of medical practitioner who was entering the public health service that made the matter so important and urgent. The Association found that "not only is the service not attracting promising graduates, but that frequently medical men give up public health work and go into general practice because they are unable, even

after years of experience, to make an adequate income as a public health medical officer." The seriousness of such a state of affairs with regard to public health administration is too clear to need emphasis. It was agreed by all the medical organizations concerned, and by the Ministry of Health, that an improvement in the salaries and prospects of these officers was necessary, and that in order to effect this, and to break down the narrowing tendency of many local authorities to look only to their own staffs when any opportunity of promotion occurred, it was desirable to systematize salaries, and to convert the public health service as far as possible into a co-ordinated whole, in which wider prospect of advancement would be given.

Further, it has never been the desire of the Association to "impose" upon, or "demand" from, a local authority submission to its scale of minimum salaries, or to "fix the remuneration without reference to the employing authority." Over and over again, almost from the very beginning, the Association has made it evident that it wished rather to persuade authorities of the reasonableness of its scale and of the public considerations on which it is based, to give opportunity for the observations of authorities, and to meet their representatives in conference before the details of the scale were fixed; to modify those details in any or every particular if found necessary as the result of such observations or conference; and to insert an arbitration clause under which, if there were dispute between the professional organization and the local authority in individual cases, the matter should be placed before, and determined by, the Ministry of Health.

In May, 1923, a letter in this sense was sent to the various associations of local government or education bodies inviting their comments and promising them consideration. From these several associations either no reply was received or it was intimated that no scale of any kind would receive their countenance. Nevertheless, the Representative Body still asked the Council to meet, if possible, the representatives of these associations, and authorized it to make whatever alterations in the scale might be necessary. In October, 1923, with great difficulty, a conference attended by certain representatives of some of these bodies was got together, but it was entirely unsatisfactory. No discussion took place, as the representatives of the British Medical Association and the Society of Medical Officers of Health were at once met with a statement from the chairman that no scale would be acceptable, and therefore the matter was at an end. The patience of the British Medical Association was not even then exhausted. In February, 1924, under the auspices of the Ministry of Health, which had

become definitely alarmed at the condition of recruiting for the public health service, the profession's representatives began a series of conferences with members of the councils of the County Councils Association, of the Municipal Corporations Association, and, later, of the Rural District Councils Association and others. As a result the scale was materially modified. Among other things, some differentiation was made in favour of certain appointments in rural areas, a wider latitude was given to appointing authorities within certain limits of salary, and it was arranged that in order to militate against making responsible appointments straight from the medical school a certain amount of experience after graduation would be required before the minimum salary should be asked for.

In the end the scale, so modified, received the sanction and support of the Ministry of Health, was regarded by the Association of Municipal Corporations as not unreasonable, and commended by them to their constituent authorities as a guide when making appointments, and was approved by the Council and Representative Body of the British Medical Association. It is unfortunate that agreement was not complete, but it is clear that abundant opportunity was offered, and it is manifestly too late now, when the scale has been operative for more than two years, with success in some 80 per cent. of the vacancies which have occurred, for the Association of Education Committees, which persistently refused the opportunities for consultation offered it, to say "it should not be beyond the wit of representatives of local authorities and representatives of the medical profession to frame a scale of remuneration for members of the medical profession engaged in the education service, in which such factors as preliminary training, qualifications, experience, and conditions of service would have due consideration, and which would be acceptable to both parties."

The British Medical Association is quite unable, in the public interest, to regard the school medical service as other than a part of the whole public health medical service, or to enter into any separate negotiations for a different scale with education committees as such; but it may be desirable to say something with regard to the contention of the editor of *Education* that it is unreasonable and inconsistent to ask for an assistant school medical officer a commencing salary of £600 a year. The main reasons for such a salary are set out in a circular letter, dated May, 1925, which should be quite familiar to our contemporary. They are, in effect: (1) that such officers, before appointment, are required to have passed through the full medical curriculum and obtained their registrable qualification; that in addition it is very desirable, and often compulsory, that they should further have taken the course for and secured the Diploma of Public Health; that they should have had at least three years' experience in the practice of their profession subsequently to qualification; and that therefore they are on appointment commonly about 30 years of age and can very rarely be less than 27; (2) that the number of higher appointments in the service which they have a chance of securing is extraordinarily small; (3) that only too often there is no advancement of any kind, and that their maximum salary remains the same as their minimum, or rises very little above it.

It is quite true, as the leading article with which we are concerned suggests, that in such a matter a comparison with the emoluments enjoyed by other employees of a local authority, and by practitioners engaged in other spheres of medical work, is quite legitimate. We believe that within the education service the proper comparison can only be with the male graduate teacher of like age in a secondary school, who holds a post of special responsibility. Even this comparison must be profoundly modified by reason of the considerations above stated, and several others. It must be remembered, too, that in the teaching profession

almost the whole cost of training—itsself materially smaller than with the medical profession—is often borne by public funds, and only to a small extent by the individual trained; and while this is true the two professions must, in some respects, be on different planes.

The comparison with other branches of the profession did not, of course, escape the attention of those concerned with the framing of the scale. Indeed, it was precisely to bring the public health service into proper competition with these other branches that the scale was adopted in its present form. The remuneration and prospects over a number of years will not be found out of proportion. The comparisons which our contemporary makes with such appointments as those of house-surgeon are entirely inappropriate, and with those of an assistant in private practice largely so. The former are invariably of a temporary, and largely of an educational, character; the latter, in the main, are of the same nature. Hospital appointments in the public service are provided for in the scale itself. The Association has made, and is continuing, efforts to improve the position of assistants. It has laid down by resolution conditions which it desires to see fulfilled, but the circumstances of assistantships vary so greatly that uniformity is impossible to enforce, and it is highly desirable to encourage recently qualified practitioners to take such positions for a time as perhaps the best introduction of all to the private practice of their profession. Both these classes of appointment are totally different from the permanent position of responsible assistant school medical officer, which is to be regarded as the first (often, alas! the last) step in a service offering a career.

## British Medical Association.

### CURRENT NOTES.

#### Sir Dawson Williams.

At its last meeting, on Thursday, January 19th, the Journal Committee, on the proposal of its chairman, Dr. J. A. Macdonald, passed the following resolution, with acclamation, and ordered it to be entered on the minutes:

"The Journal Committee, meeting on the day on which he relinquishes the position of Editor after thirty years in that office, wishes to place on record its deep appreciation of the great services rendered to medical science and the medical profession by Sir Dawson Williams during his long and brilliant editorship; its gratitude for all he has done to advance the British Medical Association in every branch of its work; and its high regard and affection for him personally."

"The Committee trusts that in the leisure earned by forty-seven years of unselfish devotion to the *British Medical Journal*, during which he has raised it to the great position it occupies to-day, Sir Dawson Williams will renew his health to enjoy the honour and esteem in which he is universally held."

On the evening of the same day Sir Dawson Williams was the guest of his senior colleagues on the staff of the Association and *JOURNAL* at an informal dinner in the Hotel Victoria. After dinner Sir Dawson was presented by Dr. Cox, on behalf of those present, with a framed photograph of himself taken in his room at B.M.A. House, Tavistock Square, where, by his consent, it will be hung.

#### Some Work of the Week.

##### Medico-Political Committee.

The Medico-Political Committee, which met on January 18th, is making recommendations to the Council as to the conditions of service of assistants in mental hospitals, and with reference to the infant welfare centres which are being promoted by lay persons for mothers who can afford to pay for such a service and are said to desire it. Both

these questions have been thoroughly explored by sub-committees. The Committee is in communication with the Central Midwives Board and the Ministry of Health on the subject of the detailed ante-natal records which midwives are required to fill up. Other matters under consideration were the appointment by the Government of Canada of Canadian practitioners who are in future to examine all intending emigrants for Canada before they leave this country, and the position of a doctor whose detailed report to a coroner obviates the need for an inquest. With regard to the first point the Committee is informed that the Canadian doctors will be whole-time civil servants and will not be permitted to engage in any form of private practice. On the second point the Committee decided to inform the Divisions of the steps to be taken to secure a fee for reports given to coroners in such circumstances.

#### *Increased Sickness Benefit Claims.*

On January 19th the representatives of the Insurance Acts Committee discussed with representatives of the Ministry of Health the present position with regard to the substantial increase in claims for sickness benefit under the National Health Insurance Acts. A special subcommittee has been appointed by the Insurance Acts Committee to explore the whole question with the representatives of the Ministry, and to determine, if possible, whether the increase is natural and inevitable, or due to some cause over which the profession may have some control.

#### *Remuneration of Non-Professional Teachers and Research Workers.*

For some time there has been evidence that dissatisfaction is felt by a number of universities and medical schools with the scale adopted by the Association in 1926 for the remuneration of whole-time non-professional medical teachers and medically qualified research workers. The scale was originally the work of a committee largely composed of representatives of medical schools, and it was realized from the start that it was by no means easy to handle this matter judiciously, since the value of these appointments is determined by a number of considerations, among which the actual salary, however important, is not necessarily predominant. In view of criticisms recently received from the deans of several medical schools the Council has now decided to review the whole position in the light of the experience gained during the past eighteen months, and to this end has invited a medical representative from each of the medical schools in Great Britain and Ireland to attend a conference at the House of the Association on Friday, February 10th. It is hoped that this discussion may result in some solution of the difficulty, in which both the material interests of an important class of worker and the traditions and resources of the medical schools will be safeguarded.

#### *The B.M.A. and Medical Charities.*

The Association has received from Dr. A. J. Copeland, honorary treasurer of the Malaya Branch, a draft for £35 18s. 2d., collected from members of the Branch and intended as a donation to the Royal Medical Benevolent Fund. Last year the same Branch sent £26 3s. 2d., and Dr. Copeland announces that he hopes to make a still greater improvement next year. This is a notable and most welcome gift, and Dr. Copeland has been warmly thanked for his efforts.

#### *The Half-yearly Indexes.*

The usual half-yearly indexes to the JOURNAL and to the SUPPLEMENT and EPITOME have been prepared and will be ready shortly: they will, however, not be issued with all copies of the JOURNAL, but only to those readers who ask for them. Any member or subscriber who desires to have one or all of the indexes can obtain what he wants, post free, by sending a post-card notifying his desire to the Financial Secretary and Business Manager, British Medical Association House, Tavistock Square, W.C.1. Those wishing to receive the indexes regularly as published should intimate this desire.

## Association Notices.

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: COVENTRY DIVISION.**—A meeting of the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, February 7th. Dr. Brailsford (Birmingham) will read a paper on oboleystography.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—A meeting of the Nuneaton and Tamworth Division will be held at the Nuneaton General Hospital on Wednesday, February 8th. Mr. C. A. Raison will read a paper on surgical conditions of the biliary tract.

**BIRMINGHAM BRANCH: WEST BROMWICH DIVISION.**—The annual meeting of the West Bromwich Division will be held at the West Bromwich and District General Hospital, Edward Street, West Bromwich, on Tuesday, January 31st, at 3 p.m. Agenda: The retiring chairman will give a summary of the work of the Division during 1927; programme and election of officers for 1928; education of the public in health matters; question of courtesy calls; inquiry into the treatment of varicose ulceration; chairman's address.

**BORDER COUNTIES BRANCH: ENGLISH DIVISION.**—A meeting of the English Division will be held at Maryport to-day (Friday, January 27th). Dr. J. N. Douglas Smith will read a paper on the early treatment of puerperal sepsis.

**EAST YORK AND NORTH LINCOLY BRANCH: EAST YORK DIVISION.**—At the meeting of the East York Division to be held on Friday, February 17th, Dr. Ritelie Rodger will read a paper on foreign bodies in the air passages, etc.

**GLASGOW AND WEST OF SCOTLAND BRANCH: Ayrshire DIVISION.**—A meeting of the Ayrshire Division will be held in the board room of the County Hospital, Ayr, on Friday, February 10th, at 4 p.m. An address will be given by Dr. J. A. Wilson of Glasgow on diagnosis of pulmonary tuberculosis of the young adult. It is hoped that there will be a good attendance of members.

**LANCASHIRE AND CHESHIRE BRANCH: MID-CHESHIRE DIVISION.**—The annual meeting of the Mid-Cheshire Division will be held on Sunday, January 29th, at 4 p.m. in the board room of the Altrincham General Hospital. Tea will be served at 3.45. Agenda: Annual report of the Executive; election of officers; charities; branch periodical.

**LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.**—A meeting of the Southport Division will be held on Friday, March 30th, when Dr. E. P. Cumberbatch will deliver a British Medical Association Lecture on the use of ultra-violet rays in general as well as in skin disease. It is hoped that there will be a large attendance of members.

**METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.**—A meeting of the Camberwell Division will be held at the Bermondsey and Rotherhithe Hospital on Tuesday, February 7th, at 9 p.m. Mr. A. E. Webb-Johnson will give an address on haematuria.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, February 7th, at 9.30 p.m. Dr. H. C. Senior will discuss diagnostic pitfalls in dermatology.

**METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, February 7th, at 8.45 p.m. Dr. F. M. R. Walshe will give a lecture on faith healing.

**METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.**—A meeting of the Hampshire Division will be held at the Hampstead General Hospital on Thursday, February 9th, at 8.30 p.m. Dr. S. Monckton Copeman, F.R.S., will discuss inoperable cancer.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—The next clinical meeting of the Hendon Division will take place at Hendon Cottage Hospital to-day (Friday, January 27th), at 8.30 p.m., when Dr. Archibald Leitch (director of the Cancer Hospital Research Institute) will deliver an address on modern views on cancer.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, February 14th, at 9 p.m. Dr. Alfred Cox, Medical Secretary of the British Medical Association, will give an address entitled "The family doctor on his trial."

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, February 10th, at 8.15 p.m. Professor A. J. Hall (Sheffield) will discuss certain points in the use of some everyday drugs.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A meeting of the Sunderland Division will be held to-day (Friday, January 27th) at 8.30 p.m. at the Sunderland Royal Infirmary. Agenda: Minutes; annual report; election of officers; any other business. The annual dance in aid of B.M.A. Charities will be held in Meng's Rooms, Sunderland, on Thursday, February 2nd. Reception 8 p.m., dancing 8.30 p.m. to 1 a.m. Tickets 10s. 6d. each, early application for which should be made to Dr. MacMurrey, North Grange, Stockton Road, Sunderland.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, February 16th, at 8.30 p.m. Mr. A. S. Ferguson will read a paper on focal infections of the head.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—A meeting of the Portsmouth Division will be held on Thursday, February 9th. A British Medical Association Lecture will be delivered by Professor Hugh Maclean on renal disease and high blood pressure.

**SURREY BRANCH: CROYDON DIVISION.**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, February 8th. Dr. W. H. Jewell will give a lantern demonstration on malignant diseases of the antrum. Preceded by tea at 4 p.m.

**SURREY BRANCH: GUILDFORD DIVISION.**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, February 2nd, at 4 o'clock. Sir D'Arcy Power will give an address on the history of medicine. Tea at 3.45 p.m.

**YORKSHIRE BRANCH: DEWSBURY DIVISION.**—A meeting of the Dewsbury Division will be held at the Dewsbury Infirmary on Friday, February 3rd, at 8.15 p.m. Dr. G. Cooper (Leeds) will read a paper on radiotherapy.

**YORKSHIRE BRANCH: HALIFAX DIVISION.**—A clinical meeting of the Halifax Division will be held in the board room of the Royal Halifax Infirmary on Wednesday, February 1st, at 8.30 p.m. Will members who have cases or specimens to show please notify the honorary secretary, Dr. W. O. Lodge, 3, Heath Hall, Halifax, beforehand if possible.

**YORKSHIRE BRANCH: LEEDS DIVISION.**—A meeting of the Leeds Division will be held in the General Infirmary, Leeds, on Friday, February 17th, at 3 p.m. Dr. John Parkinson will give a British Medical Association Lecture on common difficulties in cardiac diagnosis. Lantern slides will be shown, and there will be a discussion after the lecture.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Great Bull Restaurant, Westgate, Wakefield, on Thursday, February 9th. Mr. A. Gough, surgeon to the Women's and Children's Hospital, Leeds, will lecture on menstrual diseases and the menopause. Supper (2s. 6d.) at 7.45 p.m. will precede the lecture.

## Meetings of Branches and Divisions.

### AUSTRALIA: VICTORIAN BRANCH.

#### *The Year's Work.*

The annual report of the Victorian Branch for the year 1927 contains interesting details which record steady advance in many directions. The number of members increased from 1,311 to 1,343. Various legal and ethical decisions have been published. A resolution adopted by the Branch with regard to supplying information to insurance companies under certain defined conditions was not approved by the Federal Committee. Members have been advised that before divulging confidential information about deceased persons to insurance companies they should secure written permission from the executor. A warning has also been issued that the plea of privilege will not hold when evidence is required in any criminal cases, though such information should not be divulged in civil cases. It was agreed to broadcast a series of lectures on medical subjects. A member was reminded that the Council held that all country members in the neighbourhood of a public hospital should become honorary medical officers to the institution, as it is considered desirable that all medical practitioners attending patients at a public hospital should be members of the staff. The Council disapproved collaboration by a medical practitioner with a layman doing x-ray work. The social activities of the Branch continue to develop, and, in accordance with the usual practice, recent graduates were entertained on the evening of their registration. Delegates to various conferences were entertained from time to time by the Council and members of the Branch. The Scientific Committee arranged the work of the monthly meetings and clinical evenings throughout the year; successful meetings were held at Warragul in June, and at Melbourne in July.

The committee also made suggestions for the revision of the *Pharmacopoeia*, which were adopted by the Council and forwarded to the Federal Committee. Ten monthly meetings of the Branch, seven clinical meetings, and four special meetings were held during the year; various papers were read and demonstrations were given. The Legislative Committee met regularly each fortnight and concerned itself with the principles of medical ethics, standing orders, and the conduct of debates; the rules have been revised and the proposed amendments have received the sanction of the Council. The hospital policy of the Branch has also been reconsidered. The profits of the medical agency were greater than in any preceding year, and attention is drawn to the advantages afforded to members as regards the obtaining of books and journals from abroad at reduced cost. The British Medical Insurance Company is now well established, and is said to offer better terms than any other company in Victoria. It gave £285 in rebate to its members during one half-year, and has made a substantial profit over and above the heavy initial expenses. Successful meetings have been held by the orthopaedic, radiological, gynaecological and obstetrical, and the eye and ear sections of the Branch; the section of neurology and psychiatry has been reorganized and good meetings have been held.

### BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

A MEETING of the Nuneaton and Tamworth Division was held at Nuneaton General Hospital on January 11th.

After preliminary business the members adjourned to the wards of the hospital, where Dr. PRACY (Atherstone) demonstrated the following cases: (1) swelling in lumbar region—a case for diagnosis; (2) fracture dislocation of the astragalus; (3) osteomyelitis of tibia—removal of shaft of tibia; (4) tuberculosis of spine; (5) torsion of testis in a child—removal of gangrenous testis. Later there was a discussion on these cases, and radiograms and pathological specimens from some of them were shown. Dr. Pracy also showed the following specimens: (1) Adenoma of prostate; (2) gangrene of finger—following prick in palm of hand; (3) injury to testis; (4) an unusual form of appendix; (5) popliteal thrombosis; (6) caseous glands; (7) microscopic slides of three primary malignant growths in one person; (8) a rare "surgical instrument" used by a professional bleeder.

On the motion of the CHAIRMAN, seconded by Dr. L. E. PRICE, a hearty vote of thanks was accorded to Dr. Pracy for a most interesting and instructive demonstration.

Correspondence was read from the local branch of the British Legion asking for the assistance of the Division in selecting and classifying cases in which the Legion is endeavouring to secure revision of war pensions awards. After some discussion it was decided that the Division should respond to the appeal of the Legion, and a committee of five members was nominated to act as a medical advisory committee.

### CAMBRIDGE AND HUNTINGDON BRANCH: CAMBRIDGE AND HUNTINGDON DIVISION.

A GENERAL meeting of the Cambridge and Huntingdon Division was held on January 17th at Addenbrooke's Hospital, Cambridge, primarily to continue the discussion on the question of maternity treatment in the town and surrounding extensive rural area.

Arising from the minutes of the last meeting, the question of dental anaesthetics was again discussed, and the following motion was adopted:

That this Division views with disapproval the administration of either nitrous oxide or ethyl chloride in any circumstances under a minimum fee of half a guinea. Likewise no general anaesthetic should be given under a guinea.

It was also agreed:

That this resolution shall not apply in the case of voluntary clinics (that is, where they are neither rate-aided nor State-aided) where all anaesthetics may be given without payment.

The secretary was instructed to send a copy of the above resolutions to all medical officers in the Division who were concerned.

During the discussion on the maternity question Dr. YOUNG occupied the chair, the chairman of the Division, Dr. STEVENSON, being a mover of one of the resolutions. After a very full discussion, in which most of those present took part, both motions—as reported in the SUPPLEMENT of January 21st (p. 21)—were passed. The secretary was instructed to send a copy of both resolutions to each of the public and hospital authorities concerned.

### DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.

A MEETING of the West Dorset Division was held on January 19th at the County Hospital, Dorchester. The number of members attending was the largest in the history of the Division for a clinical meeting.

Dr. C. J. MARSH was unanimously elected representative, and Dr. K. WILSON deputy representative, of the Division for 1928-29.

Dr. G. G. MORRICE showed a case of follicular impetigo of the scalp in a child, and also a woman of 66, who was suffering from numbness of the left side of the body and a high blood pressure (200 mm. systolic); the urine contained albumin. He regarded it as a case of granular kidney. Dr. SUMNER showed a case of acromegaly.

Mr. P. J. VERRALL delivered a British Medical Association Lecture entitled "Manipulative surgery," and subsequently gave a demonstration of his methods on a lad. The lecture and the demonstration were most interesting, and a hearty vote of thanks was accorded to the lecturer at the close. Tea was served during the meeting by the courtesy of the medical and surgical staff.

### JAMAICA BRANCH.

THE festival dinner in celebration of the jubilee of the Jamaica Branch was held on December 10th, 1927, under the presidency of Dr. C. A. H. THOMSON, and was very well attended. Among the twenty-nine guests were the Governor (Sir Reginald Stubbs), the Chief Justice (Sir Barrett Leonard), the Officer Commanding Troops (Colonel James), the Colonial Secretary, the Attorney-General, and the Mayor of Kingston. The dinner was a great success, and the speeches were of a high order of merit. The ATTORNEY-GENERAL proposed the health and future prosperity of the British Medical Association, the COLONIAL SECRETARY was responsible for the toast of "The Common Health," and a particularly felicitous reference to the guests was made by Dr. G. I. LEESIDE.

### METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.

A CLINICAL meeting of the Lambeth and Southwark Division was held on January 11th at the Belgrave Hospital for Children, Clapham Road, when Mr. L. E. C. NORBURY showed many cases of interest. The chief exhibits were: (1) Three cases of umbilical hernia which had been operated on, with photographs of the condition before and after operation. (2) Three cases of

umbilical hernia before operation. (3) Case of double intussusception. (4) Case of branchial cysts. (5) A boy, aged 9, who had multiple pyemic abscesses following a splinter in the foot—treated with intravenous injection of perchloride of mercury and autogenous (staphylococcal) vaccine.

#### METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held at the South-Eastern Children's Hospital, Sydenham, on January 17th, when Dr. W. E. HALLINAN took the chair.

Dr. H. M. STEWART showed x-ray plates from a case of fibrocystic disease in a boy aged 6 years. Dr. G. RICHARDSON described a case of fibrocystic disease in the right alvea of a woman. Dr. C. E. CARPMAZ showed x-ray plates and a sequestrum from a child 7½ years old, with acute osteomyelitis of the metacarpal bone; it had been opened under the impression that it was a whitlow. The temperature was 103° F. and there was vomiting and constipation.

Dr. G. RICHARDSON described a case of volvulus neonatorum. A male child was admitted when 4 days old and weighing 8 lb. 8 oz.; it was passing blood per anum continuously, and vomiting was persistent. The abdomen was soft. At the necropsy there was slight distension of the abdomen; the bowel was black and distended with blood. The stomach and duodenum were normal, but the whole small intestine was loose, without any mesentery, and there was anticlockwise rotation of the bowel. Death had occurred on the sixth day.

Dr. CHARSLEY described a case of nephritis in a child aged 6, with a history of recurrent pyelitis, scarlet fever in 1926, and tonsillectomy in December, 1927, followed by pyrexia, albuminuria, and haematuria. He also showed a child, aged 5, admitted in October, 1927, with a history of gastro-enteritis. There was a lump over the right temporal region, and bruising of the eyelid. The child was ill, fretful, and lost weight. Exophthalmos and ecchymosis developed, and the abdomen increased in size. The necropsy showed a sarcoma of the adrenals with hydronephroma; the lump over the eye was also sarcomatous.

Drs. G. JONES, HALLINAN, CHARSLEY, BEATTIE, and DAVIES joined in the discussion. Dr. BUCHAN proposed, and Dr. HALLINAN seconded, the vote of thanks to the hospital staff.

#### METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.

A MEETING of the Marylebone Division was held on January 18th, by the kind invitation of Mr. H. S. Wellcome, at the Wellcome Historical Medical Museum, Wigmore Street. Mr. MALCOLM, the curator, gave a demonstration of the general arrangement of the museum and of the objects of interest in the various sections, which was much appreciated by the sixty members who attended.

A vote of thanks to Mr. Wellcome, proposed by Dr. JOHNSON ROBERT, chairman of the Division, was carried by acclamation. The museum contains a unique collection of specimens of historical interest, and Mr. Malcolm stated that it was open every week-day, and that members of the profession and their friends were always welcome to visit it on presentation of their visiting cards.

#### METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.

At a meeting of the Willesden Division on January 18th Dr. CHRISTINE MURRELL gave an address on the subject of nursing homes for middle-class patients.

Dr. Murrell pointed out that nursing home facilities were very greatly needed for the middle classes, and more particularly for the lower middle classes, to whom the acceptance of charity from the general hospitals was repugnant, and for whom these institutions were not intended. In planning the provision of hospitals for these patients it was most essential that the charges made by such homes should be kept within the means of the lower middle-class patient. Several suggestions for the provision of nursing accommodation had been put forward and merited consideration. One was that the general hospitals should segregate a proportion of beds in their wards for paying patients; this Dr. Murrell thought inadvisable and inadequate on various grounds. A second suggestion was that hospitals should equip paying nursing homes where the services of the hospital would be available for the patients; this, as a general application, was thought unsatisfactory, for many hospitals had already reached so great a size that further extension would entail such difficulties of organization that the expense per patient would be increased rather than diminished. Vested interests in the nursing home under such a scheme would almost certainly become established. Dr. Murrell emphasized strongly the point that whatever scheme of nursing home was ultimately adopted, the principle of continuity of treatment, whereby the family physician should be in charge of the patient throughout his stay in the home, should be strictly adhered to, and that this principle would be in the best interests both of the patient and of the practitioner. Neither of the schemes alluded to would allow of the adoption of this principle. A third suggestion had been that independent nursing homes of comprehensive size, and containing all necessary ancillary services, should be erected, and run on a profit-making basis. Dr. Murrell thought that it would not be possible to make such a venture financially sound and at the same time accomplish the purpose for which it came into existence—namely, the supply of nursing accommodation to the majority of the lower middle classes at prices within their means. Dr. Murrell suggested a scheme whereby the assistance of the King Edward VII Hospital Fund would be invoked to supply the capital expenditure, and that

the nursing homes thus provided should be run by suitably chosen committees. A resolution urging the necessity for the provision of middle-class nursing homes was passed by the meeting.

A hearty vote of thanks to Dr. Christine Murrell for her interesting and stimulating address was moved by Dr. WILLIAM PATERSON, seconded by Dr. G. W. R. SKENE, and was passed unanimously.

#### NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.

A MEETING of the North Northumberland Division was held in the Infirmary, Alnwick, on January 10th, when Dr. LAWRIE was in the chair. It was unanimously decided that a letter be sent to each member of the Division asking him to subscribe £1 to the B.M.A. Charities Fund, those present at the meeting agreeing to pay that amount forthwith. At the close of the business meeting a most interesting and instructive address on abdominal emergencies was given by Mr. HAMILTON BARCLAY, for which he was very heartily thanked, on the motion of Dr. SCOTT PURVES. Tea was kindly provided by the matron after the lecture.

#### SOUTHERN BRANCH: PORTSMOUTH DIVISION.

A MEETING of the Portsmouth Division was held at the Queen's Hotel, Southsea, on January 12th, when Dr. LITTLE was in the chair.

Dr. E. MAPOTHER, medical superintendent of Maudsley Hospital, gave an address on the possible co-operation of the profession in the treatment of mental disorders. The speaker indicated the general practitioner as the only possible observer of the genesis and early development of mental disorder; his obligation to ensure suitable hospital treatment for the poor, when available; the greater likelihood that early treatment would be accepted by the well-to-do if it remained chiefly in his hands; and a possible solution of difficulties by association of clinics for voluntary treatment of curable cases in the poor, with paying homes for the well-to-do under the care of their own doctor.

An interesting discussion ensued, in which Mr. INMAN, Dr. MEARNS FRASER, Dr. BEATON, Dr. BOSWORTH WRIGHT, Dr. MONTAGUE WAY, and Dr. STEVENSON took part. A very successful meeting was brought to a close by a cordial vote of thanks proposed by Dr. PHILIP GREEN, and seconded by Mr. LUMB. The attendance at the meeting was over 50, of whom 34 sat down to supper.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH.

A CLINICAL meeting of the South Wales and Monmouthshire Branch was held at the Royal Gwent Hospital, Newport, on November 19th, 1927.

Professor A. W. SHEEN demonstrated two cases of cyst of the mandible, illustrated by plaster casts and skiagrams. The first patient was an edentulous woman, aged 51, with a swelling of eight weeks' duration outside the left lateral incisor and canine. The second patient was a lad, aged 18, with a swelling of the same duration outside the position of the right first and second molars. In both cases the bony walls were removed, the contents of the cyst evacuated, and the cavities healed eventually. The first case was regarded as osteitis fibrosa cystica and the second as a dental cyst. Professor Sheen then discussed twenty-one cases of pelvic injury seen during five years in the surgical unit at the Cardiff Royal Infirmary.

Mr. LAMBERT ROGERS showed a case of spinal tumour (meningioma) in a girl, aged 17, who was completely paraplegic and incontinent. Laminectomy was performed and the tumour removed; there had been no recurrence during eighteen months, and the only remaining symptom was a very slight limp in walking, due to some spasticity of the right leg.

Lieut.-Colonel W. K. BEAMAN showed a case of oedema of the feet and legs in a woman, aged 35, believed to be early parenchymatous nephritis with little involvement of the kidney, no cysts being present in the urine.

Dr. P. C. INGRAM showed a case of aortic aneurysm of syphilitic origin, which had responded well to silver salvarsan and kbar-sulphan with colloidal iodine. He also described the thallium method of treating ringworm of the head, a single dose of not less than 8 or more than 9 mg. for each kilogram of body weight being administered by the mouth in some sweetened water. About the seventh day the hair began to loosen, and by the twenty-first had completely come out, with the exception of a downy fringe above the forehead, which, apparently, was never infected with ringworm. Parasticidal ointment, consisting of one part of phenol and two parts each of sulphur ointment and unguentum hydrarg. nitratils, was rubbed into the scalp night and morning to prevent reinfection of the new hairs, which soon began to grow rapidly. Toxic symptoms were frequent, and consisted of pains and occasional effusion into a joint, drowsiness, malaise, and, rarely, albuminuria. The joint trouble was relieved readily by salicylates, internally and externally, while the drowsiness yielded to thyroid extract.

Dr. T. I. CANDY showed three radiographs of a condition of the fibula discovered while examining a man, aged 24, who had been injured while playing football. Three minute cysts appeared close together at the site of injury, and callus was produced around them subsequently. The cysts invaded the callus, and a diagnosis of myeloid sarcoma was made, necessitating resection of the middle third of the fibula. The unusual features of the case were that the patient was unconscious of pain or swelling until the time of the injury, and the underlying morbid condition would have been easily overlooked but for the clarity of the first radiograph revealing the minute cysts.

Dr. H. CATTO gave a demonstration of pathological sections of microscopic slides, including the invasion of the chest wall by an epithelioma primarily situated in the hand; carcinoma of the

sigmoid colon, producing complete occlusion; malignant endocarditis of the left auricle, with freedom of the valves from disease; and actinomycosis of the Fallopian tube.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH: CARDIFF DIVISION.

The annual dinner and dance of the Cardiff Division took place at Cox's Café, Cardiff, on January 18th, when Dr. T. W. THOMAS (Caerphilly) presided. The Lord Mayor and Lady Mayoress and Mr. J. Alcock (city treasurer) were among those present.

After the loyal toasts had been honoured, Principal A. H. TROW of University College, Cardiff, proposed prosperity to the British Medical Association. He said that the members of the medical profession were more individualistic than those of any other profession. Though inclined to agree with the old saying that two doctors would never agree, he was sure that on the question of the British Medical Association they were all agreed. He regretted the relatively slow rate at which research in medicine was being carried on, and felt convinced that it could be greatly accelerated by closer association and collaboration with those engaged in the realm of pure science. He was quite sure that the important researches on cancer and other diseases would make much more rapid progress if the medical profession would adopt a greater degree of team work with workers in other sciences. He congratulated the Cardiff Division on the fact that the British Medical Association was to hold its Annual Meeting there this year.

Sir EWEN MACLEAN, in responding, said that every medical man cordially endorsed Principal Trow's plea for greater co-operation in their researches with other sciences. It was, he said, forty-two years since the British Medical Association had held its annual meeting in Cardiff, with a membership numbering 9,000, whereas this year it was around 35,000. There would be a very distinguished gathering at the meeting in July, including eminent members of the profession from the fringes of the empire, as well as from Europe and America. There would be sixteen scientific sections, which would meet in the University College, Cathays Park, which had been practically put at the disposal of the Association for the week. Among the unique features of the meeting would be an exhibition in the National Museum of ancient Welsh medical relics, and he was hoping the display would include the first gold medal presented by the British Medical Association, which was awarded in 1877 to Dr. H. A. Davies for his skill and bravery in the Tynewydd Colliery disaster. They were proud that Dr. Davies's son was a member of their Division.

Dr. W. E. THOMAS, who also responded, expressed his admiration for the work of such a democratic body as the British Medical Association, which had improved the status of the profession in the army and navy, and had upheld the position of medical practitioners under the National Insurance Acts.

Dr. H. G. COOK proposed the toast of "The Guests," coupling with it the names of the Lord Mayor and Mr. John Alcock. The LORD MAYOR, in responding, stated that he had promised to do all he could to make the Annual Meeting of the Association in July a success. Mr. ALCOCK, who also acknowledged the toast, said that the Cardiff Corporation would leave no stone unturned to make the forthcoming Annual Meeting of the British Medical Association a memorable occasion.

Dr. T. W. THOMAS responded briefly to the toast of "The Chairman," proposed by Dr. COLSTON WILLIAMS.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH: SOUTH-WEST WALES DIVISION.

A MEETING of the South-West Wales Division was held on January 11th at the Carmarthenshire Infirmary, Carmarthen, when a large and very appreciative audience heard a most excellent and instructive lecture by Dr. FREDERICK W. PRICE (London) on some recent advances in the diagnosis, prognosis, and treatment of heart disease.

The lecturer dealt with his subject in a most interesting fashion, and by frequent blackboard diagrams illustrated points of difficulty in a most pleasing manner. It was felt by all present that they had derived real help in a subject full of difficulties for practitioners far removed from a teaching hospital.

At the close of the lecture a hearty vote of thanks was conveyed to Dr. PRICE by Dr. D. H. PENNANT, D.S.O. (chairman), and seconded by Dr. A. THOMAS, who said that he and others had come over fifty miles to hear the lecturer, and it had been well worth their trouble. Dr. PRICE having responded, tea was served.

#### SOUTH-WESTERN BRANCH.

AN intermediate meeting of the South-Western Branch was held in the library of the Royal Devon and Exeter Hospital on January 19th. There was a moderate attendance of twenty-two, and Colonel RAMSON PICKARD, C.B., was in the chair.

Mr. NORMAN LOCK read a paper on some remarks on puerperal fever. He gave a very interesting sketch of the difficulties that a surgeon has to contend with in such cases, and by illustrations from his own cases showed that these conditions are frequently of a fulminating type. A vigorous discussion followed the reading of the paper.

Dr. R. L. TAILL read notes on a case of macerated foetus with gas gangrene, which served to show the great odds that general practitioners very frequently are up against, particularly in the country, and illustrated the heroic measures that may be necessary.

Dr. R. V. SOLLY gave a long paper on some observations of cerebro-spinal fluids. He pointed out the great frequency with which an expert examination of the spinal fluid might be of extreme diagnostic value.

#### SURREY BRANCH: GUILDFORD DIVISION.

An ordinary meeting of the Guildford Division was held at the Royal Surrey County Hospital, Guildford, on December 1st, 1927. Mr. H. B. BUTLER was in the chair, and a large number of members were present, including some dozen members of the Midwives Association branch of the Midwives Institute.

#### Address on Puerperal Sepsis.

Dr. JAMES MONTAGUE WYATT, assistant obstetric physician to St. Thomas's Hospital, gave an interesting address on puerperal sepsis. He commented first on the fact that the mortality from this disease had not appreciably declined in the last sixty years. The Registrar-General's figures for 1847 to 1881 showed a death rate of 1.8 per 1,000, and for 1916 to 1920 of 1.48 per 1,000, which indicated that in spite of the great advance in antisepsis with regard to general surgery, a corresponding advance had not been shown in regard to obstetrics. The chief organism concerned was the haemolytic streptococcus, which was found in from 75 to 80 per cent. of all cases. The question was, What was the source of the organism? It had in the past been considered that it was present on the examining finger or on instruments introduced into the vagina; but that would not account for cases of infection that occurred when no examination at all had been carried out. Other possible sources might be the mouth of the attendant, or the mouth or vagina of the patient concerned. Investigations on these lines were now being carried out by Dr. Wyatt in connexion with his work on puerperal infections for the Metropolitan Asylums Board. In regard to predisposing causes, there seemed to be no doubt that the resistance of each individual patient was a potent factor, and that the resistance was undoubtedly lowered by such conditions as prolonged labour, difficult or instrumental delivery, extensive laceration of the soft parts, and haemorrhage. The toxæmia of pregnancy and previous ill health of the patient from causes other than the pregnancy had to be considered. The results of infection varied considerably, and there seemed to be no means of deciding what the condition was which caused the variation. In the first place there was a local infection of the vagina and uterus, which in the past had been termed "sapraemia." Then there were cases in which the infection in the Fallopian tube spread to the peritoneal cavity, producing usually a localized peritonitis, but sometimes a general peritonitis. Thirdly, there was a general infection of the blood stream; and, lastly, those cases not manifesting themselves until the tenth or fourteenth day of the puerperium. Other conditions mentioned were thrombosis of the femoral vein and pelvic cellulitis.

With regard to treatment, in cases of local infection there seemed to be no doubt that the less the interference the better the results. Vaginal douching with one of the antiseptics of the chlorine group, the promotion of drainage by Fowler's position, and the administration of an active principle generally proved

Remington delay in the condition settling. Hobbs's method of intrauterine glycerin injections<sup>1</sup> was of great help. Intrauterine manipulation, except in cases of incomplete abortion, should be avoided. In cases of peritonitis, provided the condition remained localized, expectant treatment again appeared to give the best results; but if there was any evidence of the condition becoming generalized, then laparotomy and drainage should be carried out at once, and combined with this, massive injections of anti-B. *wellchii* serum, as advocated by Williams in his paper in the *Journal of Surgery*. With regard to general infection of the blood stream, the outlook was not at all cheerful; there was at present no specific treatment at all. At the Metropolitan Asylums Board's hospitals various preparations of arsenic and mercury had been tried, but no good results had been obtained. However, it was only by prolonged perseverance that specifics for other diseases had been found, and it was to be hoped that the same good results might eventually be obtained in the treatment of septicæmia. At present, therefore, prophylaxis seemed to be of tremendous importance. The introduction of ante-natal clinics had undoubtedly reduced the number of difficult labours and lessened the number of severe cases of toxæmia, and as the number of these clinics increased, and with it the proficiency of those in charge, this would be a help. Still, it the proficiency of those in charge, this would be a help. Still, great care must be taken during the actual confinement, and any source of infection, either in the patient or attendant, especially from the mouth and teeth, should be looked for and dealt with. An instructive discussion followed, in which Drs. LAWTON MOSS, FLEMING, PARKER, the CHAIRMAN, and the honorary secretary, Dr. G. M. BLUETT, took part. Dr. WYATT, having replied to the questions addressed to him, was accorded a very hearty vote of thanks for his kindness in coming to address the Division on such an important subject to medical practitioners.

#### ULSTER BRANCH: PORTADOWN AND WEST DOWN DIVISION.

A MEETING of the Portadown and West Down Division was held in the Swan Café, Armagh, on January 18th, when twenty-two members were present, which, considering the weather and the distances to be travelled, was very good.

The CHAIRMAN (Dr. W. J. Dawson), before opening the meeting, referred in feeling terms to the loss the Division had sustained by the death of Dr. J. Singleton Darling, who took part at the last meeting, and moved that the sympathy of the Division be recorded on the minutes and also conveyed to Mrs. Darling; this was passed, all present standing. The chairman also referred to the loss by death of Dr. James Taylor, Tandragee, one of the senior members of the Division.

Dr. DEAN and Dr. T. B. Penlow reported some cases of surgical interest and showed pathological specimens. Mr. HOWARD STEVENSON (Belfast) read a paper on methods of

<sup>1</sup> BRITISH MEDICAL JOURNAL, December 31st, 1927, p. 1223.

examination and treatment of stomach cases; this was listened to with great interest and led to a lively discussion. The CHAIRMAN thanked Mr. Stevenson for his paper, and extended a hearty welcome to the vice-chairman, Admiral McKeown, R.N., who was present for the first time.

#### YORKSHIRE BRANCH: WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.

A MEETING of the Wakefield, Pontefract, and Castleford Division was held at the Great Bull Restaurant, Wakefield, on January 12th, when Dr. T. GINSON was in the chair.

The CHAIRMAN congratulated Dr. Hillman upon his appointment as Mayor of Wakefield.

Correspondence from headquarters of the British Medical Association regarding the inquiry into the treatment of varicose ulceration was read. On the motion of Dr. STEVEN, seconded by Dr. SCHOLEFIELD, it was agreed that the honorary secretary should write to all members of the Division asking for their active support.

Dr. HILLMAN gave an interesting, lucid, and thorough survey of the relationships of the insurance practitioner to his fellows and the public. He ventured the opinion that the reputation of the panel doctor was quite good now, and had gradually improved since the days of the inception of the Insurance Act, and he considered that the British Medical Association had done a good deal towards this end. He thought that every effort should be made to preserve the relationship of the doctor and patient upon the old "family doctor" lines. He also felt that the relationship of the doctor to the sanitary authority should be helpful, and at the same time critical, and that the future of medicine would undoubtedly be more on the preventive side than it had been in the past. In conclusion, Dr. Hillman discussed the question of excessive prescribing, and made a plea for the centralization of administration in medical affairs.

In the subsequent discussion, in which Drs. DOWKIE, GIBSON, GREAVES, RADCLIFFE, SCHOLEFIELD, STEVEN, SULLIVAN, WALKER, and TWIST took part, many interesting points were brought out.

### Correspondence.

#### A Referendum on Ophthalmic Benefit?

Sir,—May I subscribe my support to "Another Ophthalmic Surgeon" in his suggestion (SUPPLEMENT, January 14th, p. 11) for a referendum with reference to ophthalmic clinics?

Over two years ago I made the suggestion to the headquarters of the British Medical Association that the fee per case should be 10s. 6d.—that is, for the whole of the ophthalmic work amongst insured persons. I received a reply to the effect that the Ophthalmic Committee would not consider such a proposal, although I pointed out that the largest and most important approved societies were willing to agree to such terms. The reason given was that if a proposal of this kind were accepted, it was probable that some distinguished ophthalmic surgeons would retire from the list. Surely it would have been better to have permitted them to retire, and for the remainder to have received reasonable remuneration, rather than to have grasped the shadow of £1 1s. per case and lost the substance of 10s. 6d. per case.

I have not the slightest intention of hindering the progress of the difficult work of the Ophthalmic Committee, but it is patent that the committee is out of touch with the general feeling of, shall we say, the "new ophthalmic surgeons," who have been discovered by the British Medical Association list, and that the only way it can get to know that feeling is to take a referendum—and abide by the result. We shall then not drop from the Utopian £1 1s. to a sweated 6s. I am convinced that the large majority of the ophthalmic surgeons on the British Medical Association list would be willing to set apart a convenient number of, say, evening hours to ophthalmic benefit cases, if the whole of the eye cases were referred, at a fee of 10s. 6d. per case; patients requiring special appointments to bring the fee up to the usual private fee. It is useless to spend money on equipping clinics and on administration when everything necessary is available in ophthalmic surgeons' consulting rooms.—I am, etc.,

January 16th.

M.D.

### Naval and Military Appointments.

#### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander F. E. Anley is placed on the retired list with the rank of Surgeon Captain.

Surgeon Commanders L. S. Goss, O.B.E., to the *Pembroke* for R.N. Barracks, Chatham, temporary; A. G. Malcolm to the *Courageous* for trials and to the *Courageous* on commissioning; T. Cock to the *Cormorant*.

Surgeon Lieutenant Commander T. Madill to the *Ambrose*. Surgeon Lieutenants A. E. Phillips to the *Bee*, temporary; R. G. Anthony to the *Pembroke* for R.N. Infirmary, Deal; P. J. Maguire to the *Montrose*; C. B. Nicholson to the *Constance*; G. S. Rutherford to the *Ceres*; W. R. S. Panckridge to the *Alecto*; S. G. Weldon to the *Vernonia*.

#### ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon Lieutenant R. Pedlow to the *Rodney* for training. J. D. Simpson has entered as probationary Surgeon Sublieutenant and attached to List 2 of the London Division.

#### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel C. R. Sylvester-Bradley, half-pay list, late R.A.M.C., retires on retired pay on account of ill health.

Captain B. L. Davis, O.B.E., to be Major (prov.).

#### ROYAL AIR FORCE MEDICAL SERVICE.

Flying Officer J. D'I. Rear is promoted to the rank of Flight Lieutenant and is appointed to Headquarters, Iraq.

Flying Officers J. Hill and M. O'Regan to Headquarters, Iraq.

#### TERRITORIAL ARMY.

#### ROYAL ARMY MEDICAL CORPS.

Captain G. J. Pillans, M.C., late R.A.M.C., to be Lieutenant, with precedence as from November 13th, 1924, and relinquishes the rank of Captain.

Lieutenant N. Capstaff to be Captain.

### VACANCIES.

ALL SAINTS' HOSPITAL FOR GENITO-URINARY DISEASES.—(1) Honorary Consulting Physician. (2) Honorary Medical Officer. (3) Honorary Surgical Registrar.

DEVON COUNTY HOSPITAL.—Assistant House-Surgeon (male, unmarried). Salary £130.

BIRKENHEAD GENERAL HOSPITAL.—(1) Honorary Gynaecologist. (2) Honorary Orthopaedic Surgeon. (3) House-Physician (male); salary £150 per annum.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.11.—House-Surgeon (male). Salary £120 per annum.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—Honorary Physician for Out-patient Department.

CALCUTTA: PRESIDENCY COLLEGE.—Professor of Physiology. Pay Rs.800 per calendar month, rising to Rs.1,000 plus overseas pay of £25 a month.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—House-Surgeon (male). Salary at the rate of £130 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—House-Physician (male). Salary at the rate of £100 per annum.

CITY OF LONDON MATERNITY HOSPITAL, City Road, E.C.1.—Registrar. Honorarium at the rate of £100 per annum.

DEWSBURY AND DISTRICT GENERAL INFIRMARY.—House-Surgeon (male). Salary £200 per annum.

EDINBURGH: ROYAL EDINBURGH HOSPITAL FOR SICK CHILDREN.—Five Honorary Resident Medical Officers.

ELIZABETH GARRETT ANDERSON HOSPITAL, Euston Road, N.W.—(1) Assistant Radiologist (part time); £400 per annum. (2) Assistant Pathologist (part time); £150 per annum. Women.

GRANT YARMOUTH: GENERAL HOSPITAL.—House-Surgeon (male, unmarried). Salary £150 per annum.

HERTFORD COUNTY HOSPITAL.—Honorary Assistant Surgeon.

HOSPITAL FOR WOMEN, Soho Square, W.1.—Honorary Medical Officer in charge of Out-patients.

HULL: BEVERLEY ROAD INFIRMARY.—Visiting Operating Surgeon. Salary £200 per annum.

HULL ROYAL INFIRMARY.—Casualty House-Surgeon (male). Salary at the rate of £150 per annum.

LEICESTER ROYAL INFIRMARY.—(1) Honorary Physician. (2) Assistant Honorary Physician. (3) Casualty House-Surgeon; salary at the rate of £125 per annum.

LIVERPOOL CORPORATION.—City Coroner. Salary £1,000 per annum.

LOCHMARON PARISH COUNCIL, Ross-shire.—Medical Officer and Public Vaccinator. Salary £133 per annum.

LONDON SCHOOL OF HYGIENE AND TROPICAL MEDICINE, Endsleigh Gardens, W.C.—Research Studentship in Protozoology. Value £250 per annum.

LONDON UNIVERSITY.—University Chair of Public Health, tenable at the London School of Hygiene and Tropical Medicine. Salary £1,300 a year, together with allowance of £200 a year.

MIDDLESBROUGH COUNTY BOROUGH.—Assistant to Medical Officer of Health (male, unmarried). Salary £450 per annum.

MOUNT VERNON HOSPITAL.—Assistant Physician.

PRESTON COUNTY BOROUGH.—Assistant School Medical Officer (male). Salary £600 per annum.

QUEEN MARY'S HOSPITAL FOR THE EAST END, E.15.—Anaesthetist. Honorarium 25 guineas per annum.

ROYAL LONDON OPHTHALMIC HOSPITAL, City Road, E.C.1.—Assistant Surgeon.

ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN, Plaistow, E.13.—Resident Medical Officer and Assistant Resident Medical Officer. Salary at the rate of £175 and £130 per annum respectively.

ST. THOMAS'S HOSPITAL.—Physician in charge of Out-patients.

SKIMEN'S HOSPITAL SOCIETY.—Honorary Assistant Physician at the Hospital for Tropical Diseases, Endsleigh Gardens, W.C.

SHEFFIELD ROYAL INFIRMARY.—Honorary Assistant Ophthalmic Surgeon.

SHOREBURGH BOROUGH COUNCIL.—Assistant Medical Officer of Health (male). Salary £650 per annum, rising to £750.

SHREWSBURY: ROYAL SALOP INFIRMARY.—House-Physician (male, unmarried). Salary at the rate of £160 per annum.

SHERBURN COUNTY BOROUGH.—Lady Assistant Medical Officer of Health and Assistant School Medical Officer. Salary £600 per annum.

SOMERSET COUNTY COUNCIL.—County Assistant Medical Officer. Salary £600 per annum.

STOKE-ON-TRENT: NORTH STIFFORDSHIRE ROYAL INFIRMARY.—(1) Honorary Assistant Surgeon. (2) Honorary Anaesthetist. (3) Honorary Assistant Rural Surgeon. (4) Honorary Assistant Orthopaedic Surgeon.

TRURO: ROYAL CORNWALL INFIRMARY.—House-Surgeon. Salary £170 per annum.

UNIVERSITY COLLEGE HOSPITAL MEDICAL SCHOOL.—Radcliffe-Crocker Travelling Scholarship in Dermatology. Approximate value £280.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—Honorary Obstetric Registrar.

WEST RIDING COUNTY COUNCIL.—School Oculist. Salary £600 per annum, rising to £700.

WILTS COUNTY COUNCIL.—School Dentist. Salary £500 per annum.  
WOLVERHAMPTON AND MIDLAND COUNTIES EYE INFIRMARY.—House-Surgeon.  
Salary £200 a year.

CRIPPLING F.—  
announced  
Peasenhall  
Fort William (Inverness);

MEDICAL REFEREES UNDER THE WORKMEN'S COMPENSATION ACT.—(1) Ophthalmic Specialist for County Courts in Circuits 15 and 17 (East Riding of Yorkshire and Lincolnshire). (2) For the districts of the Blandford, Bridport, Dorchester, Ringwood, Lyminster, Poole and Bournemouth; Wareham; Weymouth and Wimbome Minster County Courts (Circuit No. 65). Applications to the Private Secretary, Home Office, London, S.W.1, by February 7th and 10th respectively.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

### APPOINTMENTS.

CUTP, Cyril H., M.B., B.S., F.R.C.S.Ed., Consulting Surgeon to the Government of Cyprus.  
GEMMELL, Reginald W., M.D., Liverpool, D.M.R.E., Honorary Radiologist, David Lewis Northern Hospital, Liverpool, vice W. C. Oram, M.D., deceased.  
INGRAM, J. T., M.D., M.R.C.P.Lond., Lecturer on Diseases of the Skin, University of Leeds.  
RIDDETT, Stanley A., M.C., L.D.S., M.R.C.S.Eng., L.R.C.P.Lond., to be Honorary Dental Surgeon to the Royal London Ophthalmic Hospital (Moorfields Eye Hospital).  
STEELE, Richmond, M.B., Ch.B.Glas., Honorary Radiologist to Southport Infirmary.  
WHEELER, Donald R., M.B., B.Ch., B.A.O., F.R.C.S., Aural Surgeon to the Kent County Ophthalmic and Aural Hospital, Maidstone.

### DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.  
Section of History of Medicine.—Wed., 5 p.m., Dr. G. A. Auden: (1) The Child of the Barber Surgeons of the City of York; (2) An Ancient Medical Manuscript in the Library of York Minster.  
Section of Surgery.—Wed., 8.30 p.m., Pathological Evening.  
Section of Tropical Diseases.—Thurs., 8.15 p.m., Discussion: Life Assurance in the Tropics. To be opened by Sir William Prout, followed by Mr. H. E. Raynes and Dr. J. F. C. Haslam.  
Section of Laryngology.—Fri., 4 p.m., Cases.  
Section of Anaesthetics.—Fri., 8.30 p.m., Mr. A. Douglas Cowburn: Death occurring under operation or before recovery from anaesthesia.  
Section of Otolaryngology.—Sat., 9.30 a.m., Cases. 10.30 a.m., Dr. Alexander Fleming: The Bactericidal Power of the Blood and Methods of Altering It; Dr. A. Lowndes Yates: Methods of Estimating Alterations in the Middle Ear by means of Quantitative Tests of Hearing (demonstration of audiograph).

ROYAL COLLEGE OF SURGEONS, Lincoln's Inn Fields, W.C.2.—Mon., 5 p.m., Mr. W. E. M. Wardill: Cleft Palate. Wed., 5 p.m., Mr. H. S. Souttar: New Methods of Surgical Access to the Brain. Fri., 6 p.m., Mr. E. M. Atkinson: Abscess of the Brain.

### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Lecture at Medical Society of London, 11, Chandos Street, W.1: Mon., 5 p.m., The Principles of Spa Treatment. Brompton Hospital for Chest Diseases, Brompton: Mon., 10 a.m., Clinical Demonstration, Royal National Orthopaedic Hospital, 234, Great Portland Street, W.; Thurs., 2 p.m., Special Clinical Demonstration. Royal West Charing Cross, W.C.2: Fri., 5 p.m., Lecture—Its Causes and Treatment. Bethlehem R Fields, S.E.1: Course in Psychological Medicine, Tues. and Sat. at 11 a.m.; proportionate fees payable.

CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Mon., 1.30 p.m., Examination of Accessory Sinuses. Wed., 1.30 p.m., Examination of Larynx.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Thurs., 4 p.m., Broncho-pneumonia.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs., 4 p.m., Respiratory Diseases in Child and Adult.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Tues., 5 p.m., Alopecia. Thurs., 5 p.m., Xanthoma, Herpes.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

ROYAL INSTITUTE OF PUBLIC HEALTH, 37, Russell Square, W.C.1.—Wed., 4.30 p.m., Medical-Legal Problems of Lunacy.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.—Tues., 3.15 p.m., Anaesthesia. St. Paul's Hospital, Endell Street, W.C.2.—Thurs., 4.30 p.m., Some New Devices in Urinary Surgery.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION, St. James's Hospital, Ouseley Road, Batham, S.W.12.—Wed., 4 p.m., The Surgical Aspect of Goitre.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.5.—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations, Skin Department, Surgical Wards; 2 p.m., Surgical Wards, Gynaecological and Eye Departments; Tues., 10 a.m. to 1 p.m., Medical Ward Visit, Demonstrations in Venereal Diseases; 2 p.m., Medical Wards, Throat, Nose, and Ear Department. Wed., 10 a.m. to 1 p.m., Children's Medical Out-patients, Medical Wards, Demonstration in Medical Pathology; 2 p.m., Surgical Wards, Eye Department. Thurs., 10 a.m. to 1 p.m., Neurological Department, Demonstration of Fractures; 2 p.m., Eye and Genito-urinary Departments, Gynaecological Ward. Fri., 10 a.m. to 1 p.m., Gynaecological Operations, Dental, Skin, and Electrical Departments; 2 p.m., Throat, Nose, and Ear Department. Daily: Operations, Medical and Surgical Out-patients at 2 p.m.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Royal Hospital for Sick Children, Wed., 4.15 p.m., Medical Cases.  
MANCHESTER: ST. MARY'S HOSPITALS (WHITWORTH STREET WEST BRANCH).—Fri., 4.30 p.m., Occipito-Posterior Positions.  
SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.—Fri., 3.30 p.m., Clinical Cases.

#### CONFERENCE ON PUERPERAL MORBIDITY AND MORTALITY.

##### THE PREVENTIVE ASPECTS OF MIDWIFERY.

A CONFERENCE on puerperal morbidity and mortality, called on the initiative of the British Medical Association committee entrusted with that subject, was held at the Association House, Tavistock Square, on January 11th. In addition to members of the committee, those attending included representatives of the Ministry of Health, the Scottish Board of Health, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Royal Society of Medicine, the Central Midwives Board, and the Society of Medical Officers of Health, and there were certain other medical men present by invitation. In the unavoidable absence of Sir Ewen Maclean (chairman of the committee), Dr. T. WATTS EDEN presided, and the first part of the proceedings was given up to the reading of four short papers dealing with distinct aspects of the subject, after which there was a general discussion.

The CHAIRMAN sketched briefly the objects of the committee and the nature of its uncompleted investigations. Its desire was to encourage the medical profession to view the preventive aspects of midwifery in a more serious light than hitherto. Despite the noteworthy increase in midwifery beds, the progress towards a solution of the whole problem had not been as great during the last few years as might have been hoped, and the question was whether the best use was being made of the means available. He hoped that that conference would bring forth some practicable suggestions.

##### Co-operation of Medical Practitioner and Midwife.

Dr. J. S. FAIRBAIRN, in an opening paper, recapitulated some of the points discussed by him in a previous paper published in the BRITISH MEDICAL JOURNAL (January 8th, 1927, p. 47) as to why the midwives of the Queen Victoria Jubilee Institute were able to attend some 50,000 confinements a year and declare a mortality rate below half that of the country as a whole. He explained that in his view it was because the medical man called in to midwifery cases had to do more than secure normal function—he had to relieve the patient. It was relief that the parturient woman asked for from her medical attendant, and this was usually given by anaesthesia and a speedy and artificial end to labour. But, as hospital records

showed, all internal interference involved an increased morbidity. Under good conditions the risk was very small, but in total, spread over thousands of cases, it accounted for an appreciable addition to mortality. On the other hand, the class of women attended by midwives, with medical assistance available for difficult and complicated cases, showed a lower mortality because of less interference. Incidentally, Dr. Fairbairn expressed his entire disagreement with the policy of the British Medical Association in seeking to prohibit the use by midwives of such simple sedatives as laudanum and chloral. The commonest causes of weakening of uterine powers were fatigue and the emotional disturbance from anxiety and recurrent pains. To remove the cause was the first principle in preventive medicine, and to treat a condition at its very beginning was the second. A dose of laudanum sufficient to give relief and rest for the time would often secure a natural end to labour. He differed also from the Association's Maternity and Child Welfare Subcommittee in its attitude towards the ante-natal record card issued by the Central Midwives Board for the use of midwives. If pupil midwives were taught ante-natal work they must be expected to carry it out in practice, and, in his opinion, the more that could be done in the way of ante-natal work by the midwife the better; it would all help to narrow the mesh of the net. It was the midwife rather than the doctor who might often have the opportunity of going through the obstetrical part of the ante-natal examination of the woman. He hoped it would not be long before there came about the gradual adoption of the midwife as one of the team in private practice. The chief difficulty in the way was that of attracting the best type of trained women into practice. Not one-quarter of the women who took the C.M.B. examination practised as midwives, and of those who did so very few were the highly trained. Something might be done to attract a better class into the service if the posts of health visitor or inspector of midwives or other whole-time jobs in the health service were awarded to those well trained women who had borne the burden of day and night in the rough-and-tumble of midwifery practice.

##### Bacteriological Investigation.

Dr. LEONARD COLEBROOK raised the question of the practicability of preventive immunization against the risk of puerperal infection. Unfortunately, no satisfactory evidence was as yet available from lying-in wards that women could actually be protected in this way. The haemolytic streptococcus as the cause of puerperal fever had been known for many years, but the results of most workers along this line of inquiry had been negative. Nature was niggardly in her arrangements for killing these organisms. Certain experiments with vaccines had, however, been made abroad for which encouraging results were claimed. He showed a chart giving the results obtained by Jotten in Germany, relating to something like 1,500 women. This worker, starting with small doses of a vaccine, found an

increase in phagocytic power and a steady decrease in the percentage of morbidity as the dose was given in larger quantities. The speaker also cited figures by Maroudi of Athens, comparing 1,200 inoculated cases with 780 cases uninoculated. Here again there was a suggestion of benefit. In the inoculated group there were no deaths and only two local streptococcal infections; in the non-inoculated group there were seven deaths and eight local infections. This was all the evidence the speaker had been able to find in literature. It was certainly premature at present to suppose that the parturient woman could be successfully immunized. Certain difficulties came to mind in connexion with this prophylactic work. When was it going to be carried out? If before labour, would the immunity be lost should labour be delayed? And if during labour, was there any possibility that harm might be done or that the immunity might not be conferred in time? He thought the committee might usefully consider whether arsenical drugs could not hopefully be employed in prophylaxis. With regard to treatment, there were two schools of thought among research workers. One school, having in mind the recent work on scarlet fever, looked upon puerperal fever as primarily a toxæmia—in other words, that there was a specific toxin produced by the streptococcus which must be neutralized. The other school thought it not proved that toxin was the essential feature, but rather that the micro-organism itself appeared to find conditions for multiplication and proliferation in the patient's body, and that the problem was to kill the micro-organism. Dr. Celebrook inclined to the latter view, and pointed out certain distinctions between scarlet fever and puerperal fever. The object should be to help the body to kill off the streptococci rather than primarily to neutralize the toxins. Here came in the usefulness of organic compounds of arsenic, which in nearly all patients increased the power of the blood to kill streptococci, and in all of them increased the power of the serum. He emphasized the necessity of getting the cases at the earliest stage, and the advisability of arsenical treatment in every case that developed even a small temperature.

#### *Midwifery and the General Practitioner.*

Dr. C. E. DOUGLAS, a member of the B.M.A. Committee, in a further paper, touched upon the vexed question of instrumental intervention. His impression was that the midwife of to-day, in many parts of the country at any rate, held on to her case till she felt that it was not going to do alone, and sent for the doctor really that he might give the relief that was desired. Therefore, a high proportion of cases would necessarily be forceps cases. This might be contemplated with perfect equanimity if men would observe two simple rules: perfect antiseptics, and withholding of the forceps until the second stage had gone on for over two hours. In thirty years' practice, out of 1,620 cases he had applied forceps 283 times. There were no deaths, but during that time he had two deaths from sepsis in specially easy cases. Another question bearing on the point of co-operation was whether the midwife should give drugs. Strictly speaking, she should not. She was allowed only to undertake normal labours, which should not require drugs. But of late years there had come a change in practice. For many years it was considered bad form to give opiates. At present this was not the case, largely by reason of the so-called "twilight sleep" method. If midwives were to be encouraged to adopt a waiting attitude they should certainly be trained in the use of morphine and chloral; pituitrin he thought pretty dangerous, even in other hands than theirs. With regard to medical education, there was an impression that the medical student was being imperfectly trained. The available clinical material was limited, and had now to be shared with the growing class of pupil midwives. Another thing to be said was that if it was desired to send out competent and reliable men this would not be done by putting "the fear of death" upon them if they so much as dared to apply forceps. Men should be trained and warned, not frightened. Ante-natal care had immense possibilities. The effect of the recommendation of the Scottish Departmental Committee—that this be made compulsory for students—would be far-reaching and beneficial. It was surprising—vide that report—that the watch for eclampsia should require emphasis at this late day. Since 1899 watch had been kept by him on every woman who had engaged him for her confinement, and he had had no case all these years. As a general scheme for the future nothing could be better than that ante-natal care should

be with the doctor, the actual confinement under the midwife, with the doctor in reserve for emergencies, and hospital treatment for exceptional cases; and that the doctor should see, by post-natal examination when requisite, that the woman was restored to functional efficiency.

#### *The Role of the Medical Officer of Health.*

Dr. DUNSTAN BREWER discussed the subject from the point of view of the special duties of the medical officer and his staff which bore upon the reduction of maternal morbidity. These duties, he said, were of three kinds—those relating to the people themselves, to his professional colleagues, and to scientific investigation. The duties under the first head were to ensure that all persons in his district could obtain such medical skill as was available, and that they did in fact obtain it, and obtain it in time. His duties to his colleagues were embodied in the Midwives Act and the Puerperal Pyrexia Order. The provisions of the latter had given rise to some objections, due entirely to misunderstanding. About one delivery in fifty was followed by pyrexia as defined by the Order—an average of two notifications by every practitioner in a year. The notification form allowed the practitioner to ask for certain facilities if he required them. It was for the practitioner to say what he wanted, and for the medical officer to see that it was forthcoming. With regard to the third part of the medical officer's duties, the investigation of maternal deaths could be undertaken only by the public medical service. These inquests required great tact, and were impracticable unless the medical officer was on the most friendly terms with the practitioners in his district. In his own experience, in his district he had not discovered a single case of a mother who had lost her life through lack of medical skill, though many had died because that skill was not available until too late. The midwives were occasionally to blame, but the patients themselves were the chief offenders, occasionally from stupidity, more often from ignorance. The public health service might also not be without fault for failing to supply facilities which it was its duty to supply. If the compulsory notification of pregnancy were feasible and properly carried out, and sound administration founded upon it, it might put a stop to maternal mortality. At present such a provision was not practicable, but without it much might be done to prevent fatalities by supervision in pregnancy as far as possible, involving machinery for drawing upon medical skill without difficulty, formality, or delay, and other machinery, non-medical in character, whose main function was to watch and to detect immediately any departure from a state of health when medical intervention must be sought.

#### GENERAL DISCUSSION.

Professor BECKWITH WHITEHOUSE (Royal Society of Medicine) said that during the last few years there had been, in connexion with the Maternity Hospital at Birmingham, an experimental clinic with a team headed by a sister who really knew her job, intent upon securing sufficient ante-natal care in some of the worst districts of the city. The women were attended in their own homes, none but selected cases going on to hospital. In the first 1,000 cases the morbidity rate was only 2 per cent., and only one woman in the 1,000 died—from ruptured uterus—but she, as it happened, had not had the full ante-natal supervision. In contrast to this he mentioned what he had discovered in a high-class maternity nursing home—the incidents, all happening within one month, were touched for by the matron and sisters—namely, a refusal to have obstetric forceps boiled, a refusal to wear a sterilized gown during labour, the placing of sterilized instruments upon an unsterilized area, and the use of silkworm gut direct from a box without sterilization of any kind. None of the cases went wrong, but that was a wonderful testimony to the resistance of the patients. As a constructive measure he urged the special post-graduate training of certain general practitioners, particularly to imbue them with "surgical sense" and to make them obstetric specialists, and that the possibility might be considered of obstetric work in any area being in charge of men who held a post-graduate diploma, and who would hand over normal cases to the midwives and pass on to maternity hospitals cases of grave obstetric difficulty. Something must be asked also from the midwife. More care might well be taken to eliminate unsuitable women; the training of midwives might be improved by the greater concentration of training centres, so that the best teachers would be more generally avail-

able; post-graduate training might be made universal; and no age limit for retirement from the service imposed. He also suggested the provision of depots where sterilized gowns, towels, and gloves would be available for obstetric purposes. An ante-natal centre would be the ideal place for this, and the cost, in the case of the poor, might be defrayed from maternity benefit. Another suggestion was that the committee should draw up a form, to be completed by the practitioner called out to a case of pyrexia during the puerperium, and forwarded to the inspector. A little care was necessary lest there be any loophole in the puerperal pyrexia regulations.

Dr. MADEL RAMSAY (B.M.A. Committee) asked why Dr. Colebrook had recommended arsenic. She had had good results with colloidal silver in about fifteen cases, treated with doses of 10 to 20 c.cm.

Mr. WYATT pointed out the wide field for investigation which remained in connexion with the sources of infecting organisms. Until the source and mode of conveyance were known it was difficult to advise midwives and practitioners how to avoid puerperal infection. It could not be doubted that in a great many cases there was mouth infection, haemolytic streptococci being breathed by the obstetrician into the vagina. In general surgery no one would think of opening the abdomen without wearing a mask. With regard to treatment, he was not quite so hopeful of arsenic as Dr. Colebrook. He had seen no really encouraging results with this agent, though he could speak only of a limited number of cases, and therefore perhaps he was not in a position to judge.

Dr. MIDDLETON MARTIN (Society of Medical Officers of Health) spoke of the conditions in Gloucestershire, with a population of 330,000, where, when the Midwives Act came into operation, there were 250 untrained women and 25 trained. These figures were now reversed, but, so far as he could observe, there had been little change during these twenty-five years in the incidence of disease. In 1927 there were sixteen cases of puerperal fever notified in his area. An analysis, which was incomplete, bore out Dr. Fairbairn's point that it was not only in cases where there had been intervention that these conditions arose. Out of 46 cases analysed, there had been no intervention in 20. Despite the most elaborate precautions, infection was in some way introduced. Was it necessary to assume in puerperal cases that there was an introduction of organisms from without? Much could be learned and much could be done by following up the slight cases. His experience of the work of midwives, especially those connected with the county nursing association, had been favourable; he admired their patience and conscientiousness. One of the difficulties in a large area like Gloucestershire—1,250 square miles—was to spread the machinery so that no part of it should be neglected. It was important, he thought, that there should be a room in every cottage hospital to which the pregnant woman could go.

Mr. DONALD W. ROR (Royal College of Surgeons) gave statistics relating to the work of a hospital ante-natal service. In the period 1904-09, when a good deal of ante-natal work was done, although it was not systematized as it became later, there were 4,200 in-patient and 12,365 out-patient deliveries, with 20 deaths, a mortality of 0.13 per cent. Of the 20 patients who died about 15 had been sent in by doctors or came from neighbouring institutions for which the service itself was not responsible until the moment of admission. Ten of the deaths were due to eclampsia, and one to sepsis. In the period 1922-26 there were 4,719 in-patient and 8,348 out-patient deliveries, and the total deaths numbered 13, or 0.099 per cent. Seven of these fatal cases were emergencies, with which, ante-natally, the service had had nothing to do. Of the 13 deaths one was due to eclampsia and one to sepsis. This was primarily a midwives' service, supervised by medical men, chiefly the house-physician. The extreme value of ante-natal work needed no emphasis. In the cases covered by a well organized service it was rare for a quite unforeseen emergency to arise. There was still need for propaganda among practitioners generally with regard to the value of systematic ante-natal work, and also of extremely good antiseptic technique, should intervention be necessary. He did not agree that there was a tendency on the part of teachers to put the "fear of death" into the men who used forceps, but the pendulum having swung so far in the direction of operative intervention, it was not remarkable if teachers tried to correct matters by stating the other case. He thought it most important that

lying-in institutions should be of sufficient size to have resident medical officers working under the supervision of skilled obstetric teachers. The multiplication of small maternity homes was not for the good of obstetric teaching in the long run.

Mr. E. B. TURNER (B.M.A. Committee) gave some interesting details of his father's practice in Dorset, Essex, and London from 1841 to 1882, during which time he treated nearly 2,000 midwifery cases, under all sorts of conditions, and did not lose one of them; also of his uncle who, qualifying in 1836, practised until 1886, and had nearly 4,000 cases of midwifery, with only seven deaths, five of them in one month, due to a scarlet fever infection. He was not advocating a return to the conditions under which those men worked, but he thought there was something in the success of those old practices which, if it were studied, might bring very near a solution of the present problem.

Dr. CHRISTINE MURRELL (B.M.A. Committee), speaking as a general practitioner, said that there did not seem to be sufficient evidence that puerperal sepsis was due entirely to introduction from without. This question would not be tackled satisfactorily until all the various and obscure sources of septic infection were investigated. She also spoke of the importance of ante-natal inspection. Every woman ought to have during her pregnancy at least one inspection by a doctor. The question of expense loomed large, but she thought that to proceed along these lines would be more remunerative than other expenditure suggestions which had been made, such as the provision of depots for sterilized garments.

Dr. H. B. BRACKENBURY (Chairman of Council, British Medical Association) took up Dr. Fairbairn's complaint of the Association policy in denying the right of midwives to administer certain drugs. The resolution in question included opium and pituitrin, and with regard to the danger of the latter he thought everybody was agreed. But so far as opium was concerned also he was of opinion that the Association's position must be maintained. Drugs of this kind could not be safely placed in the hands of other than medical men. He saw no practical difficulty about the matter in those areas where the doctor's services could easily be obtained. If the condition of affairs was such that the midwife thought the patient ought to be given a drug of this kind the doctor should be called in and the drug given, if at all, on his responsibility. There were cases in sparsely populated areas where to bring in the doctor for this purpose might be difficult, or even impossible, but surely it was better to lay down a general rule of prohibition, even if very rare exceptions had to be admitted, than to advocate, as Dr. Fairbairn apparently did, that midwives should be allowed to use drugs whenever they pleased. With regard to ante-natal examination by midwives, again, surely nobody but a qualified medical practitioner could give a guarantee that nothing was wrong with the patient, and that was the object of ante-natal examination, which, as Dr. Fairbairn himself had said, was medical work, and, if it was thoroughly done, was to be regarded as of the same category as examinations for insurance or for admission to the Services. To place such a responsibility on the midwife was utterly wrong, and it was, in fact, the best midwives who objected to having to make the record to which Dr. Fairbairn had alluded, and to take this responsibility, while those least qualified did it most readily. With regard to medical students, almost all the teaching bodies were giving attention to the question of the training of students in ante-natal work. The General Medical Council was busying itself at present in seeing how far the obligations in this respect were being carried out. Dr. Brackenbury uttered a protest against the idea, put forward again in the present conference, that no qualified medical man was to be allowed to practise in any particular direction in his profession unless, after his qualification, he had taken a post-graduate course and obtained an additional diploma in that particular branch of his profession. It was a false idea. There might be, for example, doctors who were imperfect in their treatment of pneumonia; but was a special post-graduate course going to be made compulsory before medical men were allowed to treat cases? He thought it was quite absurd to require these super-numerary diplomas in this, that, or the other department of medicine before a man could be considered a duly qualified medical practitioner. With regard to the great desirability of securing ante-natal observation, and, if necessary, ante-natal treatment by a registered medical practitioner for every pregnant

woman, the question was how this could be done. The class of women who could pay for their private practitioner could be reached only by a process of education and persuasion. Even if there were compulsory notification of pregnancy, compulsory ante-natal examination would have to be added on to it before any good could be done. The insured woman could be reached through the insurance medical service, and, by way of maternity benefit, the wife of the insured man not herself insured. There would remain a small number, many of whom might be reached through the work of the ante-natal centres. What the profession had to say was that it was out to secure, by State aid where necessary, or by persuasion, ante-natal examination of every pregnant woman by a medical practitioner during pregnancy, and it could not tolerate the taking over of this work by the midwife, because that would be clearly a second-best procedure, and in the present state of public opinion and public affairs insistence on the second best was a distinct obstruction.

Dr. T. F. DEWAR (Scottish Board of Health) agreed with the general trend of the discussion, which indicated the realization that normal cases were the sphere of the midwife, and that abnormal midwifery, more strictly than ever, should go to the practitioner. He spoke of some recent inquiries in Scottish cities which showed that quite a large proportion of women—30 per cent. was mentioned—were receiving some ante-natal examination. The investigation of every maternal death had not yet been brought about, but he dared to hope that it would be.

Lady BARRETT (B.M.A. Committee) realized the difficulty of demanding a post-graduate diploma from all who practised midwifery, but she thought that a period of assistantship under a trained leader of an ante-natal clinic would be very valuable. One line of investigation which might be fruitful was to endeavour to find out what it was that made the vast majority of women resist infection. It would show what an extraordinarily powerful thing was normal resistance.

Dame JANET CAMPBELL (Ministry of Health) said that the Ministry desired to do all that it could from the administrative point of view to secure co-ordination between the various agencies concerned in the solution of this problem. No one body, whether of practitioners or midwives, could solve it alone. There was need also for central co-ordination, for the number of cases in any one district or hospital was too small for conclusions to be based upon them. Especially was it necessary to obtain help from the general practitioner, who saw these cases in their early stages. A committee charged with investigation on the bacteriological and clinical sides of the question might be very useful. An inquiry into every maternal death would also be helpful, if carried out in the right way; it could be done quite confidentially, and without hurting anybody's feelings. There were also many cases in which the practitioner concerned was unaware of the facilities which were available for his assistance. There was room for more co-operation in this respect between practitioners and medical officers. The difficulty of ensuring a medical examination for every pregnant woman was that of cost. The woman could not afford to pay for it, and the doctor could not afford to do it for nothing. Some modification of the insurance maternity benefit afforded almost the only hope of bringing the majority of women—84 per cent. of women were insured or the wives of insured men—into such a scheme.

Dr. FAIRBAIN, briefly replying to Dr. Brackenbury, still affirmed that midwives might be trusted to administer certain drugs which it was necessary should be given at an early stage when the woman began to show signs of fatigue. There had been no case of abuse before the Central Midwives Board. From the point of view of preventive medicine, if the midwife was not taught the use of something to avoid fatigue there would be more calamities. With regard to the ante-natal work of the midwife, he thought her role could be very much like that of a sister in a ward—carrying out the instructions of the medical man, making observations for him, and relieving him of a great deal of unnecessary work. From the point of view of the lying-in he thought ante-natal training essential to the midwife.

The conference ended with a vote of thanks to the Chairman, who remarked that the views expressed would be of great use to the committee in carrying through the further stages of its inquiry.

## THE PROVISION OF OPHTHALMIC BENEFIT.

ADDRESS BY DR. BRACKENBURY.

A FULL meeting of the Ophthalmic Benefit Committee was held at the Hastings Hall of the British Medical Association House, on January 31st to hear an address by Dr. H. B. Brackenbury, Chairman of Council of the British Medical Association. Mr. H. L. EASON, and afterwards Dr. G. W. KENDALL, presided.

Dr. BRACKENBURY, at the outset, instituted a parallel between the present ophthalmic position and the dental position previous to the passing of the Dentists Act, 1921. At that time it was clear that the supply of properly qualified dentists was inadequate to the public needs, and similarly it now had to be recognized that in the country as a whole the supply of properly qualified ophthalmic service was inadequate. It was interesting to consider how the public was supplied with such treatment as it received—he was thinking chiefly of refraction, but also of the treatment of more or less minor eye troubles. To a quite considerable extent the needs of the public were met by a commercial supply of cheap spectacles. The dimensions of this business were surprising. In one of the cheap stores, which he named, a million and a quarter spectacles were sold in a year. People went into these stores, picked up spectacles from a tray, and tried them until they found the glasses which suited them best. No doubt this resulted in a certain amount of harm to individuals, though there was no evidence that it constituted a grave public evil.

### *The Sight-testing Optician.*

The second way in which the public supplied its needs was by going direct to the sight-testing optician for defects of vision. The three representatives of the sight-testing opticians on the Departmental Committee contended, not merely that the opticians' work was better than the medical practitioners' work in general, but that it was better than the ophthalmic surgeons' work so far as refraction was concerned and things incidental thereto. The ideal of the sight-testing opticians was to be placed in the same position as the dentists, whereas the medical view was that they should be placed in a position analogous to that of the dispensing chemist. The opticians desired to have a Board which would prescribe a course of study approximating to the medical curriculum, with special reference to eye diseases, in exactly the same way as the dental student went through a truncated medical curriculum and then devoted himself to certain special subjects, and got a registrable diploma in dentistry. He was bound to say that, leaving out school children and those who received attention at hospitals, the great majority of the British public were receiving attention for defects of vision from sight-testing opticians rather than from medical practitioners. That being so, it was argued that the public should be protected by a State register consisting of those opticians who really did know something about their job, so as to enable them to be distinguished from others—admittedly a large number—who knew little or nothing.

The medical evidence before the committee showed two things: first, that there were appreciable dangers in defects of vision being dealt with by those who had not a complete medical education; and secondly, that there was a prospect in the not distant future of the medical profession being able to supply the public with the facilities which it needed for first-rate treatment. These were propositions which needed to be proved if the claim—on the face of it, in the existing state of affairs, not an absurd one—that there should be a State register of ophthalmic opticians, following on a definite curriculum, was to be withstood.

The third way in which the public got its ophthalmic requirements was through the school medical service, the hospitals, and the private practitioner. But unless it could be shown that the medical profession was able to supply the public needs by a first-rate service the case of the sight-testing optician was unanswerable. If, in fact, the public could be supplied only in the second-best way it was right to distinguish that second-best way from a third-best way by the setting up of a register. The medical evidence before the committee on the Registration Bill showed that there was danger in the second best, and that there was a reasonable prospect of the first best being supplied, and this was accepted by the committee.

The problem was to supply the first best by an adequate service of medical men and women competent to give ophthalmic treatment. The General Medical Council was doing something to help, and, partly owing to the greater concern of the public about eyesight, partly to the demands of the sight-testing opticians for recognition, and partly to the giving of ophthalmic benefit by approved societies, there had been recently an awakening on the part of the medical profession

to its duties and opportunities in this respect. The new curriculum laid down by the General Medical Council some years ago, in which emphasis was laid upon the study of ophthalmic conditions, was only now maturing, and there was clear evidence that a large number of senior students in the medical schools did intend, whether as general practitioners or not, to continue the study of ophthalmic surgery and to practise it. There was thus an increasing supply of medical practitioners interested in and willing to practise specially—not entirely—in this direction. How to get them distributed properly over the country was a more difficult problem, but he supposed it would be solved by financial arrangements made for the people in the more sparsely populated areas.

#### *The Approved Societies.*

Another factor in the situation was that the approved societies in supplying ophthalmic benefit were now handicapped. Earlier valuations had shown surprisingly large surpluses, but in 1926 there were enormous claims for sickness and disablement benefit, which were put down to the peculiar circumstances of that year—the general strike and the coal deadlock. But in 1927 the claims were vastly in excess of those even of 1926, so that it looked as if there was some underlying and continuing cause. If this was so, the next valuation would reveal for many societies no surplus at all, and therefore no ophthalmic or other special benefits would be possible. The societies were right in saying now that they could not afford to pay a guinea for each ophthalmic case. All the societies, except one—though that one was the largest—had said frankly that they would prefer to have treatment for their members by registered medical practitioners rather than by opticians. The Prudential, on the other hand, was inclined to the extreme view of the sight-testing opticians, that they could do the job better than the doctor. Some of these other societies had thought, as did the representatives of the medical profession at the time, that a guinea fee would be satisfactory; but it was now plain that for the bulk of them this amount was beyond their means, and their means, so far from improving, were apparently going to be attenuated further, unless the underlying cause of the increased claims could be discovered and proved to be remediable, which he doubted.

What, then, was to be done? Some offer had to be made to the public which would approximately halve the present cost of ophthalmic benefit. The Departmental Committee clearly saw that the public interest called for a State register of sight-testing opticians as the second-best thing if the first-best thing was not forthcoming.

#### *The Proposed Ophthalmic Clinics.*

One way of meeting the position, advocated in letters to the *BRITISH MEDICAL JOURNAL*, was the simple plan of reducing the guinea fee to half a guinea; but it appeared that that proposition would not be acceptable to a considerable proportion of those on the British Medical Association list, and if they withdrew, the available facilities, instead of enlarging, would diminish. It had therefore been suggested that conditions should be arranged, primarily in the large towns, by which the work of the ophthalmic surgeon could be eased so that in the new circumstances he might be willing to set apart a certain time for a smaller fee, reserving to himself otherwise the right to charge the guinea fee under the conditions originally contracted for, or to charge his ordinary private fee. In this direction certain offers had been made for the establishment of clinics, as they had been loosely called. Offers had been made to establish central premises, with full equipment, clerical and nursing assistance, and the presence of an optician for measuring, etc., so that the ophthalmic surgeon would have everything done for him short of the actual examination. It was thought that in this way he might set apart a session at which cases would be seen by him for half a guinea. It was further suggested that in connexion with these clinics in large centres certain facilities should be provided at stated times in satellite towns, where premises and assistance would be furnished, but where the surgeon would probably take his own equipment.

Clinics in London, and in five or six other large towns, had been established by the National Insurance Beneficence Society, which was the approved societies under another form, technically a charitable organization. The British Medical Association had discountenanced these clinics, but the society had come forward and said that if a plan could be agreed upon it would be prepared to finance and extend them further. The dispensing opticians had also come forward with a similar offer. There seemed to be no other auspices—unless the British Medical Association itself undertook the financial responsibility and administrative work, which he did not think it would be inclined to do—whereby the position could be met. The plan which was preferred by the representatives of the Ministry and of the medical profession was that of the dispensing opticians. In effect, the plan was that there should be set up a central committee on which the medical profession,

through the British Medical Association and such other organizations of ophthalmic workers as might seem desirable, would be represented; there would be also an entirely medical sub-committee, to which all medical questions should be referred. The dispensing opticians would finance the establishment of these clinics, which, of course, would not appear all at once, but would spread gradually in various centres. The medical men, on their part, would undertake to put in the requisite number of afternoons or evenings a week of these premises, which would be properly equipped and attended, and to do the work, not at a sessional fee, which was at first proposed, but at a fee of half a guinea per case.

This method was not intended to supplant other more private methods of supplying ophthalmic treatment. There would be an option—indeed, he thought that it would be in most places the rule—for ophthalmic practitioners to hold such sessions in their own houses. In that case, of course, they would supply their own equipment, and the dispensing optician would attend for the purpose of measuring the patients for spectacles, and so on. There would also remain a proportion—it must be recognized that it would probably be a diminishing proportion—of cases in which the patient would prefer to go quite privately and have attention at the guinea fee, half of this being provided possibly by the society.

At the moment, therefore, the position was this—that the profession should supply to members of approved societies entitled to ophthalmic benefit, at half a guinea per head, the ophthalmic service required, and that this should be accomplished either by a session in the private practitioner's house or by a session in a separately established clinic, at which certain arrangements had been made with regard to equipment, nursing, and so forth.

In conclusion Dr. Brackenbury begged that the ultimate aim in view might not be forgotten. The continuance of ophthalmic benefit to members of approved societies as such was not the ideal at all. What it was desired to carry out was the plan put forward in the evidence of the British Medical Association to the Royal Commission on National Health Insurance and recommended by the Commission—an extension of medical benefit to include specialist and consultant treatment, of which, of course, ophthalmic treatment would be one branch, and would be on the same principles and terms as all other specialist and consultant services, this to be the right of the whole of the insured population, and not dependent upon the accident of the societies' surplus.

#### QUESTIONS.

At the close of his address many questions were put to Dr. Brackenbury. In reply to one question he stated what were the recommendations on the subject which were being made by the Ophthalmic Committee of the British Medical Association for presentation to the Council on February 8th. The Council had authority from the Representative Body to sanction a scheme of the kind he had outlined if it approved the conditions and the auspices under which the scheme was run. The Ophthalmic Committee was recommending approval of the scheme subject to its conformity to certain conditions laid down. If the scheme went forward it would mean that the conditions under which men and women had placed their names on the British Medical Association list would be materially altered, and therefore they would have to be consulted on the matter. It was hoped that the list would be extended; it should have at least 1,000 names, some 200 more than at present.

In answer to further questions, Dr. Brackenbury said that the dispensing opticians had stated that they were prepared to start the scheme with a number of clinics in large centres, and as the need arose these would be multiplied, though in most parts of the country there would be, for the present at all events, no question of a separate clinic. The selection of medical men to take sessions at a clinic, supposing there were more men available than sessions arranged, would be a matter for friendly adjustment between themselves, subject to the right of appeal to the central medical committee in the unlikely event of anyone feeling himself aggrieved.

Asked if there would be room for free choice of doctor, Dr. Brackenbury pointed out that there could not be free choice at a particular session, but that the principle of free choice was preserved by the fact that the patient could go to any doctor in the area who chose to say, "If you come to me at a certain time I will see you for half a guinea." He added that it should be made clear that the position of anyone who desired to remain on the list, but was not willing under present conditions to see any patient except at a guinea, was not prejudiced. He need not take part in the work of the "clinics" at all, although, of course, such a practitioner must recognize that a proportion of what had hitherto been his clientele might be drawn away through the effect of these other provisions.

At the close of the questions a hearty vote of thanks was accorded to Dr. Brackenbury.

Cheques should be made payable to the Williams-Freeman Presentation Fund, and addressed to Dr. D. G. Greenfield, Treasurer, c/o the Medical Secretary, British Medical Association, British Medical Association House, Tavistock Square, London, W.C.1.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders T. C. Patterson to the *President* for Medical Department, temporary; C. E. Gresson to the *Victory*, February 6th, and to the *President* for H.M. Experiments Station, Porton, for course of instruction, February 13th, and to the *Victory*, March 12th; H. M. Braithwaite to the *Egmont* for R.N. Hospital, Malta.  
Surgeon Lieutenant Commander W. J. Colborne to the *Field* for R.N. Hospital, Plymouth.  
Surgeon Lieutenant G. S. Rutherford to be Surgeon Lieutenant Commander.  
Surgeon Lieutenants J. W. Simpson to the *Infant*; R. W. Higgins to the *Impregnable*.

### ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon Sublieutenants D. C. Livingston and D. R. Goodfellow to be Surgeon Sublieutenants.  
A. H. Shelswell has entered as probationary Surgeon Lieutenant, and is attached to List 2 of the London Division.

### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel H. F. Shea, D.S.O., having attained the age limit for compulsory retirement, retires on retired pay.  
Major H. St. M. Carter, D.S.O., to be Lieutenant-Colonel, vice Lieut.-Colonel H. F. Shea, D.S.O., to retired pay.  
Major B. H. H. Neven-Spence is re-employed under Article 507 (b), Royal Warrant for Pay and Promotion, 1926.  
Captains W. Millerick, M.C., and R. Johnson, M.B.E., to be Majors (prov.).  
Temporary Captain J. W. Darling, M.C., relinquishes his commission and retains the rank of Captain.  
Lieutenant on probation V. G. Rentilf resigns his commission.  
W. G. Rees to be temporary Lieutenant.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenants E. G. Howell to the School of Army Co-operation, Old Sarum; D. R. Smith to R.A.F. Station, Upper Heyford; H. Pennam to No. 26 Squadron, Catterick; G. M. Anderson to R.A.F. Station, Biggin Hill.  
Flying Officer C. J. S. O'Malley to be Flight Lieutenant.  
Flying Officers N. I. Smith to Station Headquarters and Storage Section, Andover; J. P. Hederman to R.A.F. Depot, Usbridge; E. A. Rice to R.A.F. Station, Worthy Down.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel G. H. Goddard, D.S.O., having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers.

### INDIAN MEDICAL SERVICE.

Lieut.-Colonel F. P. Mackie, O.B.E., Director of the Haffkine Institute, Bombay, appointed as Honorary Surgeon on the personal staff of His Excellency Lord Irwin, Viceroy and Governor-General of India.  
Captains P. Vernon and J. M. Shah, M.B.E., to be Majors.

### TERRITORIAL ARMY.

#### ROYAL ARMY MEDICAL CORPS.

Major W. W. MacNaught, M.C., Reserve of Officers, to be Captain, with precedence as from March 30th, 1918.  
Lieutenant T. D. Orend to be Captain, with precedence as from January 21st, 1927.  
R. N. Kinnison to be Lieutenant.

### TERRITORIAL ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Major D. E. Finlay, having attained the age limit, relinquishes his commission and retains his rank.  
Hygiene Companies.—Lieutenant R. E. J. Currell, from the active list, to be Lieutenant.

## VACANCIES.

ALL SAINTS' HOSPITAL FOR GENITO-URINARY DISEASES.—(1) Honorary Consulting Physician. (2) Honorary Medical Officer. (3) Honorary Surgical Registrar.

BEDFORD COUNTY HOSPITAL.—Assistant House-Surgeon (male, unmarried). Salary £130.

BIRMINGHAM CITY.—Two Assistant Medical Officers for the Public Health Department, Tuberculosis Section (male, unmarried). Salary at the rate of £450 per annum.

BRIGHTON: ROYAL SUSSEX COUNTY HOSPITAL.—House-Surgeon (male). Salary £150 per annum.

CARDIFF ROYAL INFIRMARY.—Honorary Assistant Surgeon to the Ear, Nose, and Throat Department.

CHARLSE: CUMBERLAND INFIRMARY.—Medical Officer as House-Surgeon for six months; salary at the rate of £155 a year. (2) Resident Medical Officer as Junior House-Physician; salary at the rate of £135 per annum.

CHILDREN'S MEDICAL HOME, Waddon, Croydon.—Medical Officer (V.D.). Salary £150 per annum.

CHURCH MISSIONARY SOCIETY.—Medical Officer for Church Missionary Society Hospital, Omdurman.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—House-Physician (male). Salary at the rate of £100 per annum.

CITY OF LONDON UNIVERSITY HOSPITAL, City Road, E.C.1.—Assistant Resident Medical Officer. Salary at the rate of £80 per annum.

CROYDON COUNTY BOROUGH.—Deputy Medical Officer of Health and Deputy School Medical Officer. Salary £780 per annum.

DERBYSHIRE COUNTY COUNCIL.—Woman Medical Officer. Salary £600 per annum, rising to £750.

DEVONPORT: ROYAL ALBERT HOSPITAL AND EYE INFIRMARY.—Assistant House-Surgeon (unmarried). Salary at the rate of £50 per annum.

EDINBURGH: ELISE INGLIS MEMORIAL MATERNITY HOSPITAL.—Two House-Surgeons (females).

EDINBURGH HOSPITAL FOR WOMEN AND CHILDREN.—(1) House-Surgeon, (2) House-Physician. (3) Junior House-Surgeon (non-resident); remuneration at the rate of £25 per annum. Females.

EDINBURGH: ROYAL EDINBURGH HOSPITAL FOR SICK CHILDREN.—Five Honorary Resident Medical Officers.

EDINBURGH ROYAL INFIRMARY.—Senior Clinical Assistant and Clinical Tutor in the Ophthalmic Department. Emoluments £145 per annum.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Resident Casualty Officer and House-Physician to the Radium, X-Ray, and Electrical Department (male). Salary at the rate of £100 per annum.

GLASGOW EYE INFIRMARY.—(1) Resident Assistant House-Surgeon; salary £75 per annum. (2) Visiting Surgeon.

GREY YARMOUTH: GENERAL HOSPITAL.—House-Surgeon (male, unmarried). Salary £150 per annum.

GUILDFORD UNION.—Resident Male Assistant Medical Officer at the Institution. Salary at the rate of £150 per annum.

HERTFORD COUNTY HOSPITAL.—Honorary Assistant Surgeon.

IRSWICK PARK.—Assistant Resident Medical Officer (female) at Heathfields Infirmary, Heathfield House, and St. John's Home for Children. Salary £250 per annum.

ISLAY: PARISH OF KILDULTON AND O.—Medical Officer and Public Vaccinator. Salary from Parish Council £100, and grant from Highlands and Islands (Medical Service) Fund £180.

LEICESTER ROYAL INFIRMARY.—(1) Honorary Physician. (2) Assistant Honorary Physician.

LEWISHAM BOROUGH COUNCIL.—Assistant Medical Officer and Maternity and Child Welfare Medical Officer. Salary £650 per annum, rising to £750.

LIVERPOOL: HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.—Assistant Medical Officer and Pathologist (non-resident). Salary £150 per annum.

LONDON SCHOOL OF HYGIENE AND TROPICAL MEDICINE, Endleigh Gardens, W.C.—Research Studentship in Protozoology. Value £250 per annum.

LONDON UNIVERSITY.—University Chair of Pathology, tenable at the London (Royal Free Hospital) School of Medicine for Women. Salary £1,000 a year.

MANCHESTER AND Salford HOSPITAL FOR SKIN DISEASES.—House-Surgeon. Salary £100 per annum.

MIDDELBROUGH COUNTY BOROUGH.—Assistant to Medical Officer of Health (male, unmarried). Salary £450 per annum.

MIDDELBROUGH: NORTH RIDING INFIRMARY.—Senior and Junior Resident Surgeons (male). Salary at the rate of £200 and £150 per annum respectively.

MINISTRY OF HEALTH.—Medical Officer (male). Salary £600 per annum, rising to £1,100, and bonus, at present £175 7s.

PRESTON COUNTY BOROUGH.—Assistant School Medical Officer (male). Salary £600 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—(1) Resident Medical Officer. (2) Casualty Officer. Salary £200 and £100 per annum respectively.

ROCHESTER: ST. BARTHOLOMEW'S HOSPITAL.—House-Physician (unmarried). Salary at the rate of £175 per annum.

ROYAL FREE HOSPITAL AND LONDON (R.F.H.) SCHOOL OF MEDICINE FOR WOMEN.—Anaesthetist for Obstetrical and Gynaecological Unit. Honorarium £100 per annum.

ROYAL NATIONAL ORTHOPEDIC HOSPITAL, 234, Great Portland Street, W.1.—(1) House-Surgeon. (2) House-Surgeon at Country Branch at Stanmore. Salary £150 per annum each.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.7.—Ophthalmic Surgeon.

ST. JOHN'S HOSPITAL, Lewisham, S.E.13.—Assistant Physician.

ST. THOMAS'S HOSPITAL.—Physician in charge of Out-patients.

SEVEN'S HOSPITAL SOCIETY.—Honorary Assistant Physician at the Hospital for Tropical Diseases, Endleigh Gardens, W.C.

SHEFFIELD COUNTY BOROUGH.—Lady Assistant Medical Officer of Health and Assistant School Medical Officer. Salary £600 per annum.

SOMERSET COUNTY COUNCIL.—County Assistant Medical Officer. Salary £600 per annum.

STOKE-ON-TRENT CITY.—Medical Officer of the Venereal Diseases Centre. Salary £850 per annum.

TURBO: ROYAL CORNWALL INFIRMARY.—House-Surgeon. Salary £170 per annum.

UNIVERSITY COLLEGE HOSPITAL MEDICAL SCHOOL.—Radcliffe Crocker Travelling Scholarship in Dermatology. Approximate value £280.

WARWICK COUNTY MENTAL HOSPITAL, Hatton.—Assistant Medical Officer. Salary £300 per annum.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—Honorary Obstetric Registrar.

WEST BIRING COUNTY COUNCIL.—School Oculist. Salary £600 per annum, rising to £700.

WILTS COUNTY COUNCIL.—School Dentist. Salary £500 per annum.

WOLVERHAMPTON AND MIDLAND COUNTIES EYE INFIRMARY.—House-Surgeon. Salary £200 per annum.

CERTIFYING FACTORY SURGEON.—The appointment at Middleton-in-Teesdale, co. Durham, is vacant. Applications to the Chief Inspector of Factories, Home Office, London, S.W.1.

MEDICAL REFEREE UNDER THE WORKERS' COMPENSATION ACT, 1925, for the (a)rn). Application London, S.W.1.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

## APPOINTMENTS.

LEWIS, M. G., M.B., Ch.B.Ed., Honorary Anaesthetist to the Hull Royal Infirmary.

MASON, Malcolm, M.D.Glas., D.P.H.Camb., Medical Officer of Health and School Medical Officer, Wood Urban District, vice W. E. Porter, M.D.Ed., D.P.H.Camb., retired.

MARSHALL, C. M., M.B., Ch.B.New Zealand, Resident Medical Officer to the Freeman's Hospital.

REID, E. Neil, M.B., Ch.B.St.And., Assistant Deputy Medical Officer for Dumfriesshire.

## DIARY OF SOCIETIES AND LECTURES.

**ROYAL SOCIETY OF MEDICINE.**  
*Section of Orthopaedics.*—*Tues.* 4.30 p.m., Cases.  
*Section of Pathology.*—Laboratory Meeting at the Bernhard Baron Institute of Pathology, London Hospital, E.1, *Tues.* 8.30 p.m., Demonstrations:—*H. E. Roaf:* Method for Testing Colour Vision; *S. P. Bedson:* Experimental Tetanus; *H. D. Ray:* Test for Renal Function; *E. D. Ray and R. L. Al:* Method; *A. B. Bratten:* Pathological Specimens; *R. H. Lauermau:* Preparation of Coflodon Membranes; *J. R. Marrack:* Osmotic Pressure of Serum Proteins in Nephritis; *P. Fildes:* Motility and Germination of *B. tetani*.  
*Section of Surgery.*—*Subsection of Proctology.*—*Wed.* 5.30 p.m., *Mr. F. J. McCann:* Operation for Prolapse of the Rectum in the Female; *Mr. Zachary Cope:* Treatment of Irreducible Sigmoido-rectal Intussusception in Old People; *Mr. W. B. Gabriel:* Five Cases of Small Gut Obstruction round Colostomies; *Dr. . . . . .* Demonstration of Sigmoido-scope Appearances of . . . . .  
*Sections of Ophthalmology.*—*Orig.* . . . . . Cases, 8.30 p.m., Special Discussion: Ocular Complications of Encephalitis Lethargica. To be opened by *Dr. James Collier* (Neurology) and *Mr. F. A. Williams-Noble* (Ophthalmology); followed by *Dr. A. Feiling*, *Dr. J. R. Perdrau*, *Mr. M. L. Hine*, *Mr. R. Foster Moore*, and *Dr. W. J. Adie*.  
*Clinical Section.*—*Fri.* 5 p.m., Cases.

**ROYAL COLLEGE OF SURGEONS OF ENGLAND,** Lincoln's Inn.—*Mon.* 5 p.m., *Sir Percy Sargent:* Surgery of the Posterior Cranial Fossa, *Wed.* 5 p.m., *Mr. G. Grey Turner:* Treatment of Congenital Defects of the Bladder and Urethra by Implantation of the Ureters into the Bowel. *Fri.* 5 p.m., *Mr. J. H. Sheldon:* An Undescribed Disease of Bone.

**BIOCHEMICAL SOCIETY,** Lister Institute, Chelsea Bridge Road, S.W.—*Mon.* 6 p.m., (i) *H. Jephcott* and *A. L. Bacharach:* The Quantitative Estimation of Vitamin B; (ii) *A. L. Bacharach* and *E. Allehorner:* The Vitamin B Content of Malt Extract; (iii) *M. G. White* and *J. J. Williams:* The Alcohol Fermentation of Pentoses by *Fusarium lini*; (iv) *A. V. Hill:* Increased Anaerobic Metabolism in Muscle following Stimulation; (v) *D. Jordan Lloyd* and *W. B. Pleas:* The Effect of Nitrates on the Absorption of Water by Gelatin; (vi) *W. W. Kinnearley*, *R. A. Peters*, and *V. Reader:* Metabolic Constancy in the Pigeon; (vii) *R. T. Brain* and *H. D. Kay:* Phosphate Excretion; (viii) *R. P. Oook* and *B. Woolf:* The Deamination and Synthesis of L-Aspartic Acid in the Presence of Bacteria; (ix) *R. Robison* and *K. M. Soames:* Calcification *in vitro*.

**MEDICAL OFFICERS OF SCHOOLS ASSOCIATION,** 11, Chandos Street, W.1.—*Fri.* 5 p.m., *Dr. A. A. Mumford:* The School Medical Officer of the Future.  
**WEST KENT MEDICO-CHIRURGICAL SOCIETY,** Miller General Hospital, Greenwile Road, S.E.10.—*Fri.* 8.45 p.m., *Dr. R. Travers Smith:* The Origin and Diagnosis of Functional Cardiac Murmurs.

## POST-GRADUATE COURSES AND LECTURES.

**FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—*Lecture,* Medical Society of London, 11, Chandos Street, W.1. *Mon.* 5 p.m., Secondary Forms of Mental Deficiency. *Paddington Green Children's Hospital,* W.2: *Fri.* 2 to 3 p.m., Clinical Demonstration. *St. Mark's Hospital,* City Road, E.C.: *Mon.* 2.30 p.m., Clinical Demonstration. *Royal Westminster Ophthalmic Hospital,* Charing Cross, W.C.: *Fri.* 5 p.m., Clinical Demonstration: Cataract. The above are free to medical practitioners. *Paddington Green Children's Hospital* and *Victoria Hospital for Children:* Combined Course in Diseases of Children. Mornings and afternoons, Lectures, Demonstrations, and Operations; fee £3 3s. for two weeks. *St. John's Hospital for Diseases of the Skin,* Leicester Square: Course in Dermatology every afternoon; Pathology Course arranged. *Bethlem Royal Hospital,* St. George's Fields, S.E.1: *Tues.* and *Sat.* mornings, Clinical Demonstration in Physiological Medicine. *National Hospital,* Queen Square, W.C.1: Course in Neurology every afternoon; Demonstrations; Lectures at certain times.**

**CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL,** Gray's Inn Road, W.C.1.—*Wed.* 4 p.m., Consultations and Demonstrations of Interesting Cases. *Fri.* 4 p.m., Early Mastoid Operations.

**EAST LONDON HOSPITAL FOR CHILDREN,** Shadwell, E.1.—*Thurs.* 4 p.m., Heart Problems in School Children.

**HOSPITAL FOR SICK CHILDREN,** Great Ormond Street, W.C.1.—*Thurs.* 4 p.m., Oystoscopy.

**LONDON SCHOOL OF DERMATOLOGY,** St. John's Hospital, Leicester Square, W.O.2.—*Tues.* 5 p.m., Lichen Planus. *Thurs.* 5 p.m., Lupus Erythematosus.

**NATIONAL HOSPITAL,** Queen Square, W.O.1.—*Mon.* *Tues.* *Thurs.* and *Fri.* 2 p.m., Out-patient Clinics. *Tues.* and *Fri.* 9 a.m., Operations: 5 p.m., Methods of Examination of the Nervous System. *Mon.* 3.30 p.m., Papilledema. *Tues.* 3.30 p.m., Diagnosis of Spinal Tumours. *Thurs.* 3.30 p.m., Neuro-syphilis. *Fri.* 3.30 p.m., Demonstration of Re-educative Methods.

**NORTH-EAST LONDON POST-GRADUATE COLLEGE,** Prince of Wales's General Hospital, Tottenham, N.15.—*Mon.* 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. *Tues.* 2 p.m., Special Demonstration of Ear, Nose, and Throat Cases; 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. *Wed.* 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. *Thurs.* 11.30 a.m., Dental Clinics, Special Demonstration of Medical Cases; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. *Fri.* 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

### British Medical Association.

#### CURRENT NOTES.

##### London Clinic for Rheumatic Diseases.

On seeing the report of the inaugural meeting of this clinic,<sup>1</sup> the Medical Secretary of the British Medical Association wrote to Sir Arthur Stanley, chairman of the executive committee of the British Red Cross Society, asking what is to be the method of access of the public to the clinic. The Medical Secretary asked whether the clinic is to be open to anyone who likes to go and pay a fee for treatment or is it intended only for patients who are sent with a medical recommendation; and he pointed out that unless the cases are sifted beforehand the clinic may easily be flooded with all kinds of unsuitable patients; and, moreover, the medical profession would regard with grave suspicion any medical institution which opened its doors to all and sundry who might think it worth their while to try a course of treatment. Sir Arthur Stanley has replied saying that the point is an important one, and that the procedure to be adopted has been referred by the clinic committee to the medical subcommittee for consideration. He adds that the Association may rest assured that the recommendations of the subcommittee will be satisfactory to it.

##### Committee Work of the Week.

The Committee on Puerperal Morbidity and Mortality met on January 31st and discussed the suggestions put forward at the recent conference, a full report of which appeared in last week's SUPPLEMENT. On February 3rd the special subcommittee appointed by the Science Committee to consider the effect of the growing propaganda for the general use of ultra-violet light and the indiscriminate supply of apparatus for the purpose to the lay public met, and after reviewing the existing position in this respect formulated detailed recommendations for the consideration of the Science Committee at its next meeting. The special Lunacy Committee also met during the week.

##### Annual Session of American Medical Association.

The annual session of the American Medical Association is to be held in Minneapolis, Minnesota, from June 11th to 15th, 1928. The Medical Secretary would be very glad to be informed at the earliest possible moment of any member of the British Medical Association who is proposing to attend the meeting at Minneapolis.

##### Medical Appointments Abroad.

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas, which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

### Meetings of Branches and Divisions.

#### JAMAICA BRANCH.

The monthly meeting of the Jamaica Branch was held in Port Maria Public Hospital on January 19th, when Dr. LECESNE read a paper on eclampsia. He also presented three cases of ectopic gestation for discussion.

The St. Mary members entertained the Branch to lunch at the Palm Beach Hotel, and the afternoon was spent at the Robin's Bay golf house.

#### OXFORD AND READING BRANCH: OXFORD DIVISION.

The first meeting of the year of the Oxford Division was held in the Radcliffe Infirmary on January 25th, when Dr. MONTGOMERY was in the chair and forty members were present.

Mr. H. WHITELOCKE read notes of a case of prolapse of bowel through a persistent umbilical fistula, through which faeces had passed regularly three or four times daily since birth. When the infant was four weeks old about eight inches of intussuscepted bowel protruded through the opening, and was reduced by operation. The convalescence was complicated by pneumonia, but four weeks after the operation the wound was well healed and the child was putting on weight.

Dr. R. WARREN TAYLOR reported the case of a child, aged 11, who was first seen in May, 1924. The patient then had what seemed to be an ordinary attack of chorea, with marked and universal movements of all her limbs, and was at that time suffering badly from want of sleep, a symptom very difficult to relieve. Treatment was given on ordinary lines. The condition continued for some nine weeks, when a gradual improvement set in. The child was sent away to the seaside, where she appeared to be normal in health. At the end of August, however, in the same year, she returned home, and had then a marked Parkinsonism, with a very emotional nature. This condition became steadily worse, and she passed into a condition of spastic rigidity, with very marked tremor. The original diagnosis of chorea, although entirely incorrect, was at first supported by a history of "growing pains." There was never any definite cardiac lesion or any symptoms pointing to a rheumatic infection. Dr. Taylor added that it was difficult to see how the diagnostic error could have been avoided, even though the subsequent course of the illness proved it to be a clear case of encephalitis lethargica.

Dr. R. W. CRUICKSHANK and Dr. W. T. COLLIER showed two cases of cow-pox. The first, a boy aged 15, had complained of distinct illness on January 15th—namely, headache and general lassitude: he seemed to be feverish and perspired a good deal. He remained in bed for the next two days, and an inflamed spot appeared on his right index finger. He had a crack in the skin behind the lobe of the right ear due to frost and cold. On January 18th there was much swelling and thickening around this crack, and a crusted scab was found around this. The glands under the angle of the jaw were enlarged and tender, so also were the axillary glands. On January 22nd the finger showed a bluish-black scab and the tissues immediately round this were ulcerating; a thinish discharge of purulent appearance was oozing from under the scab. The ear lesion showed much the same condition. There was also a spot on the left wrist—first a papule, then a vesicle, and lastly a dark umbilicated scab.

On January 14th a man, aged 22, complained of "sore throat" and enlarged submental and maxillary glands; he looked flushed and ill, and the throat and tonsils were slightly congested. The temperature was 101° F. On the inside of the left nostril, at the junction of the skin and mucous membrane, there was a papular swelling which, on January 16th, showed a black crust; a purulent foul-smelling discharge oozed later from under this. Both the patients were employed at the same farm and were looking after and milking cows which had been suffering from some eruption and sore places on their teats. Dr. Cruickshank added that it was interesting to note that the first patient had not been vaccinated in infancy and that the second one had only been vaccinated as an infant. In the unvaccinated lad the infection was multiple, and in the one vaccinated in infancy infection was single.

Dr. IZOP BENNETT read a very interesting paper on recent advances in pernicious anaemia. An unusually large number of

<sup>1</sup> BRITISH MEDICAL JOURNAL, January 28th, p. 152.

members took part in the discussion which followed. A vote of thanks to Dr. Izod Beckett, proposed by Dr. Collier, sen., and seconded by Dr. Gimson, was enthusiastically carried.

## Association Notices.

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.**—At the meeting of the East York Division to be held on Friday, February 17th, Dr. Ritchie Rodger will read a paper on foreign bodies in the air passages, etc.

**EDINBURGH BRANCH.**—The winter clinical meeting of the Edinburgh Branch will be held in the Royal Infirmary, Edinburgh, on Wednesday, February 29th. All members of the profession are cordially invited. Senior medical students desirous of attending will be admitted by card, obtainable from Mr. W. A. Cochran, 24, Walker Street. The museum will be open from 10 a.m. to 6 p.m. Arrangements will be made for holding special clinics during the day. The clinical meeting will be held at 3.30 p.m. Those who have patients, specimens, etc., to show are requested to communicate with Mr. W. A. Cochran by February 18th. At 7.15 p.m. dinner will be held in the North British Station Hotel; morning dress. Diuner ticket, 10s. Ladies will be welcomed. Members are asked to notify the honorary secretaries by February 25th whether they intend to be present, and whether they will be accompanied by ladies or other guests.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at the County Laboratory, Hamilton, on Wednesday, February 22nd, at 5.30 p.m. Dr. James L. Brownlie will read a paper on the bacteriological laboratory and the practitioner.

**KENT BRANCH: ISLE OF THANET DIVISION.**—A meeting of the Isle of Thanet Division will be held at the Queen's Highcliffe Hotel, Margate, on Thursday, February 16th, at 8.30 p.m., when Dr. Raven will be in the chair. Agenda: Medical charities; the British Medical Association collective investigation on after-results of gastro-enterostomies, also treatment of varicose ulcers; paper by Dr. F. E. Nichol entitled "De Omnibus."

**LANCASHIRE AND CHESHIRE BRANCH.**—A science meeting of the Lancashire and Cheshire Branch will be held at the Salford Royal Hospital on Thursday, February 23rd, at 3 p.m. The following short papers will be read:—(1) Mr. Garnett Wright: Volvulus of the sigmoid; (2) Mr. R. Ollerenshaw: Fractures in the region of the elbow joint; (3) Dr. G. J. Langley: Some problems of glycosuria; (4) Mr. J. B. Macalpine and Mr. E. D'A. McCrea: Stricture of the urethra. After tea there will be an exhibition of cases, a display of exhibits from the pathological laboratory, and a demonstration by Dr. R. Gibson on the treatment of varicose veins by injection.

**LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.**—A meeting of the Southport Division will be held on Friday, March 30th, when Dr. E. P. Cumberbatch will deliver a British Medical Association Lecture on the use of ultra-violet rays in general as well as in skin disease. It is hoped that there will be a large attendance of members.

**METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.**—A general meeting of the Kensington Division will be held at the Great Western Hotel, Paddington (opposite Praed Street Station), on Wednesday, February 15th, at 8.45 p.m. Agenda: An address by Dr. A. Remington Hohbs (medical superintendent of St. Mary Abbott's Hospital and consulting gynaecologist to the Royal Borough of Kensington) entitled "Puerperal sepsis." Dr. Robert Donaldson and Mr. John Ellison will open the subsequent discussion, the former from the pathological and the latter from the surgical point of view. Light refreshments can be obtained at moderate charges during the meeting; smoking. Members who intend to enter for the Treasurer's Cup golf competition are asked to notify the honorary secretary as soon as possible, as the drawing for opponents must take place soon.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Cufford, on Tuesday, February 21st, at 8.45 p.m. Dr. J. Stanley White will read a paper on some recent aspects of biological therapy, illustrated by lantern slides and a film, "How biological products are made." Dr. Jane Hawthorne having had to leave for the Continent the address on March 20th to the Division at the Town Hall, Cufford, will be on the general practitioner and the prevention of venereal disease, by Mr. Wansey Bayly.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, February 14th, at 9 p.m. Dr. Alfred Cox, Medical Secretary of the British Medical Association, will give an address entitled "The family doctor on his trial."

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, N.W.10, on Wednesday, February 15th, at 9 p.m. Dr. McKinstry, pathologist to the hospital, will give a practical demonstration on the examination of cerebro-spinal fluids. Entries for the Treasurer's Cup golf competition should be sent to Dr. G. F. Buchan, 54, Winchester Avenue, N.W.6, not later than February 29th.

**MIDLAND BRANCH: LINCOLN DIVISION.**—A joint meeting of the Lincoln Division with the Lincoln Medical Society will be held at the Lincoln County Hospital (massage department) on Thursday, February 16th, at 4 p.m. Sir Richard H. Luce, M.P. for the borough of Derby, lately surgeon to the Derby Royal Infirmary, will deliver an address entitled "The future of hospital service."

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The first clinical meeting of the Branch will be held at Gray's Hospital, Elgin, on Thursday, February 16th, at 3.30 p.m., when Dr. Shiach, L.D.S., will read a paper on oral sepsis. After the paper, tea will be served and will be followed by a demonstration of cases by members of the Banff, Moray, and Nairn Division. Two other clinical meetings will be held this winter: (1) at the Northern Infirmary, Inverness, on March 15th; (2) at the District Asylum, Inverness, on April 12th.

**NORTH OF ENGLAND BRANCH: NEWCASTLE-UPON-TYNE DIVISION.**—A meeting of the Newcastle-upon-Tyne Division will be held at 7, Windsor Terrace, on Tuesday, February 14th, at 8.30 p.m. Agenda: Consider letter from the Central Ethical Committee; election of representatives and deputy representatives; reports of (a) Subcommittee re Public Education in Health, (b) Medical Charities Subcommittee, (c) Reception and Dance Subcommittee.

**NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.**—A meeting of the North Northumberland Division will be held in the Infirmary, Alnwick, on Tuesday, February 14th, at 2.45 p.m. Agenda: Annual report; election of representatives. At the close of the meeting an address will be given by Dr. Nottrass entitled "Clinical forms of nervous syphilis." Tea will be provided.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A scientific meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, February 15th, at 8.15 p.m., when Dr. Alfred Parkin will give a lecture entitled "The medico-legal aspect of the Workmen's Compensation Act."

**OXFORD AND READING BRANCH: WINDSOR DIVISION.**—A joint meeting of the teaching and medical professions and of others interested in education will be held at the Town Hall, Windsor, on Friday, February 17th, at 5.15 p.m. A discussion will be opened by Dr. A. W. Sikes, divisional medical officer, London County Council, on the school child of yesterday and to-day. Dr. John Goff (Windlesham) will be in the chair, and the following have promised to speak: Miss Agate (head mistress, girls' council school, Egham), Mr. E. A. Bell (head master, council school, Maidenhead), and Dr. J. J. Paterson (M.O.H., Maidenhead). All doctors, whether members or not of the British Medical Association, and all teachers, school managers, and other educationists are invited to the meeting.

**SHROPSHIRE AND MID-WALES BRANCH.**—A clinical meeting of the Shropshire and Mid-Wales Branch will be held at the Royal Salop Infirmary on Tuesday, February 14th, at 3.45 p.m., when Dr. Stanley Barnes, physician to the Birmingham General Hospital, will deliver an address, illustrated by lantern slides, upon the simulation by functional disorder of organic disease of the nervous system. Tea will be provided by kind invitation of Dr. Urwick, chairman of the Clinical and Pathological Section.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, February 16th, at 8.30 p.m. Mr. A. S. Ferguson will read a paper on focal infections of the head.

**SURREY BRANCH: REIGATE DIVISION.**—A Divisional meeting will be held at the East Surrey Hospital on Tuesday, February 14th, at 8.45 p.m. Agenda: Election of representative; paper by Mr. Clifford White: Abdominal pain in women, with special regard to pregnancy.

**SUSSEX BRANCH: BRIGHTON DIVISION.**—The next clinical meeting of the Brighton Division will be held at the Sussex Eye Hospital, Queen's Road, Brighton, on Wednesday, February 15th, at 3.45 p.m. The Brighton Division supper will be held on Saturday, February 18th, at 8 p.m., at the Royal Albion Hotel, Brighton. Mr. J. H. Rothwell, C.B.E., town clerk of Brighton, will be the guest of the evening, and will give an address on the relationship of the municipality to the medical profession. Members are invited to municipality to the medical profession. Members are invited to bring guests, medical or otherwise; ladies are especially invited. Price of tickets 5s. (exclusive of wines); morning dress. Applications for tickets, accompanied by remittance, should be made to Dr. St. George B. Delisle Gray, 20, Norton Road, Hove.

**YORKSHIRE BRANCH: LEEDS DIVISION.**—A meeting of the Leeds Division will be held in the General Infirmary, Leeds, on Friday, February 17th, at 8 p.m. Dr. John Parkinson will give a British Medical Association Lecture on common difficulties in cardiac diagnosis. Lantern slides will be shown, and there will be a discussion after the lecture.

## National Insurance.

### LONDON INSURANCE COMMITTEE.

#### Disciplinary Action.

THE meeting of the London Insurance Committee, held on January 26th, was chiefly remarkable for the number of complaints formulated against chemists for faulty dispensing. In sixteen out of about twenty cases the chemists were either censured or cautioned, and in three of the cases it was decided, in addition to censure, to report the facts to the Ministry of Health. Two practitioners who had been found guilty of a breach of the terms of service in accepting a fee for treatment of an insured person were censured, and it was decided to report the facts to the Ministry. A communication was received from the Ministry relating to two practitioners who had failed to keep proper records. It was stated that as the practitioners in this possibly not appreciated the full extent of their duties in this respect, the Minister had decided on this occasion not to withhold any part of the moneys payable in respect of medical benefit, but he warned the practitioners that their record cards would be inspected again in the course of the next twelve months, and if they were then found not to have been kept in

accordance with the instructions, the Minister would have no alternative but to withhold a sum which, if the defects were serious, might be substantial. The Minister pointed out that the practitioners were not dealing fairly with their colleagues, who might afterwards have to treat these same cases, if they failed to fulfil their obligation to furnish a continuous medical history.

#### The Final Certificate.

Mr. H. MILLS, chairman of the Medical Service Subcommittee, said that in cases which had come before the subcommittee complaints had been made against practitioners because the insured person had not been able to get a second opinion when his practitioner had—improperly, as the insured person thought—insisted on giving a final certificate. One insured person asked leave to go to the regional medical officer, but that was refused by his society, which held that the regional medical officer was brought into existence to protect the society against its members. There was a difference of opinion as to whether the society was justified in that attitude. It was suggested that if some method could be found whereby the insured person would know what was his proper course under such circumstances it would simplify the work of the Medical Service Subcommittee. In a brief discussion some astonishment was expressed that any society should refuse its members permission to go to the regional medical officer, because the alternative, as to which the society had no option, was the clumsy procedure of arbitration. It was agreed that the chairman and another member should seek an interview with the officials of the society which had withheld consent and endeavour to discover some compromise.

#### Change of Doctor.

The total number of notifications by insured persons of their desire to change doctors in the same district received in London during the last three months of 1927 was 5,834. The greatest number on any one day was 107 on November 3rd. The number of irregular transfer acceptances sent in by practitioners and rejected during the same three months was 2,198.

#### LONDON PANEL COMMITTEE.

At a meeting of the London Panel Committee on January 24th, Dr. H. J. CARDALE presiding, Dr. W. L. Templeton was appointed a member to fill a vacancy in the representation of Islington.

#### Alleged Canvassing for Patients.

The case of a practitioner who, it was alleged, had contravened the warning notice in regard to canvassing for patients came again before the committee. At its last meeting the committee decided to report the case to the registrar of the General Medical Council. A letter was now read from the registrar asking whether, in the event of an inquiry, the committee would be prepared to lay the facts before the Council at the hearing. After discussion, the committee decided that its funds did not permit it to appear before the Council in the role of prosecutor, and that it would be the more proper course to refer the matter to the Medical Service Subcommittee of the London Insurance Committee to be dealt with as a complaint, and then it would be for the Insurance Committee to decide whether the case should go forward to the General Medical Council. It was agreed that this should be done.

#### Proprietary Preparations.

On the question coming forward as to whether certain proprietary preparations should be allowed at the cost of the Drug Fund, a member complained that there did not seem to be any intelligent system whereby any proprietary article was admitted and another refused. The CHAIRMAN replied that primarily every practitioner must be a law unto himself in this matter. There was no fixed list published, but from time to time the question of certain preparations came before the Panel Committee, on the request of the Insurance Committee, as to whether it was considered that they should be paid for out of the Drug Fund. A number of opinions by the Panel Committee were now on record; but the whole question was one of common sense. If a practitioner thought that a certain preparation suited his patient better than a preparation in the *Pharmacopoeia*, it would be comparatively easy for him to justify it before the authorities. A practitioner had only to say that in his experience he had found the proprietary article do his patients more good than the usual prescription, and his point of view would almost certainly be accepted without further question. The London Insurance Committee was going to notify practitioners of all preparations definitely turned down.

#### Public Medical Service.

At a meeting of the committee of the London Public Medical Service, which followed the meeting of the Panel Committee, it was announced that the number of subscribers was now 8,434.

## Naval and Military Appointments.

#### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander D. H. O. Given to the *Victory* for R.N. Barracks, Portsmouth.  
Surgeon Lieutenant T. G. B. Crawford to the *Concord* on completing.

#### ROYAL ARMY MEDICAL CORPS.

Major F. B. Dalgleish retires on retired pay and is granted the rank of Lieutenant-Colonel.  
Major C. M. Rigby retires on retired pay.  
Captain T. C. Bewle to be Major.  
The following Captains to be temporary Captains and temporarily relinquish the rank of Captain: B. D. Merrin and J. B. Woodrow.  
Temporary Lieutenant I. MacV. Bourke relinquishes his commission.

#### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenants J. J. Clarke and B. Pollard are transferred to the Reserve Class DII.  
Flying Officer N. 1. Smith to be Flight Lieutenant.  
Flying Officers V. V. Brown to No. 5 Flying Training School, Sealand; M. Clancy to No. 1 Flying Training School, Netheravon; F. E. Lipscomb and O. P. O'Toole to R.A.F. Depot, Uxbridge; S. B. S. Smith to Electrical and Wireless School, Flowerdown; G. H. Williams to Aeroplane and Armament Experimental Establishment, Martlesham Heath; D. A. Wilson to Headquarters, Air Defence of Great Britain, Uxbridge.

#### RESERVE OF AIR FORCE OFFICERS—MEDICAL BRANCH.

Flight Lieutenant G. R. Nodwell is transferred from Class DI to DII.

#### VACANCIES.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—(1) Second House-Surgeon. (2) Third House-Surgeon. (Non-resident.) Salary at the rate of £153 per annum each.  
BIRMINGHAM: QUEEN'S HOSPITAL.—Medical Registrar. Honorarium £100 per annum.  
BIRMINGHAM UNION.—Technical Laboratory Assistant at Selly Oak Hospital (male). Salary £4 per week, rising to £5.  
BLACKBURN COUNTY BOROUGH.—Medical Officer of Health and School Medical Officer. Salary £1,000 per annum.  
BOOTH BOROUGH HOSPITAL.—(1) Senior Medical Officer. (2) Two Junior Medical Officers. Males. Salary £150 and £125 respectively.  
BRISTOL GENERAL HOSPITAL.—House-Physician. Resident. Obstetric Officer, House-Physician and Department. Casualty House-Surgeon. Salary, each, rising to £100 if reappointed.  
BRISTOL ROYAL INFIRMARY.—(1) Two House-Physicians. (2) Four House-Surgeons. (3) House-Surgeon to Ear, Throat, and Nose Department. (4) House-Surgeon to Gynaecological, Ophthalmic, and Dermatological Departments. (5) Obstetric House-Physician. (6) Casualty House-Surgeon. (7) Assistant House-Surgeon and House-Surgeon to Ophthalmic Department. (8) Dental House-Surgeon. Salary (1) to (7) at the rate of £80 per annum, but if candidate had previously held resident appointment in Infirmary £100, and for (8) £80 per annum if resident, and £116 if non-resident.  
BUXTON: DEVONSHIRE HOSPITAL.—Assistant House-Physician (male). Salary £150 per annum, rising to £175 after three months.  
CANTERBURY: KENT AND CANTERBURY HOSPITAL.—(1) Honorary Assistant Physician. (2) Two Honorary Assistant Surgeons.  
CHILDREN'S MEDICAL HOME, Waddon, Croydon.—Medical Officer (V.D.). Salary £150 per annum.  
CHURCH MISSIONARY SOCIETY.—Medical Officer for Church Missionary Society Hospital, Omdurman.  
CROYDON COUNTY BOROUGH.—Deputy Medical Officer of Health and Deputy School Medical Officer. Salary £780 per annum.  
CYRUS.—District Medical Officer. Salary £600 per annum.  
DERBYSHIRE COUNTY COUNCIL.—Woman Medical Officer. Salary £600 per annum, rising to £750.  
DEWSBURY AND DISTRICT GENERAL HOSPITAL.—House-Surgeon (male). Salary £200 per annum.  
EDINBURGH: ELISIE INGLIS MEMORIAL MATERNITY HOSPITAL.—Two House-Surgeons (females).  
EDINBURGH HOSPITAL FOR WOMEN AND CHILDREN.—(1) House-Surgeon. (2) House-Physician. (3) Junior House-Surgeon (non-resident); remuneration at the rate of £25 per annum. Females.  
EDINBURGH ROYAL INFIRMARY.—Senior Clinical Assistant and Clinical Tutor in the Ophthalmic Department. Emoluments £145 per annum.  
GUILDFORD UNION.—Resident Male Assistant Medical Officer at the Institution. Salary at the rate of £150 per annum.  
HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Assistant Pathologist and Research Fellow. Salary £450 per annum.  
LIFORD EMERGENCY HOSPITAL.—Senior and Junior House-Surgeons (male, unmarried). Salary £110 and £90 per annum respectively.  
IPSWICH PARISH.—Assistant Resident Medical Officer (female) at Heathfields Infirmary, Heathfield House, and St. John's Home for Children. Salary £250 per annum.  
KEESINGTON, FULHAM, AND CHELSEA GENERAL HOSPITAL, S.W.10.—Senior and Junior Resident Medical Officers. Salary at the rate of £125 and £100 per annum respectively.  
LEICESTER ROYAL INFIRMARY.—Two House-Physicians. Salary at the rate of £125 per annum.  
LIVERPOOL AND DISTRICT HOSPITAL FOR DISEASES OF THE HEART.—House-Physician.  
LONDON UNIVERSITY.—University Chair of Biochemistry tenable at the London School of Hygiene and Tropical Medicine. Salary £1,300 a year and allowance of £200.  
MANCHESTER AND Salford HOSPITAL FOR SKIN DISEASES.—House-Surgeon. Salary £100 per annum.  
MINNLESBROUGH: NORTH RIDING INFIRMARY.—Senior and Junior Resident Surgeons (males). Salary £200 and £150 per annum respectively.  
MILBURN MISSION HOSPITAL, Austin Street, E.2.—Junior Resident Medical Officer (male). Salary £100 per annum.  
MINISTRY OF HEALTH.—Medical Officer (male). Salary £600 per annum, rising to £1,100 and bonus, at present £175 7s.  
QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—(1) Resident Medical Officer. (2) Casualty Officer. (3) Two House-Physicians. Salary for (1) £200 and for (2) and (3) £100 per annum.  
RICHMOND, SURREY: ROYAL HOSPITAL.—Junior Assistant House-Surgeon (male). Salary at the rate of £100 per annum, rising to £150 on appointment as Senior.  
ROCHFORD UNION.—District Medical Officer and Public Vaccinator of the Southend-on-Sea (West) District. Salary £120 per annum and usual medical and vaccination fees.  
ROYAL COLLEGE OF SURGEONS OF ENGLAND.—Member of Court of Examiners.  
ROYAL NATIONAL ORTHOPAEDIC HOSPITAL, 234, Great Portland Street, W.1.—(1) House-Surgeon. (2) House-Surgeon at Country Branch at Stanmore. Salary £150 per annum each.  
ROYAL NORTHERN HOSPITAL, Holloway Road, N.7.—(1) Ophthalmic Surgeon. (2) House-Surgeon; salary at the rate of £70 per annum.  
ST. GEORGE'S HOSPITAL, S.W.1.—Assistant Radiologist. Remuneration at the rate of £110 per annum.  
ST. JOHN'S HOSPITAL FOR DISEASES OF THE SKIN, Leicester Square, W.C.—Honorary Medical Registrar.  
ST. THOMAS'S HOSPITAL.—Physician in charge of Out-patients.

STOCKPORT INFIRMARY.—Resident Surgical Officer. Salary £250 per annum.  
 STONE AND WOLSTANTON UNION.—Assistant Medical Officer at the London Road Institution. Salary £250 per annum.  
 STROKE-ON-TRENT CITY.—Medical Officer of the Venereal Diseases Centre. Salary £850 per annum.  
 TETRO: ROYAL CORNWALL INFIRMARY.—Honorary Assistant Surgeon.  
 WARWICK COUNTY MENTAL HOSPITAL, Hatton.—Assistant Medical Officer. Salary £300 per annum.  
 WEST LONDON HOSPITAL, Hammersmith Road, W.6.—Honorary Obstetric Registrar.  
 WEST NORFOLK AND KING'S LYNN HOSPITAL.—(1) Resident Surgical Officer. (2) Assistant House-Surgeon. Salary £400 and £100 per annum respectively.  
 YORK MATERNITY HOSPITAL.—House-Surgeon (female). Salary at the rate of £350 per annum.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Aberystwyth (Cardiganshire), Rothesay (Buteshire). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

### APPOINTMENTS.

EDDISON, Herbert W., M.B., B.Ch., D.P.M.Camb., Medical Superintendent of Wonford House Mental Hospital, Exeter, vice W. B. Morton, M.D.Lond., deceased.  
 GREGG, R. Ashleigh, M.D., D.P.H., County Medical Officer of Health to the East Sussex County Council.  
 JONES, Archibald M., M.D., F.R.C.S.Ed., Honorary Surgeon to the Ear, Nose, and Throat Department of Cardiff Royal Infirmary.  
 MARLEY, J., M.R.C.S., L.R.C.P.Lond., Certifying Factory Surgeon for the Hoveyale District, county of Chester.  
 ROBINSON, J. S., M.B., B.Ch.Dub., F.R.C.S.Ed., Consulting Surgeon to the Tewkesbury Hospital.  
 ROXBURGH, A. O., M.D.Cantab., M.R.O.P.Lond., Physician in charge of Skin Department, St. Bartholomew's Hospital.

### DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.  
 For Section.—Mon., 5 p.m., Surgeon Commander S. F. Dudley, R.N.: Somo Asper.  
 Section of P.—at the Maudsley Hospital, Denmark Hill.  
 Prognosis of Acute Schizophrenia; preceded by display of series of cases.  
 Social Evening.—Wed., 8.30 p.m., Reception by the President and Lady Berry. 9.15 p.m., Address by Lieut.-Colonel W. P. MacArthur, R.A.M.C.: Some Medical References in Papyrus (with illustrations).  
 Section of Dermatology.—Thurs., 4 p.m., Cases.  
 Section of Obstetrics.—Fri., 8 p.m., Dr. Bethel Solomons: Two Uteri removed for Puerperal Sepsis. Mr. J. Ellison: Two Extreme Cases of Multiple Myomata in Sisters of under 25 years; Mr. Frederick Roques: Encephali.  
 Section of Irradiation h.—Cinematograph Demonstration including the Action of

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.2.—Mon., 5 p.m., Dr. Adolphe Abraham: Physiology of Violent Exercise in relation to the Possibility of Strain. Wed., 5 p.m., Mr. A. Fleming: Lysosyme. Fri., 5 p.m., Dr. Ida C. Mann: Regional Differentiation of the Vertebrate Retina.

ROYAL SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 11, Chandos Street, W.1.—Thurs., 8.15 p.m., Dr. A. R. Paterson, Deputy Director of Sanitary Service, Kenya: The Provision of Medical and Sanitary Services among Rural Populations in Tropical Africa; preceded at 7.45 p.m. by a demonstration.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.1.—Mon., 8.30 p.m., Discussion: The Use and Abuse of Ultra-violet Light Therapy. To be introduced by Professor Leonard Hill, Dr. O'Donovan, and Dr. C. B. Heald.

### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Lecture at Medical Society of London, 11, Chandos Street, W.1, Mon., 5 p.m., Hysterical Breasts. West End Hospital for Nervous Diseases, Welbeck Street, W.1: Clinical Demonstrations, Mon., 5 p.m. St. Peter's Hospital, Henrietta Street, W.C.2: Clinical Demonstrations, Fri., 5 p.m. Royal Westminster Ophthalmic Hospital, Charing Cross, W.C.2: Lecture Demonstration: The Clinical Application of Perimetry, Fri., 5 p.m. The above are open to all members of the medical profession without fee. St. John's Hospital, Leicester Square, W.C.2: Course in Dermatology every afternoon. Pathology Course arranged. National Hospital, Queen Square, W.C.1: Course in Neurology every afternoon; Demonstrations. Lectures at certain times.

CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Fri., 4 p.m., Dysphagia—Pain in Swallowing.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Thurs., 4 p.m., Acute Abdominal Emergencies.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs., 4 p.m., Modern Methods of Control cases.

LONDON SCHOOL OF DERM.—Leicester Square, W.C.2.—Tues., 5 p.m., Pathology Demonstration. Thurs., 5 p.m.,

NATIONAL HOSPITAL, Queen Square, W.C.1.—Mon., Tues., Thurs., and Fri., 2 p.m., Out-patient Clinics. Tues. and Fri., 9 a.m., Operations. 5 p.m., Examination of the Nervous System. Mon., 12 noon, Pathology of the Nervous System; 3.30 p.m., Cranial Nerve Palsies. Tues., 3.30 p.m., Cranio-cerebral Topography. Thurs., 3.30 p.m., Cranial Nerve Palsies. Fri., 12 noon, Anatomy and Physiology of the Nervous System; 3.30 p.m., Muscular Atrophies.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2 p.m., Demonstration of Gynaecological Cases; 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2 p.m., Demonstration of Eye Cases; 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

ROYAL CHEST HOSPITAL, City Road, E.C.—Tues., 3.15 p.m., Early Diagnosis of Pulmonary Tuberculosis.

ROYAL INSTITUTE OF PUBLIC HEALTH, 37, Russell Square, W.C.1.—Wed., 4.30 p.m., Medico-Legal Aspects of Jewish Life.  
 ST. PAUL'S HOSPITAL, Endell Street, W.C.2.—Wed., 4.30 p.m., Retention of Urine.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION, St. James's Hospital, Ouseley Road, Balham, S.W.12.—Wed., 4 p.m., Blood Transfusion.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.6.—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations, Skin Department, Surgical Wards; 2 p.m., Surgical Wards, Gynaecological and Eye Departments; 4.30 p.m., Special Lectures: The Anxiety Neurosis. Tues., 10 a.m. to 1 p.m., Medical Ward Visits. Demonstrations in Venereal Diseases; 2 p.m., Medical Wards, Throat, Nose.

Wed., 10 a.m. to 1 p.m., Children's Medicine Wards, Demonstration in Medical Pathology; Eye Department. Thurs., 10 a.m. to 1 p.m., Demonstration of Fractures; 2 p.m., Eye and Operations, Dental, Skin, and Electrical Department. Fri., 10 a.m. to 1 p.m., Surgical Wards, Throat, Nose, and Ear Department; 4.30 p.m., Special Lecture: Surgical Emergencies. Daily: Operations, Medical and Surgical Out-patients at 2 p.m.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Royal Maternity and Women's Hospital: Wed., 4.15 p.m., Obstetrical Cases.

MANCHESTER: ST. MARY'S HOSPITALS (WHITWORTH STREET WEST BRANCH).—Fri., 4.30 p.m., Congenital Pyloric Stenosis.

SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.—At Royal Infirmary: Fri., 3.30 p.m., Surgical Cases.

### British Medical Association.

#### REMUNERATION OF NON-PROFESSORIAL UNIVERSITY WORKERS.

##### CONFERENCE OF REPRESENTATIVES OF MEDICAL SCHOOLS WITH THE SCIENCE COMMITTEE OF THE ASSOCIATION.

A CONFERENCE of representatives of medical schools with the Science Committee of the British Medical Association was held at the House of the Association on February 10th for the purpose of discussing the question of the remuneration of non-professorial medical teachers, laboratory workers, and research workers at the universities. Mr. H. S. SOUTTAR, Chairman of the Science Committee, presided, and was supported by Sir Robert Philip, President of the Association, Dr. C. O. Hawthorne, Chairman of the Representative Body, and Mr. Bishop Harman, Treasurer. Almost all the medical schools of Great Britain and Ireland were represented, in the majority of cases by their deans.

The CHAIRMAN, after thanking those present for their attendance, said that it might be asked what was the interest of the British Medical Association in a purely university matter. In the first place, many of those who came into the category just stated were members of the Association, whose interests had to be safeguarded, and, in the second place, the Association was bound to exercise a very careful control over the advertisements of appointments in its JOURNAL. The Association had had to put up a certain scale of salaries for medical officers employed by local authorities, and to scrutinize advertisements by public bodies with this scale in view. It was admitted that laboratory workers employed by universities might come into a different category from similar officers employed by public bodies, and that considerations other than the mere question of salary might arise in their case which did not arise in others, but the difficulty of making any such discrimination in regard to advertisements for posts would be understood. As long ago as 1919 a subcommittee was formed, under the leadership of the late Sir Clifford Allbutt, to go into this matter, and it was upon the report of that subcommittee that certain resolutions were adopted by the Representative Body in ensuing years, and following subsequent discussions the policy of the Association in this respect was framed in 1926, when a certain scale was adopted at the Annual Representative Meeting of that year.<sup>1</sup> This was reported to the governing bodies of the universities, and certain criticisms had been received, from which it appeared to be the opinion of some that the university point of view had not had sufficient consideration. Hence the present conference.

SIR ROBERT PHILIP, who spoke as representing the University of Edinburgh, said that it would have been all to the good had such a conference been summoned earlier. The interest of the Association in the matter had been truly stated by the chairman, but it was also the duty of the Association to keep a large and wide outlook on the whole question of the

training of the profession. The Association had perhaps restricted itself too sharply to the immediate financial interest of individuals. The junior teachers attached to medical schools were from certain aspects a remarkably privileged class; their misfortune was in being attached to institutions with very limited resources. They were in a sense apprentices or pupils, not so much officers as sons, and their remuneration might be considered rather from the point of view of the filial relation than from that of the hireling. The universities—at least those of which he had cognizance—were not able, like other public bodies, to enlarge their resources by an additional penny on the rates, and they were compelled to "spread the butter" carefully. They made as many posts as they could, and rewarded them in such manner as they were able to afford. At Edinburgh many of these workers were on temporary engagements, and regarded it as a privilege to serve for a time under the head of a department whose scientific eminence gave their experience an added value. Another consideration was that there were other faculties in the university employing similar assistants who, if the scale under consideration were enforced in the medical faculty, would feel that they had similar rights; and these men in the other faculties would go on to a career in which the remuneration was not so high as the positions at which many of the men in the medical profession were aiming. The dilemma was therefore a very real one. One practical suggestion he would make was that in the advertisements for such university posts it might not be considered necessary to state the salary at all.

Dr. A. MACGILLIVRAY (St. Andrews) said that when this matter came before the Dundee Branch of the Association in May, 1926, a recommendation was arrived at unanimously that the Council should be empowered to exempt from the operation of the scale any appointment with regard to which it was satisfied that the exemption was justified by the financial position of the school or by other special circumstances. Although St. Andrews was the oldest university in Scotland it had the youngest and smallest medical school. This did not mean that its staff was unduly reduced, for it had actually fifty-seven teachers, a great number of whom, of course, were part-time men, whose case did not arise in the present discussion. The adoption of this scale at St. Andrews would mean a diminution in the number of posts; the professors and full-time men would have much more teaching work to do, and consequently less time for research. Insistence on the scale would handicap the university considerably. It was true that the university got a Government grant, but a large proportion of this had to go into building development.

Professor E. FAWCETT (Bristol) said that it would be useful to know what universities had adopted the grading system suggested by the Association of University Teachers some years ago. Some, he knew, had adopted it with the full financial obligations attached to it at that time; others had adopted the scheme without those full obligations. At Bristol the principle of the scheme had been adopted, and all the full-time people were graded.

Professor J. R. CURRIE (Glasgow) said that grades had been adopted at Glasgow not very different from those proposed by

<sup>1</sup> BRITISH MEDICAL JOURNAL SUPPLEMENT, April 24th, 1926, page 143, and July 24th, 1926, page 42.

the British Medical Association. The crux of the question related to the ungraded assistants. These people were often anxious to come to the university to gain experience and do research; sometimes there was a personal link between the assistant and the head of his department, and the question of salary was not very closely regarded. These people came in order to prepare themselves generally for their profession, and some of them afterwards went into the public service and others into special branches of medicine, or into ordinary general practice, all having derived benefit from the probationary period in the university. In Glasgow it was felt that if these scales were insisted on the field would be encumbered by another class of person less suitable. He also wished to suggest that there was no true parallel between the junior assistants at the universities and the junior assistants in the public services, in spite of a certain similarity in the character of their work. In the public services, with their huge extensions into tuberculosis work, maternity and child welfare work, and the school medical service, despite the fact that the heads of the various administrations were highly paid (at least in comparison with professorial posts), these highly paid positions were not numerous enough to give the junior officer much of a chance of being anything other than a junior officer; yet in the junior position a man was doing important and necessary work for the community, and therefore the Association was right in determining to maintain his status and remuneration at certain levels. If such officers did not get promotion—and few of them did—they would be permanently in the lower-grade work to which the scale rightly applied. On the other hand, the junior at the university was there for a short time only, chiefly with the object of gaining experience.

Dr. C. O. HAWTHORNE said that the university appointments of which Professor Currie had been speaking were domestic arrangements between the professor on the one side—with the nominal covering of the university court—and the individual student on the other. The Association had no desire to interfere with arrangements which were domestic and personal. Such appointments, neither permanent nor advertised, did not come under this scheme. On the other hand, a man who was appointed a lecturer, unless his lectureship was limited to a certain duration, had an appointment which involved the quality of permanence.

Professor T. R. ELLIOTT (University College Hospital) said that the resolutions, if insisted on, would interfere with the responsibility of all the universities in Great Britain. To clear the ground he urged that teaching posts be excluded from the ambit of the resolutions.

Professor CURRIE, in reply to the CHAIRMAN, said that at Glasgow the grades were in force for those whose work might be described as senior, though their tenure of the posts was temporary; their duties were to lecture, and they were generally attached to a department, where they had departmental duties also, and did research. A few of these men remained until they got into Grade I, "hanging on" chiefly in the hope of a chair, which was sometimes realized. The graded workers were appointed for a term of years; the ungraded from year to year.

Professor A. W. SHEEN (Welsh National School of Medicine) said that in his university it had been found almost impossible to work to a scale. The contingent future advantages of an appointment were not to be disregarded. In the department of pathology, for example, the professor was desirous of having two demonstrators, and two qualified people were appointed at a salary of £250 a year. Both were perfectly satisfied, and were doing good work; the salary in such cases was not the primary consideration. In the departments of clinical medicine appointments might lead to the hospital staff and to consulting practice in the district. On the physiology side larger sums had to be paid, because the class of men needed were not so readily forthcoming. He thought it would be an advantage if there were no scale at all.

Sir HUMPHRY ROLLESTON (Regius Professor of Physic, Cambridge University) said that it was obvious that what was laid down for Grade III (comprising those who were junior workers temporarily employed on probation, remaining in the grade for not more than two years at a minimum salary of £300 for the first year and £350 for the second) would have to be referred back to the Science Committee.

Dr. HAWTHORNE thought that the conference might reasonably feel that there was a case for reconsideration. The very fact

that the conference had been called was an indication that those primarily responsible for the policy of the British Medical Association recognized that in connexion with academic appointments some alteration of the scale had to be made. But those present would appreciate how difficult it was for the Association to insert an advertisement in the JOURNAL offering £600, say, for an appointment in the public health service, and another offering £300 or £350 for an appointment in the academic service. No doubt the academic people felt that their appointment involved large opportunities for the future, but the public health people would say exactly the same thing. The public health people would not agree that any appointment of theirs was necessarily one which led to an impasse, nor would they agree that every junior university appointment did effectively carry with it a reasonable chance of promotion. Possibly Sir Robert Philip's suggestion was a practical one, that advertisements for academic appointments need not specify salary, but he hoped that other practical suggestions would be forthcoming.

Professor W. J. DILLING (Liverpool University) said that it would be helpful if representatives of universities which had a grading system would say what grades existed and the salary attached. In Liverpool it had been found necessary to divide Grade II (laboratory or research workers), or teachers permanently or exclusively employed as such) into two categories, with certain variations as to the scale, the first category including a number who, while very good teachers, were not likely to advance beyond that grade.

Professor KAY JAMIESON (Leeds University) said that in the faculty of medicine the majority of the staff were on their way to other lines of professional work, and the same was true in other faculties. Few were permanently on the academic staff. Those who had permanent positions had been sifted out from the others who were moving on. The university deliberately made as many positions available as possible in order to afford men experience fitting them for various lines of professional life. It was scarcely necessary for the Association to lay down rigid scales in the interests of its own members in the universities. The universities were doing their best for their staffs; moreover there was a considerable number of persons on the academic staffs who were not in the profession at all, and not affected by any action of the Association.

Professor J. S. B. STOPFORD (Manchester) said that in Manchester the adoption of Grade III with the salaries stated would have the effect of quite definitely reducing the staff.

Dr. ARNLEY WALKER (Dean of the Faculty of Medicine, Oxford University) said that at Oxford Grade III would correspond to a class of persons who were called departmental demonstrators; they were not appointed by the university, but by the professor himself, for a maximum period of three years; they could be reappointed for a further three years, but no more.

Professor DOUGLAS (Sheffield) said that at Sheffield no system of grading had been adopted in any faculty. He agreed with the remarks made by Professor Jamieson, though there was this difference between Leeds and Sheffield, that at the latter university the junior people were not as a rule appointed for any definite length of time.

The CHAIRMAN thought it was now possible to draw some definite conclusions from the discussion. The conference seemed to be generally agreed that the scales of salaries suitable for public appointments were not directly applicable to academic appointments, that the Association required more information with regard to the salaries of laboratory workers throughout the kingdom, and that it would be an advantage if salary was not mentioned in advertisements of academic appointments.

Mr. BISHOP HARMAN trusted that no hopes would be held out that advertisements could be inserted in the JOURNAL without a specific statement as to salary. He felt sure that this would never pass the Representative Meeting. He read the resolution of the Annual Representative Meeting, 1919, to the effect that no advertisements of public appointments should be accepted unless the salary was definitely stated in the advertisement. Dr. MACGILLIVRAY suggested that "public appointments" meant appointments by a body of men elected by the ratepayers.

Sir ROBERT PHILIP put forward tentatively the following resolution:

This conference, having had evidence of the variation in respect of privileges of non-professorial medical assistants in

the different universities and medical schools, is of opinion that scales of salary suitable for public appointments are not directly applicable to academic appointments.

The conference would ask the Science Committee of the British Medical Association to consider the desirability of recommending to the Association: (1) to exempt such assistantships from the application of a fixed scale of salaries; (2) to allow advertisements bearing on such appointments to appear in the *British Medical Journal* without a statement of the salary payable; and (3) in the meantime to obtain further information as to the salaries and conditions in force at the different universities and medical schools.

Dr. MacGILLIVRAY demurred to the last clause, and stated that universities, especially in Scotland, would not be inclined to furnish figures. The salaries were private and could not be given. Professor CUNNINGHAM also said that he could not commit his university (Glasgow) to give the information. Dr. HAWTHORNE pointed out that it was administratively impossible for the Council to consider each individual advertisement on its merits, and therefore a standard had to be set up for the guidance of the officials.

After some further discussion the latter portion of the resolution was dropped, and the remainder was carried unanimously, as follows:

This conference, having had evidence of the variation in respect of privileges of non-professional medical assistants in the different universities and medical schools, is of opinion that scales of salary suitable for public appointments are not directly applicable to academic appointments.

The conference would ask the Science Committee of the British Medical Association to consider the desirability of recommending to the Association the exemption of such assistantships from the application of a fixed scale of salaries.

The CHAIRMAN, in closing the conference, reminded those present that the organization of the British Medical Association was a complex one, and that the powers of action of the Science Committee without further reference were strictly limited. However much the committee might agree with what had been put forward, it was finally controlled by the Representative Body, whose endorsement of any new procedure must be sought.

A vote of thanks was accorded to Mr. Sontar for his services as chairman, and the conference terminated.

### LEICESTER PUBLIC MEDICAL SERVICE.

The report of the board of management of the Leicester Public Medical Service for 1922, in recording the resignation of Dr. Wallace Henry from the board, calls attention to the fact that he had played an outstanding and distinctive part in laying the foundation of the service, and rendered invaluable service for many years. In recognition of his work Dr. Wallace Henry has been elected president and an *ex officio* member of the board of management.

The number of subscribers to the various sections of the service was 41,843 for the first half of the year and 41,932 for the second half. In addition, the State-insured members of the Foresters and Oddfellows Friendly Societies and some insured members of the Leicester United Friendly Societies' Medical Association were paid for through the service. As might be expected, the continued industrial depression adversely affected the receipts. The board continued the arrangements with the People's Dispensary and the Foresters' Medical Association, whereby medicines, etc., were dispensed at the Public Medical Service branches for those members who desired to avail themselves of the facilities. During the year 222,000 prescriptions were dispensed. The ophthalmic, aural, radiological, and dental departments were continued, and subscribers took great advantage of the facilities afforded by the first two named. By arrangement with the Ministry of Health a consulting room with waiting room accommodation was provided at the Central Dispensary for the regional medical and dental officers, and accommodation was also provided for the City of Leicester Health Department in connexion with the dental treatment of expectant mothers. Accommodation, by arrangement with the committee of the Leicester and the Leicestershire Maternity Hospital, was provided also for the ante-natal clinic of the hospital.

The Benevolent Fund, established for assisting uninsured people unable to purchase insulin at the ordinary prices to obtain it at a greatly reduced cost, proved very useful in a number of cases.

The report of the committee of the Union of Medical Practitioners (Leicester Subdivision) states that the scheme of collective locumtenencies during holidays and sickness, inaugurated in 1919, was successfully continued. Donations amounting to £113 were made to medical charities, while £193 had been credited to the National Insurance Defence Trust and £48 to the Medical Representation of Parliament Fund for 1922.

## INDIAN MEDICAL SERVICE.

### RECRUITMENT FOR PERMANENT COMMISSIONS.

We published in the *JOURNAL* of January 28th (p. 160) an announcement that the Secretary of State for India would shortly make a number of appointments to permanent commissions in the Indian Medical Service. For some years past, it will be remembered, recruitment for the I.M.S. has been by way of temporary commissions.

A Memorandum on the terms and conditions of appointments to permanent commissions has now been issued from the India Office, and as the matter is of great importance we reprint this document below, substantially in full. Comment on the conditions stated in the Memorandum must be deferred until after the Naval and Military Committee of the British Medical Association has met and considered it in all its hearings.

#### MEMORANDUM ON APPOINTMENT TO THE I.M.S. AND CONDITIONS OF SERVICE.

1. The conditions contained in this Memorandum are those in force at the present time. They are subject to any alterations that may be determined on. For detailed regulations reference should be made to Army Regulations, India.

#### Method of Appointment.

2. Since the open competitive examination held in July, 1915, for admission to the I.M.S. no similar examination has been held, but such appointments as have been required to meet the needs of the service have been made by nomination by the Secretary of State. This method of recruitment will continue to be in force until further notice. To assist him in making appointments the Secretary of State has appointed a Selection Committee, who will summon and interview such applicants as may appear to be prima facie suitable and make recommendations for appointment. A similar committee has been appointed in India to investigate applications and forward recommendations to the Secretary of State. Applications from Europeans resident in Europe should be addressed to the Secretary, Military Department, India Office, Whitehall, S.W.1. Other applications should be addressed to the Director-General, I.M.S., Simla (or Delhi), India. The applications of all Indian candidates are considered by the Selection Board in India, and no useful purpose is served by such candidates presenting themselves for interview before the Selection Board in London. Applications from Indians in this country to appear before the London Selection Board will only be entertained where the Board is of opinion that the circumstances are exceptional. All correspondence regarding applications should be marked "Medical Recruitment" at the top left-hand corner of the envelope.

#### General Qualifications and Limits of Age.

3. Every candidate must be either (a) a British subject of European descent in the male line, whose father was, at the time of the candidate's birth, a British subject, or (b) a British subject whose father was, at the time of the birth of the candidate, either a British subject domiciled in British India or a subject of a State in India. In either case, such father must still be, or have continued to be to his death, a British subject or a subject of such a State in India. Provided that a subject of any State in India, in respect of whom the Governor-General in Council has made a Declaration Note, under section 95A of the Government of India Act, shall be deemed to be eligible. Every candidate must also be of sound bodily health, and, in the opinion of the Secretary of State for India in Council, in all respects suitable to hold a commission in the I.M.S. He may be married or unmarried. He must possess a qualification registered in Great Britain and Northern Ireland under the Medical Acts in force at the time of his appointment. Candidates must be under 32 years of age at the time of application.

#### Declaration to be Submitted.

4. Candidates must subscribe and send in to the Secretary, Military Department, India Office, Whitehall, a declaration in the terms printed on the form of application.

5. This declaration must be accompanied by the following documents: (a) *Proof of age*, in the form of a birth certificate or, where such certificate is not available, a declaration signed by the candidate's own statutory declaration, forms for which can be obtained at the India Office, supported, if required by the Secretary of State, by such evidence as he may consider satisfactory. A certificate of baptism which does not afford proof of age will not be accepted. (b) A recommendation and certificate of moral character from each of two responsible persons—not being members of the candidate's own family—to the effect that he is of regular and steady habits and is likely, if appointed, to prove in every respect creditable to the I.M.S. (c) A certificate of having attended a course of instruction for not less than three months at an ophthalmic hospital, or the ophthalmic department of a general

hospital, which course shall include instruction in the errors of refraction. (d) Evidence of registration under the Medical Acts in force in Great Britain and Northern Ireland.

6. The physical fitness\* of each candidate is determined by a Board of Medical Officers appointed by the Secretary of State for India. Detailed regulations as to the physical requirements are printed separately.

#### Courses of Instruction.

7. An officer shall, on appointment, attend such courses of instruction as the Secretary of State may direct, either in the United Kingdom or in India, in the subjects mentioned below. His retention in the service is subject to his attaining a reasonable standard of efficiency in any examination that may result from these courses: (1) Hygiene; (2) military and tropical medicine; (3) military surgery; (4) pathology of diseases and injuries incidental to military and tropical service; (5) midwifery and diseases of women and children; (6) military medical administration: (a) internal economy; (b) Army Service Corps subjects; (c) hospital administration; (d) stretcher and ambulance drill; (e) equitation. An officer is also required to attain a certain standard of proficiency in Hindustani in the early part of his career.

#### Date of Appointment, War Service, and Antedates.

8. The date of appointment will ordinarily be that on which the candidate commences the course of instruction referred to in paragraph 7, or in special cases one month prior to the date of embarkation for India. Any service rendered by an officer during the war as a medical or combatant officer, or in a position usually filled by an officer, may be counted as service for increments of pay, promotion, retirement and retired pay, but not for gratuity (see paragraph 45). One-half of any service in the ranks during the war may be counted as service for retirement and retired pay only. An officer who has held a resident appointment of not less than one year in a recognized civil hospital in the United Kingdom or in India may be granted an antedate not exceeding one year, provided that the interval between the termination of the hospital appointment and the date of entry into the service shall not ordinarily exceed six months. This antedate will count as commissioned service for the purpose of increments of pay, promotion, retirement and retired pay, but not for gratuity. A candidate who at the time of selection for appointment holds, or is about to hold, a resident appointment in a recognized civil hospital in the United Kingdom or in India, may be seconded for the period, not exceeding one year, during which he holds the appointment. While seconded he will not receive pay from Government funds, but the period will count as commissioned service for the purpose of increments of pay, promotion, retirement and retired pay, but not for gratuity.

9. An officer will not be permitted to remain in the service if at any time during the first three years from the date of his first commission his retention therein is considered undesirable. Service previous to appointment to a permanent commission in the I.M.S. will not count for this purpose.

#### Postings.

10. Candidates will be required to conform to such rules of discipline as may from time to time be laid down. They will be liable for military or civil employment as may be required, but are required to perform two years' military duty subsequent to permanent appointment before they can be considered eligible for civil employment. With a view to possible future transfers to civil employment, each officer will be assigned to one of the following civil areas: (1) Madras and Burma; (2) Bombay, with Aden; (3) Upper Provinces—that is, United Provinces, Punjab, and Central Provinces; (4) Lower Provinces—that is, Bengal, Bihar, and Orissa, and Assam. The allocation of officers to these areas of employment will be determined upon a consideration of all the circumstances, including, as far as possible, the candidate's ordinary employment within the area to which they may have been assigned, remain liable to employment elsewhere, according to the exigencies of the service. On transfer to a civil appointment an officer is placed on probation for a period of two years.

#### Ranks and Promotion.

11. The ranks of officers in the I.M.S. are six in number—namely (1) Major-General,† (2) Colonel, (3) Lieutenant-Colonel, (4) Major, (5) Captain, (6) Lieutenant.

12. A Lieutenant is normally promoted to Captain on completion of three years' full-pay service, if he has previously qualified for promotion in such manner as may be prescribed, service previous to permanent appointment in the Indian Medical Service being permitted to account for such purpose (see paragraph 8).

13. A Captain, if in all respects qualified and recommended, is promoted to Major on completion of 12 years' full-pay service, subject to the same condition as regards service previous to permanent appointment in the I.M.S. All officers before promotion to Major will be required to attend the senior officers' course at the Royal Army Medical College, Millbank, and qualify, in the examination held on its conclusion. An officer who fails at the first attempt will be allowed a second trial. Attendance at this course will be regarded as duty and will carry with it a free passage to and from the United Kingdom.

\* A candidate may, if he wishes it, undergo a preliminary examination as to his physical fitness by the Medical Board at the India Office on payment of a fee of two guineas. Particulars regarding such examinations may be obtained from the Under Secretary of State, India Office, Whitehall, London.

† The Director-General, I.M.S., will rank either as Major-General or Lieutenant-General, as may be decided in each case by the Secretary of State for India in Council.

14. A Major, if in all respects qualified and recommended, is promoted to Lieutenant-Colonel on completion of twenty years' full-pay service, subject to the same condition as regards service previous to permanent appointment in the I.M.S.

15. Time (not exceeding one year) passed on the temporary non-effective list, in the case of an officer placed thereon on account of medical unfitness caused by duty, military or civil, reckons as service for promotion and pension.

16. Promotion from the rank of Captain to the rank of Major, or from Major to Lieutenant-Colonel, may be accelerated by not more than six months in the case of officers who produce satisfactory evidence of progress in any branch of knowledge which is likely to increase their efficiency. A certain number of Lieutenant-Colonels are specially selected for increased pay for ability and merit.

17. All promotions from the rank of Lieutenant-Colonel to that of Colonel, and from the rank of Colonel to that of Major-General, are made by selection for ability and merit.

18. The tenure of office of Major-Generals and Colonels is limited to four years, subject to the limits of age as laid down in paragraph 45.

19. Colonels, if not disqualified by age, are eligible either for employment for a second tour of duty in the same grade, or for employment in the higher grade of Major-General by promotion thereto.

20. Absence from duty for longer than eight months consecutively involves the vacation of an administrative appointment of limited tenure.

21. Officers of the I.M.S. are eligible for the military distinction of the Order of the Bath, and for other Orders, British and Indian, and for good service pensions. Six of the most meritorious officers on the active list are appointed Honorary Physicians, and six Honorary Surgeons, to His Majesty. On appointment as Honorary Physician or Honorary Surgeon to His Majesty, an officer below the rank of Colonel may be promoted to the brevet rank of Colonel. A Captain after at least six years' service, a Major, or a Lieutenant-Colonel may be promoted to the next higher rank by brevet for distinguished service in the field, or for meritorious or distinguished service of an exceptional nature other than in the field.

#### Pay and Allowances.

22. Officers on appointment will receive an outfit allowance of £50.

23. Pay will normally commence from the date of appointment and is issued monthly in arrear in this country up to the date of embarkation at the rates of leave pay shown in paragraph 31, except that during the course of instruction referred to in paragraph 7, the R.A.M.C. rates of pay and allowances are admissible. An advance of two months' pay at the rates shown in paragraph 31 is also made before embarkation, if desired. This advance will be recoverable from the officer's pay in India.

24. The following are the monthly rates of Indian pay payable from the date of arrival in India:

Rank.	Service in Rank.	Basic Pay.	Overseas Pay.	Year of Total Service.
1.	2.	3.	4.	5.
		Rs.	Rs.	
Lieut. ...	...	500	150 150 150 150	1st 2nd 3rd 4th
Captain ...	(i) During first 3 years' service as Captain	650	15 15 15	5th 6th 7th
	(ii) With more than 3 and less than 6 years' service as Captain	750	25 25 25	8th 9th 10th
	(iii) With more than 6 years' service as Captain	850	25 30	11th 12th
Major ...	(i) During first 3 years' service as Major	950		
	(ii) With more than 3 and less than 6 years' service as Major	1,100		
	(iii) With more than 6 years' service as Major	1,250		
Lieut.-Col. ...	(i) Until completion of 23 years' total service	1,500	30	13th and over
	(ii) During 24th and 25th years' service	1,600		
	(iii) After completion of 25 years' total service	1,700		
	(iv) When selected for increased pay	1,850		

Note.—(1) Until the completion of 23 years' total service, basic pay is regulated according to rank and service in rank (columns 1 and 2), which, owing to the system of accelerated promotion, may be in advance of the time scale of promotion.

(2) Overseas pay is admissible only in the case of officers who, at the date of their appointment to the I.M.S., had their domicile elsewhere than in Asia, and is regulated solely with reference to length of total service.

25. In addition to the above rates of pay, various allowances are admissible to officers holding special appointments, such as:

(a) Command pay drawn in addition to pay of rank by Indian Medical Service officers for the command and second in command of Indian Military Hospitals:—

	Command.	Second in Command.
	Rs.	Rs.
1st class Station Hospital ...	240	120
2nd class " " ...	180	90
3rd class " " ...	120	Nil

(b) Allowances for charge of Cantonment Hospitals and Cantonment Dispensaries at rates approved by the Cantonment authority concerned and sanctioned by the General Officer Commanding-in-Chief, the Command.

(c) Charge pay varying from Rs. 30 to Rs. 240 per mensem for the medical charge of staffs of certain stations, depots, factories, etc.

(d) Specialist pay of Rs. 100 per mensem in each case attaching to specialists' appointments in certain subjects, including: Advanced Operative Surgery, Medicine, Ophthalmology, Gynecology and Midwifery, Dermatology, including Venereal Diseases, Prevention of Disease, and Charge of Brigade Laboratory. There are 50 such specialists' appointments, for which officers of the I.M.S. in military employment below the rank of Lieutenant-Colonel are eligible together with officers of the R.A.M.C. A candidate for one of these appointments must give proof to the satisfaction of the Director-General, I.M.S., of special knowledge in the subject selected.

(e) Monthly allowances for officers holding certain civil posts, as for instance: Professorial appointments, Rs. 250; Principalships of " " 150; Appointments as Superintendents of 1st class jails, Rs. 150; (h) 2nd class jails, Rs. 50.

#### Administrative Appointments.

26. The following are the principal administrative appointments and the salaries attaching to them when they are held by officers of the I.M.S.:

Deputy Director, Medical Services, Command, Major-General	Rs. 3,500 per mensem.
Deputy Director, Medical Services and Director, Hospital Organization, Army Headquarters	Rs. 3,200 per mensem.
Assistant Director, Medical Services District Director, Medical Organization for War " Director, Hygiene and Pathology, Army Headquarters	Rs. 2,750 per mensem.
Assistant Director, Medical Services, Army Headquarters	Rs. 2,500 per mensem.
Deputy Assistant Director (Medical Services or Hygiene and Pathology), Army Headquarters, Commands Districts	Rs. 2,400 per mensem.
Assistant Director of Hygiene and Pathology, Commands	Rs. 2,150 per mensem.
I.M.S. pay of rank and service plus an additional pay of Rs. 250 per mensem.	

27. Unemployed pay is granted to Administrative Officers at the following rates:

(a) *Out of India.*—A Colonel will receive the half-pay of rank of an R.A.M.C. officer of corresponding rank, as laid down in the Royal Warrant, i.e., £1 5s. 6d. a day = £53 7s. 6d. a year, with an Indian allowance, at present £200 a year. A General Officer will receive the half-pay of rank of a British Service officer of corresponding rank, as laid down in the Royal Warrant, i.e., £2 5s. a day = £821 5s. a year.

(b) *In India.*—The rates of unemployed pay for officers remaining in India during such unemployment will be the same as those payable in this country, converted into rupees at the current rate of exchange as defined in Indian Army Regulations. Unemployed pay cannot be drawn for any period exceeding three years, and in no case will time on the unemployed list count as service for pension.

#### Civil Appointments.

28. A number of civil appointments under the Government of India and Provincial Governments are reserved for officers of the I.M.S. in order to provide for a War Reserve and for medical attendance on European officers of the Superior Civil Services and their families. The reserved appointments include the following:

Rs. 2,500-3,500 per mensem.	to the Government of India (salary).
Other Public Health appointments.	
Port Health officers.	
Appointments under the Foreign and Political Department of the Government of India.	
Research appointments.	
Professorial and Hospital appointments.	
Civil Surveillances (including District Medical and Sanitary officers in Madras).	
Jails Department:	
Inspectors-General of Prisons (salary, Rs. 2,360-2,500 per mensem).	
Superintendents of Central Jails.	

In addition to these reserved appointments, officers of the I.M.S. are eligible for appointment to other posts included in the cadre of the Provincial Civil Medical Services, the pay and conditions of which are regulated by Provincial Governments.

29. With the exception of Administrative Officers, military or civil, and officers holding certain special appointments, officers of the I.M.S. are not debarred from taking private practice, so long as it does not interfere with their proper duties.

#### LEAVE RULES.

30. Leave cannot be claimed as a right, but is granted at the discretion of the competent authority in India under whom an officer may be serving.

\* Normally one or the other of these posts is held by an officer of the British Service.

† I.M.S. officers holding these posts may, if they fulfil the conditions laid down in Army Instruction (India), 401 of 1925, draw in addition sterling overseas pay at £13 6s. 8d. per month.

‡ The Royal Warrant rates of half-pay are subject to alteration on account of a rise or fall in the cost of living as compared with the year 1919. With effect from July 1st, 1927, a reduction of 6 per cent. on this account has been made from the amounts shown above. A further revision will take place on July 1st, 1930, and every three years thereafter to an extent not exceeding 20 per cent. in all.

§ Gratuitous in the case of officers, but not of their families.

31. Officers of the I.M.S. in military employment, below the rank of Colonel, may be granted—(1) privilege leave on full Indian pay under such regulations as may from time to time be in force; (2) furlough out of India on private affairs or on medical certificate for a period not exceeding one year in the first instance, on the rates of pay shown below (plus ration allowance at the rate laid down from time to time in Army Council Instructions).

	Per diem.	Per annum.
	£ s. d.	£ s. d.
Lieutenant ... ..	1 2 0	401 10 0
Captain ... ..	1 7 0	492 15 0
" (after 8 years' com. service) ...	1 10 0	547 10 0
" (after 10 years' com. service) ...	1 12 6	583 2 6
" (holding higher brevet rank in addition) ... ..	0 2 0	36 10 0
Major ... ..	1 17 6	681 7 6
" (after 15 years' com. service) ...	2 2 6	775 12 6
" (after 18 years' com. service) ...	2 5 0	821 5 0
" (after 20 years' com. service) ...	2 10 0	912 10 0
Lieutenant-Colonel ... ..	2 17 6	1,048 7 6
" (after 3 years as such) ... ..	3 2 6	1,140 12 6

These rates are subject to alteration on account of a rise or fall in the cost of living as compared with the year 1919. With effect from July 1st, 1927, a reduction of 6 per cent. on this account has been made from the amounts shown above. A further revision may take place on July 1st, 1930, and every three years thereafter to an extent not exceeding 20 per cent. in all.

(3) Leave in India, other than privilege leave, on the following monthly rates, to which full overseas pay will be added when admissible:

	Rs. per mensem.
Lieutenant ... ..	375
Captain, for first three years in the rank ... ..	500
" after three years in the rank ... ..	600
" after six years in the rank ... ..	700
Major, for first three years in the rank ... ..	750
" after three years in the rank ... ..	900
" after six years in the rank ... ..	1,050
Lieutenant-Colonel, until completion of 23 years' service ...	1,200
" during 24th and 25th years of service ... ..	1,300
" after 25 years' service ... ..	1,400
" when selected for increased pay ... ..	1,550

32. No extension of leave involving absence from duty for more than two years, whether taken in or out of India, can be granted except on specially urgent grounds and without pay.

33. An officer unable on account of the state of his health to return to duty within the maximum period of two years' absence, unless he is, under paragraph 32, specially granted an extension of leave without pay, is placed on the temporary non-effective or the retired list, as the circumstances of the case may require. An officer is also liable to be placed on the temporary non-effective list or the retired list should his health require an undue amount of leave, whether in or out of India. In no case will an officer be granted an extension of leave on medical certificate or he placed on the temporary non-effective list if there is no reasonable prospect of his becoming fit to return to duty.

34. An officer on leave, whether in India or out of India, is required to rejoin at once on being recalled to duty, unless certified by a Medical Board to be unfit to do so.

35. Officers of the Administrative Grade may, during their tenure of appointment, be granted such privilege leave as is due to them, and in addition six months' furlough (on private affairs or on medical certificate), which may be combined with the privilege leave. Such combined leave may be taken in one or two instalments up to a total of eight months in all. Privilege leave will be on full pay and furlough at the following rates:

(a) <i>Out of India.</i>	£
Colonel ... ..	1,175
Major-General ... ..	1,250
Director, Medical Service in India (Lieutenant-General or Major-General) ... ..	1,350

(b) *In India.*—At twice rates, which are approximately 75 per cent. of full pay, plus overseas pay in full, if admissible.

36. An I.M.S. officer in civil employment (subject to certain exceptions in regard to posts of limited tenure) becomes subject to the civil leave rules from the date of first substantive appointment to a post in civil employ, or from the date of completion of three years' continuous officiating duty in such service, whichever is earlier.

The following is only a short summary of the civil leave rules, and must not be taken as overriding the provisions of the Fundamental Rules for the time being in force, with reference to which any disputed question will be decided.

#### "Special" Leave Rules for Officers with Domicile Outside Asia.

Leave is calculated in terms of "leave on average pay," and the amount of "leave on average pay" with which an officer's leave account is credited is three-twenty-seconds of the period spent on duty. Subject to certain maxima and minima, and to the limitations noted below, an officer may draw, at his option, leave salary equal to the average pay of the last twelve months of completed duty or to half such average pay. All leave on average and half the period on half average pay is debited in the leave account. An officer may take his leave on average pay, on half average pay, or on a combination of the two, provided that his continuous absence from duty does not exceed twenty-eight months, and that the amount of leave taken on average pay does not exceed eight months at any one time. The maximum amount of leave admissible during an officer's career, expressed in terms of the period spent on duty, is three years, plus one-eleventh of the period spent on duty, of which not more than one year, plus one-eleventh of the period spent on duty, may actually consist of leave on average pay.

**"Ordinary" Leave Rules for Officers with Asiatic Domicile.**

Leave is calculated in terms of "leave on average pay," and the amount of "leave on average pay" with which an officer's leave account is credited is two-elevenths of the period spent on duty. Subject to certain maxima and minima, and to the limitations noted below, an officer may draw, at his option, leave salary equal to the average pay of the last twelve months of completed duty or to half such average pay. All leave on average pay and half the period on half average pay is debited in the leave account. An officer may take his leave on average pay, on half average pay, or on a combination of the two, provided that his continuous absence from duty does not exceed twenty-eight months, and that the amount of leave taken on average pay does not exceed, at any one time, four months, if taken without medical certificate and spent in India or Ceylon, or eight months, if taken on medical certificate or spent elsewhere than in India or Ceylon. The maximum amount of leave admissible during an officer's career, expressed in terms of leave on average pay, is two and a half years, plus one-eleventh of the period spent on duty, of which not more than one-eleventh of the period spent on duty may actually consist of leave on average pay, provided that, in the case of an officer who either takes leave on medical certificate or spends his leave elsewhere than in India or Ceylon, leave on average pay up to a maximum of one year, plus one-eleventh of the period spent on duty, is admissible.

**General Rules, Applicable to both Special and Ordinary Leave.**

Leave not due and carrying half average pay (or subsistence grant as indicated below) may be granted on medical certificate, and within certain limits, for other reasons. Such leave, except for a maximum period of three months in all during the officer's service, expressed in terms of leave on average pay, is debited in the leave account, and an officer will not again begin to earn leave until the expiration of a fresh period of duty sufficient to earn a credit of leave equal to the leave taken before it was due and debited in the leave account. After twenty-eight months' absence from duty an officer draws subsistence grant. Leave salary is ordinarily payable in rupees if the officer spends his leave in Asia, and in sterling if he spends it elsewhere.

**Study Leave.**

57. Extra leave (known as study leave) may be granted to officers desirous of pursuing special courses of study. These courses must be definite courses of post-graduate study at a recognized institution, or of study ordinarily associated with post-graduate work, and must be approved as suitable by the Director-General, I.M.S., or by the Medical Adviser to the Secretary of State for India. (Courses of study intended for students preparing for their primary medical qualifications will not be approved.) The satisfactory completion of such approved courses is taken into consideration for the purposes of accelerated promotion under the terms of paragraph 16. The period of study leave will be calculated at the rate of one-twelfth of pension service, but will not exceed twelve months in all during an officer's service. Study leave may be combined with other leave provided that the period occupied in study is not less than two months. The minimum period of study leave taken by itself is six months. For the course of study, study allowance, at present fixed at the rate of 12s. a day in the United Kingdom, £1 a day on the Continent of Europe, and £1 10s. in the United States of America, will be granted after the completion of the course on the production of satisfactory certificates, as required by the Study Leave Rules. Study leave will count as service for promotion and pension, but not for leave. Officers of Asiatic domicile, immediately after completing the senior officers' course at the Royal Army Medical College, Millbank, will be regarded as eligible for a period of study leave, during which they will retain a lien on their free return passage to India. If the exigencies of the service make it necessary in any particular case to refuse an application for such study leave, the officer in question will subsequently be eligible for a free passage between India and the United Kingdom on one occasion during his service for the purpose of taking study leave.

**Passages.**

32. An officer on appointment is provided with a free passage to India, normally by transport. The wives and families of officers who are married prior to the date of the officer's embarkation on first appointment to the I.M.S. will also be provided with free passage to India.

33. Subject to the limitations in paragraph 40, an officer of non-Asiatic domicile at the date of appointment to the I.M.S. is entitled during his service to passages of a total value equal to the cost of the number of passages between Bombay and London by P. and O. 1st Class B., shown below:

I. For the officer himself: If under 31 years of age, four return passages; if 31 years or over, but under 38 years, three return passages.

II. For his wife, the same number of return passages to which the officer himself is entitled; provided that in the case of an officer who has been married after the date of his entering Indian Service, the scale of benefits for his wife shall be as follows: If the officer's age at date of marriage is under 31 years, four return passages; if 31 years or over, but under 38 years, three passages; if 38 years or over, but under 45 years, two passages; if 45 years or over, one passage.

III. For each child, one single adult passage.

40. The scheme of concession passages stated in the previous paragraph is based on the assumption that an officer continues in the service till qualified for pension. All officers, however, possess the option of retirement on a gratuity, and the following condi-

tions are, therefore, laid down governing the grant of passages during the early years of an officer's service:

(a) No concession passage will be granted during an officer's first five years of service. On the completion of that period an officer becomes eligible for concession passage, provided that he has not given notice of his intention to retire with a gratuity in accordance with the terms of paragraph 45. On the completion of eleven years' service he becomes eligible for a second concession passage, subject again to his not having given notice of retirement. The remaining passages due to an officer may be taken at any time during the rest of his service, subject to the exigencies of the service.

(b) An officer invalidated home on sick leave during his first twelve years of service will be provided with a passage, but any such passage granted to him will count against any concession passage or passages to which he may subsequently become entitled. In the event of his retiring otherwise than on account of ill health, before becoming entitled to full benefits under the concession passage rules, he will be required to refund the cost of any passages granted to him on sick leave.

(c) An officer who retires with a gratuity at the end of either six or twelve years' service in accordance with the terms of paragraph 45 will be provided with a free passage to the United Kingdom for himself and his family.

**Pensions and Gratuities.**

41. Officers of the I.M.S. are allowed, subject to the right of Government to suspend retirements in times of emergency, to retire on the following scale of pension, on completion of the required periods of service for pension:

	Per annum.		Per annum.
After 17 years' service ...	£ 400	After 23 years' service ...	£ 620
" 18 " " " " " " "	410	" 24 " " " " " "	660
" 19 " " " " " " "	420	" 25 " " " " " "	700
" 20 " " " " " " "	500	" 26 " " " " " "	750
" 21 " " " " " " "	540	" 27 " " " " " "	800
" 22 " " " " " " "	580		

These rates are subject to alteration on account of a rise or fall in the cost of living as compared with the year 1919. With effect from July 1st, 1927, a reduction of 4½ per cent. on this account has been made from the amounts shown above. A further revision may take place on July 1st, 1930, and every three years thereafter, to an extent not exceeding 20 per cent. in all.

42. Service for pension reckons from the date of commission, and includes leave taken under the leave rules, time passed on the temporary non-effective list (if the officer is placed thereon on account of medical unfitness caused by duty) up to one year, and previous war service.

43. A Major-General, after three, two, or one years' service in the substantive rank, is entitled to retire upon a pension of £350, £315, or £285 per annum respectively, in addition to the pension to which he may be entitled under the above scale.

44. A Colonel, after four, three, two, or one years' service in the substantive rank, is entitled to retire upon a pension of £250, £185, £125, or £65 per annum respectively, in addition to the pension to which he may be entitled under the above scale.

45. An officer is entitled to retire on a gratuity at any time after the completion of six years' service from the date of permanent appointment to the I.M.S., provided that he has given notice of his intention to do so twelve months in advance. The amount of the gratuity for an officer with over six years' and less than twelve years' service is £1,000, and for an officer with twelve years' service or over is £2,500. Privilege leave will be allowed to count towards service for a gratuity, but not ordinary furlough or sick leave.

46. Officers of the rank of Lieutenant-Colonel and Major are placed on the retired list when they have attained the age of 55 years, Colonels when they have attained the age of 57 years, and General Officers when they have attained the age of 60 years.

47. An officer is liable, after retirement on pension or with a gratuity after not less than twelve years' service, to recall to military duty in case of emergency up to 55 years of age. Officers will be recalled to duty only in the event of an emergency arising which exhausts the reserves permanently maintained in civil employ in India.

48. An officer who, before completing seventeen years' service, has become permanently incapacitated for further service in India on account of unfitness caused by duty may be granted an invalid pension varying from £60 to £370 per annum, according to length of service. Provision is also made for the grant of additional disability pensions of from £20 to £100 per annum.

49. Officers placed on the temporary non-effective list are granted temporary invalid pensions at the half-pay rates of the British Army—namely:

**Rates of Half-pay.**

	Per diem.	Per annum.
	£ s. d.	£ s. d.
Colonel ...	1 9 6	538 7 6
Lieutenant-Colonel, after 3 years' service as such ...	1 7 6	501 17 6
Lieutenant-Colonel, under 3 years' service as such ...	1 3 9	433 8 9
Major ...	0 15 9	287 8 9
" after 5 years' service as such ...	0 18 6	337 12 6
Captain ...	0 11 9	214 8 9
Lieutenant ...	0 8 0	146 0 0

These rates are subject to alteration on account of a rise or fall in the cost of living as compared with the year 1919. With effect

from July 1st, 1927, a reduction of 6 per cent. on this account has been made from the amounts shown above. A further revision may take place on July 1st, 1930, and every three years thereafter, to an extent not exceeding 20 per cent. in all. An officer of less than three years' service, although he may be transferred to the temporary non-effective list under the general conditions of transfer, will not be granted any temporary invalid pension unless his unfitness has been caused by duty.

50. The claims to pension of widows and families of officers are treated under the provisions of such Royal Warrant regulating the grant of pensions to the widows and families of British officers as may be in force at the time being.

51. The widows and families of officers are also entitled to pensions under the Regulations of the Indian Military Widows' and Orphans' Fund. Subscription under these Regulations is a condition of appointment, except in the case of Indians, for whom it is optional.

## British Medical Association.

### CURRENT NOTES.

#### Consulting Pathologists Group.

THE Council of the British Medical Association, at its meeting on December 14th, 1927, approved the formation of a Group of Consulting Pathologists, to comprise all those members of the Association (not being members of the Public Health Service) who are working in institutional or private pathological laboratory engaged in examining and reporting on specimens for clinical purposes. The official notice summoning the first meeting of the members of this Group for Friday, March 2nd, at 2.30 p.m., appears in the adjoining column. It is hoped that all members eligible for inclusion in the Group will make a special effort to attend.

#### The Hempson Prize.

Mr. W. E. Hempson has placed at the disposal of the Council, upon his retirement in March next from the post held by him for thirty years of Solicitor of the Association, and as a mark of esteem for the Association and appreciation of his happy relations therewith, a sum of twenty-five guineas, to be awarded as a prize for the best essay or treatise on some phase or branch of public health. The subject approved by the Council for the prize is "A study of personal experiences in the inspection and treatment of school children under the auspices of any elementary educational authority." The following conditions govern the award of the prize:

1. Only members of the Association are eligible to compete.
2. Studies must be sent to the Medical Secretary, British Medical Association House, London, W.C.1, not later than December 31st, 1928, and the prize will be awarded at the Annual General Meeting of the Association at Manchester in 1929.
3. No study that has been published in the medical press or elsewhere will be considered eligible.
4. If any question arises as to the eligibility of the candidate or the admissibility of his study, the decision of the Council on any such point shall be final.
5. Each study must be typewritten or printed, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address.
6. Inquiries relative to the prize should be addressed to the Medical Secretary.

#### Annual Session of American Medical Association.

The annual session of the American Medical Association is to be held in Minneapolis, Minnesota, from June 11th to 15th, 1928. The Medical Secretary would be very glad to be informed at the earliest possible moment of any member of the British Medical Association who is proposing to attend the meeting at Minneapolis.

#### The Half-yearly Indexes.

The usual half-yearly indexes to the JOURNAL and to the SUPPLEMENT and EPITOME have been printed; they will, however, not be issued with all copies of the JOURNAL, but only to those readers who ask for them. Any member or subscriber who desires to have one or all of the indexes can obtain what he wants, post free, by sending a postcard notifying his desire to the Financial Secretary and Business Manager, British Medical Association House, Tavistock Square, W.C.1. Those wishing to receive the indexes regularly as published should intimate this desire.

## Association Notices.

### ELECTION OF MEMBERS OF COUNCIL BY BRANCHES OUTSIDE THE UNITED KINGDOM.

THE following is a list of the nominations received for the election of the Council for 1928-31 by Branches outside the United Kingdom:—

- Mr. T. P. DUNNILL, C.M.G. (London), South Australian, Tasmanian, Victorian, and Western Australian Branches.  
 Sir JENNER VERRALL, LL.D. (Leatherhead), New South Wales and Queensland Branches.  
 Dr. G. CLARK TROTTER (London), New Zealand and Fiji Branches.  
 Hong-Kong and China, and Malaya Branches. No nomination.  
 Dr. J. BUCKROFT ANDERSON (London) and Dr. W. WATKINS-FITCHFORD (Bridgnorth, Salop), Border (South Africa), Cape Eastern, Cape Midlands, Cape Western, Egyptian, Gibraltar, Giquiland West, Kenya, Malta, Mashonaland, Matabeleland and Northern Rhodesia, Natal Coastal, Natal Inland, Nyasaland, Orange Free State and Basutoland, Pretoria, Sierra Leone, South-West Africa, Tanganyika Territory, Uganda, Witwatersrand, and Zanzibar Branches.

Voting papers for the African Group of Branches were posted from the Head Office on February 11th; they are returnable not later than Monday, April 14th, 1928, to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

The candidates referred to in the remaining Groups, being the only candidates nominated for those Groups, are hereby declared elected members of the Council for 1928-31.

The following is the position as regards the other Groups of Branches outside the United Kingdom:

- Lieut.-Colonel ASHTON STREET, I.M.S.(ret.) (London) *was elected for the three years 1927-30*, Assam, Baluchistan, Bombay, Burma, Ceylon, Hyderabad, Mesopotamia, Northern Bengal, Punjab, and South Indian and Madras Branches.  
 Dr. F. J. GOMEZ (South Petherton) *was elected for the three years 1927-30*, Barbados, Bermuda, British Guiana, Grenada, Jamaica, Leeward Islands, St. Lucia, and Trinidad and Tobago Branches.

#### CONSULTING PATHOLOGISTS GROUP.

A MEETING of the recently formed Consulting Pathologists Group of the Association will be held at the B.M.A. House, Tavistock Square, London, W.C.1, on Friday, March 2nd, at 2.30 p.m.

The Group comprises all those members of the Association (not being members of the Public Health Service) who are working in an institutional or private pathological laboratory engaged in examining and reporting on specimens for clinical purposes.

The agenda of the meeting is as follows:

- (1) Elect a chairman.
- (2) Elect Group committee of six.
- (3) Consider arrangements to be made for provision of pathological service in connexion with National Health Insurance.
- (4) Any other relevant business.

ALFRED COX, Medical Secretary.

#### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.**—The next meeting of the Dumfries and Galloway Division will be held in the Royal Infirmary, Dumfries, on Tuesday, February 21st, at 2 p.m., when Professor Edwin Bramwell will give a lecture on some clinical aspects of pain. As the lecture is especially for the general practitioner, and as the hour fixed is to suit those from a distance, it is hoped that all members and their friends will make a special effort to be present. Tea will be served.

**EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.**—At the meeting of the East York Division to be held to-day (Friday, February 17th), Dr. Ritchie Rodger will read a paper on foreign bodies in the air passages.

**EDINBURGH BRANCH.**—The winter clinical meeting of the Edinburgh Branch will be held in the Royal Infirmary, Edinburgh, on Wednesday, February 29th. All members of the profession are cordially invited. Senior medical students desirous of attending will be admitted by card, obtainable from Mr. W. A. Cochrane, 24, Walker Street. The museum will be open from 10 a.m. to 6 p.m. Arrangements will be made for holding special clinics during the day. The clinical meeting will be held at 3.30 p.m. Those who have patients, specimens, etc., to show are requested to communicate with Mr. W. A. Cochrane by February 18th. At 7.15 p.m. dinner will be taken in the North British Station Hotel; morning dress. Dinner ticket, 10s. Ladies will be welcomed. Members are asked to notify the honorary secretaries by February 25th whether they intend to be present, and whether they will be accompanied by ladies or other guests.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at the County Laboratory, Hamilton, on Wednesday, February 22nd, at 3.30 p.m. Dr. James L. Brownlie will read a paper on the bacteriological laboratory and the practitioner.

**LANCASHIRE AND CHESHIRE BRANCH.**—A science meeting of the Lancashire and Cheshire Branch will be held at the Salford Royal Hospital on Thursday, February 23rd, at 3 p.m. The following short papers will be read:—(1) Mr. Garnett Wright: Volvulus of the sigmoid; (2) Mr. R. Ollerenshaw: Fractures in the region of the elbow joint; (3) Dr. G. J. Langley: Some problems of glycosuria; (4) Mr. J. B. Macalpine and Mr. E. D'A. McCrea: Stricture of the urethra. After tea there will be an exhibition of cases, a display of exhibits from the pathological laboratory, and a demonstration by Dr. R. Gibson on the treatment of varicose veins by injection.

**LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.**—A meeting of the Hyde Division will be held in the Dukinfield Town Hall on Thursday, February 23rd, at 8.30 p.m., when an address will be delivered by Dr. A. Corsar Sturrock.

**LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.**—A meeting of the Southport Division will be held on Friday, March 30th, when Dr. E. P. Cumberbatch will deliver a British Medical Association Lecture on the use of ultra-violet rays in general as well as in skin disease. It is hoped that there will be a large attendance of members.

**LANCASHIRE AND CHESHIRE BRANCH: WARRINGTON DIVISION.**—A meeting of the Warrington Division will be held at the Infirmary, Kendrick Street, Warrington, to-day (Friday, February 17th) at 8.30 p.m. Mr. E. Fox will give a lantern demonstration on radiography as an aid to diagnosis.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The next meeting arranged by the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, March 6th, at 9.30 p.m. Mr. Norman Patterson will read a paper on ear trouble in general practice.

**METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, March 6th, at 8.45 p.m. Dr. J. W. McNeef will discuss the clinical features of thrombosis of branches of coronary arteries.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, February 21st, at 8.45 p.m. Dr. J. Stanley White will read a paper on some recent aspects of biological therapy, illustrated by lantern slides and a film, "How biological products are made." Dr. Jane Hawthorne having had to leave for the Continent the address on March 20th to the Division at the Town Hall, Catford, will be on the general practitioner and the prevention of venereal disease, by Mr. Wansey Bayly.

**METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.**—A meeting of the South-West Essex Division will be held at the Whipp's Cross Hospital, Leytonstone, on Tuesday, March 6th, at 3.30 p.m. Dr. J. C. Muir, medical superintendent, will give a clinical demonstration.

**METROPOLITAN COUNTIES BRANCH: STRATFORD DIVISION.**—A meeting of the Stratford Division will be held in the Board Room, Educational Offices, The Grove, Stratford, on Tuesday, February 21st, at 9.15 p.m. Lecture by Mr. W. Rowley Bristow, orthopaedic surgeon, St. Thomas's Hospital: Common disabilities of the knee-joint, and their treatment.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, March 9th, at 8.15 p.m. Mr. Graham S. Simpson will discuss the value of operations.

**NORTH OF ENGLAND BRANCH: BISHOP AUCKLAND DIVISION.**—A meeting of the Bishop Auckland Division will be held in the Cottage Hospital, Bishop Auckland, on Friday, February 24th, at 8 p.m. Dr. Harvey Evers will give a lecture on uterine haemorrhage.

**NORTH OF ENGLAND BRANCH: STOCKTON DIVISION.**—A meeting of the Stockton Division will be held on Friday, February 24th, Dr. George Hall (Newcastle-on-Tyne) will give an address on infantile paralysis.

**SOUTH MIDLAND BRANCH: BEDFORDSHIRE DIVISION.**—A general meeting of the Bedfordshire Division will be held at the Bedford County Hospital on Wednesday, February 22nd, at 3 p.m. Agenda: Letters and communications (a) from the Malta Branch re undulant fever; (b) from the Leicester Personal Health Association and from the British Medical Association on public education in health. Discussion: The treatment of varicose ulceration, to be opened by the chairman, Dr. H. D. Pollard.

**SURREY BRANCH: CROYDON DIVISION.**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Tuesday, February 21st, at 8.30 p.m. Mr. A. E. Hayward Finch, medical superintendent of the London Radium Institute, will read a paper on radium. On February 22nd a lecture-demonstration will be given by Mr. E. T. C. Milligan at the Croydon General Hospital on practical points about rectal diseases, which will be preceded by tea at 4 p.m.

**SURREY BRANCH: GUILDFORD DIVISION.**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, March 1st, at 4 o'clock. Sir Thomas Lewis will give an address on the rheumatic heart in children. Tea will be served at 3.45 p.m.

**SUSSEX BRANCH: CHICHESTER AND WORTHING DIVISION.**—A meeting of the Chichester and Worthing Division will be held in the Burlington Hotel, Marine Parade, Worthing, on Wednesday, February 22nd, at 6 p.m. Business: Communication from head office about the inquiry into the treatment of varicose ulceration; organization of medical charities; paper by Dr. R. Brooke (Chichester): The modern operative treatment of hernias, illustrated by lantern slides and cases. Dinner will be served in the Burlington Hotel at 7.30.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Stratford Arms Hotel, Wakefield, on Thursday, March 8th. Dr. R. A. Veale, physician-in-charge of the skin department, General Infirmary, Leeds, will give a lecture on common skin diseases. Supper (2s. 6d.), at 7.45 p.m., will precede the lecture.

## Meetings of Branches and Divisions.

### BIRMINGHAM BRANCH: WEST BROMWICH DIVISION.

The annual meeting of the West Bromwich Division was held on January 31st. The report of the work of the Division during 1927 stated that the chief matter of interest was the appointment of medical officer of health for West Bromwich, which was successfully negotiated. The contract rates in the Tipton area had been reformed and brought up to the recognized scale. The members of Parliament for West Bromwich, Smethwick, and Wednesbury had been written to and asked to vote against the Dogs' Protection Bill.

The following officers were appointed for 1928:

Chairman, Dr. D. M. Spring. Vice-Chairman, Dr. E. Ashton. Honorary Secretary, Dr. A. F. Adamson. Representative in Representative Body, Dr. J. M. Mitchell. Deputy Representative in Representative Body, Dr. D. M. Spring.

The Executive Committee will meet at an early date to arrange a programme for 1928.

It was decided to consult with the medical officers of health before taking any further steps regarding the education of the public in health matters.

Drs. Spring and Davidson agreed to supply the information as required for the inquiry into the treatment of varicose ulceration.

The new chairman, Dr. Spring, showed a case of rodent ulcer which was cured under treatment by ultra-violet rays, and also a case of carcinoma mammae which was steadily improving under the same treatment.

### BOMBAY BRANCH.

A MEETING of the Bombay Branch was held on November 22nd, 1927, at the Pathological Laboratory of the Grant Medical College, when Dr. R. Row was in the chair.

Dr. ARTHUR SWAIN, who had passed many years in China and was in India only temporarily on account of the unsettled conditions in China, read a paper on "The medical and important paper entitled "and medicinally: a medical man's interest... seised the good and the bad in the Chinese customs and beliefs, and in their social habits. Throughout he showed impartiality and an appreciation of the Chinese point of view, without any ridicule or contempt. He could not discuss the political aspect for want of time; but he gave a good account of the medical aspect. The Chinese relied greatly on the character of the pulse for their diagnosis, and it was described in the Chinese books as exhibiting more than a hundred different varieties. From the treatment point of view their stronghold was dietetics. Throughout all their methods a very great amount of superstition and evil spirits pervaded.

Dr. Row thanked the lecturer for his discourse and expressed the hope that Dr. Swain would be able to address the Branch again on the subject during his stay in India.

Dr. TURNER showed two samples of coloured urine that he was asked to examine during the last few months—one was pink and the other blue. Neither case showed any other abnormality. The pink colour was proved ultimately to be due to phenolphthalein present in chocolate that the child was fond of taking. The other was due to methylene blue in some preparation that the other child was taking.

### GLOUCESTERSHIRE BRANCH.

A MEETING of the Gloucestershire Branch was held at the General Hospital, Cheltenham, on January 12th, with Dr. J. G. SOUTAR, vice-president, in the chair.

The adjourned discussion on new growths of the breast was continued by Dr. CURTIS WEBB, who recommended the hardest rays possible for post-operative treatment, and others.

Mr. J. S. KELLET SMITH read a paper on painful spine in adults, dealing chiefly with those cases resulting from mechanical strain connected with lateral curvature. He said that the causes of tenderness and pain in such cases were inflammatory mischief in the joints, osteitis and periostitis set up by tension on ligaments and by direct pressure between bony points, and painful hypertonus of the spinal muscles. This last factor was especially important, and might be the chief element in the trouble, but all the factors named were often active and formed a very obstinate vicious circle. The reason for a lateral curvature making its appearance in the adult frequently demanded a close clinical and radiological analysis. Films were shown demonstrating postural curves associated with such conditions as sacralization of the fifth lumbar vertebra and renal calculus. Special stress was laid upon

the fact that a small inequality in the standing height of the legs, even so small as that due to the development of a one-sided flat-foot, would cause a side tilt of the pelvis which might result in a painful compensatory curvature of the spine. This sequence of events, and the mechanics of curvature in the dorsal region, were fully illustrated by anatomical slides and radiograms of cases. Mr. Kellett Smith thought that not enough attention was paid to the fact that the spine presented a large number of fairly big joints, which were very liable to sprain, capable of traumatic arthritis of acute and subacute type, and the possible site of adhesions. Lumbago, for instance, was generally attributed to "rheumatism in the muscles," because they felt hard and were tender. This was very often a manifestation of the rigidity and tenderness of a protective hyperlombus, and the occasional success of the osteopath in curing "bad backs," by putting the spine through movements to the full physiological excursion of all its joints, might be due to the breaking down of articular adhesions.

The beautiful illustrations, in films and slides, were a special feature of the address, and Mr. Kellett Smith was very cordially thanked on the motion of Dr. Soutar.

#### METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.

A MEETING of the Lambeth and Southwark Division was held on January 25th at Lambeth Carlton Club, Coldharbour Lane. Dr. R. G. W. St. Cenn was in the chair.

Dr. A. G. THOMPSON, medical officer of health for Lambeth, read a most interesting and instructive paper on the Schick test and immunization against diphtheria, with demonstration and charts. He began by reminding his hearers that the Schick test was a means of indicating with considerable accuracy the susceptibility to diphtheria of any subject tested—in other words, it was possible by this means to pick out all those in a community who were susceptible to the disease and to immunize them, while the remaining non-susceptibles could be ignored altogether. The main points in Dr. Thompson's paper were as follows: (1) The absolute safety of the individual immunized with British material. (2) The absurdly easy technique of immunization—merely three hypodermic injections of material which was neither pain-causing nor expensive. (3) The certainty of rendering the subject so tested immune to diphtheria. (4) The death ratio of diphtheria in proportion to age was 16 per cent. under 1 year old, 14 per cent. from 1 to 2 years old, 7 per cent. from 3 to 5 years old, 3 per cent. from 5 to 15 years, and almost negligible later in life, showing the paramount necessity of immunizing infants within the first few months of life. (5) In practice so few children of 5 and under were immune that it was not worth while to perform the Schick test, but it was better to immunize all, treating all as susceptibles. (6) The ease, certainty, safety, and cheapness of immunization made it eminently suitable for the general practitioner to undertake. Moreover, the general practitioner was in the best position to advise the great majority of parents, who looked, naturally, to him for friendly guidance on medical matters.

A detailed survey of diphtheria during the past ten years in Lambeth was presented by Dr. J. GRAHAM FORBES of the Public Health Department, London County Council. In that period there had been a total of between 6,400 and 6,500 notified cases, and over 500 deaths, among a population ranging approximately from 302,000 to 310,000, and giving an average attack rate for the whole borough of over 2 per 1,000; a death rate of nearly 17 per 100,000 of the inhabitants, and a case mortality of over 8 per cent. per annum. As was to be expected, the incidence and mortality had mainly fallen upon children under the age of 15, and of the above-quoted total there had been a proportion of roughly 2,000 cases and 300 deaths in the first five years of life, and 3,000 cases and 200 deaths between the ages of 5 and 15. The case mortality of the two age groups was respectively 14 and 7 per cent.; the attack rates having been over 8 per 1,000 under 5, and 5.6 per 1,000 of the population between 5 and 15 years, and the death rates nearly 120 per 100,000 under 5, as compared with 40 between the ages of 5 and 15. Dr. Forbes went on to discuss at some length the distribution of diphtheria in the borough, the more populous parts having suffered most, where contact was freer, with more crowded conditions of living and a higher population density per acre. Diphtheria as a cause of death in Lambeth, compared with other diseases in the ten years 1917 to 1926, had occupied a high position, as the following figures showed: In a total of 39,636 deaths in the borough in those ten years the rate per 1,000 deaths was as follows: measles 15.3, diarrhoea 14.3, diphtheria 13.2, whooping-cough 9.2, and scarlet fever 3.0, showing that diphtheria still occupied far too prominent a place. Dr. Forbes then gave a summary of the basis of evidence supporting the value of the Schick test and toxoid antitoxin immunization, which he stated rested mainly on what had followed its use in Great Britain and in the United States, as well as in many other parts of the world, in the control of diphtheria outbreaks in residential schools, institutions, and hospitals, as had been dealt with at length in the report published in May, 1927, by the Medical Research Council. In conclusion, he emphasized the point that the technique of the Schick test and of toxoid antitoxin inoculation was simple, but required practice, full knowledge of the procedure, and minute attention to detail. Moreover, the replacement of toxin antitoxin still in use outside this country by the later production toxoid antitoxin, carefully supervised and standardized, and now generally employed throughout Great Britain, had minimized the risk of any untoward result or serious reaction, and ensured complete security.

A hearty vote of thanks was proposed by Dr. R. S. PEARSON, who gave details of the work done and results obtained at the Spurgeon's Orphanage, Stockwell. Dr. V. V. PARTRIDGE seconded the vote of thanks to the lecturers for their informative remarks.

#### PRETORIA BRANCH.

THE report of the honorary secretary of the Pretoria Branch of the Medical Association of South Africa (British Medical Association) states that the Branch now numbers 109 members (40 country and 69 town); 24 new members joined during the year, while 3 had been transferred to other branches. Since the annual meeting in January, 1927, there had been ten general meetings, with an average attendance of 24.6. Four of the meetings had been devoted to the reading of papers, when the members took an active part in the discussions which followed, while six were mainly clinical meetings, when excellent clinical material had been presented. A new feature had been the display of interesting x-ray films, and the medical officers in charge of the cases gave brief clinical notes. The honorary secretary records his thanks to Mr. Ensor of the x-ray department of the Pretoria Hospital for his labours in making this feature a success.

The Branch Council held twelve meetings at the house of the president, when a large number of important matters were discussed. Organization rules had been adopted, and the questionnaire of the Federal Council regarding the medical staffs of public hospitals was still under consideration. A start has been made towards establishing a reference library, and the hope is expressed that when the new hospital is completed the reference library will be placed on a better basis.

Prolonged negotiations between the Branch Council and the representative of the Municipal Employees' Sick Fund have led to a satisfactory arrangement for medical service to the members of the sick fund, subject to certain minor adjustments. It is hoped that when the whole matter comes up for review in a year's time it will be found possible to continue the scheme.

Negotiations with the Hebrew Order of David and the Pretoria Sick Benefit Society were reported to a general meeting on November 8th, 1927, when the following principles were unanimously agreed to:

1. An income limit for members of the benefit society. This income limit to be fixed by the Branch Council and approved of by the Branch in general meeting.
2. Free choice of doctor by patient and of patient by doctor.
3. Remuneration to be for services rendered at the minimum fixed by the Branch.
4. Payment must be guaranteed by the benefit society.

Draft rules for the administration of the Central Benevolent Fund of the Medical Association of South Africa have been formally approved. The Hospital Survey Committee report has been considered and the principles advocated therein have been generally approved, with the recommendation that, as preventive and curative medicine can only be co-ordinated under one control, that control should be vested in the Union Government.

The annual dinner, when several distinguished visitors were present, was a great success.

#### SOUTHERN BRANCH: PORTSMOUTH DIVISION.

A MEETING of the Portsmouth Division was held on February 9th at 9.30 p.m. at the Quenn's Hotel, Southsea. The meeting was preceded by a supper.

Professor HUGH MACLEAN gave a British Medical Association Lecture on renal disease and high blood pressure. The speaker, who gave an address last year, on rising to speak, was given an enthusiastic reception. The points of the lecture were emphasized by some interesting specimens. A discussion followed, in which the following took part: Drs. BLACKMAN, CLARK, DEWEY, T. A. M. FORD, PHILIP GREEN, Mr. INMAN, Drs. LYTLE, McASKIE, WARREN, and BOSWORTH WRIGHT. An instructive and entertaining evening was brought to an end by a vote of thanks to Professor Maclean, proposed by Dr. CLARK and seconded by Dr. JEANS, which was carried with much applause.

#### SUFFOLK BRANCH: WEST SUFFOLK DIVISION.

THE annual meeting of the West Suffolk Division was held at the West Suffolk General Hospital, Bury St. Edmunds, on January 24th.

Arising out of the minutes, the SECRETARY reported that he had heard from the clerk to the county council to the effect that the council would be willing to pay a fee of 10s. 6d. for cases in which a doctor furnished a report in response to a request from the coroner, as a result of which the holding of an inquest was avoided.

The following officers were elected:

Chairman, Dr. E. C. HARDWICKE. Vice-Chairman, Dr. Grace Griffith. Honorary Secretary, Dr. B. E. A. BATT. Representative at Annual Representative Meeting, Dr. Grace Griffith. Deputy Representative, Dr. F. R. BARWELL.

After a prolonged discussion it was agreed, on the motion of Dr. BARWELL, and seconded by Dr. BIRD, that the capitation rate for attendance on all juvenile members of friendly societies should not be less than 8s. 6d.; that the new rate should be enforced not later than July 1st, 1928; and that doctors should in future insist on having a written contract, in which should be stated the radius within which they were prepared to act, the fact that they would only be liable for those on their list, and the notice necessary on either side to terminate the contract. It was also decided to advise all the doctors in the area that they should insist on having a list of juvenile members whom they had accepted, preferably in a card index form, and that this list should show the date of initiation of each member and the age at initiation. The secretary was instructed to send a copy of the resolutions and suggestions to all practitioners in active practice, whether members or not, and to the secretaries of all neighbouring Divisions.

In regard to the education of the public in health matters, the small subcommittee elected by the Executive Committee was

empowered to consult with all local bodies interested in the public health—namely, the county council, borough councils, district councils, National Health Insurance Committee, and the committee of the West Suffolk General Hospital.

The SECRETARY gave a brief explanation of the nature of the collective investigation into varicose ulceration and the kind of form that would be required to be filled up. Several members undertook to take part.

Dr. BIRD suggested that the Division should send out a circular stating the fees to be charged for various services, such as examinations for life insurance, workmen's compensation, etc. It was agreed that the revision of the circular issued by the Division some years ago should be undertaken at a later date.

#### ULSTER BRANCH.

A GENERAL meeting of the Ulster Branch was held in the Medical Institute, Belfast, on January 19th. Dr. W. PORTER (Portlough), the president, occupied the chair, and provided tea for the members.

Dr. F. M. B. ALLEN read a paper on the use of acidified milks in infant feeding. He said that though breast-feeding was the most satisfactory, it was sometimes impossible for various reasons; proprietary or patent foods were of use occasionally. But in four out of every five cases in artificial feeding cow's milk was used, and cow's milk required the addition of more hydrochloric acid. Acidified milk was exemplified by the use of buttermilk for very many years in Holland, and of Bulgarian koumiss. Alkali slowed down the emptying stomach. Two and a half years ago, as the result of suggestions in American journals, Dr. Allen had tried acidified milk in the Queen Street Hospital for Sick Children, and had elsewhere explained the process and his success in its use. In one of his cases the mother had asked for a return to lactic acid after a change to the citric acid, stating definitely that the child was better with the former. Dr. Allen outlined the indications for the use of acidified milk and the method of preparation, which could be undertaken by any intelligent mother. Diarrhoea, wasting, and vomiting were cured, and he did not see why rickets, tetany, and coeliac disease should not improve; cod-liver oil and fresh fruit juice might be added.

Mr. G. D. McFANDER read a paper on the production and treatment of obstetric paralysis. He showed a large number of cases illustrating variations in the affection; and with the aid of numerous diagrams explained the direct and predisposing causes, and how some of the methods, such as twisting the head round, which were adopted to expedite delivery, might bring about the complication. He added that some cases of sudden death of the infant were due to injury to the medulla.

### Correspondence.

#### Change of Doctor.

SIR,—Like most of the doctors with whom I have discussed the matter, I object to the cumbersome new regulations for change of doctor in national health insurance. The worst feature of the whole business, however, is that of the signing of the pink slip which the Insurance Committee attaches to the inside of the insured person's card after he has taken his card to the committee's office and notified his desire to change. The card, with the slip attached, is then returned to the insured person, who is requested to take it again to the "new" doctor to be signed by him. As the insured person has already sat for perhaps an hour in a crowded waiting room waiting to see the "new" doctor in the first instance as regards the desire for change, he simply will not bring the card a second time.

My experience is that the card is put in a drawer until the next time the insured person is ill, and is produced with the confirmatory pink slip, of course unsigned up to that date.

To say that free choice of doctor is not interfered with is mere eye-wash.—I am, etc.,

Darlington, Feb. 1st.

C. J. KINK.

#### Ophthalmic Benefit and Clinics.

SIR,—One aspect of the subject under discussion has not been noted by your correspondents—namely, the large number of patients who need repeated attention and to be seen very often. I have just gone through my card index for this month and find that I have seen 22 persons under the ophthalmic benefit scheme. Of this number only 11 were refraction cases. The others were as follows:

Two patients each with two large Meibomian cysts, which were evacuated under cocaine: seen once.

Corneal abrasion: seen four times.

Severe interstitial keratitis: seen first in September and twelve times to date.

Acute iritis: now cured, but seen ten times in all.

Angular conjunctivitis and blepharitis: seen three times.

Chronic glaucoma: I have operated on one eye successfully, and I have seen the patient in all seven times at my house, besides attendance at hospital; I shall be seeing him again.

Severe iridocyclitis: seen six times to date.

Deep septic ulcer of cornea: seen, so far, twice.

Two patients with neglected foreign body on cornea, with resulting ulcer and keratitis: one seen three times and now cured; the other had considerable keratitis when first seen, and has been seen three times to date.

The glaucoma patient had already been to two opticians the second time having been sent by his society. Six weeks of most valuable time had thus been wasted. I had to examine him, examine him again after intensive eserine treatment do tonometric readings (they were 40 and 50), and see him three times before I took him into hospital; I have seen him four times since. In course of time I hope to receive on guinea for my work from his society, who might have had to pay him sick benefit for years. It does not seem to be realized that the fee of one guinea covers all cases. It will be seen that I have received anything from eighteenpence to one guinea per attendance, and that a total of sixty-three attendances divided into twenty-two possible guineas works out at not quite 7s. an attendance for the average, but is really less, as some of the cases are not finished. Also, most of the inflammatory cases were sent as emergencies by their medical men, and had to be treated, the application for benefit being sent in after I had seen the patients. In some cases the benefit may be refused. Not long ago, by the time a septic ulcer had healed the patient received a form from his society to take to an optician "who would then say whether he needed to see a specialist." The ulcer was then healed and he was told that his society could take no responsibility for my fee, as he had not waited for instructions before applying to me. So I speak of "possible guineas." That reduces it down to a probable 5s. per attendance. Writers in the JOURNAL, and others who do not know what a busy ophthalmic practice is really like, apart from a West End consulting room, would like to reduce the fee to 10s. 6d. per case. That brings the payment for the above attendances down to a probable 2s. 6d. Now the average time for those attendances, I think, would be twenty minutes to half an hour. It is necessary to allow not less than half an hour for a refraction case, and a glaucoma case took an hour on one occasion; the suggested fee of half a crown is absurd.

I may add, perhaps, that I am acquainted with West End practice as well as "suburban" practice, and that the above cases were seen at my home address in Surrey just outside the London area. Before the ophthalmic benefit scheme was begun (there is no settled scheme yet) I used to see the above type of patient for no fee, or for a reduced fee, at the request of the patient's medical man, and they knew that they were being seen under exceptional circumstances. Now it is suggested that, if my name is on the "ophthalmic benefit list," they will have the right to see me for a total fee of 10s. 6d., which, as I have pointed out, is probably about 2s. 6d. per attendance. Is it surprising that some of us feel inclined to withdraw our names at once, and see patients who are poor, and sent by their doctors, in the old way?

The medical man who takes up ophthalmology and expects to receive "specialists' fees" must have had at least as good a training in his special line as the dentist has for his life-work. Within a few years such a man will find that he has as much work as he can manage, that 40 per cent. of his cases are not refraction cases, that half his time is taken up by medical and surgical ophthalmic cases, and that he must be something of a neurologist. To hear and to read some of the discussion about "ophthalmic benefit" it might be supposed that an ophthalmologist did nothing else but correct presbyopia. Let us endeavour to remove this impression from the minds, not only of insurance officials, but of medical practitioners who should know better.—I am, etc.,

London, W.1, Jan. 31st.

M.D., D.O.M.S.

### Naval and Military Appointments.

#### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders W. J. Morris to the *Dragon*; W. F. Beattie to the *Conquest*; L. S. Goss, O.B.E., to the *Suffolk* on commissioning; T. J. O'Riordan to the *Tulcan*; R. P. Nipps to the *Pembroke* for R.N. Barracks, Chatham; W. H. Murray to the *Frobisher* on recommissioning and as Squadron Medical Officer on transfer of flag.

Surgeon Lieutenants C. B. Fox to the *Virid* for R.N. Hospital, Plymouth, temporary; G. W. Garde to the *Centurion*; O. Watson to the *Suffolk* on commissioning; E. R. Sorley to the *Pembroke* for R.N. Barracks, Chatham; J. B. Patrick to the *Frobisher* on recommissioning; A. S. Burns to the *Calliope*.

Messrs. R. A. Graff, T. L. Cleave, G. D. J. Ball, E. S. Bolton, and S. L. Lord have entered as Surgeon Lieutenants for short service and appointed to the *Pietory* for R.N. Hospital, Haslar, for course of instruction.

#### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Commander F. H. Watson is placed on the retired list.

## ROYAL ARMY MEDICAL CORPS.

Major W. I. Thompson, D.S.O., retires on retired pay on account of ill health and is granted the rank of Lieutenant-Colonel.  
Captain J. C. Harris, half-pay list, late R.A.M.C., retires on retired pay on account of ill health contracted on active service.  
Lieutenant (on probation) W. R. C. Spicer, from the seconded list, is restored to the establishment.

## ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant G. J. Griffiths is transferred to the Reserve, Class DH. Flying Officers D. A. Wilson to R.A.F. Station, Bicester; J. Kemp, H. B. Kennedy, J. I. MacAndrews, R. F. MacLachy, J. B. Murphy, J. C. Neely, F. A. O'Connor, L. O'Connor, and J. J. Quinlan to the Medical Training Depot, Halton, and appointment to short service commissions.

## INDIAN MEDICAL SERVICE.

Colonels R. W. Knox, D.S.O., and A. Fenton and Lieut.-Colonel L. T. R. Hutchinson have retired from the Service.

Consequent on the appointment of Brevet Colonel S. R. Christophers, C.I.E., O.B.E., Director, Central Research Institute, Kasauli, as Member and Secretary of the Medical Research Institute Committee, Captain K. R. K. Jeunger, Assistant Director, Central Research Institute, is appointed to officiate as Director of the Institute.

Lieut.-Colonel F. E. Wilson, an Agency Surgeon and Civil Surgeon, Quetta, is appointed to officiate as Residency Surgeon and Chief Medical Officer, Baluchistan, in addition to his own duties.

The services of Major M. G. Bhambhani are placed permanently at the disposal of the Government of Bombay for employment in the Jail Department.

The services of Major K. B. Bhambhani are placed permanently at the disposal of the Government of Bihar and Orissa for employment in the Jail Department.

The services of Captain Som Dutt, M.C., are placed at the disposal of the Government of Bengal temporarily for employment in the Jail Department.

Captains S. A. Phatak and R. A. Warters to be Majors.

## TERRITORIAL ARMY.

## ROYAL ARMY MEDICAL CORPS.

Major H. E. S. Richards, M.C., T.D., having attained the age limit, is retired, and retains his rank with permission to wear the prescribed uniform.

Major (prov.) A. H. Fullerton is confirmed in his rank.

Captain W. Lumley, late R.A.M.C., to be Captain, with precedence as from July 26th, 1924.

Lieutenants to be Captains: F. N. Foster, E. Holmes, F. A. Smorfitz, and P. C. Lewis.

To be Lieutenants: Lieutenant J. S. Fulton, late R.F.V. (Special Reserve), and A. C. King.

Superannuation for Service with O.T.C.—Captain W. R. Martine from General List, T.A., to be Lieutenant with precedence as from July 24th, 1925, superannuation for service with Medical Unit, Edinburgh University Contingent, Senior Division, O.T.C., and relinquishes the rank of Captain.

## TERRITORIAL ARMY RESERVE OF OFFICERS.

## ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel J. B. Jamieson, T.D., and Major J. A. Davies, having attained the age limit, are retired and retain their rank, with permission to wear the prescribed uniform.

Captain B. Holroyd, having attained the age limit, relinquishes his commission and retains his rank.

## COLONIAL MEDICAL SERVICES.

Dr. W. L. Peacock appointed Senior Medical Officer, Masindi, Uganda. Drs. E. A. C. Langton and S. W. T. Lee appointed District Medical Officers, Mbende and Arua, Uganda, respectively. Dr. C. J. Macquillan, Medical Officer, Tanganyika. Dr. W. C. Smith, Medical Officer, Nigeria. Dr. G. V. Allen, Senior Medical Officer, Nigeria.

Dr. H. C. Wilkinson, Medical Superintendent, King Edward VII Memorial Hospital, Bermuda, appointed Director of the Medical and Health Department, Bermuda. The following appointments have been made by the Secretary of State for the Colonies during the month ended January 31st: Captain J. M. Wallace, Bacteriologist, Trypanosomiasis Research, Uganda. Dr. H. M. Soar, Medical Officer, West African Medical Staff. Dr. D. W. McLaren, Medical Officer, West African Medical Staff. Dr. F. Kane, Medical Officer, Cold Coast. Lieutenant C. W. Hope-Gill, Medical Officer for Tsetse Fly Investigation, West African Medical Staff, Nigeria. Miss J. R. Mason, Lady Medical Officer, Gold Coast. Mr. W. H. Emslie, Medical Officer, West African Medical Staff. Dr. A. C. Lovett-Campbell, West African Medical Staff. Dr. H. C. Curtis, Medical Superintendent, King Edward VII Memorial Hospital, Bermuda. Miss E. A. Robertson, Medical Inspector of Schools, Federated Malay States.

## VACANCIES.

BILFORD HOSPITAL, Fort William, Inverness.—Medical Superintendent and Surgeon. Salary £100 per annum.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—(1) Second House-Surgeon. (2) Third House-Surgeon. (Non-resident.) Salary at the rate of £150 per annum each.

BLACKBURN COUNTY BOROUGH.—Medical Officer of Health and School Medical Officer. Salary £1,000 per annum.

BOOTH BOROUGH HOSPITAL.—(1) Senior Medical Officer. (2) Two Junior Medical Officers. Males. Salary £150 and £125 respectively.

BRADFORD MUNICIPAL GENERAL HOSPITAL.—(1) House-Surgeon. (2) House-Physician. Salary £200 per annum each.

BRISTOL ROYAL INFIRMARY.—(1) Two House-Physicians. (2) Four House-Surgeons. (3) House-Surgeon to Ear, Throat, and Nose Department. (4) House-Surgeon to Gynaecological, Ophthalmic, and Dermatological Departments. (5) Obstetric House-Physician. (6) Casualty House-Surgeon. (7) Assistant House-Surgeon and House-Surgeon to Ophthalmic Department. (8) Dental House-Surgeon. Salary (1) to (7) at the rate

of £80 per annum, but if candidate had previously held resident appointment in Infirmary £100, and for (8) £80 per annum if resident, and £116 if non-resident.

BRISTOL: WALKER DEXTER PRIVATE HOSPITAL FOR WOMEN AND CHILDREN.—Honorary Anaesthetist (female).

BURY INFIRMARY.—Second House-Surgeon (male). Salary at the rate of £175 per annum.

CAMBRIDGE: PARISH OF ST. GILES.—Locumtenent Assistant Medical Officer. Salary £7 7s. per week.

CANTON HOSPITAL, Fulham Road, S.W.3.—Surgical Registrar.

CHICHESTER: ROYAL WEST SUSSEX HOSPITAL.—Junior House-Surgeon (male). Salary £150 per annum.

CHURCH MISSIONARY SOCIETY.—Medical Officer for Church Missionary Society Hospital, Omdurman.

CYFRUS.—District Medical Officer. Salary £600 per annum.

HARFORD COUNTY AND CITY MENTAL HOSPITAL.—Second Assistant Medical Officer (male, unmarried). Salary £350 per annum.

HARTFORD COUNTY HOSPITAL.—(1) Resident Surgical Officer. (2) House-Physician. Salary £250 and £150 per annum respectively.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—(1) Assistant Pathologist and Research Fellow; salary £450 per annum. (2) Part-time Junior Casualty Officer for six months (non-resident). Salary £75.

JOHANNESBURG: UNIVERSITY OF WITWATERSRAND.—Senior Lecturer in Physiology. Salary £516 per annum, rising to £726.

KENT COUNTY OPHTHALMIC AND AURAL HOSPITAL, Maidstone.—Ophthalmic House-Surgeon (male). Salary at the rate of £200 per annum.

LEICESTERSHIRE COUNTY COUNCIL.—Assistant Medical Officer for Maternity and Child Welfare and Assistant School Medical Officer (female). Salary £600 per annum.

LEICESTER ROYAL INFIRMARY.—Two House-Physicians. Salary at the rate of £125 per annum.

LINCOLN CITY AND COUNTY BOROUGH.—Medical Officer of Health. Salary £1,000 per annum.

LINCOLN COUNTY HOSPITAL.—Junior House-Surgeon (male, unmarried). Salary £150 per annum, rising to £200 after six months' approved service.

LIVERPOOL: SAMARITAN HOSPITAL FOR WOMEN.—House-Surgeon. Salary at the rate of £160 per annum.

LIVERPOOL: STANLEY HOSPITAL.—(1) House-Surgeon. (2) House-Physician. Salary at the rate of £100 per annum each.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.1.—Resident Medical Officer. Salary at the rate of £175 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—(1) Resident Medical Officer. (2) House-Physician. (Males, unmarried.) Salary £250 and £125 per annum respectively.

NOTTINGHAM AND MIDLAND EYE INFIRMARY.—House-Surgeon. Salary £200 per annum.

OXFORD: RADCLIFFE INFIRMARY AND COUNTY HOSPITAL.—(1) House-Physician. (2) House-Surgeon. (3) Casualty House-Surgeon. (4) Obstetric House-Physician. Males. Salary at the rate of £120 per annum.

PLYMOUTH: HOMOEOPATHIC AND GENERAL HOSPITAL.—House-Surgeon (male). Salary £100 per annum.

PRICE OF WALES'S GENERAL HOSPITAL, Tottenham, N.15.—Radiographer.

QUEEN CHARLOTTE'S MATERNITY HOSPITAL, Marylebone Road, N.W.1.—(1) Assistant Resident Medical Officer (male); salary at the rate of £80 per annum, rising to £100 on appointment as senior. (2) District Resident Medical Officer; salary at the rate of £80 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—(1) Resident Medical Officer. (2) Two House-Physicians. (3) Clinical Assistant in the Orthopaedic Department for Out-patients; honorarium 5s. per attendance. Salary for (1) £200 and for (2) £160 per annum.

RICHMOND, STREY: ROYAL HOSPITAL.—Junior Assistant House-Surgeon (male). Salary at the rate of £100 per annum, rising to £150 on appointment as Senior.

ROYAL CHEST HOSPITAL, City Road, E.C.—Assistant Tuberculosis Officer (non-resident). Salary £600 per annum.

ST. GEORGE'S HOSPITAL, S.W.1.—Assistant Radiologist. Remuneration at the rate of £110 per annum.

ST. GEORGE'S HOSPITAL MEDICAL SCHOOL, Hyde Park Corner, S.W.1.—Whole-time Worker in Research Department. Initial salary £500 per annum.

ST. JOHN'S HOSPITAL FOR DISEASES OF THE SKIN, Leicester Square, W.C.—Honorary Medical Registrar.

SWANSEA FREE HOSPITAL FOR WOMEN, Marylebone Road, N.W.1.—House-Surgeon. Salary at the rate of £100 per annum.

SHEFFIELD: JESSOP HOSPITAL FOR WOMEN.—Assistant House-Surgeon (male). Salary £100 per annum.

SOUTHEND VICTORIA HOSPITAL.—Junior House-Surgeon (male). Salary at the rate of £150 per annum.

TENBRIDGE WELLS AND COUNTY GENERAL HOSPITAL.—House-Surgeon. Salary £160 per annum.

WESTERN OPHTHALMIC HOSPITAL, Marylebone Road, N.W.1.—Senior and Junior Honorary Anaesthetists. Honorarium £1 ls. per visit.

WEST HAM UNION.—Assistant Medical Officer at the Whipps Cross Hospital. Salary £300 per annum, rising to £250.

WEST NORWICH AND KING'S LYNN HOSPITAL.—(1) Resident Surgical Officer. (2) Assistant House-Surgeon. Salary £400 and £100 per annum respectively.

WILLESDEN MUNICIPAL HOSPITAL.—Resident Medical Officer. Salary £150 per annum.

WOOLWICH AND DISTRICT WAR MEMORIAL HOSPITAL, Shooters Hill, S.E.18.—(1) Honorary Senior Anaesthetist. (2) Two Honorary Anaesthetists. Honorarium 50 guineas per annum each.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Whitehaven (Cumberland), Chesham (Buckinghamshire), Clydesdale (West Yorkshire), Montgomery (Montgomeryshire), Oakham (Rutlandshire), King's Lynn (Norfolk), Newburgh (Fife), Applications to the Chief Inspector of Factories, Home Office, Whitehall, London, S.W.1.

MEDICAL REFEREE UNDER THE WORKMEN'S COMPENSATION ACT, 1925, for the Districts of Chester (Chesham No. 7), Holywell and Flint, and Mold (Chesham No. 29) County Courts. Applications to the Private Secretary, Home Office, Whitehall, S.W.1, by March 3rd.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

ROYAL CHEST HOSPITAL, City Road, E.C.—Tues., 3.15 p.m., Intrathoracic Tumours.

ROYAL INSTITUTE OF PUBLIC HEALTH, 37, Russell Square, W.C.1.—Wed., 4.30 p.m., Some Aspects of Legal Live Birth.

ST. PAUL'S HOSPITAL, Endell Street, W.C.2.—Thurs., 4.30 p.m., Methods of Diagnosis in Renal Conditions.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION, St. James's Hospital, Ouseley Road, Ballham, S.W.12.—Wed., 4 p.m., Lantern Demonstration: The Radiographic Values in Bones and Joints.

SUBSCRIPTIONS AND ADVERTISEMENTS (Financial Secretary and Business Manager, Telegrams: Articulate Westcott, London).  
MEDICAL SECRETARY (Telegrams: Medisecra Westcott, London).  
EDITOR, BRITISH MEDICAL JOURNAL (Telegrams: Aitiology Westcott London).  
Telephone numbers of British Medical Association and British Medical Journal, Museum 9861, 9862, 9863, and 9864 (Internal exchange four lines).  
SCOTTISH MEDICAL SECRETARY: 6, \_\_\_\_\_ (Telegrams: Associale, Edinburgh).  
IRISH MEDICAL SECRETARY: 16, \_\_\_\_\_ (Telegrams: Bacillus, Dublin. Tel. 4737 Dublin).

DEATH.

MCDONALD BROWN.—On February 9th, 1923, suddenly, at 18, The Cloister Crofts, Leamington Spa, Caroline Helen, beloved wife of John Macdonald Brown, J.P., M.D., F.R.C.S., late of 64, Upper Berkeley Street, London, W.

## British Medical Association.

### PROCEEDINGS OF COUNCIL.

Wednesday, February 8th, 1928.

A MEETING of the Council of the British Medical Association was held on Wednesday, February 8th, at Tavistock Square, when Dr. H. B. BRACKENDURY was in the chair, and the following were present:

Sir Robert Philip (President), Dr. C. O. Hawthorne (Chairman of Representative Body), Mr. N. Bishop Harman (Treasurer), Sir Ewen Maclean (President-Elect), Dr. A. Lyndon (Deputy Chairman of Representative Body), Sir Robert Bolam (Immediate Past Chairman of Council), Dr. J. Barcroft Anderson, Dr. J. Armstrong, Dr. F. J. Baidon, Sir Alfred Blenkinsop, Dr. J. W. Bone, Dr. H. C. Bristow, Dr. G. F. Buchan, Dr. H. G. Dain, Dr. C. E. Douglas, Mr. T. P. Dunkhill, Mr. W. McAdam Eccles, Dr. F. W. Goodbody, Dr. R. Wallace Henry, Dr. G. B. Hillman, Dr. J. Hudson, Dr. I. W. Johnson, Dr. R. Langdon-Down, Dr. R. W. Leslie, Dr. E. Lewys-Lloyd, Dr. J. Livingstone London, Sir Richard Luce, M.P., Dr. J. A. Macdonald, Dr. S. Morton Mackenzie, Dr. O. Marriott, Dr. J. C. Matthews, Dr. G. W. Miller, Dr. Christine Murrell, Mr. A. W. Nuthall, Dr. W. Paterson, Dr. J. R. Prytherch, Dr. F. Radcliffe, Dr. E. H. Snell, Mr. H. S. Souttar, Dr. E. A. Starling, Dr. John Stevens, Lieut.-Colonel Ashton Street, Dr. W. E. Thomas, Dr. G. Clark Trotter, Mr. E. B. Turner, Sir Jenner Verrall, Dr. J. F. Walker, Mr. A. M. Webber, Sir William Wheeler, and Dr. W. E. A. Worley.

Apologies for absence were received from: Mr. R. G. Hogarth, Dr. D. E. Finlay, Dr. T. Fraser, Dr. F. J. Gomez, Dr. E. K. Le Fleming, Dr. J. G. McCutcheon, Dr. A. Manknell, Lieut.-Colonel F. O'Kinealy, Mr. J. Patrick, Dr. R. C. Peacocke, Group Captain N. J. Roche, Dr. Lockhart E. W. Stephens, and Dr. D. Walshe.

#### Preliminary Business.

The Chairman said that since the last meeting a colleague who had been present at the Council on that occasion had passed away—Sir Percy Bassett-Smith. Sir Percy was a man greatly esteemed by all who knew him. In the work of the Council, though primarily interested in his own special department of medical practice, he had shown a catholic sympathy. The members, by a standing vote, authorized the Chairman to forward a letter of condolence to the family.

The congratulations of the Council were accorded to Sir Percy Sargent, a member of the Association, and to Sir Frederic Hallett, an honorary member, on their recent honours.

An invitation from the American Medical Association to send an official delegate or delegates to the annual congress, to be held in Minneapolis in June, was considered. It was stated that the President of the Association might be able to attend, but that domestic reasons made it somewhat doubtful, and that Sir Robert Philip would like some deputy to be appointed. The matter was left in the hands of the Officers of the Association. A somewhat similar course was taken in respect to the customary celebration of the Faculty of Medicine, Cairo, and the International Congress of Tropical Medicine and Hygiene,

to take place in Egypt next December. The President hoped to be able to attend.

Dr. G. F. Buchan and Dr. I. W. Johnson, members of the Council, were appointed delegates to attend the Royal Sanitary Institute Congress in July.

#### Election of Future President.

A communication was received from the Manchester Division intimating that it desired formally to nominate Mr. A. H. Burgess, F.R.C.S., honorary surgeon to the Manchester Royal Infirmary, and professor of clinical surgery at Victoria University, Manchester, as President of the Association in 1929-30. The Council unanimously agreed to a motion by the Chairman that a recommendation in this sense be made to the Representative Body.

#### Vice-Presidents.

The Chairman also moved that it be recommended to the Representative Body that Sir Robert Bolam and Sir Dawson Williams be elected Vice-Presidents of the Association in recognition of their services as Chairman of Council, 1920-27, and Editor of the BRITISH MEDICAL JOURNAL, 1898-1923, respectively. This was carried unanimously.

#### Sir Dawson Williams.

A further recommendation to the Representative Body, that Sir Dawson Williams be offered the title of Emeritus Editor of the BRITISH MEDICAL JOURNAL, was also unanimously adopted.

The Chairman said that on the report of the Editorial Staff Committee, to be brought up later, there was a resolution passed by that committee placing on record its profound appreciation of Sir Dawson Williams's great services. He thought the Council would desire that this resolution should be adopted as its own, and he proceeded to read it as follows:

The Council of the British Medical Association, at its first meeting after his retirement from the position of Editor of the BRITISH MEDICAL JOURNAL on completing thirty years in that office, wishes to place on record its profound appreciation of Sir Dawson Williams's great services to the Association and the medical profession during the past forty-seven years. The Council recognizes with gratitude the high position the JOURNAL has attained under Sir Dawson Williams's direction, and offers to him on behalf of the Association its warmest wishes for a renewal of health in the leisure he has so well earned by his long and devoted service.

The Chairman having moved this from the chair as the expression of the feeling of the Council, it was seconded by the President, and carried unanimously and with acclamation.

*Election of Overseas Members of Council.*

It was declared that the following, being the only nominations received, were duly elected members of Council for the years 1928-31: Mr. T. P. Dunhill (South Australian, Tasmanian, Victorian, and Western Australian Branches); Sir T. Jenner Verrall (New South Wales and Queensland Branches); Dr. G. Clark Trotter (New Zealand and Fiji Branches).

*Appointment of Solicitors.*

The Council considered the appointment of a Solicitor to the Association for the period April 1st, 1928, to March 31st, 1929. Mr. W. E. Hempson had intimated his decision not to seek reappointment. After discussion it was the opinion of the Council that there were certain advantages in appointing a firm rather than an individual, and on the motion of Sir Robert Bolam it was agreed that Messrs. Hempsons, of Henrietta Street, W.C., the firm of which Mr. W. E. Hempson has been for many years the leading member, be appointed Solicitors to the Association for the period stated.

*MEDICO-POLITICAL BUSINESS.**Contract Rate for Juvenile Oddfellows.*

Dr. Bone, chairman of the Medico-Political Committee, said that his committee had been approached by the Manchester Unity of the Independent Order of Oddfellows with the suggestion that the Association should consider the adoption of a standard fee for medical attendance and medicine supplied to juvenile members of the society. In the course of a conference it was stated that the board of directors of the Order was prepared to advocate general acceptance by all juvenile branches of a standard rate of 8s. 8d. per head per annum for medical attendance and medicine, with a slightly lower rate for exceptional areas, where, owing to economic conditions, the standard rate was not feasible, free choice of patient by doctor and doctor by patient to be safeguarded. A recommendation in this sense to the Representative Body was accordingly brought before the Council.

Dr. Starling said that this raised a question which had been before the Representative Body, as well as the Divisions, on many occasions. It was well known that medical attendance on children and young people was much more onerous than attendance on adults. This matter ought to be considered very closely before a capitation fee was fixed at a lower rate than under national health insurance, where the fee was for attendance alone. In 1925 the Council of his Branch was approached by a local juvenile lodge of the Independent Order of Oddfellows, and asked to suggest a suitable capitation rate for the medical officer. After discussion and negotiation a capitation fee of 9s. for medical attendance and the provision of drugs was suggested, and was accepted by both the doctor concerned and the lodge, and he believed it still obtained. If the present recommendation were passed it would make a difficulty for medical men in other circumstances in holding out for more than 8s. 8d.

Dr. Radcliffe asked whether it was not the policy of the Association to oppose all contract practice, in spite of the National Insurance Act. Dr. Bone replied that it certainly was not.

Dr. Johnson opposed the recommendation. If he interpreted aright the feelings of his brother practitioners of Lancashire, this proposal would receive universal condemnation.

Dr. Walker asked within what ages these juvenile members came, and whether they were examined before admission. He reminded the Council that this was not a question of treating with individuals, but with a society which had large reserves, accumulated to a considerable extent owing to the wretched fees paid to medical men in the old days.

Dr. Bone replied that the children might be of any age from birth up to 16 years, and he believed that it was not customary to have a medical examination before entry.

Dr. Hawthorne thought that before the Council decided on this proposal the opinion of the Insurance Acts Committee should be ascertained, as, if such a decision were made, it would have an important bearing on the fee to be paid for dependants of insured persons if and when these dependants were brought into national health insurance. He moved that the recommendation be postponed until after consideration by the Insurance Acts Committee, and this was seconded by Dr. Lyndon, and carried.

The Chairman pointed out that what was intended here was not to encourage the extension of contract practice, but to raise the fee from the more usual 6s. 6d. to 8s. 8d.

It was agreed that the matter should be reported to the next meeting of Council after the Insurance Acts Committee had considered it.

*Assistant Medical Officers at Mental Hospitals.*

Dr. Bone brought forward certain propositions with regard to the salaries and emoluments of assistant medical officers to mental hospitals. The policy of the Association in this matter was laid down in 1915, and therefore the figures did not correspond with the present cost of living. The Council now agreed, on Dr. Bone's motion, to express the following opinions, not with a view to recommendation to the Representative Body, but as a matter of record:

(i) That all assistant asylum medical officers should be able to look forward to a salary which with emoluments would amount to at least £600 per annum after some five years' service; that this end could be attained by a provision that assistant asylum medical officers should be given a minimum commencing salary of £350, with annual increments of £25 a year rising to £450, with emoluments in addition valued at £150, which should include board, lodging, laundry, and attendance;

(ii) that assistant asylum medical officers should be encouraged to take a Diploma in Psychological Medicine;

(iii) that (having in mind the view expressed by the Royal Commission on Lunacy that in a large number of institutions the medical staff should be enlarged) a whole-time medical officer of a mental hospital should not take charge of more than (a) 50 acute cases together with 50 convalescent patients, or (b) 400 chronic cases, as understaffing of hospitals means that the patients therein receive insufficient treatment, and this entails a corresponding low recovery rate;

(iv) that practitioners who are acting as clinical assistants in mental hospitals should not be required to undertake the duties of junior assistant medical officers;

(v) that practitioners engaged in the trying work of continuous attendance on mental patients in mental hospitals should have at least four weeks' leave each year, and that they should not be obliged to take more than two weeks of this consecutively.

The Council also agreed to recommend to the Representative Body that the minimum commencing salary be as set out in paragraph (i) above; that officers who possessed the diploma should receive an additional £50 a year; that temporary medical officers should not be employed on the staffs for more than three months, except as relief during holiday periods or when a member of the permanent staff was incapacitated by illness, or had been seconded for any purpose; and that every mental hospital should contain a separate house suitable for a married assistant officer, or two such houses where the hospital had four or more assistants.

Dr. Bone added that it was proposed at once to send copies of these recommendations to the County Councils Association and the Association of Municipal Corporations for comment, and to all the county and county borough councils. It was the desire of his committee to consult the important associations just named before the policy had become stereotyped, and the Council would have time to consider any comments before the recommendations came up to the Representative Body.

It was agreed also to consult any other representative associations, such as the Parish Councils Association of Scotland, whose views might be useful.

*Treatment of Employers of Ordnance Survey Department.*

The last Annual Representative Meeting instructed the Council to approach the authorities concerned with a view to obtaining an increase in the fees paid to doctors for casual cases in the Post Office Telegraph Survey Department. It had been ascertained that the persons referred to were employed by the Ordnance Survey Department. Dr. Bone gave an account of the fees offered to practitioners, and said that, although inadequate, they were less so than fees paid by certain other Government departments which were accepted by the profession, and his committee thought that no action should be taken in the matter.

Dr. Walker said that the fees were very inadequate—2s. 6d. for consultation and medicines, 3s. 6d. for visit and medicines, while night visits, for which there was a slight addition, were supposed to be visits between 10 p.m. and 7 a.m., which implied that the practitioner's working day was from 7 a.m. to 10 p.m. It was a poor reason for taking no action that other cases were worse, and he moved the reference back.

The Chairman said that in other connexions the Association

had succeeded in establishing the hours from 8 p.m. to 9 a.m. as the "night" period, and he hoped that these would be established in every connexion as the proper hours.

Dr. Bone said that he was not out to defend the scale; but the fact was that here, as with other Government departments, there were always practitioners who were prepared to accept the scale. There was a scale of fees for attendance on seamen away from their ships, and another for attendance on soldiers at home, by civilian practitioners, which were not such good scales as this. There appeared to be enough practitioners in every area to give attendance on these terms.

It was agreed that the views of the committee he reported to the Representative Body, but not in the form of a recommendation.

#### *Paying Centres for Infant Hygiene.*

A long discussion took place on certain recommendations arising out of the recent promotion of schemes for the establishment of infant consultation centres for better class families. Representations had been made to the Association by the Association of Infant Welfare and Maternity Centres, putting forward the strong feeling amongst a section of the middle-class public that the mothers of this class should be able to get that instruction which was provided for a different class of the population by the municipal maternity and child welfare clinics. These mothers were willing to pay for the instruction, and at one institution of the kind, known as the Chelsea "Babies' Club," the charge proposed was five guineas a year for each child. It had been stated by a deputation which met the Maternity and Child Welfare Subcommittee of the Association that many private practitioners were unable or unwilling to give the kind of instruction required. It was not proposed at these centres to give medical treatment.

Dr. Bone said that his committee was not desirous of encouraging the extension of these centres among well-to-do people, but at the same time it believed there was a good deal of truth in the assertion that many medical men were not specially interested in this branch of work, and that a case had been made out for the establishment of the centres under discussion. The ladies who had brought forward the matter attached great importance to these clubs, asserting that they found a reluctance on the part of the ordinary practitioner to give detailed advice on the feeding and management of small children, and they were determined that these centres should be formed. That being the case, it was necessary to consider ways in which they should be run. He therefore moved the first of several recommendations to the Representative Body as follows:

(i) That the education of all mothers in preventive medicine, as applied to the care of the infant and the conditions of the home, is desirable; (ii) that it is considered that there already exist means by which both of these objects may be partially attained; (iii) that any further establishment of special paying centres should be for the purpose of education and health propaganda and not for the purpose of treatment; and (iv) that should mothers prefer to avail themselves of paying centres it is desirable that attendance at such centres should be with the knowledge of the family medical attendant.

Dr. I. W. Johnson said that this was to his mind one of the most preposterous propositions that had ever come before the Council. The committee appeared to have been unduly swayed by the representations of a few ladies from Chelsea. Apparently the ordinary medical practitioner was judged not to be capable of advising on the care of the baby.

Dr. Stevens also expressed strong dissent. How was a distinction to be made between medical advice and medical treatment? If these centres were established there would be conflict between them and the private practitioner. He thought this was a matter with which the Association ought to have nothing to do.

The Chairman said that he imagined the opponents did not wish to negative all the propositions set forward in the recommendation, and if they wished to say that the Association should not countenance the establishment of such clinics it would be better to put forward an amendment in that form.

Dr. Johnson desired to move to proceed to the next business, but the Chairman declined to accept such a motion at that stage.

Dr. Starling thought the encouragement by the Council of such a policy as was laid down in the recommendation was likely to be disadvantageous. The work of the private practitioner had already suffered sufficient inroads without this fresh

one. His experience was that a large number of general practitioners were much interested in the management of infants and anxious to give advice on the subject. The distinction between advice and treatment would be very hard to draw.

Dr. Christine Murrell said that there was more than one middle-class centre already in existence. She believed that when infant welfare centres for the industrial classes were started the attitude of the Council was somewhat similar to that which had been expressed by the previous speakers. But was the Council really acting in the interests of the general practitioner when it washed its hands of this thing? Was it not better to take an interest in and to guide the early stages of this movement? The movement might be dangerous, but it was more dangerous to ignore it.

Dr. Bristowe felt that, whether the Association discouraged or approved them, these centres had come to stay. The wisest thing the Association could do was to try to guide them into the right paths.

Dr. J. A. Macdonald considered that each one of these developments was a step towards the establishment of a State medical service.

Dr. Radcliffe supported the opposition, urging that it was impossible for any medical man to give the mother the best advice unless he was acquainted, as the private practitioner was, with the home surroundings, the economic situation, and other circumstances.

Mr. E. B. Turner said that while he shared the feelings of others with regard to these movements it was necessary to face such a fact as this, that one of these centres was started by a lady who had asked her practitioner how to manage her baby, and he had told her that he knew very little about these things. It was not a few ladies of Chelsea, as Dr. Johnson had said, who swayed the committee, but the accredited representatives of an organization which covered the whole kingdom—namely, the Association of Infant Welfare and Maternity Centres. Some of these centres were already in existence, and members of the profession who belonged to what he called the "publicity brigade" had addressed them. But the whole question was largely in the hands of the members of the profession. If they chose to do this work in the ordinary course of their private practice the need for such centres would not arise.

The Chairman reminded the Council that the Representative Body had committed it to a campaign in the direction of health education and propaganda. It might be said that a thing of this kind was not a right method of propaganda, but it was not for the Council to oppose education and propaganda in connexion with infant hygiene. If there was a demand for public information and education with regard to infant hygiene—a demand not completely met by private practitioners—then some such organization as this was a proper thing, but it ought to be confined to that particular sphere of education and propaganda.

Dr. Johnson having moved that the whole matter be referred back,

Dr. Bone said he could not agree that these careful recommendations should be scrapped. The committee did not come to its decision lightly, and the deputation which it received was not a local affair, but representative of a national body, on which, by the way, the Council of the British Medical Association itself was represented. All the arguments advanced that morning, such as the difficulty of distinguishing between treatment and advice, were equally applicable to the municipal clinics which for some time now had had the approval of the Council. He sometimes thought that the interests of the profession were looked after a little too minutely; its monetary interests were considered to the disadvantage of the wider view. That seemed to be the underlying consideration of the dissentients who had spoken. Even on this ground he did not think that any money was going to be lost to the profession, because this was entirely new work, which had not been done in the past. It seemed evident that ladies would not be willing to pay five guineas a year for each child if they could get the information from their family doctor. It appeared, therefore, that there was a need for these centres, and if there was a need they would be forthcoming. Could the Association, even if it wished, do anything to stop them? And if not, why not try to guide them in the right path?

The amendment to refer back was lost by 20 votes to 11.

Mr. Bishop Harman then moved another amendment, substituting for the recommendation a form of words which had been adopted by the Council in 1917 in connexion with a similar proposal then made by the Mothers' Union:

The Council, with reference to a proposal to establish infant consultation centres for better-class families, states that it fully appreciates the value of the work proposed to be done at such centres in the way of giving lectures on infant management, but it does not approve of these centres providing consultations and advice in respect of mothers and young children belonging to classes of the community which are quite able to consult their own family doctor.

Dr. Johnson seconded this amendment.

Mr. Hawthorne considered that this amendment was vicious in principle and dangerous in practice. It was to encourage a method of giving advice to patients *en masse*. Lectures necessarily dealt with general propositions, whereas medical practice was the application of knowledge to individual circumstances. Something might be said for a centre or an arrangement by means of which the opinion of an expert practitioner could be obtained in reference to an individual child, but nothing could be said to defend a proposition which would let loose upon the public a number of lecturers who would be giving general advice, to the confusion, in many instances, of the individual advice furnished by private practitioners. Public pronouncements by medical practitioners regarding health appeared frequently in the newspapers, and some medical men like himself were aware that in their own practice these pronouncements were quoted against them in reference to the particular advice they themselves had given. Consequently there was a danger of prejudicing the private practitioner responsible for the individual patient by the public pronouncements so made. Mr. Bishop Harman apparently wished to multiply these public pronouncements. That was a form of medical advice which the Council ought obstinately to oppose. The disadvantage of lectures was that they dealt with general propositions and not with individual cases.

Sir Robert Bolam hoped the Council would not take Mr. Bishop Harman's way out of an admitted difficulty. He was personally left quite cold by Dr. Bone's suggestion that because infant welfare centres had been satisfactory for a certain grade of the population, therefore the Council should at once agree to their operation in other grades. But did the practitioner in fact give this service which was asked for? Was this a new field which was being opened up? On their decision as to what extent it was new might well depend their attitude towards it. If the Council was satisfied that the movement would rather extend the field of medical practice than the result from the point of view of public health would be all to the good.

Mr. Nuthall doubted whether, the country over, there was a demand for these centres. There was no sufficient evidence, he thought, that this advice was not forthcoming from private practitioners.

Dr. Paterson said that the committee was informed that six centres had already been started, and it was proposed to form more of them. Those concerned were anxious for the approval and help of the Association so that their schemes might be assured of the goodwill of the profession. The committee had put forward what it believed to be the best way of meeting the situation.

Mr. Bishop Harman's amendment was lost by 20 to 17, and the committee's recommendation was then carried.

Further recommendations were adopted to the effect that any body of persons considering the formation of a centre should communicate with the local profession, preferably through the Division; that it was for the committee of the centre, on the recommendation of the local medical profession, to decide whether the medical staff of a centre should be selected from among specialists or general practitioners, and whether from those practising in the area or outside; that the local medical profession should be represented on the committee of management; and that the remuneration of the medical staff must be a matter of arrangement between the committee of management and the local profession.

Certain model rules were then suggested by the committee. Sir Jenner Verrall thought it better not to put forward model rules at this stage, but an amendment to that effect was lost. In the first of the rules, which laid it down that the object of the centre was to give "education and advice," Dr. Radcliffe wished to delete the word "advice," but Dr. Bone thought

that the connotation of the word, as expressly excluding treatment, was familiar to every member of the Council. The word was allowed to stand. Discussion arose on a form of words which should make it evident that advice relating to a child who was really ill should not be given at the centre, and a phrase proposed by Mr. Bishop Harman was agreed to—namely, "advice on the general welfare of children." Mr. Harman at first proposed "diet and general welfare," but Dr. Hawthorne urged that "diet" was part of medical treatment. One of the model rules, that the subscription entitled subscribers to home visits by the nurse-superintendent, gave rise to some objections and was withdrawn. Other rules, emphasizing the desirability that any mother wishing to attend the centre should inform her family medical attendant of her intention and obtain his co-operation; that should any illness be discovered at the centre the subscriber should be referred to the family attendant; that the medical officer of the centre should not be at liberty to attend the children of subscribers in illness except in consultation with the private doctor; that medical advice should not be given by telephone or correspondence; and that children acutely ill, or who had been in contact with infectious disease, must not be brought to the centre, were adopted.

#### *Protection of Children During Birth.*

Following upon a resolution passed by the Public Health Section at the Annual Meeting, 1926, requesting the Council to approach the Government with a view to securing legislation to protect the unborn child against intentional violence during its passage from the mother's body, Dr. Bone pointed out that the Births and Deaths Registration Act, 1926, perpetuated the legal position that the child was not "born" until it was completely expelled, and the Council agreed to an expression of opinion that no useful purpose would be served by an attempt, at any rate at present, to take action on the lines suggested in the resolution.

#### *Education Authorities and Hospital Staffs.*

The committee reported that in connexion with contributory schemes for hospital benefit some education authorities which had hitherto paid fees for medical attendance on school children were now taking advantage of the existence of these schemes by advising parents of children needing medical attention who were contributors to such a scheme to send their children to the hospital, thereby avoiding the necessity of fees being paid for them either by the education authority or by the parent. The committee was advising Divisions and Branches with regard to this position, as indicated by the policy of the Association, pointing out that the medical staff of the hospital should refuse to perform operations without a fee on any children for whom the education authority was responsible. Mr. Bishop Harman drew attention to some points of difficulty in the wording of this advice, and it was agreed to refer the matter back and bring it up at a future meeting.

#### *X-ray Examinations in Bone Injuries.*

Dr. Bone stated that his committee had asked that the attention of the Science Committee be drawn to the statement by the Medical Defence Union relating to its possible refusal to accept liability unless its members made a rule of advising patients to undergo x-ray examination in every case of injury to a bone or joint. It seemed necessary that some pronouncement on this important matter should be formulated. Dr. Lyndon observed that the matter had been brought to the attention of the committee by a few members of the Medical Defence Union, and he questioned whether it was wise to take action on such basis, when the result might be possibly to bring about conflict with another professional organization. The members concerned would have the opportunity of raising the whole matter at the annual meeting of the Union. Dr. Bone replied that his committee thought it a very important question, quite irrespective of the means by which it had come forward, and all it had done at present was to ask that it be referred to the Science Committee.

#### *PUBLIC HEALTH BUSINESS.*

##### *The Sir Charles Hastings Lecture.*

Dr. Lewys-Lloyd, chairman of the Public Health Committee, brought forward recommendations empowering his committee to make arrangements for the delivery in the spring of 1928 of a public lecture, to be known as the Sir Charles Hastings

Lecture on education in health. These were agreed to, and the names of possible lecturers and chairmen were suggested.

#### Combined Appointments.

Dr. Hawthorne brought forward a report of a joint meeting of the Medico-Political and Public Health Committees which had been held to consider the question of combined appointments of whole-time medical officer of health, Poor Law medical officer, and public vaccinator. The occasion of the joint meeting arose out of what is known as the Godstone case, discussed at the last meeting of Council.<sup>1</sup> The joint meeting brought forward a recommendation for submission to the Representative Body as follows:

(i) That domiciliary attendance should, in the best interests of the patients, be provided by private practitioners in the area concerned and not by a whole-time medical officer; (ii) that the adoption of the above resolution leaves unimpaired the position of any medical officers at present holding whole-time appointments in which domiciliary attendance is one of the duties; (iii) that if there are in the area no practitioners willing to undertake the domiciliary work on suitable terms, the resolution (paragraph (i)) shall not apply.

He said that it was felt that it would be unfair to make the proposition retrospective, and, moreover, the possibilities indicated in paragraph (iii) had to be borne in mind.

Dr. Morton Mackenzie asked whether the Godstone case was covered. Dr. Hawthorne replied that this was a recommendation to the Representative Body, and if it was passed it would begin to operate from the date of its passing, so that the Godstone and other appointments would then be covered by paragraph (ii).

Dr. Morton Mackenzie then moved, and Dr. Lyndon seconded, that words be added in paragraph (ii) "prior to the origin of the Godstone case." This amendment was lost, and Mr. Harman moved the deletion of the whole of paragraph (ii), and Dr. Mackenzie seconded. Dr. Hawthorne urged that this would be unjust to individuals, and this amendment also was lost, and the recommendation as it stood was agreed to.

Dr. Hawthorne further moved as a recommendation to the Representative Body:

"That there is no objection in principle to the combination in one and the same whole-time appointment of the duties of medical officer of health and those of Poor Law institutional medical officer, but the application of this principle in any individual instance must be governed by local circumstances and by the opinion of the Division or Divisions concerned."

This was agreed to, and Dr. Hawthorne further moved that there was no objection in principle to the combination in one and the same whole-time appointment of the duties of medical officer of health or of Poor Law institutional medical officer and those of public vaccinator, subject to the same provision with regard to the local circumstances. This also was agreed to.

Dr. Morton Mackenzie moved a resolution regretting the lack of co-operation shown by the Council of the Society of Medical Officers of Health in not urging its members to postpone applying for the post recently advertised in the public press by the Godstone board of guardians. He reminded the Council of the circumstances of the Godstone case and of the fact that the Council, at its last meeting, confirmed the issue of an Important Notice. Six applications were received for this post, from which three selections were made. Two of the three applicants withdrew, and the third was appointed. An appeal was made to this applicant to withdraw his application, but he refused, and based his refusal on a letter from the Society of Medical Officers of Health, in whose hands he had placed himself, which stated that no decision was taken by the council of the society in support of the Important Notice issued by the British Medical Association, and that the council had passed to the next business. Dr. Mackenzie thought that this was falling a little short of what might be expected from the sister society, which the Association had supported, incurring some odium in so doing. Here was a case in which the local profession felt very strongly, and yet the society could give their own member no positive advice on the subject.

Dr. Starling seconded the resolution. The area in question, he said, was within the constituency which he represented on the Council, and there it was felt very strongly indeed by a large number of those with whom he came into contact that all possible steps should be taken to preserve the practice of private practitioners. It had always been his object to try to get the

two branches of the profession to work together in harmony, but he thought the Council should register its regret at what had happened in this instance.

Dr. Snell regretted to see such a resolution as this on the agenda. At the previous meeting of the Council there was considerable difference of opinion over the Godstone case, and after a long discussion the resolution was carried only by 23 votes to 19. To have on a resolution so carried a resolution of regret or censure relating to another society would be quite out of place. Similar appointments had been held by whole-time officers for over thirty years, and there was no expressed policy of the Association on record. But in 1911 the policy was laid down by the Annual Representative Meeting that the Association should do what it could to make all medical officers of health appointments whole-time appointments. If this Godstone advertisement had offered opportunity for general practice to the man appointed it would have contravened the policy as stated in 1911. In 1910 a memorandum was issued by the Local Government Board in support of the combination of appointments with a view to securing whole-time medical officers of health, and the Council had not expressed a contrary opinion. Therefore when this advertisement was on the Association's books there was nothing laid down by the Association directing its members not to apply for such an appointment. With regard to the relationship between general practitioners and the medical officer of health, it might be of interest if he stated that he, an M.O.H., had been a member of the Association for nearly forty years, and whenever he had expressed a desire to attend the Annual Representative Meeting his Division had always sent him. He moved that the Council proceed to the next business.

Mr. Webber seconded, and the motion to pass to the next business was carried by 17 to 13.

#### HOSPITALS BUSINESS.

##### Co-ordination of Hospital Provision.

Several important recommendations were brought forward by Mr. McAdam Eccles on behalf of the Hospitals Committee. The first related to the co-ordination of hospital provision. The Minister of Health, he said, was in correspondence with the British Hospitals Association with regard to this matter of co-ordination, and the Hospitals Committee, hearing of this, had thought it well that the British Medical Association should look into the matter also, and a subcommittee was appointed for this purpose under the chairmanship of Sir Richard Luce. The Hospitals Committee considered that the Association should take an active part in attempting to guide any legislation which might be the outcome of any of the principles adopted as a result of the consideration of the answers to the questions which had been suggested by the Minister of Health. The policy of the Association should be framed before any bill was introduced by the Minister into Parliament. The subcommittee had prepared a scheme, but it had not yet been before the full committee. In the meantime, however, the committee brought forward certain recommendations in order to gauge the feeling of the Council. The first was:

That all hospitals in a given area should be grouped round a parent or primary hospital, which hospital, in view of the existing state of affairs, will generally be one of the bigger voluntary general hospitals. In any area of co-ordination in which there is a hospital with a recognized medical school attached, such teaching hospital must necessarily be the hospital round which the others are grouped.

Mr. Eccles added that the committee was quite aware that some so-called Poor Law—in future probably to be called municipal—hospitals were exceedingly good in their buildings, equipment, and staff, but they had not got the same facilities as the larger voluntary hospitals, particularly those with medical schools attached, for research work and other matters.

Sir Robert Bolam suggested that the term "primary hospital" might cause confusion with some similar term in the report of the Consultative Council. On the understanding that the phraseology in this respect might be made plainer, the recommendation was agreed to.

Mr. McAdam Eccles then brought forward some replies which he suggested might represent the Association's point of view in answer to the questions which the Minister of Health had suggested that voluntary hospitals should examine in conjunction with local authorities. The discussion in the Council on these answers was almost entirely devoted to terminology, particularly the description of what was variously termed the primary or

<sup>1</sup> SUPPLEMENT, December 24th, 1927, p. 228.

parent hospital or base hospital. The term "central or base hospital" appeared to find most favour. The Minister's questions (Q) and the proposed replies (A), as agreed to after the discussion in the Council, are set out below:

Q.—Having regard to the nature of the hospital accommodation available in the area, both in voluntary and public hospitals, are there any categories of cases which should, so far as practicable, be allocated to one type of hospital or the other?

A.—No class of case other than infectious or insane should be excluded from the central or base hospital. Certain categories of cases might, according to local circumstances, be allocated to other hospitals of the area, provided they were still available for teaching purposes when necessary.

Q.—Is it possible, after taking stock of local needs, to agree on any line of demarcation between the province of the voluntary and public hospitals in the area?

A.—The line of demarcation must depend upon the staffing and equipment of the hospitals concerned.

Q.—Assuming that some understanding is reached as to the line of demarcation between the voluntary and public hospitals in a given area, to what extent would this modify schemes of enlargement in hand or in contemplation?

A.—The public hospitals must provide accommodation for those cases which are outside the province of the respective voluntary hospitals, but the public hospitals should not develop in competition but in co-ordination and co-operation with the voluntary hospitals. Where a voluntary hospital is already holding the leading position, and is progressive and locally supported, it should maintain this position, and any further developments which are necessary should be made in co-operation with it.

Q.—If there is a shortage of voluntary hospital beds, in what respect is the shortage most serious—for example, is it a shortage of general, surgical, or medical beds, gynaecological or maternity beds, or orthopaedic? Is there vacant accommodation in public hospitals suitable, or capable of being adapted, for the type of case for which accommodation is specially needed?

A.—The shortage of voluntary hospital beds must vary in different localities. In industrial areas the shortage is chiefly in general medical and surgical beds (in surgical beds particularly for those cases of which the urgency depends upon industrial rather than medical causes). In London, on the other hand, it appears that the shortage is partly in general medical and surgical beds, but mainly in beds for special departments—for example, throat and orthopaedic cases. Where there is vacant accommodation it will probably be necessary to adapt such accommodation to meet the special needs, and to provide adequate and efficient staff.

Q.—Could not some "clearing house" arrangement be established by agreement between the voluntary hospitals and the local authorities (including the guardians) which would ensure a better distribution of patients and the more rapid admission of cases requiring institutional treatment?

A.—A "clearing house"—that is, a central bureau—to co-ordinate the distribution of cases requiring admission to the various hospitals would be essential under a system of co-ordination of grouped hospitals. It should work in close connexion with the primary hospital, and be situated near it, or even within it, but should be under the control of a central committee of co-ordinated hospitals of the area. It should also co-ordinate the hospital ambulance transport of the area.

Q.—To what extent and under what conditions could the medical staffs of the voluntary hospitals undertake responsibility for cases, or for a definite number of beds, in public hospitals, so that the patient may be secured of the special type of experience required, whether medical or surgical, without regard to whether the bed he occupies is under voluntary or public management?

A.—The members of the medical staffs of the existing voluntary hospitals could undertake the responsibility for cases in public hospitals in one of the following ways: (a) as visiting consultants to the public hospitals; (b) as members of the active staffs of the public hospitals with direct charge of beds. All classes of cases could be dealt with in one of the above ways with the assistance of a resident medical staff. It must, however, be made clear that any extension of this work to the care of those for whom the Government and local authorities make themselves responsible must be remunerated, and it is considered that the remuneration should take the form either of a fixed salary or of an honorarium for definite services and responsibility. It is essential that such visiting staff have the right of access directly or indirectly to the governing body of the particular hospital.

Dr. Radcliffe desired to delete the words "or indirectly" from this last paragraph. Mr. Eccles pointed out that the staff of a public hospital, in exercising their right of access to the governing body, would do so in all save very exceptional cases indirectly through the medical superintendent. But there might be circumstances in which they desired direct access—that is, over the head of the medical superintendent—which would probably lead to very severe friction. No staff would go over the head of the superintendent unless it had first tried the more ordinary means and had failed.

Sir Robert Bolam hoped the chairman of the committee would accept the amendment. The normal routine of the hospital did not contemplate access to the governing body, but it was essential in the last resort that members of the visiting staff should have direct access.

It was agreed that the words "or indirectly" be omitted. The recommendations were then approved, and it was agreed that they should be communicated to the Ministry of Health at an appropriate time.

Other matters brought forward in the report of the Hospitals Committee included a recommendation to the Representative Body laying down certain criteria for practitioners treating patients in private wards or nursing homes attached to hospitals. Mr. McAdam Eccles said that when practitioners were desirous of treating their patients in paying wards or nursing homes attached to hospitals the authorities might reasonably ask for proof that the practitioners were really competent to do the special service required by the patient, and the proposal was to amend the hospital policy by setting out the conditions, one or more of which should be satisfied by the practitioner, in a special case of this kind before undertaking the treatment. The motion, as a recommendation to the Representative Body, was agreed to. Mr. Eccles said further that the contributory schemes for hospital benefit were being watched, and he asked, and it was agreed, that the Hospitals Committee might be empowered to convene at an appropriate time a conference of representatives of medical staffs to consider this subject.

#### OPHTHALMIC CLINICS.

Dr. Wallasey Henry brought forward a report of the Ophthalmic Committee embodying certain principles for incorporation in any scheme for the provision of ophthalmic examination and advice through clinics. He detailed the recent history of this subject as set out at greater length by Dr. Brackenbury in his recent address to the Ophthalmic Benefit Committee (SUPPLEMENT, February 4th, p. 36), and said that the matter had a certain amount of urgency in view of the report of the Departmental Committee on the registration of sight-testing opticians. When he and Mr. Bishop Harman and the Medical Secretary, as witnesses for the Association, gave evidence before that committee a large part of the cross-examination turned on the question whether it was possible for the medical profession to provide a sufficient number of men to do the ophthalmic work. The Association's witnesses practically pledged the Association that it would take every possible step to provide medical ophthalmic treatment.

The recommendation set out the conditions as to representation of the Association on the central board of management, the composition of an entirely medical executive committee to deal with medical questions, and the methods under which treatment should be provided—namely:

(i) Clinics established apart from the practitioners' private consulting rooms where necessary, the practitioner receiving 10s. 6d. per case for ophthalmic examination and advice.

(ii) Arrangements whereby ophthalmologists on the list might see patients at their own private consulting rooms at fixed hours on terms similar to those applicable to patients seen at clinics, provided that the prescriptions were forwarded to the optician at the clinic.

(iii) A continuance of the existing arrangements whereby an ophthalmologist upon the list will only see patients at his own private consulting rooms at a fee of one guinea, payable by the approved society, or, alternatively, will accept a fee of half a guinea from the society, the balance being obtained from the patient, provided that the prescriptions were forwarded to the optician at the clinic.

It was also laid down that practitioners wishing to serve should be chosen from the British Medical Association list by the Medical Executive Committee, that the central board of management should be responsible for all appointments, both as regards ophthalmologists and dispensing opticians, and should make arrangements where necessary for a suitable service in satellite towns, and that the arrangements for attendance at sessions at the clinics must be primarily a matter for arrangement between the area ophthalmologists themselves.

The recommendation was agreed to, as also were further recommendations approving the scheme of the Association of Dispensing Opticians, subject to the committee being satisfied that the scheme complied with the general principles just stated, and another empowering the committee to approve any scheme for the provision of ophthalmic benefit which satisfied these principles.

#### OTHER COMMITTEE BUSINESS.

On the motion of Dr. Dain, it was agreed to recommend to the Representative Body that the Insurance Acts Committee be enlarged by the addition of two members so as to facilitate

a rearrangement of the groups of areas, whereby Wales would become a group by itself instead of being, as hitherto, linked with Cheshire.

It was agreed that a History of the British Medical Association should be prepared, to appear about the time of the Association's centenary in 1932, and that Sir Dawson Williams be asked to consider the matter, and to give his views on the best arrangements for the production of such a history.

It was announced that Dr. Andrew Balfour, director of the London School of Hygiene and Tropical Medicine, had compiled a handbook dealing in full detail with the way in which to obtain education and qualification in public health and tropical diseases. Dr. Balfour had offered to edit and give it to the Association if the Association would publish it. The Chairman stated that this was a most valuable and laborious piece of work, and he thought the offer should be gratefully accepted. The Council signified its assent by applause.

Several committees presented routine or interim reports which gave rise to no discussion. Among these were the Puerperal Morbidity and Mortality Committee, the Central Ethical Committee (on whose recommendation an amendment of the regulations relating to Important Notices was agreed to), the Organization Committee, the Private Practice Committee, the International Medical Sea Code Committee, and the Lunacy and Mental Disorder Committee.

On the rising of the Council at 7 p.m., Sir Robert Bolam expressed to the Chairman, Dr. Braekenhury, the wishes of the Council for a successful and health-restoring voyage to South Africa as the Association's delegate at the South African Medical Congress to be held in Bloemfontein next month. It was agreed by the Council that the Chairman of the Representative Body (Dr. Hawthorne) should act as Chairman of Council during Dr. Braekenhury's absence.

## British Medical Association.

### CURRENT NOTES.

#### Consulting Pathologists Group.

THE Council of the British Medical Association, at its meeting on December 14th, 1927, approved the formation of a Group of Consulting Pathologists, to comprise all these members of the Association (not being members of the Public Health Service) who are working in an institutional or private pathological laboratory engaged in examining and reporting on specimens for clinical purposes. The official notice summoning the first meeting of the members of this Group for Friday, March 2nd, at 2.30 p.m., appears in the adjoining column. It is hoped that all members eligible for inclusion in the Group will make a special effort to attend.

#### The Association's Collection of Autographs.

In December last we announced that the British Medical Association had begun a collection of autographs which was founded on a number presented through Mr. Muirhead Little by Miss E. M. Bennett, daughter of the late Sir James Risdon Bennett, President of the Royal College of Physicians of London. Members will be gratified to hear that Miss Bennett has again through Mr. Muirhead Little presented a very interesting series of autographs, including a page of the manuscript of *The Origin of Species* by Charles Darwin. The Council would welcome the gift of autographs of (a) persons who have held high official positions in the Association, (b) celebrated medical men and women, and (c) lay persons in some way connected with the medical profession or medical affairs. Any member interested may inspect the collection on application to the librarian.

#### The Half-yearly Indexes.

The usual half-yearly indexes to the JOURNAL and to the SUPPLEMENT and EPILOGUE have been printed; they will, however, not be issued with all copies of the JOURNAL, but only to those readers who ask for them. Any member or subscriber who desires to have one or all of the indexes can obtain what he wants, post free, by sending a postcard notifying his desire to the Financial Secretary and Business Manager, British Medical Association House, Tavistock Square, W.C.1. Those wishing to receive the indexes regularly as published should intimate this desire.

## Meetings of Branches and Divisions.

### METROPOLITAN COUNTIES BRANCH: WESTMINSTER AND HOLBORN DIVISION.

On January 19th Professor FREDERICK HOBDAI, C.M.G., F.R.C.V.S., Principal of the Royal Veterinary College, London, read a paper before the Westminster and Holborn Division of the British Medical Association on "The value to the public and ourselves of an efficient liaison between the medical and veterinary branches of medicine." The paper was illustrated by photographs and specimens.

Commenting on the similarities between the two professions, or rather, the two branches of the same profession, Mr. Hobday pointed out that veterinary surgery had to be conducted under the same antiseptic precautions as human surgery, but that generally—except in animals kept as pets—it was necessary for the veterinary surgeon to consider his patient from the economic point of view as well as from the humane. If, for example, the fractured limb of a horse would take three months to set, and then would leave the animal lame, it was probably better to destroy the horse at once. Anaesthetics were in use for animals in the same way, and with the same precautions, as for man. Chloroform and A.C.E. mixture were the favourite general, and procaine and novocain the chief local, anaesthetics. Cocaine was excellent, but dangerous to use unless the doses were accurately gauged.

Dental and oral operations gave more trouble than most other operations because of the difficulty of working with an inhaler in position. It was interesting to note that the horse breathed through the nostrils alone under natural conditions, not through the mouth. Dental treatment was an important branch of equine surgery, especially in early adult life, as the colt suffered greatly, just as did children, from teething troubles. In dogs, too, teething fits and convulsions were often seen, while pyorrhoea was as common in old pet animals as in man. The latter disease was seldom seen in horses and cattle; yet few pet dogs reached 6 years' without signs of it. He believed that this was almost entirely a question of improper dietary—sloppy food and no hard bones or bisulphites to clean the gums and use the teeth. The disease was a rare one in working sporting dogs kept under harder and more natural conditions. Once the teeth had gone they could be replaced by artificial teeth—a rare, but not impossible, feat. X rays were of use for diagnosis, not only in dogs, but also for larger animals, particularly horses. Ultra-violet rays, too, had proved valuable for ulcerating wounds and for certain forms of eczema in animals, as in man.

Among the medical diseases there was much in common between human and veterinary medicine. It was in the prophylaxis of disease, however, that the two branches came closer together. In the horse group the two most important diseases were glanders and mange—the first of which had now been eradicated from Britain and the second would be, in a few years. Yet twenty-five years ago nearly 2,000 horses were being destroyed annually because of glanders, and during the South African war tens of thousands were affected. The Royal Army Veterinary Corps, by the use of mallein, had eradicated the disease from the British Army within the first two years of the great war, and had kept it out ever since. Among cattle the most important diseases were tuberculosis and anthrax. Tuberculosis was too big a subject to discuss, but its eradication was being gradually undertaken on lines similar to the glanders campaign. Anthrax was exclusively a disease of animals and their products. Other diseases briefly mentioned by Professor Hobday were ringworm in calves, cats, and rodents, Malta fever in goats, and rabies and mange in dogs. He was thankful to say that rabies was now non-existent in Britain, but canine mange was still present, and not infrequently transmitted to man. He suggested that this, too, like mange in the horse, ought to be scheduled as a notifiable disease.

### BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

An ordinary meeting of the Nuneaton and Tamworth Division was held at Nuneaton General Hospital on February 8th.

After preliminary business Mr. C. A. RAISSON read a paper, which was illustrated by diagrams, specimens, and radiographs, on surgical conditions of the biliary tract. Following some introductory remarks and a short sketch of the anatomy of the biliary tract and the function of the gall-bladder, Mr. Raison entered very fully into the pathology of cholecystitis and cholelithiasis. In discussing the probable route of infection he referred at some length to the recent work of Wilkie at Edinburgh, which appeared to prove that the blood stream was by far the most usual route and a streptococcus much the most frequent causal organism. Dealing with symptomatology, Mr. Raison emphasized the usually very long prodromal stage of dyspepsia, and suggested that if patients could be seen early in this stage medicinal remedies would sooner or later be discovered which would often obviate the necessity for a cholecystectomy. Speaking of cholecystography, he discussed the striking advance in radiodiagnostic investigation by the introduction of the tetraiodophenolphthalein method, but stated his conviction that this method was far from being free from risk. He looked

forward to the time when some less toxic chemical would be discovered to supplant this salt as, in pyelography, sodium bromide had supplanted the irritating silver salts.

Mr. Raisou compared the operations cholecystotomy and cholecystectomy, and referred especially to some of the difficulties and dangers of the latter operation—for example, haemorrhage from the cystic artery, damage to the common bile duct, leakage of bile into the lesser sac or into the general peritoneal cavity, haematemesis, and melaena. He referred to the slow convalescence often noted after cholecystectomy, and to the occasionally disappointing results, and suggested the probable causes.

In concluding his paper Mr. Raisou emphasized the following points: (1) Cholelithiasis is probably but the end-result of a long-standing cholecystitis. (2) Cholecystitis is probably secondary to some other infective focus elsewhere in the body. (3) Cholecystitis probably starts in most cases in the walls of the gall-bladder, and not from within. (4) In most cases, when gall-stones have been formed, the walls of the gall-bladder cease to be of any functional value, but rather are encumbrances to the cholesterol metabolism. (5) In cholecystography we have a valuable adjunct to early diagnosis, but a certain risk is attached to it, and it must be used with caution. (6) While, at the moment, cholecystectomy probably offers the best prospects in the treatment of cholecystitis, it is to be hoped that the future will open up means of curing the disease and yet at the same time preserving a useful gall-bladder.

A discussion followed, and a hearty vote of thanks was accorded to Mr. Raisou for his interesting and suggestive paper.

After some general discussion it was agreed to hold the annual dinner at the Newdegate Arms Hotel, Nuncaton, on May 9th or 16th, and a small committee was appointed to make arrangements.

#### EAST YORK AND NORTH LINCOLN BRANCH: EAST YORK DIVISION.

THE East York Division held a well-attended dinner on January 27th, to which Professor D. P. D. Wilkie of Edinburgh came as chief guest. The chairman, Dr. MATTHEW MACKAY, replying to the toast of "The British Medical Association," alluded to the serpent represented in the badge of the Association, and offered a suggestion with regard to its symbolism. He showed how the two Greek terms for the serpent referred to its unwinning eyes, which seemed to qualify it to act as a guardian, whether of fruit, of a fountain, or of a fleece, as in different stories. Dr. Mackay remarked that similar functions were performed by the British Medical Association and by medical practitioners in guarding the profession and the public generally from dangers. He proceeded to suggest that the reason for the adoption of the serpent as the emblem of medicine was its connexion with the celebrated "Python," which was destroyed by the infant Apollo with his first arrow; he thought that the staff round which the serpent was twined might represent this arrow.

#### ESSEX BRANCH: SOUTH ESSEX DIVISION.

A LARGE meeting of the South Essex Division took place at the Queen's Hotel, Westcliff-on-Sea, on January 10th, when Mr. E. C. HUGHES of Guy's Hospital gave a most interesting address entitled "Our surgical mistakes." Various members took part in the subsequent discussion, notably Dr. SELLS. On the motion of Dr. CLEVELAND SMITH, seconded by Dr. FLOYD OF GRAYS, a hearty vote of thanks was accorded to Mr. Hughes for his address.

On February 14th Dr. A. S. WOODWARD, physician to the Westminster and Royal Waterloo Hospitals, addressed a very full gathering of members on the modern treatment of diabetes. The address was listened to with great interest by all present. Dr. HOEKING, clinical pathologist to the Westminster Hospital, gave a practical demonstration in the modern methods of performing the blood sugar tests, which was very much appreciated. The warm thanks of the meeting were accorded to Dr. Woodward and to Dr. HOEKING on the motion of Dr. GOSVENOR HIRKS, seconded by Dr. VICTOR HOSKIN.

#### METROPOLITAN COUNTIES BRANCH: CITY DIVISION.

A MEETING of the City Division was held on February 6th at the Metropolitan Hospital, when Dr. PHILIP HAMILL was in the chair and thirty-eight members were present.

Dr. H. C. G. SEMON read a paper entitled "Diagnostic pitfalls in dermatology," in which he emphasized the supreme importance of correct diagnosis in two diseases with entaneous manifestations—namely, variola and erythema. Both these were dangerous for the individual and might have serious consequences in the patient's family.

The other mistakes in diagnosis of dermatological conditions affected only the individual patient and the doctor's reputation. As illustrations, Dr. Semon cited the case of a young mineralogist, who, having been put to bed and dieted for eczema for six weeks, eventually succeeded in demonstrating the acarus of scabies from a digital burrow on a slide under his own microscope. One lady who was treated with x rays for two years for alternating pruritus of the anus and vulva was eventually proved to be suffering from tinea cruris. Almost any dermatosis could occur on a syphilitic basis, and the Wassermann test was only of really positive value when it supported the clinical findings, or in a case of suspected secondary syphilis, when it was negative. Self-inflicted eruptions often gave rise to errors of diagnosis. Dr. Semon suggested that an artefact should be suspected when the eruption was of no recognized pathological type, and when some of its elements presented straight line borders or angular contours. The civil cases were usually young girls, with pronounced hysterical stigmata, such as hemianesthesia, contractures, or paraplegia. In two cases quoted the self-mutilations had ultimately involved amputation through the shoulder-joint. When intractable ulceration occurred in such subjects, without any demon-

strable pathological cause, the possibility of artefact should always receive consideration. An inquiry should always be made into the patient's employment and hobbies, and the question of drugs and local applications ought never to be omitted. A patient with pustular acne which refused to yield to x-ray treatment was later found to be taking bromide prescribed by a colleague for some functional form of dyspepsia. On this being omitted the acne immediately cleared up without further application of x rays. In writing certificates for cases of ringworm of the scalp the wording should not be too dogmatic, and the word "cure" might well be replaced by some such periphrasis as that, after repeated examination, no evidence of tinea capitis could be found. When the diagnosis was in doubt the best plan was to send the patient away for a week or ten days, with strict injunctions to be isolated and to apply nothing to the scalp. The signs of tinea would be very definite by the end of that time. Ringworm infections in other situations were discussed in some detail, and it was asserted that this type of cutaneous infection probably gave rise to more errors in diagnosis than any other at the present time.

The paper was highly appreciated by those present, and a very hearty vote of thanks was accorded to the lecturer.

#### METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.

A CLINICAL meeting of the Lambeth and Southwark Division was held on February 8th at the Belgrave Hospital for Children, Clapham Road, S.W.9. Dr. N. H. HILL showed many interesting medical cases, the chief being: (1) a boy, aged 6, who had been

diabetic for the past three years, and was (2) a boy, aged 7, who presented three cases of congenital heart disease of varying severity; (4) a microcephalic idiot; (5) a girl with cerebral palsy; (6) a girl with tuberculous glands of the neck.

#### METROPOLITAN COUNTIES BRANCH: TOWER HAMLETS DIVISION.

A CLINICAL meeting of the Tower Hamlets Division was held on January 25th at St. Andrew's Hospital, Bow, E.3, when about thirty members were present.

Mr. R. J. M. LOVE showed cases of (1) caries of the spine associated with phthisis; (2) osteomyelitis of the os calcis; (3) ureteric calculus; (4) lupus of the nose and pharynx; (5) acromegaly. Dr. J. W. LINNELL showed cases of (1) aortic aneurysm; (2) aortic regurgitation; (3) perniciosis. Dr. LINNELL moved a vote of thanks to the members who participated.

#### MIDLAND BRANCH: NOTTINGHAM DIVISION.

At a combined meeting of the Nottingham Medico-Chirurgical Society and the Nottingham Division of the British Medical Association on January 18th Dr. W. H. WYNN, professor of medicine in the University of Birmingham, gave an address on the treatment of pneumonia.

Professor Wynn remarked that while during the last hundred years there had been a very marked reduction in most infectious fevers, pneumonia had actually increased, and was the most widespread and fatal of all acute diseases in civilized lands. This was because it had not been regarded as a contagious disease, and no precautions had been taken to prevent infection. The proof of contagiousness had been established, and the time had come when it should be classed with the other contagious fevers, and patients be isolated as strictly as cases of diphtheria, typhoid fever, or cerebro-spinal fever. In the treatment of pneumonia it was necessary to think in terms of immunity, and the hope of a necessary reduction of the case mortality lay in specific therapy; this must be started as early as possible, since its object was to control the infection before it was out of hand, and to prevent the development of grave symptoms. Early diagnosis was therefore necessary; too often this was not made until consolidation was present, whereas the striking early symptoms should lead to recognition of the disease within a few hours of its onset. Pneumonia was an acute medical emergency in which delay might be fatal. From the first absolute rest in a well-ventilated room must be secured. The skill of the nurse was tried as in no other condition. Immunity depended upon several factors, of which the most important were the so-called protective bodies. Animals could be protected against an otherwise fatal dose of pneumococci by the simultaneous injection of an antiserum. Protective bodies were produced by injection of a vaccine and were found in patients at the time of the crisis, but in fatal cases of pneumonia there was scarcity or absence of protective bodies in the blood of the patients, and this lack of resisting power was associated with a septicaemia. In specific treatment there was the choice between serums and vaccines. The various forms of serums and their limitations were discussed. The advantage of a vaccine was that it could be used without delay. Vaccines stimulated the production of protective substances, but only after a few days' delay. They also had an immediate non-specific action, which was exploited in the early treatment of pneumonia. Negatives which was exploited in the early treatment of pneumonia. Negatives two phases after injection of a vaccine only occurred in sensitized persons who possessed specific antibodies. In the early stages of pneumonia specific antibodies were absent, and therefore a vaccine could be safely used in the first three days. A large number of temperature charts were shown to illustrate the action of vaccines in various stages of pneumonia. The successful results obtained by the early injection of a vaccine were not limited to pneumonia, but could be obtained in other acute infections in which a diagnosis could be made early and before the patient was sensitized. Charts

were shown also of patients suffering from simple influenza, influenzal broncho-pneumonia, Friedländer's pneumonia, cerebro-spinal fever, typhoid fever, *B. coli* infections, erysipelas, cellulitis, streptococcal septicaemia, puerperal fever, and streptococcal meningitis.

#### NORTHERN COUNTIES OF SCOTLAND BRANCH.

A MEETING of the Northern Counties of Scotland Branch was held at Gray's Hospital, Elgin, on February 16th. In the absence of the president, the chair was taken by Dr. E. K. MACKENZIE, vice-president; there was an attendance of twenty-three members, and Mr. J. Kyle Mackintosh, L.D.S., was present as a guest. Dr. SMACK (Elgin) read a paper on oral sepsis, and illustrated his remarks by a series of specially prepared water-colour paintings, showing the different conditions referred to. In the subsequent discussion on the paper a number of members took part. After an enjoyable tea, provided by the matron of the hospital, interesting cases and specimens were demonstrated by Drs. D. G. CAMPBELL, JOHN TAYLOR, J. T. McQUAT, ALEX. ROBERTSON, and Dr. G. THOM.

#### NORTH OF ENGLAND BRANCH: HARTLEPOOLS DIVISION.

At a meeting of the Hartlepoons Division, held on January 26th, Dr. W. WARREN COOK, chairman, presiding, Mr. H. HARVEY EVERS (Newcastle-on-Tyne) delivered an address on modern views on some forms of uterine haemorrhage. He emphasized at the outset that he would confine his remarks as far as possible to those forms of haemorrhage which gave trouble in general practice. He first discussed troublesome haemorrhages at puberty and in young unmarried women, and pointed out that some of these difficult cases with no physical signs had been shown to be due to excessive thyroid activity, while some were associated with excessive ovarian function and others with septic foci in other parts of the body. A brief outline of the lines of treatment for these cases was given. Haemorrhages in the region of the menopause were then discussed, special attention being directed to the value of radium in cases of so-called fibrosis uteri. Some of the pitfalls in the early diagnosis of carcinoma of the cervix were mentioned, and pre- and post-operative uses of radium in these conditions were indicated. The great improvement in remote results obtained by Wertheim's operation was emphasized. The difficulties in the diagnosis of malignant disease of the body of the uterus were briefly alluded to, and the great value of diagnostic curetting was stressed. Brief reference was then made to some modern views on the management of cases of ante-partum haemorrhage, particular attention being drawn to the value and limitations of Caesarean section in cases of placenta praevia. Recent ideas with regard to the relation between general toxæmia and accidental haemorrhage were outlined. An interesting discussion followed.

#### SURREY BRANCH: GUILDFORD DIVISION.

A MEETING of the Guildford Division was held at the Royal Surrey County Hospital on January 5th. In view of the fact that Sir John Collie was to give an address on the meeting-place of law and medicine, an invitation had been issued to solicitors practising in the area to take part in any discussion; a considerable number accepted. Mr. FERNAND SNALLPEICE, the oldest practising solicitor in the area, was elected to the chair.

Sir JOHN COLLIE said that it was not a mistake which condemned a practitioner, but the way he subsequently behaved. It was always best to own up if a mistake was made, because the truth would certainly emerge in the end. The consulting room was the right place for examination and not the lawyer's office, where the mental effect on the patient was enormous. Practitioners who hurried an examination would be sure to repent afterwards. When a patient was injured, however slightly, in the region of the back he was generally directed to go to bed; pain in the back in the vast majority of cases was not physical, and depended not so much on the actual injury as on the degree of shock and the nature of the mental outlook. With regard to medical reports, it was well to remember that insurance companies and employers of labour were not interested in technical terms, so that any report should be couched in plain English. Such reports should not be long, and the practitioner must not be biased by sympathy.

Many joined in the following discussion, and the speaker replied. On the motion of Dr. BUTLER, seconded by Dr. LANKESTER, a hearty vote of thanks was accorded to Sir John Collie.

#### YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.

A MEETING of the Wakefield, Pontefract, and Castleford Division was held at the Stratford Arms Hotel, Wakefield, on February 9th, when Dr. T. GIBSON was in the chair.

Dr. A. GOUCH gave an interesting account of the disorders of menstruation, with suggestions for their treatment. He emphasized the importance of the examination of the chest for early signs of phthisis in cases of amenorrhoea with no discoverable local signs. He considered that good advice with regard to normal menstruation, such as was now given in the best girls' schools—in not regarding the menstrual period as a time of ill health as was done in the past—would lead to the disappearance of the bulk of cases of dysmenorrhoea. Ovarian products he often found to be disappointing in the disorders of the menopause, and small doses of thyroid to be much more useful.

An interesting discussion followed, in which Drs. BUTLER, GIBSON, LISTER, RADCLIFFE, and WALKER took part.

## Association Notices.

### A BUXTON DIVISION.

NOTICE is hereby given to all concerned of the formation by the Council of the Association of a Buxton Division of the Midland Branch, of area as follows:

The municipal borough of Buxton; the urban districts of Now Mills and Bakewell; and the rural districts of Chapel-en-le-Frith, Bakewell, and Hayfield.

The new Division to come into existence as from the date of publication of this Notice, and the area of the Derby and Chesterfield Divisions being modified accordingly.

### CONSULTING PATHOLOGISTS GROUP.

A MEETING of the recently formed Consulting Pathologists Group of the Association will be held at the B.M.A. House, Tavistock Square, London, W.C.1, on Friday, March 2nd, at 2.30 p.m.

The Group comprises all those members of the Association (not being members of the Public Health Service) who are working in an institutional or private pathological laboratory engaged in examining and reporting on specimens for clinical purposes.

The agenda of the meeting is as follows:

- (1) Elect a chairman.
- (2) Elect Group committee of six.
- (3) Consider arrangements to be made for provision of pathological service in connexion with National Health Insurance.
- (4) Any other relevant business.

ALFRED COX, *Medical Secretary.*

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: COVENTRY DIVISION.**—A meeting of the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, March 6th, at 8.30 p.m. Discussion on dental sepsis and internal medicine to be opened by Mr. Harold Round (Birmingham) and Dr. Annand.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—A meeting of the Nuneaton and Tamworth Division will be held at the Tamworth General Hospital on Thursday, March 8th, when a paper will be read by Dr. F. B. Gillespie.

**CAMBRIDGE AND HUNTINGDON BRANCH.**—A meeting of the Cambridge and Huntingdon Branch with the Cambridge Medical Society will be held on Friday, March 2nd, at 2.45 p.m., in the Pathological Theatre, Medical Schools, Downing Street, Cambridge, by permission of Professor H. R. Dean, when a British Medical Association Lecture will be delivered by Mr. Alexander Fleming, St. Mary's Hospital Medical School, on vaccine therapy. Tea will be kindly provided by the president of the Cambridge Medical Society, Dr. H. B. Roderick.

**DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.**—The annual dinner of the Bournemouth Division will be held on Tuesday, March 6th, at 7.30 for 7.45 p.m., at the Royal Bath Hotel. After the dinner there will be dancing in the King's Hall until midnight. It is hoped that as many members as possible will come and bring guests, including ladies. Tickets 8s. 6d. each (exclusive of wine). Application, with remittance, must be made by Saturday, March 3rd, to Dr. O. C. Carter, Hursley, Poole Road, Bournemouth.

**EDINBURGH BRANCH.**—The winter clinical meeting of the Edinburgh Branch will be held in the Royal Infirmary, Edinburgh, on Wednesday, February 29th. All members of the profession are cordially invited. Senior medical students desirous of attending will be admitted by card, obtainable from Mr. W. A. Cochrane, 24, Walker Street. The museum will be open from 10 a.m. to 6 p.m. Arrangements will be made for holding special clinics during the day. The clinical meeting will be held at 3.30 p.m. At 7.15 p.m. dinner will be taken in the North British Station Hotel; morning dress. Dinner ticket, 10s. Ladies will be welcomed. Members are asked to notify the honorary secretaries by February 25th whether they intend to be present, and whether they will be accompanied by ladies or other guests.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at St. Enoch's Station Hotel on Wednesday, March 14th, at 3.30 p.m. A paper on teeth in relation to health (with lantern illustrations) will be read by Dr. Charles Read.

**KENT BRANCH: DARTFORD DIVISION.**—A general meeting will be held at the Erith and District Hospital, Park Crescent, on Tuesday, February 28th, at 3 p.m. Business: Date of meeting of committee to arrange preliminaries for the annual Kent Branch meeting to be held at Dartford in June; Mr. Cecil Rowntree, consulting surgeon to the Erith Hospital, will open a discussion on the acute abdomen.

**LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.**—A meeting of the Hyde Division will be held in the Stalybridge Town Hall on Thursday, March 15th, at 8.30 p.m. Dr. T. B. Williams will deliver his presidential address.

**LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.**—A meeting of the Southport Division will be held on Friday, March 30th, when Dr. E. P. Cumberbatch will deliver a British Medical

Association Lecture on the use of ultra-violet rays in general as well as in skin disease. It is hoped that there will be a large attendance of members.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The next meeting arranged by the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, March 6th, at 9.30 p.m. Mr. Norman Patterson will read a paper on ear trouble in general practice.

**METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, March 6th, at 8.45 p.m. Dr. J. W. McNee will discuss the clinical features of thrombosis of branches of coronary arteries.

**METROPOLITAN COUNTIES BRANCH: HAMPSTEAD DIVISION.**—A meeting of the Hampstead Division will be held at the Hampstead General Hospital on Thursday, March 8th, at 8.30 p.m. Dr. G. A. Sutherland will discuss the heart in acute infections.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, March 20th, at 8.45 p.m., when Mr. Wansey Bayly will deliver an address on the general practitioner and the prevention of venereal disease.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRA'S DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, March 13th, at 9 p.m. Mr. Sidney Boyd will give an address on the diagnosis of surgical emergencies occurring in general practice.

**METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.**—A meeting of the South-West Essex Division will be held at the Whipp's Cross Hospital, Leytonstone, on Tuesday, March 6th, at 3.30 p.m. Dr. J. C. Muir, medical superintendent, will give a clinical demonstration.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, March 9th, at 8.15 p.m. Mr. Graham S. Simpson will discuss the value of operations.

**SOUTHERN BRANCH: JERSEY DIVISION.**—The next meeting of the Jersey Division will be held at the General Hospital on Thursday, March 15th, at 8.30 p.m. Mr. C. A. Halliwell will read a paper on the treatment of peritonitis.

**SURREY BRANCH: CROYDON DIVISION.**—At the meeting of the Croydon Division at the Croydon General Hospital on Wednesday, March 14th, Dr. J. W. Wayte will give a lantern demonstration on haematuria. It will be preceded by ten at 4 p.m.

**SURREY BRANCH: GUILDFORD DIVISION.**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, March 1st, at 4 o'clock. Sir Thomas Lewis will give an address on the rheumatic heart in children. Tea will be served at 5.45 p.m.

**YORKSHIRE BRANCH: DONCASTER DIVISION.**—A meeting of the Doncaster Division will be held at Parkinson's Café, High Street, Doncaster, on Thursday, March 22nd, when Professor G. Lovell Gulland, Edinburgh University, will give a British Medical Association Lecture on the significance of heart murmurs. Dinner, at 8 p.m., will precede the lecture.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Strafford Arms Hotel, Wakefield, on Thursday, March 8th. Dr. R. A. Veale, physician in charge of the skin department, General Infirmary, Leeds, will give a lecture on common skin diseases. Supper (3s.), at 7.45 p.m., will precede the lecture.

## BILL FOR THE CONTROL OF VENEREAL DISEASE IN EDINBURGH.

THIS bill, which has already been laid before Parliament, asks for the conferment of "further powers upon the Corporation of the City and Royal Burgh of Edinburgh in relation to venereal diseases and for other purposes." It consists of four sections, three of which are taken up with the preamble, short title, and expenses of the Act. Section 3, which is the operative section so far as venereal disease is concerned, is printed below.

After the bill as presented to Parliament had been put into type we received a pamphlet entitled "Statement for the Corporation," in which considerable alterations are proposed. These alterations are included in our reproduction of the bill: omissions from the original bill are placed within square brackets; additions are printed in italics. It will be noted that the original Subsection (3) has been deleted; that Subsection (4), with alterations, becomes (3), and that new subsections have been added.

**3. Venereal Disease.**—(1) When the Medical Officer of Health has reason to believe that any person is suffering from venereal disease and liable to infect other persons and such person

neglects or refuses to undergo treatment by a medical practitioner or at a treatment centre for venereal disease established by the Corporation (hereinafter referred to as "a treatment centre") or to continue such treatment until he is cured or until it has been certified as aftermentioned that he is unlikely to cause infection the Medical Officer of Health [shall be entitled to] *may* give notice in writing to such person requiring him within a reasonable time to be specified in the notice to consult a medical practitioner or to attend a treatment centre and (unless [he produces] within a time to be specified in the notice *he produces to the Medical Officer of Health* a certificate from [such] a medical practitioner that he is not suffering from venereal disease) to undergo treatment by a medical practitioner or at a treatment centre until certified by the medical practitioner or the Medical Officer of Health to be cured or unlikely to cause infection.

(2) Where the person believed to be suffering from venereal disease is under the age of sixteen the notice referred to in the immediately preceding subsection shall be given to one of the parents or the guardian of such person and such parent or guardian shall be responsible for carrying out any requisition of such notice.

(3) Where it is certified by the Medical Officer of Health that a person is suffering from venereal disease and liable to infect other persons and that it would be expedient for the purpose of preventing the spread of infection that such person should be removed to and detained in a hospital or other place provided by the Corporation for the treatment of venereal disease (hereinafter referred to as "a hospital") it shall be lawful for any magistrate or judge of police on the application of the prosecutor in the police court and on production of such certificate or on being satisfied by medical evidence of the necessity or desirability in the public interest of the removal and detention to grant warrant to remove such person to a hospital and to detain him therein until he is certified by the Medical Officer of Health or a medical practitioner to be cured or unlikely to infect other persons. Provided that the Corporation shall in every case cause the removal and detention to be effected without charge to the person removed. Provided further that proceedings in the police court under this section shall be conducted in private and no person except the person to whom the proceedings relate the Medical Officer of Health and other medical witnesses and the legal representatives of the Corporation and of such person shall be present without the leave of the court.]

(4) (3) Where any child under the age of sixteen is suffering from congenital syphilis ophthalmia neonatorum conjunctivitis or vulvo-vaginitis and the Medical Officer of Health is satisfied that the disease from which such child is suffering is of syphilitic or of gonorrhoeal origin the Medical Officer of Health [shall be entitled to] *may* give [notice in writing] to the parents of such child a notice in writing in the terms referred to in Subsection (2) of this section [or either of them requiring them within a reasonable time to be specified in such notice to undergo examination by a medical practitioner or at a treatment centre and if after such examination any such parent is found to be suffering from venereal disease the Medical Officer of Health shall be entitled to give such parent a notice in writing in the terms referred to in Subsection (1) of this section.]

(4) It shall be in the option of any person to whom a notice is given under this section to elect whether he will in terms of this section consult a medical practitioner or attend a treatment centre and in the cases provided for by Subsection (2) of this section the option shall be exercisable by the parent or guardian as the case may be.

(5) The Medical Officer of Health shall not take action under the provisions of this section on information conveyed to him by any person other than a medical practitioner unless and until he has taken such steps as he considers reasonable for the purpose of obtaining corroboration of such information.

(5) (6) If any person fails to carry out any requisition of any notice given under the terms of this section or falsely or without probable cause gives information to the Medical Officer of Health that a person is suffering from venereal disease and liable to infect other persons he shall be guilty of an offence and shall be liable to a penalty not exceeding ten pounds.

(7) Proceedings in regard to an offence under this section and proceedings under Section 54 of the Public Health (Scotland) Act 1897 where such proceedings relate to a case of venereal disease shall be conducted in private.

(8) The provisions of this section shall cease to be in force at the expiration of five years from the passing of this Act unless the same shall have been continued by Order made by the Secretary of State for Scotland which Order he is hereby empowered to make.

(6) (9) For the purposes of this section the expression "venereal disease" has the same meaning as in the Venereal Disease Act 1917 and the expression "medical practitioner" means a registered medical practitioner.

## Correspondence.

## Organization of the Profession.

SIR,—I am asking my Division to consider the following motion, and would ask other Divisions to give the matter their earnest thought.

"That the organization of the profession on present lines is tending to the depreciation and degradation of the general practitioner."

Hospital provident societies and public clinics are rapidly destroying the confidence of the community in the knowledge and skill of the general practitioner, and diminishing his field of work.

Some alteration in his field of work may be necessary in the further efforts of the community to obtain the best medical service, but immediate consideration should be given to the future position of the general practitioner in the final scheme.—I am, etc.,

Southend-on-Sea, Feb. 20th.

FERDINAND REES, M.D.

## Drugs and Appliances for Insured Patients.

SIR,—May I ask space in the columns of the SUPPLEMENT to give publicity to an example of the way in which an insurance practitioner is hampered in treating his patients by officials with no practical knowledge of the issues?

I spent considerable time and trouble in teaching two of my panel patients suffering from diabetes to carry out their own tests for sugar. The advantages to the patient are obvious (vide *The Diabetic Life*, by R. D. Lawrence). I ordered them Fehling's solution for this purpose, which was duly supplied by the chemist. Some time afterwards I received a letter that Fehling's solution was not "on the list," and had been disallowed. And yet it is stated that "it is the duty of the insurance practitioner in attendance to see that all appropriate and necessary drugs and appliances are available for the needs of his patients."—I am, etc.,

Lymington, Hants, Feb. 15th.

NEVILLE M. GOODMAN.

## Naval and Military Appointments.

## ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander A. Davidson is placed on the retired list with the rank of Surgeon Captain.

Surgeon Commander F. J. Gowan to the *Prophet*.

Surgeon Lieutenants H. H. Fisher to the *Aphis*; E. V. Barnes to the *Britannia* for R.N. Sick Quarters, Dartmouth.

W. D. M. Sim has entered as Surgeon Lieutenant for short service and appointed to the *Victory* for Haslar Hospital for course of instruction.

## ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel H. P. Shea, D.S.O., having attained the age fixed for compulsory retirement, retired on retired pay, and is granted the rank of Colonel, January 26th, 1928 (substituted for notification in the *London Gazette* of January 27th, 1928).

Captain W. W. S. Shorpe to be Major with precedence next below H. S. Moore.

Captain C. H. C. Byrne to be Major (prov.).

Lieutenants C. L. Day and J. C. Gilroy are seconded under the provisions of Article 205, Royal Warrant for Pay and Promotion, 1926.

A. F. Downie to be temporary Lieutenant.

To be Lieutenants on probation: C. L. Day, G. T. L. Archer, D. R. W. Buthury, P. J. L. Capon, P. Dwyer, K. McNeill, M. R. Burke, P. W. A. Agnew, J. C. Gilroy.

## ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenants J. D. Leahy, M.C., to R.A.F. Station, North Weald. The following Flight Lieutenants are granted permanent commissions in the rank stated: E. Thompson and N. I. Smith.

Flying Officers J. P. Hederman to remain at School of Army Co-operation, Old Sarum, instead of to R.A.F. Depot, Uxbridge, as previously notified; W. Heron and J. T. McGovern to Medical Training Depot, Hatton.

## TERRITORIAL ARMY.

## ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel F. T. Rees, M.C., from General List, R.A.M.C., T.A., Reserve of Officers, to be Lieutenant-Colonel and to command the 158th (Welsh) Field Ambulance, vice Lieut.-Colonel (Brevet Colonel) C. A. Isaac, T.P., vacated on completion of tenure.

Lieut.-Colonel A. R. Moolie to be Brevet Colonel.

Major S. R. Gibbs, M.C., T.D., resigns his commission and retains his rank, with permission to wear the prescribed uniform.

Major H. G. F. Dawson, T.D., having attained the age limit, is retired and retains his rank, with permission to wear the prescribed uniform.

Captain (Brevet Major) G. H. R. Gibson, D.S.O., to be Major.

Hygiene Companies.—F. W. Bury to be Lieutenant, January 20th, 1926 (substituted for notification in the *London Gazette*, January 18th, 1926).

### PRIVATE MEDICAL PRACTICE.

BY

E. ROWLAND FOTHERGILL, M.B., B.S.

The Representative Body of the British Medical Association in July last year adopted the following resolution:

That the Representative Body, viewing with considerable concern the insidious inroads continually being made on private medical practice under the auspices of the State, voluntary bodies, and others, and being of opinion that this is not only detrimental to the interests of the individual members of the medical profession, but ultimately to all classes in the community, instructs the Council to watch all such developments and actively to interest itself in safeguarding private practice amongst all groups in the medical profession, and to develop through the Branches and Divisions closer co-operation with the local medical profession for that purpose.

This resolution very incompletely voices the grave anxiety which is now felt in all groups of the medical profession with regard to what obviously is taking place and which has been drawn attention to from time to time. It was unfortunate that time did not allow of a general discussion and elaboration of the issues involved, and that the meeting had to be satisfied for the time being with an enumeration of certain encroachments and a few comments thereon. It will be useful to name a few of those mentioned. They included:

- National health insurance.
- Additional insurance benefits.
- Clinics for venereal disease (190), tuberculosis (450), cancer, mental, and dental diseases, mental deficiency, and mild mental disorders, artificial light, rheumatism, orthopaedics, notifiable diseases.
- Clinics for treatment of school children (1,190).
- Rheumatism and heart disease in children.
- Maternity and child welfare centres for (a) industrial classes (2,200), and (b) middle classes.
- Consultations for puerperal pyrexia.
- Ante-natal work and maternity attendance by midwives.
- Pathological facilities.
- Whole-time State medical officers engaged in domiciliary clinical work.
- Contributory schemes conducted by or for voluntary hospitals.
- Facilities for the middle classes by insurance or payment of fees for in- and out-patient treatment at voluntary hospitals; including single persons with incomes up to £500 per annum.
- Sight-testing opticians.
- Anaesthetics by registered dentists.

A formidable list, and most of the items unknown before 1900. But it does not necessarily follow that because an encroachment has been made in one or another direction into what was private practice in the past that that in itself is bad. The purpose of this communication is not to suggest solutions to the various problems indicated

above and now confronting the profession, but rather to draw attention to the direction in which such solutions may be looked for.

Dr. C. E. S. Flemming, in an able article in the SUPPLEMENT of December 10th last (p. 221), advocates that the private practitioner should come forward and take part at clinics and centres where now medical treatment is being given. To do this may or may not be a good thing; but he does not state how doing this would fit in with any fundamental principle which should guide the private practitioner's actions, or even if there is any fundamental principle at all involved. One reads the essays of others who demand "a policy," and ask that "a lead should be given," and in particular "that the Association should wake up and do something or other." As the Association is, after all, formed of the individual members, that does not carry us far; and to "announce a policy" or to "give a lead" before being sure of our "fundamentals" will lead only to destruction. It would seem to be necessary, therefore, to re-examine old conclusions and to revise our preconceived notions.

Undoubtedly profound changes are taking place in the thoughts and habits of British people, and the medical profession cannot expect to be unaffected. Because we are all in the midst of it, and are ourselves subject to it, we hardly realize what is happening, and are consequently ill-fitted to cope with the situation. The medical profession has long since left its position of isolation, and, whether it likes it or not, has been brought during the past twenty-five years into the most intimate relationship with the movements of public and party thought and opinion. To look around over our broken-down fences will prove a profitable and illuminating employment.

The speculative restlessness of some medical practitioners desiring to know "whither away" cannot be lulled by statements that all is well. It is contradicted by their experience, and their common sense will not accept it. Others would seem to be keen to plunge at once into the conflicting currents and to endeavour to readjust this or that, or to guide hither or thither, all without any previous consideration having been given to what is not necessarily on the surface. And then we have the average medical practitioner, ever an eager, single-minded (often simple-minded) seeker after truth, fully concerning himself with the individual, and hardly to be expected to be capable of getting away from this attitude of mind and to assist in determining what is best to be done. He finds himself assailed by the ardent reformer and the astute administrator. He detests the bureaucrat, with his silent but ceaseless and plausible encroachments on his liberty and private practice, who in turn resents him as a personality which cannot be made to fit itself into a set of statements on a printed form. He recognizes that things are changing,

but he has the foggiest notion how it is coming about and of the fundamental principles on which he should act. He longs for them all to leave him alone and allow him to pursue his way, continuing in that liberty and independence which he was led to expect, and in which those who preceded him so usefully functioned.

We have those who openly state that the decay of homo life is now proceeding, and that the homo and all its taboos are being brushed aside. If this is so then the private practitioner goes also, for his place has always been in the homes of the people. Again, it is becoming all too apparent that the present-day management of democracy—and this consequently involves the medical profession—is by means of inner rings, party cliques, and legislation by reference; and that the centre of gravity of public health administration has shifted from the environment to the individual, who is being encouraged to look elsewhere than in his home for the medical attendance which he is being educated to think that he has need of.

The private doctor in his difficulties hopes to find assistance in formulating his opinion and in coming to a decision by inquiring what other nations may be doing, and how they may have dealt with similar problems, especially in relation to medicine. Such an inquiry would be interesting, but it must be appreciated that developments of other national forms of medicine cannot be made applicable to the "atmosphere" of the British peoples. National dispositions, personalities, and faculties must be recognized and allowed for; and to be too closely guided by the consequences in one nation for conclusions as to possible consequences here may lead us astray. So we come to wonder whether what is going on is all a development or whether it is a revolution, and where it will all end, and how we can best manage to deal with our own difficulties.

If the profound changes in the thoughts and habits of the people we hear so much of, especially in their relation to medicine, can be shown to preserve the idea or type of the past, with a continuity of principle—changes that allow of assimilation and are a logical sequence and free from lop-sidedness—then it is reasonable to conclude that these changes are developments. But even development may not mean progress; all things develop for better or for worse. What would seem to be necessary in the development is a power of adjustment with the utmost mobility. Is this so at the present time? Incidentally it may be remarked that this power has proved to be very pronounced in the organization of the British Medical Association. But is it so in the outside medical world? The medical profession does not ask for permanency of idea, but it does ask for adaptation, and not destruction; and as a scientific profession it welcomes criticism, is willing to admit error, is imbued with the spirit of adventure, and is attracted by truth, and is eagerly in search of it, whatever the public may think to the contrary.

Is it possible, therefore, to find one common factor, a necessity, which would appeal to the medical profession and to the public—toward which both could move, animated by a common object, and which should be preserved at every cost if the two are to continue to co-operate and the British nation is to progress—a fundamental principle to govern all conclusions, and on which the medical profession can come into line, formulate a policy, and look for the leaders asked for?

The home, with its influence on conduct and character, has made England what it is. The private medical practitioner has been the guide, philosopher, and friend in the past in those homes, influencing them in many ways hardly appreciated now, bringing to bear on them, and through them, those powers which he is peculiarly trained and suited to apply. If these statements are correct, then it would seem that the home and the family doctor must be continued and the closest co-operation be developed. The case could then be stated thus:

(a) In the home alone is formed, and can be discovered, the environments of circumstances and character so necessary for successful medical practice of prevention and cure.

(b) The family doctor, aided by medical and lay co-workers, should direct and be responsible for the personal health services required in the home, making himself fully acquainted with these environments.

(c) If for any reason it is found necessary or desirable that the people should be removed from their homes for medical treatment, that treatment should be given by the family doctor; or, if not possible, then in close collaboration with him, his knowledge of the environments being put at the disposal of his colleagues.

(d) In all matters of health affecting the people and their homes the family doctor should be consulted and be given the opportunity to co-operate with the State for the maintenance of the home and the happiness of those who form it.

To many this idealistic attitude may not appeal. Practical reforms always lag behind the vision of the idealist, and even when action is at last taken the result is commonly a compromise between what the idealist and his followers demand and what the average of medical and public opinion will accept. But that is not to say that the idealist has not proved to be the very salt of progress. Anyhow, one would suggest that the appreciation of these fundamental principles and their application to each aspect of the several problems as they come to confront the medical profession will be of some assistance in their elucidation.

Get medicine away from the "bottle of physick" and the herd treatment of individuals, with its flat denial of differing personalities; convince public opinion that sound medical treatment cannot be carried on effectively detached entirely from, and independent of, the knowledge of home conditions and of the various personalities therein; then the swarming throngs ever exhausting the facilities of hospitals, clinics, and centres will at last come to see the delusion, this decadence in treatment, and will demand an efficient medical service, based upon and carried out in homes made fit to live in, as the one essential for health and happiness.

The medical profession at this juncture clamours for a policy and demands leaders. If those who are fitted to lead can seize the ideal, and, whilst throwing into the common stock their several personalities, will develop for the family doctor that sympathy and support he rightly looks for and richly deserves, then medicine can again go forward with confidence and assurance to further triumphs, having helped to recover the homes of England and their influence for good.

## Meetings of Branches and Divisions.

### KENYA BRANCH.

A MEETING of the Kenya Branch was held on October 12th, 1927, at the Municipal Council Offices, Nairobi. Dr. C. J. WILSON read a paper on tuberculosis amongst African natives, which was followed by a discussion in which many members took part, and a vote of thanks was accorded to Dr. Wilson.

A further meeting of the Branch was held at the Municipal Offices, Nairobi, on November 9th, 1927, when the PRESIDENT took the chair. Dr. H. L. GORDON read a paper on mental instability in Kenya. At the conclusion of the paper there was a discussion thereon in which several members took part. A vote of thanks was passed to Dr. Gordon. Mr. Daubney, deputy chief veterinary research officer, was elected a complimentary member of the Kenya Branch in recognition of his distinguished scientific work and the assistance he has always given to medical men in the colony.

At a meeting of the Branch held at the Municipal Offices, Nairobi, on Wednesday, December 14th, 1927, Dr. J. B. CLARKE read a paper on civil mobilization for war service. A discussion, in which several members took part, ensued, and Dr. Clarke replied. A vote of thanks was accorded to the lecturer for his address. Arrangements were made for the annual meeting of the Branch to be held on January 20th and 21st.

### METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

AN ordinary meeting of the Camberwell Division was held at the Bermondsey and Rotherhithe Hospital on February 7th. Owing to the unavoidable absence of the president, Dr. Cox, the chair was taken by Dr. HEARD. Mr. ALFRED WEBB-JOHNSON, surgeon to the Middlesex Hospital, read a paper on haematuria. The various causes of the condition were enunciated and many useful hints in treatment given. The address was illustrated by several interesting x-ray films and by some excellent coloured sketches of pathological specimens. The lecture was much appreciated and was followed by a keen discussion. A hearty vote of thanks to Mr. Webb-Johnson for his address was carried unanimously.

### METROPOLITAN COUNTIES BRANCH: HAMPSTEAD DIVISION.

A MEETING of the Hampstead Division was held at the Hampstead General Hospital on February 9th, when Dr. J. S. MACKINTOSH was in the chair. Dr. S. MORCKTON COPEMAN, F.R.S., gave an address, illustrated by lantern slides, on inoperable cancer.

Dr. Copeman defined the term "inoperable cancer" as any form of the disease in which it was no longer possible to perform what

would be regarded by the surgeon as a "complete operation." He quoted the records of the Ministry of Health Departmental Committee, indicating that when a "complete" operation was possible results, especially in cases of cancer of the breast, were exceptionally favourable. Unfortunately, however, the patients coming to the surgeon sufficiently soon for a "complete" operation to be possible were disappointingly few, especially in view of the fact that the number of patients developing cancer continued to increase. Probably at least 50 per cent. of the total number were never seen by a surgeon, and the important question arose as to what became of them, since fewer were found even in the latest stages in the metropolitan infirmaries than prior to the great war. Presumably such patients remained at their own homes, often in unhygienic conditions, which was bad both for them and for their relatives. Information was needed in this respect, and also propaganda by health authorities, with the object of urging patients to undergo treatment at a period when it was likely to be successful. Dr. Copeman described a dietetic method originally suggested by him at the meeting of the British Medical Association at Cambridge in 1920. This dietary, inadequate physiologically, though deficient in the fat-soluble A vitamin of animal origin, had been found capable of affording increased expectation of life, together with freedom from pain, sometimes so complete as to obviate entirely a previous need for analgesics. In conclusion, Dr. Copeman referred to his recent attempts at treatment with fluoroscein activated by means of  $\gamma$  rays, ultra-violet light, or radium. He illustrated his remarks with a series of photographs showing the possibility of the method in suitable cases.

In the course of the discussion which followed the address Dr. W. G. BENDLE, medical superintendent of the Paddington Infirmary, emphasized the favourable results he had obtained, over a period of several years, by using Dr. Copeman's dietary in cancer, particularly in the alleviation of pain.

#### METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.

A MEETING of the Willesden Division was held at the Willesden General Hospital on February 9th, when Dr. McKINSTRY, pathologist to the Willesden General Hospital, gave a very interesting lecture on the examination of cerebro-spinal fluids and the findings in various pathological states of the central nervous system. Dr. McKinstry reviewed the anatomy of the ventricular and subarachnoid systems of the brain and cord, the secretion and absorption of the cerebro-spinal fluid, and the technique of lumbar puncture. The lecturer described in detail the normal composition of the fluid, and contrasted it with the findings in the several diseases in which an alteration in its constituents occurs. An outline of the tests employed was given. The colloidal gold flocculation test was described, and the actual findings in the cases of two specific cerebro-spinal fluids demonstrating the typical parietic and luetic curves were shown.

On the motion of Dr. W. WOOLLEY STOCKER, seconded by Dr. F. R. STURRIDGE, a vote of thanks to Dr. McKinstry for a most instructive lecture was passed unanimously.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH: SWANSEA DIVISION.

A VERY successful meeting of the Swansea Division was held on February 23rd, when Dr. DANIEL E. EVANS, chairman of the Division, presided over a large gathering.

An address on "Birth control: its medical and social aspects" was given by Dr. J. A. RAWLINGS, J.P., who, in his eightieth year, is the senior member of the Division, and, having ceased to practise, has devoted himself to social work and magistracy duties, in which he has upheld the great traditions of the medical profession.

He was warmly welcomed by the CHAIRMAN, and in the discussion which followed his address several speakers, including colleagues—one of whom, Dr. A. LLOYD-JONES is still practising although 75 years of age—paid the lecturer high tribute. Dr. Rawlings spoke remarkably well, with great knowledge and conviction.

A very enjoyable evening was spent, and the lecturer was warmly thanked by Mr. W. F. BROOK, Dr. J. M. MORRIS, Dr. A. F. SLADDER, Dr. BESSIE GOODSON, Dr. W. H. O. WOODS, and Dr. HETTERMAN for his lucid address.

#### SUSSEX BRANCH: CHICHESTER AND WORTHING DIVISION.

A MEETING of the Chichester and Worthing Division was held in the Burlington Hotel, Worthing, on February 22nd, when Dr. FRANK HINDS was in the chair and thirty other members were present.

The SECRETARY submitted a communication from head office re the inquiry into the treatment of varicose ulceration. The names of the members willing to complete the forms were asked to be sent to the secretary.

The question of the organization of the medical charities in the Division was discussed. On the motion of Dr. F. HINDS, seconded by Dr. MILBANK-SMITH, it was resolved:

That the Division appoints a charity steward to collect funds for the medical charities for transmission through the British Medical Association.

It was emphasized that any member desiring to subscribe to any specific charity could earmark his subscription accordingly. Dr. Milbank-Smith was unanimously appointed charity steward for the Division.

Dr. R. BROOKE (Chichester) gave a most interesting paper on the modern operative treatment of hernias, which was illustrated by lantern slides prepared by himself and by five patients. The lecture proved to be one of the most interesting that had ever been given to the Division, and many expressions of thanks were voiced. In the subsequent discussion after dinner the following took part: Drs. HINDS, GIBSON, GERRATT, FITZMAURICE KELLY, MILBANK-SMITH, FIELDER, LE RICHE, and LIESCHING.

Members to the number of twenty-eight sat down to dinner.

## Association Notices.

### TABLE OF DATES.

- March 28, Wed. Nomination papers available (on application at Head Office) for election of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
- April 23, Sat. Annual Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.
- May 12, Sat. Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
- May 15, Tues. Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
- May 19, Sat. Voting papers posted from Head Office, where there are contests in above elections.
- June 2, Sat. Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.
- June 7, Thurs. Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
- June 13, Wed. Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.
- June 21, Thurs. Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members.
- June 23, Mon. Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
- June 27, Fri. Names of Representatives and Deputy Representatives must be received at Head Office by this date.
- July 4, Wed. Council.
- July 13, Wed. Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
- July 20, Fri. Supplemental Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.
- July 21, Sat. Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
- July 23, Mon. Annual Representative Meeting, Cardiff, 10 a.m.
- July 24, Tues. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
- July 25, Wed. Annual Representative Meeting, Cardiff.
- July 26, Thurs. Council, Cardiff.
- July 27, Fri. Annual Representative Meeting, Cardiff.
- July 28, Sat. Annual General Meeting, Cardiff, President's Address.
- July 29, Sun. Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
- July 30, Sun. Meetings of Sections, etc., Cardiff.
- August 1, Mon. Meetings of Sections, etc., Cardiff.
- August 2, Tues. Meetings of Sections, etc., Cardiff.

ALFRED CON, Medical Secretary.

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: COVENTRY DIVISION.**—A meeting of the Coventry Division will be held at the Coventry and Warwickshire Hospital on Tuesday, March 6th, at 8.30 p.m. Discussion on dental sepsis and internal medicine to be opened by Mr. Harold Round (Birmingham) and Dr. Annand.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—A meeting of the Nuneaton and Tamworth Division will be held at the Tamworth General Hospital on Thursday, March 8th, when a paper will be read by Dr. F. B. Gilhespy.

**BORDER COUNTIES BRANCH.**—A general meeting of the Border Counties Branch will be held at Storms Farm Dairy, Keswick, on Friday, March 16th, at 3 p.m. Mr. J. A. Spedding will describe and demonstrate the production of certified milk. Other speakers will be Mr. R. Simpson, chief veterinary inspector for Cumberland, and Dr. F. H. Morrison, M.O.H. for Cumberland.

**CAMBRIDGE AND HUNTINGDON BRANCH.**—A meeting of the Cambridge and Huntingdon Branch with the Cambridge Medical Society will be held to-day (Friday, March 2nd) at 2.45 p.m., in the Pathological Theatre, Medical Schools, Downing Street, Cambridge, by permission of Professor H. R. Dean, when a British Medical Association Lecture will be delivered by Mr. Alexander Fleming, St. Mary's Hospital Medical School, on vaccine therapy. Tea will be kindly provided by the president of the Cambridge Medical Society, Dr. H. B. Roderick.

**DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.**—The annual dinner of the Bournemouth Division will be held on Tuesday, March 6th, at 7.30 for 7.45 p.m., at the Royal Bath Hotel. After the dinner there will be dancing in the King's Hall until midnight. It is hoped that as many members as possible will come and bring guests, including ladies. Tickets 8s. 6d. each (exclusive of wine). Application, with remittance, must be made by Saturday, March 3rd, to Dr. O. C. Carter, Hursley, Poole Road, Bournemouth.

**ESSEX BRANCH: MID-ESSEX DIVISION.**—The annual general meeting of the Mid-Essex Division will be held at the Bell Hotel, Chelmsford, to-day (Friday, March 2nd), at 3 p.m. Agenda: Report of year's work and accounts; election of officers for 1928; discussions: (1) re attendance of medical practitioners at road accidents; (2) chronic varicose ulceration.

**FIFE BRANCH.**—A clinical meeting of the Fife Branch will be held in the Maternity Home, Townsend Crescent, Kirkealdy, on Thursday, March 8th, at 3.30 p.m. Dr. W. D. D. Small (Edinburgh) will give an address on the medical treatment of gastric and duodenal ulcers.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at St. Enoch's Station Hotel on Wednesday, March 14th, at 3.30 p.m. A paper on teeth in relation to health (with lantern illustrations) will be read by Dr. Charles Read.

**METROPOLITAN COUNTIES BRANCH.**—The Metropolitan Counties Branch has arranged a meeting to be held at the British Medical Association House, Tavistock Square, W.C.1, on Thursday, March 22nd. Dr. E. Graham Little, M.P., will deliver an address on "The future of medical practice: an address to senior students and young practitioners" at 5.30 p.m. Fourth and fifth year medical students and newly qualified practitioners are cordially invited; tea and coffee at 5 p.m.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The next meeting arranged by the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, March 6th, at 9.30 p.m. Mr. Norman Patterson will read a paper on ear trouble in general practice.

**METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, March 6th, at 8.45 p.m. Dr. J. W. McNevo will discuss the clinical features of thrombosis of branches of coronary arteries.

**METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.**—A meeting of the Hampshire Division will be held at the Hampstead General Hospital on Thursday, March 8th, at 8.30 p.m. Dr. G. A. Sutherland will discuss the heart in acute infections.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—The next clinical meeting of the Hendon Division will take place at Hendon Cottage Hospital to-day (Friday, March 2nd), at 8.30 p.m., when Dr. J. M. MacLeod, physician for diseases of the skin, Charing Cross Hospital, will deliver an address on some observations on ringworm and its treatment (illustrated by lantern slides).

**METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.**—A meeting of the Marylebone Division will be held at 11, Chandos Street, Cavendish Square, on Thursday, March 15th, at 8.15 p.m. Agenda: (1) nomination of candidates for election to Central Council; (2) election of seven representatives and deputy representatives to Representative Meeting; (3) a lecture, with lantern illustrations, by Dr. Percy Flemming: The Thames from London Bridge to Lambeth, with a note of London's early water supply. Members are cordially invited to bring ladies and friends.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, March 13th, at 9 p.m. Mr. Sidney Boyd will give an address on the diagnosis of surgical emergencies occurring in general practice.

**METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.**—A meeting of the South-West Essex Division will be held at the Whipp's Cross Hospital, Leytonstone, on Tuesday, March 6th, at 3.30 p.m. Dr. J. C. Muir, medical superintendent, will give a clinical demonstration.

**METROPOLITAN COUNTIES BRANCH: WESTMINSTER AND HOLBORN DIVISION.**—A meeting of the Westminster and Holborn Division will be held on Thursday, March 22nd, at 8.30 p.m., at Romano's Restaurant, Strand, preceded by a dinner at 7.30. Mr. P. B. Tustin will read a paper on modern methods in the production and treatment of milk.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, on Wednesday, March 21st, at 9 p.m. It will be a joint meeting with members of the dental profession, and Mr. H. L. Messenger, L.D.S., will read a paper on focal infection; discussion on matters of mutual interest to follow. The following further meetings have been arranged: April 18th, Dr. J. Bright Bannister: Ante-natal work; May 16th, annual meeting; June 20th, Dr. Margaret Emslie: Care of the infant.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, March 9th, at 8.15 p.m. Mr. Graham S. Simpson will discuss the value of operations.

**SOUTHERN BRANCH: JERSEY DIVISION.**—The next meeting of the Jersey Division will be held at the General Hospital on Thursday, March 15th, at 8.30 p.m. Mr. C. A. Halliwell will read a paper on the treatment of peritonitis.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—The next meeting of the Portsmouth Division will be a dental night; it will therefore be an opportunity for members to invite their friends of the dental profession as private guests. No official invitations will be issued. The meeting will be held at the Queen's Hotel, Southsea, on Thursday, March 8th, at 9.30 p.m., preceded by supper at 9 o'clock (cost 3s. 6d., including gratuities). Dr. A. Livingston, M.D.S. (Liverpool), director of dental studies at King's College Hospital, has kindly consented to give the address.

**SURREY BRANCH: CROYDON DIVISION.**—At the meeting of the Croydon Division to be held on Wednesday, March 14th, at 4 p.m., at the Croydon General Hospital, Mr. A. H. Todd will give a

lecture demonstration on various hip cases, in the place of Dr. J. W. Wayto.

**SUSSEX BRANCH: HASTINGS DIVISION.**—The next meeting of the Hastings Division will take place at the Queen's Hotel on Tuesday, March 6th, at 8.15 p.m. Dr. A. E. Larking will give an address on hospitals, general practitioners, and others. The annual dinner of the Division will be held on Friday, April 20th, at the Royal Victoria Hotel; tickets 10s. 6d.

**WILTSHIRE BRANCH: TROWBRIDGE DIVISION.**—A supper arranged by the Trowbridge Division will be held on Wednesday, March 7th, at 7.45 p.m., at the Roundstone House Hotel, Trowbridge. An address on hoarseness will be given by Mr. E. Miles Atkinson before the supper. The representative of the Division in the Representative Body will also be appointed.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Strafford Arms Hotel, Wakefield, on Thursday, March 8th. Dr. R. A. Veale, physician in charge of the skin department, General Infirmary, Leeds, will give a lecture on common skin diseases. Supper (5s.), at 7.45 p.m., will precede the lecture.

## BOOKS ADDED TO THE LIBRARY.

The following books were received in the Library of the Association during the months of December, 1927, and January, 1928.

- Annals of Medical History. Vol. 9, Part 3. 1927.  
Annals of the Pickett Thomson Research Laboratory. Vol. 3. 1927.  
Arzt, L., and Fuhs, H.: Röntgen Rays in Dermatology. 1927.  
Astier: Formulaire. 1928.  
Bailey, H.: Physical Signs in Clinical Surgery. 1927.  
Baly, E. C. O.: Spectroscopy. Vol. 2. 1927.  
Bouchacrt, J. P.: La pathogénie et le Traitement du Diabète. 1927.  
Bradley, D. C.: Topographical Anatomy of the Dog. 1927.

## NINETY-SIXTH ANNUAL MEETING, CARDIFF, JULY, 1928.

Patron: HIS MAJESTY THE KING.

President: SIR ROBERT W. PHILIP, M.D., LL.D., F.R.C.P.Ed., Consulting Physician, Royal Infirmary, Edinburgh.

President-Elect: SIR EWEN J. MACLEAN, M.D., F.R.C.P., Professor of Obstetrics, Welsh National School of Medicine.

Chairman of Representative Body: C. O. HAWTHORNE, M.D., F.R.C.P.

Chairman of Council: H. B. BRACKENBURY, M.R.C.S., L.R.C.P.

Treasurer: N. BISHOP HARMAN, M.B., F.R.C.S.

### PROVISIONAL PROGRAMME.

TOWER OF ST. JOHN'S CHURCH,  
CARDIFF.

THE incoming President, Sir EWEN MACLEAN, will deliver his address to the Association on Tuesday, July 24th, at 8 p.m.

The ANNUAL REPRESENTATIVE MEETING will begin on Friday, July 20th, at 10 a.m., and be continued on the three following week-days. The Representatives' Dinner will take place on Friday evening, July 20th, at 7.30.

The statutory ANNUAL GENERAL MEETING will be held on Tuesday, July 24th, at 2 p.m., and the adjourned general meeting at 8 p.m.

The Annual Dinner of the Association will take place on Thursday, July 26th.

The Conference of Honorary Secretaries will be held at 2.30 p.m. on Wednesday, July 25th, and the Secretaries' Dinner at 6.30 the same evening.

The official Religious Service will be held at St. John's Church, Cardiff, on Tuesday, July 24th, at 4.30 p.m.

The Annual Exhibition of surgical appliances, foods, drugs, and books will be open for inspection on Monday, July 23rd, from 2 till 6 p.m.; the formal opening by the President will take place on July 24th at 9.30 a.m. The exhibition will remain open on July 25th, 26th, and 27th from 9 a.m. till 6 p.m.

Saturday, July 28th, will be given up to excursions to places of interest in the neighbourhood.

### THE SECTIONS.

The Scientific Section will meet from 10 a.m. to 1 p.m. for papers and discussions on Wednesday, Thursday, and Friday, July 25th, 26th, and 27th.

The following Sections will meet on Three Days.

#### MEDICINE.

President: Sir THOMAS LEWIS, C.B.E., M.D., F.R.C.P., F.R.S. (London).

Vice-Presidents: IVOR J. DAVIES, M.D., F.R.C.P. (Cardiff); A. E. GOW, M.D., F.R.C.P. (London); A. FERGUS HEWAT, M.D., F.R.C.P.Ed. (Edinburgh); CYRIL LEWIS, M.D., C.M. (Cardiff); Professor T. GILLMAN MOORHEAD, M.D., F.R.C.P.I. (Dublin); H. LETHBY TIDY, M.D., F.R.C.P. (London).

Honorary Secretaries: ABEL EVANS, M.B., M.R.C.P., 36, Newport Road, Cardiff; ANTHONY FEILING, M.D., F.R.C.P., 52, Montagu Square, London, W.1.

#### SURGERY.

President: Professor A. W. SHEEN, C.B.E., M.S., F.R.C.S. (Cardiff).

Vice-Presidents: H. G. COOK, C.B.E., M.D., F.R.C.S. (Cardiff); C. H. FAGGE, M.S., F.R.C.S. (London); Professor ANDREW FULLERTON, C.B., C.M.G., M.Ch., F.R.C.S.I. (Belfast); J. W. GEARY GRANT, F.R.C.S. (Cardiff); WILLIAM MARTIN, M.B., C.M. (Cardiff); ALBERT J. WALTON, M.S., F.R.C.S. (London).

Honorary Secretaries: D. J. HARRIES, D.Sc., F.R.C.S., 106, Newport Road, Cardiff; R. ST. LEGER BRACKENBURY, M.B., M.Ch., F.R.C.S., 79, Upper Hanover Street, Sheffield.

#### OBSTETRICS AND GYNAECOLOGY.

President: T. WATTS EDEN, M.D., F.R.C.P., F.R.C.S.Ed. (London).

Vice-Presidents: MARGARET M. BASDEN, M.D., F.R.C.S. (London); ARTHUR E. GILES, M.D., F.R.C.S.Ed. (London); Professor W. FLETCHER SHAW, M.D., Ch.B. (Manchester); Professor H. BECKWITH WHITEHOUSE, M.S., F.R.C.S. (Birmingham).

Honorary Secretaries: B. K. TENISON COLLINS, M.D., F.R.C.S.Ed., 12, Windsor Place, Cardiff; EVERARD WILLIAMS, M.D., 5, Wimpole Street, London, W.1.

#### MENTAL DISEASES AND NEUROLOGY.

President: EDWIN GOODALL, C.B.E., M.D., F.R.C.P. (Cardiff).

Vice-Presidents: E. D. ADRIAN, M.D., F.R.C.P., F.R.S. (Cambridge); G. H. R. GINSON, D.S.O., M.D., F.R.C.P.Ed. (Edinburgh); BERNARD HART, M.D., F.R.C.P. (London); W. F. NELIS, M.D. (Caerleon, Mon.); N. R. PHILLIPS, M.D. (Abergavenny).

Honorary Secretaries: EDWARD LEWIS, F.R.F.P.S., Drymma Hall, Skewen, nr. Neath, Glam.; W. R. RETNELL, M.D., M.R.C.P., 87, Harley Street, London, W.1.

The following Sections will meet on Two Days.

#### PATHOLOGY AND BACTERIOLOGY.

President: Professor E. H. KETTLE, M.D., M.R.C.P. (London).

Vice-Presidents: Professor JOHN CRUICKSHANK, M.D. (Aberdeen); Sir THOMAS HOUSTON, O.B.E., M.D. (Belfast); W. PARRY MORGAN, M.D. (Cardiff); A. F. S. SLADDEN, M.D. (Swansea).

Honorary Secretaries: J. B. DUGUID, M.D., Department of Pathology, Welsh National School of Medicine, The Parade, Cardiff; LAWRENCE P. GARROD, M.B., M.R.C.P., 68, Gloucester Terrace, Hyde Park, London, W.2.

#### ORTHOPAEDICS.

President: Sir JOHN LYNN-THOMAS, K.B.E., C.B., C.M.G. F.R.C.S. (Lechryd).

Vice-Presidents: A. ROEYN JONES, M.B., F.R.C.S. (London); J. J. MCINTOSH SHAW, M.C., M.D., F.R.C.S.Ed. (Edinburgh); S. ALWYN SMITH, D.S.O., O.B.E., M.D., F.R.C.S.Ed. (Cardiff); P. JENNER VERRALL, M.B., F.R.C.S. (London).

Honorary Secretaries: J. BERRY HAYCRAFT, M.C., M.B., F.R.C.S. 31, Cathedral Road, Cardiff; ERIC IVAN LLOYD, M.B., F.R.C.S., 33, Wimpole Street, London, W.1.

#### DISEASES OF CHILDREN.

President: ALFRED HOWELL, M.D., M.R.C.P. (Cardiff).

Vice-Presidents: E. A. COCKAYNE, M.D., F.R.C.P. (London); HERBERT THOMAS EVANS, M.D., M.R.C.P. (Cardiff); CHARLES LEONARD ISAAC, M.B., F.R.C.S.Ed. (Swansea).

Honorary Secretaries: DANIEL THOMAS DAVIES, M.D., M.R.C.P., 24, Park Place, Cardiff; HILDA N. STOESSIGER, M.D., 11, Belmont House, Candover Street, London, W.1.

#### OPHTHALMOLOGY.

President: F. P. S. CRESSWELL, M.B., F.R.C.S. (Cardiff).

Vice-Presidents: HERBERT CAIGER, M.B., F.R.C.S. (Sheffield); L. V. CARGILL, F.R.C.S. (London); R. J. COULTER, M.B., F.R.C.S.I. (Newport, Mon.); F. GRIFFITH THOMAS, M.D., F.R.C.S. (Cardiff).

Honorary Secretaries: J. W. TUD, 1, Park Grove, Cardiff; F. A. JULER, Place, London, W.1.

#### LARYNGOLOGY AND OTOTOLOGY.

President: DONALD R. PATERSON, M.D., C.M., F.R.C.P. (Cardiff).

Vice-Presidents: ALBAN EVANS, M.R.C.S., L.R.C.P. (Swansea); E. D. D. DAVIS, F.R.C.S. (London); ARCHIBALD MASON JONES, M.D., F.R.C.S.Ed. (Cardiff).

Honorary Secretaries: A. A. PRICHARD, M.D., 14, Windsor Place, Cardiff; D. F. A. NEILSON, F.R.C.S., 40, Queen Anne Street, London, W.1.

#### TUBERCULOSIS.

President: HUGH MORRISTON DAVIES, M.D., M.Ch., F.R.C.S. (Ruthin).

Vice-Presidents: ALEXANDER BROWNLEE, M.D., F.R.C.S.Ed. (Fairwater, nr. Cardiff); DAN ARTHUR POWELL, M.D. (Cardiff); CECIL WALL, M.D., F.R.C.P. (London).

Honorary Secretaries: J. C. GILCHRIST, M.D., Tuberculosis Institution, Welsh National Memorial, Cardiff; J. C. HOYLE, M.B., B.S., 28, Malcolm Street, Cambridge.

**RADIOLOGY AND PHYSIO-THERAPEUTICS.**

*President:* OWEN LEWELLYN RHYS, M.D. (Cardiff).  
*Vice-Presidents:* T. GARFIELD EVANS, M.D., D.M.R.E. (Cardiff);  
 C. B. HEALD, C.B.E., M.D., M.R.C.P. (London); THOMAS MARLIN,  
 M.D., D.M.R.E. (London).  
*Honorary Secretaries:* T. I. CANDY, M.B., B.Ch., 202, Stow Hill,  
 Newport, Mon.; A. J. H. ILES, M.R.C.S., L.R.C.P., Shutterne  
 House, Taunton.

*The following Sections will meet on One Day.*

**PREVENTIVE MEDICINE.**

*President:* EDWARD COLSTON WILLIAMS, M.D., F.R.C.S.Ed. (Cardiff).  
*Vice-Presidents:* W. W. JAMESON, M.D., M.R.C.P. (London);  
 DAVID LLEWELYN WILLIAMS, M.C., F.R.C.S.Ed. (Cardiff); C. A.  
 BRIGSTOCKE, M.R.C.S. (Haverfordwest).  
*Honorary Secretaries:* H. W. CATTO, M.B., B.S., 198, Stow Hill,  
 Newport, Mon.; D. C. KIRKHOPE, M.D., Town Hall, South  
 Tottenham, London, N.15.

**PUBLIC HEALTH.**

*President:* R. M. F. PICKEN, M.B., Ch.B. (Cardiff).  
*Vice-Presidents:* D. T. ROGYN JONES, C.B.E., M.B., C.M. (Rumney,  
 nr. Cardiff); J. D. JENKINS, M.D. (Rhonda); S. G. MOORE, M.D. (Buddersfield).  
*Honorary Secretaries:* THOMAS EVANS, M.B., Public Health  
 Department, Swansea; R. P. GARROW, M.D., Health Office,  
 Saltergate, Chesterfield.

**MEDICAL SOCIOLOGY.**

*President:* WILLIAM EVANS THOMAS, M.D., C.M. (Ystrad,  
 Rhonda).  
*Vice-Presidents:* LETITIA DENNY FAIRFIELD, C.B.E., M.D. (London);  
 EVAN LEWIS LLOYD, M.R.C.S., L.R.C.P. (Towyn).  
*Honorary Secretary:* F. Y. PEARSON, M.R.C.S., L.R.C.P.,  
 18, Crwys Road, Cardiff.

**TROPICAL MEDICINE.**

*President:* PHILIP H. MANSON-BAHR, D.S.O., M.D., F.R.C.P. (London).  
*Vice-Presidents:* J. B. CHRISTOPHERSON, M.D., F.R.C.P., F.R.C.S. (London);  
 Lieut.-Colonel A. G. MCKENDRICK, M.B., Ch.B., F.R.C.S.Ed., I.M.S. (ret.) (Edinburgh).  
*Honorary Secretaries:* ERNEST HENRY PRICE, L.R.C.P.I., 153,  
 Cathedral Road, Cardiff; H. MCCORMICK HANSCHALL, D.S.C.,  
 M.R.C.S., L.R.C.P., 35, Weymouth Street, London, W.1.

**HISTORY OF MEDICINE.**

*President:* WALTER G. SPENCER, O.B.E., M.S., F.R.C.S. (London).  
*Vice-Presidents:* THOMAS WALLACE, M.D. (Cardiff); T. P. C.  
 KIRKPATRICK, M.D., F.R.C.P.I. (Dahlin); Professor J. A. NIXON,  
 C.M.G., M.D., F.R.C.P. (Clifton); CHARLES SINGER, M.A., M.D.,  
 F.R.C.P. (London).  
*Honorary Secretaries:* H. R. FREDERICK, M.B., Ch.B., 42, Victoria  
 Road, Aberavon, Port Talbot, Glam.; KENNETH R. HAY, O.B.E.,  
 M.B., 47, Hill Street, Berkeley Square, London, W.1.

**THERAPEUTICS AND PHARMACOLOGY.**

*President:* W. LANGDON BROWN, M.D., F.R.C.P. (London).  
*Vice-Presidents:* Professor W. J. DILLING, M.B., Ch.B. (Liver-  
 pool); PHILIP HAMILL, M.D., D.Sc., F.R.C.P. (London); W. H.  
 MAXWELL TELLING, M.D., F.R.C.P. (Leeds).  
*Honorary Secretaries:* J. P. H. DAVIES, M.B., "Cranmoor,"  
 The Green, Llandaff, Cardiff; J. H. BURN, M.D., Pharmaceutical  
 Society of Great Britain, Pharmacological Laboratory, 17, Blooms-  
 bury Square, London, W.C.1.

**DERMATOLOGY.**

*President:* Sir ROBERT BOLAM, M.D., LL.D., F.R.C.P. (Newcastle-  
 on-Tyne).  
*Vice-Presidents:* JAMES BEATTY, M.D., M.R.C.P. (Cardiff);  
 WILLIAM GRIFFITH, M.D., M.R.C.P. (London); HENRY SEMON,  
 M.D., M.R.C.P. (London).  
*Honorary Secretaries:* R. H. ENOCH, M.R.C.S., L.R.C.P., Royal  
 Infirmary, Cardiff; J. E. M. WIGLEY, M.B., M.R.C.P., 132, Harley  
 Street, London, W.1.

The Honorary Local General Secretary of the Annual Meeting is Dr. G. I. STRACHAN, 20, Windsor Place, Cardiff.

**PATHOLOGICAL MUSEUM.**

The committee appointed to organize the Pathological Museum in connexion with the Annual Meeting of the British Medical Association at Cardiff next July proposes to arrange the material under the following heads: (1) Exhibits bearing on discussions and papers in the various Sections. (2) Specimens and illustrations relating to any recent research work. (3) Instruments concerned in clinical diagnosis and pathological investigation. (4) Individual specimens of special interest or a series illustrating some special subject. (5) Exhibits of general interest. The committee appeals for the co-operation of the profession in making the museum a success. It will be easy of access, being situated in the same building in which the Sections

will meet; it is hoped to make arrangements for exhibitors to demonstrate their specimens. Every care will be taken of the exhibits, and the contents of the museum will be insured. The honorary secretaries (Dr. J. B. Duguid and Dr. J. Mills, Department of Pathology and Bacteriology, Welsh National School of Medicine, The Parade, Cardiff) ask intending exhibitors to notify them as soon as possible.

**Correspondence.***Infant Hygiene Centres.*

SIR,—Dr. Bone states (SUPPLEMENT, February 25th, p. 59) that this work is entirely new work which has not been done in the past. If this is so, the general practitioner has allowed others to steal a march on him. The general impression conveyed by your report of "Proceedings of Council" is that the general practitioner, like Gallo, cares for none of these things.

Actually the average general practitioner does not possess the necessary knowledge to advise. Such points as the optimum frequency of feeding, the stimulation of failing lactation, the value of supplementary feeds, the modification of milk mixtures, the results of altering the ratios of sugar and fat, the indications for the different proprietary foods in varying conditions—all these and many more are hidden mysteries. Yet he will find that the "Truby King" nurse can give him sound advice on all these points. If he is losing the opportunity for this class of work it is because he has failed to answer the public demand for it. The public will get what it wants, and if the right kind of advice cannot be obtained from the doctor the public will consult the expert nurse, or write to the various lay journals or manufacturers' bureaux where such advice is available.

Surely, Sir, an anomalous state of affairs exists when the general practitioner lacks such fundamental knowledge as the dietetics of the young of his own species. It is not surprising if the man in the street, or rather the woman in the house, loses confidence in her family doctor when she discovers such a notable failure in the oracle. Adequate instruction is the proper remedy. Objections will be raised to further straws on the breaking back of an overloaded curriculum; but if the student could spare some of the hours spent in the theatre watching dramatic major operations which he will never be called upon to perform himself, and devote those hours to the more humdrum experiences of the infant welfare clinic, he could provide himself with a foundation of accurate knowledge which might go far to counteract the present tendency, so deplored by Dr. Rees (SUPPLEMENT, p. 67) "to the depreciation and degradation of the general practitioner."—I am, etc.

Clifton, Feb. 25th.

FRANK BODMAN, M.B.

*Certification under the Insurance Acts.*

SIR,—The report of the parliamentary discussion on National Health Insurance certification and excessive sickness benefit (February 25th, p. 330) moves me, as a panel doctor, to a few comments.

First, Dr. Vernon Davies hit the nail on the head when he said that the difficulty arises at the end of an illness, in deciding whether the patient has become fit for work or not. The patient may say he does not feel fit and would like another week off. The doctor thinks, "If I were in that condition I should work; but is it fair to apply such a criterion to this man?" If he is sent back and relapses the expense will be more than that of an extra week. So the man gets his certificate. The real, and only, remedy here is a second opinion, easily available. In theory this is to be had in the shape of the regional medical officer; in practice a special form has to be filled up, and this may not be at hand. Furthermore, the doctor has to inform the patient of his doubt, and to be present at the regional medical officer's examination. This last is the chief obstacle; it is usually unnecessary, and may in a busy season be impossible. Some simpler machinery is imperative. Why cannot the doctor—in a doubtful case—give the certificate and mark it in some way—for example, put a "D" in the corner? The society, on receipt of this marked certificate, could promptly refer the case to the regional medical officer for a decision. The regional medical officer would get the doubtful cases much more effectively than he does at present, and there would be no friction between doctor and patient.

Secondly, we are told we are lax in certification; but the figures produced are too general and do not touch the individual

doctor. Cannot each man's sickness rate be worked out periodically and a local list circulated privately? We should then know where we stood in relation to our colleagues. We are educated men, and threats and penalties strike us as rather childish. The spirit of competition is more in us, and, if stimulated, would be productive of better results. We might also be told once a quarter what our prescriptions have cost. The sum of our sick pay *plus* treatment cost per patient would be an interesting figure, which we would try to keep lower than our neighbour.—I am, etc.,

London, S.W., Feb. 26th.

X.

Sir,—Regarding the recent parliamentary debate in which the iniquities of the panel doctor came under the lash of the zealous guardians of the public purse (or rather, that of the approved societies), the following details may prove of interest. Of the last thirty cases of mine referred to the regional medical officer the subsequent developments were:

"Failed to attend" ... ..	3
"Declared fit for work" ... ..	3
"Declared unfit for work" ... ..	19
"Received declaring-off certificates" ... ..	5

Of the "failed to attend" one (a woman) was by no means fit for work, but was afraid that some dire consequences would result if she presented herself for examination before one whom she regarded as "the Government doctor," whom she considered had already unfavourably prejudged her case. Of the "declared off" contingent four of them had already been at work for periods of from five to ten days before receiving the notice to attend (not very good "team work" this on the societies' part). Of the three "declared fit" one was a man I had been endeavouring to "sign off" for several weeks; No. 2 went back to work, but subsequently broke down and returned to the *status quo*; No. 3 endeavoured to join the army, but was rejected on medical grounds! Surely there must be something wrong in the alleged high percentage of "lead-swingers."—I am, etc.,

Leicestershire, Feb. 27th.

M.B., B.Ch.

## Naval and Military Appointments.

### ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon Sublieutenant E. C. W. Maxwell to be Surgeon Sublieutenant.

T. C. Larkworthy has entered as probationary Surgeon Sublieutenant and attached to List 2, London Division.

A. H. Hunt has entered as probationary Surgeon Sublieutenant and attached to List 2 of the East Scottish Division.

### ROYAL ARMY MEDICAL CORPS.

The following Captains to be Majors: C. A. Slaughter (prov.), H. A. Boyle, T. E. B. Beatty (prov.).

Temporary Captain J. R. P. Ailin, M.C., relinquishes his commission and is granted the rank of Major.

Lieutenant A. E. Campbell to be Captain.

Lieutenant (on probation) J. H. Anderson, from the second list, is restored to the establishment.

Temporary Lieutenant J. W. Kendall to be Lieutenant on probation and relinquishes the temporary rank of Lieutenant.

### ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader H. S. C. Starkey, O.B.E., to Headquarters, Coastal Area.

Flight Lieutenant C. S. de Segundo, O.B.E., V.D., to Superintendent of Reserve, Hendon; J. D. I. Rear to R.A.F. General Hospital, Iraq.

Flight Lieutenant H. Pennan is granted a permanent commission in this rank.

Flying Officers G. S. Strachan to R.A.F. Depot, Uxbridge; M. O'Regan to R.A.F. General Hospital, Iraq; J. Hill to Station Headquarters, Hinaidi.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel G. E. F. Stammers, O.B.E., and Captain (Brevet Major) S. T. Beggs, having attained the age limit of liability to recall, cease to belong to the Reserve of Officers.

R. W. Agnew to be Lieutenant.

SUPPLEMENTARY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS.  
A. Roberts to be Lieutenant.

### INDIAN MEDICAL SERVICE.

Lieut.-Colonel (Brevet Colonel) A. Spitteler, O.B.E., to be Colonel, vice Colonel George Browne, D.S.O., retired.

Captain E. Kean resigns his commission.

To be Captains: W. D. B. Read, J. F. Hinksman, and J. L. Donnelly.

To be Lieutenants: J. H. Clapp, W. J. A. Coldstream, and T. A. Malone.

### TERRITORIAL ARMY.

#### ROYAL ARMY MEDICAL CORPS.

Major C. Douglas, T.D., having attained the age limit, is retired and retains his rank, with permission to wear the prescribed uniform.

Captain D. C. Bowie, R.A.M.C., to be Divisional Adjutant, 54th (East Anglian) Division, vice Major E. Phillips, D.S.O., M.C., R.A.M.C.

## VACANCIES.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—Second House-Surgeon (non-resident). Salary at the rate of £150 per annum.

BIRMINGHAM MATERNITY HOSPITAL.—Junior House-Surgeon. Salary at the rate of £75 per annum.

BIRMINGHAM UNION.—Resident Assistant Medical Officer (female) at Moulthill Colony. Salary £250-£350 per annum.

BRIGHTON COUNTY BOROUGH.—Resident Medical Officer at the Borough Infectious Disease Hospital and Sanatorium (male, unmarried). Salary at the rate of £350 per annum.

BRIGHTON: SUSSEX MATERNITY AND WOMEN'S HOSPITAL.—Resident House-Surgeon (male). Salary at the rate of £120 per annum.

CARLISLE: GUMBERLAND INFIRMARY.—(1) Resident Medical Officer, six months as House-Physician and six months as House-Surgeon; salary at the rate of £155 and £175 per annum respectively. (2) Resident Medical Officer as Junior House-Surgeon for six months; salary at the rate of £135 per annum. (Males.)

GHESTERFIELD AND NORTH DERBYSHIRE ROYAL HOSPITAL.—(1) Junior House-Surgeon. (2) Casualty House-Surgeon. Salary at the rate of £100 per annum each.

HEATFORD COUNTY HOSPITAL.—Honorary Anaesthetist.

HEATFORDSHIRE COUNTY COUNCIL.—Assistant Medical Officer of Health. Salary £700 per annum.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Part-time Junior Casualty Officer for six months (non-resident). Salary £75.

ISLE OF WIGHT: HERMITAGE SANATORIUM.—Resident Medical Officer (male). Salary £350.

KENSINGTON BOARD OF GUARDIANS.—Resident Medical Secretary and Registrar at St. Mary Abbott's Hospital. Salary £300 per annum.

KETTERING AND DISTRICT GENERAL HOSPITAL.—Resident Medical Officer (male). Salary at the rate of £175 per annum.

KING'S COLLEGE HOSPITAL, S.E.5.—(1) Two Junior Surgeons. (2) Sambrooke Medical Registrar; salary £175 per annum.

LEAMINGTON SPA: WATERFORD GENERAL HOSPITAL.—Resident House-Surgeon. Salary £165 per annum.

LIVERPOOL: MINISTRY OF PENSIONS HOSPITAL, Mossley Hill.—Junior Medical Officer (unmarried). Salary £300 per annum.

LIVERPOOL OPEN-AIR HOSPITAL FOR CHILDREN, Leasowe.—Junior Medical Officer. Salary £200 per annum.

MANCHESTER: ANCOATS HOSPITAL.—Clinical Assistant to the Ear, Nose, and Throat Department Out-patient Clinic. Fee 10s. 6d. per clinic.

MANCHESTER: ST. MARY'S HOSPITALS.—Two House-Surgeons each for the Whitworth Street West Hospital (Maternity), and for the Whitworth Park Hospital (Gynaecological). Salary at the rate of £50 per annum each.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—(1) Honorary Physician to the Children's Department. (2) Resident Medical Officer. (3) House-Physician. Salary for (2) £250 and for (3) £125 per annum.

NEWCASTLE-UPON-TYNE CITY AND COUNTY.—Assistant Medical Officer of Health. Salary £750 per annum, rising to £900.

NORTHAMPTON GENERAL HOSPITAL.—(1) House-Physician. (2) Two House-Surgeons. (3) Two Assistant House-Surgeons. Salary at the rate of £150 per annum each.

NOTTINGHAM GENERAL HOSPITAL.—House-Surgeon. Salary at the rate of £150 a year.

NOTTINGHAM AND MIDLAND EYE INFIRMARY.—House-Surgeon. Salary £200 per annum.

PLYMOUTH POOR LAW INSTITUTION.—Resident Locumtenent for three weeks.

ROYAL DENTAL HOSPITAL OF LONDON, Leicester Square, W.C.2.—House Anaesthetist. Honorarium £200 per annum.

ROYAL MANCHESTER CHILDREN'S HOSPITAL, Pendlebury.—(1) Resident Medical Officer. (2) Resident Surgical Officer. (3) Assistant Medical Officer (non-resident). Salary for (1) and (2) £125 per annum, and for (3) £150.

ROYAL WATERLOO HOSPITAL FOR CHILDREN, Waterloo Road, S.E.1.—Honorary Medical Registrar.

ST. PETER'S HOSPITAL FOR STONE, etc., Henrietta Street, W.C.2.—House-Surgeon. Salary at the rate of £75 per annum.

SALFORD ROYAL HOSPITAL.—(1) House-Surgeon attached to Orthopaedic Department. (2) House-Surgeon. (3) Anaesthetist. Salary for (1) and (2) at the rate of £125 per annum, and for (3) £1 ls. per morning session.

SALISBURY: GENERAL INFIRMARY.—House-Surgeon (male, unmarried). Salary £150 per annum.

SEAMEY'S HOSPITAL SOCIETY.—Assistant Medical Officer at the King George's Sanatorium for Sailors, Liphook. Salary £200 per annum.

SOUTHAMPTON: ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL.—Casualty Officer. Salary £120 per annum, rising to £130 on appointment as Junior House-Surgeon.

STEPNEY PARISH.—Pathological and Bacteriological Attendant at the Mile End Hospital. Aggregate salary £4 4s. 6d. per week.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—(1) Honorary Medical Registrar. (2) House-Physician. (3) Two House-Surgeons. (4) Honorary Anaesthetist. Honorarium for (1) £100 per annum, and salary at the rate of £100 per annum for (2) and (3).

CERTIFYING FACTORY SURGEON.—The appointment at Saltoats (Ayrshire) is vacant. Applications to the Chief Inspector of Factories, Home Office, Whitehall, London, S.W.1.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

## APPOINTMENTS.

OWEN, Robert Davies, M.R.C.S., L.R.C.P., F.R.C.S.Ed., Honorary Assistant Surgeon to the Ear, Nose, and Throat Department of the Cardiff Royal Infirmary.

WILLIAMS, R. Lester, M.B., B.Ch.Camb., F.R.C.S.Eng., Honorary Surgeon to the Passmore Edwards Hospital, Wood Green, London.

CERTIFYING FACTORY SURGEONS.—C. S. Carter, M.R.C.S., L.R.C.P., for the Kenninghall District (Norfolk); I. Thomas, M.B., Ch.B.Liverp., for the Ponthdygroes District (Cardigan); P. S. Headderson, M.B.Ed., for the Fyvie District (Aberdeen).

## DIARY OF SOCIETIES AND LECTURES.

## ROYAL SOCIETY OF MEDICINE.

*Section of Orthopaedics.*—Tues., 8.30 p.m., Discussion: The Treatment of Acute Osteomyelitis. To be opened by Mr. Henry Platt, followed by Mr. Alexander Mitchell, Mr. Eric Lloyd, Mr. Whitechurch Howell, and Mr. W. H. Ogilvie.

*Section of Pathology.*—Tues., 8 for 8.30 p.m., Laboratory Meeting at the Lister Institute, Chelsea Gardens, S.W.1. G. H. Eagles and D. McClean: On the Growth of Vaccinia in Tissue Culture; R. W. Fairbrother: Cholera Antigens from the Prophylactic Point of View; J. H. Orr and W. A. Campbell: The Action of Welchii toxin on red cells in vitro; M. Robertson: The Behaviour of a Protozoan exposed to Acriflavine; J. C. G. Ledingham and D. McClean: Propagation of Vaccine Virus in Rabbit Dermis; H. Chick, M. H. Roscoe, and M. A. Boas: Pellagra-like Conditions in Rats (demonstration).

*Section of History of Medicine.*—Wed., 5 p.m., Dr. Robert Hutchison: A Biographical Note on Sir James Wyllie, Bt., M.D., a Medical Adventurer. Mr. F. Prescott: Louis Pasteur and Fermentation.

*Section of Surgery.*—Wed., 5.30 p.m., Discussion: Colectomy. To be opened by Dr. T. de Meert (Paris).

*Section of Bacteriology.*—Thurs., 5 p.m., Discussion: The Value of Marine Health Resorts, with a Special Reference to Children. To be opened by Dr. Fortescue Fox, followed by Dr. Percy Lewis (Folkestone), Dr. W. C. Willoughby (Eastbourne), Dr. Collis Hallowes (Torquay), Dr. G. R. Bruce (Hastings), Dr. W. S. Campbell (Sudmouth), Dr. W. G. Sutcliffe (Margate), Dr. Octavia Willerforce (Brighton).

*Section of Venereology.*—Thurs., 8.30 p.m., Discussion: Narcolepsy. To be opened by Dr. S. A. Kinnier Wilson.

*Clinical Section.*—Fri., 5 p.m., Cases.

*Section of Ophthalmology.*—Fri., Clinical Meeting at St. Thomas's Hospital at 5 p.m. (Tea at 4.30). Cases.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W.1.—Thurs. and Thurs., 5 p.m., Milroy Lectures by Dr. F. A. E. Crew: Individual, Familial, and Racial Inborn Differences in respect of Immunity and Disease Resistance.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.1.—Wed., 9 p.m., Third Lettsomian Lecture by Dr. F. J. Fosnot: Rheumatic Heart Disease in Childhood.

WEST KENT MEDICO-SURGICAL SOCIETY, Miller General Hospital, Greenwich Road, S.E.10.—Fri., 8.45 p.m., Dr. Maud M. Chadburn: The Radium Treatment of Cancer of the Cervix Uteri.

## POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Lecture at Medical Society of London, 11, Chandos Street, W.1: Mon., 5 p.m., The Chronic Abdomen. *British Institute of Radiology*, 32, Welbeck Street, W.1: Tues., 3 p.m., X-Rays as an Aid in the Diagnosis of Abdominal Disease (demonstration of radiographs). *Hospital for Diseases of the Throat*, Golden Square, W.1: Wed., 3 p.m., Clinical Demonstration. The above lecture and demonstrations are open to all members of the medical profession without fee. *Chelsea Hospital for Women*, Arthur Street, S.W.3: Special Course in Gynaecology, some mornings and some evenings; fee £5 ss. *Queen's Hospital for Children*, Hackney Road, E.2: Intensive Course in Diseases of Children; fee £3 ss. Luncheon and tea provided. *Royal Eye Hospital*, Southwark, S.E.1: Demonstrations and Treatment of Diseases of the Eye at 3 p.m., Mon. to Fri. inclusive; fee 41 s. Copies of syllabuses sent on application to the Fellowship of Medicine; 1, Wimpole Street, W.1. Specimen copies of the *Post-Graduate Medical Journal* will be forwarded on request.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.9.—Wed., Clinical Meeting. Tea at 4 p.m.

CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Fri., 4 p.m., Diseases of the Maxillary Antrum.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Thurs., 4 p.m., Errors of Refraction and Squint.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs., 4 p.m., Abdominal Pain.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Tues., 5 p.m., Leukaemia Cutis, Mycosis Fungoides. Thurs., 5 p.m., Pemphigus and Allied Eruptions.

NATIONAL HOSPITAL, Queen Square, W.C.1.—Mon., Tues., Thurs., Fri., 2 p.m., Out-patient Clinics. Tues. and Fri., 9 a.m., Operations. Mon., 12 noon, Pathology of the Nervous System; 3.30 p.m., The Epilepsies. Tues., 3.30 p.m., The Psychoneuroses. Thurs., 3.30 p.m., Methods of Testing the Eighth Nerve. Fri., 12 noon, Anatomy and Physiology of the Nervous System; 3.30 p.m., Some Forms of Encephalitis.

SOUTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 p.m., Demonstration of Skin Cases; 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 p.m., Demonstration of Medical Cases (Children); 2.30 to 5 p.m., Surgical, Medical, and Children's Disease Clinics; Operations.

ROYAL CHEST HOSPITAL, City Road, E.C.—Tues., 3.15 p.m., Demonstration of Cases in the Wards.

ROYAL INSTITUTE OF PUBLIC HEALTH, 37, Russell Square, W.C.1.—Wed., 4.30 p.m., Some Problems in Medico-Legal Practice.

ST. PAUL'S HOSPITAL, Endell Street, W.C.2.—Thurs., 4.30 p.m., Stone in the Upper Urinary Tract and its Treatment.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION, St. James's Hospital, Ouseley Road, Batham, S.W.12.—Wed., 4 p.m., The Medical Dyspepsias.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE

10 a.m. to 1 p.m., Genito-urinary Operations  
Wards: 2 p.m., Surgical Wards. Eve and  
Department: Special Lecture at 4.30 p.m., C  
10 a.m. to 1 p.m., Lecture at 4.30 p.m., C  
Electrical Department: 2 p.m., Venereal Diseases Demonstration,  
Department. Wed., 10 a.m. to 1 p.m., Medical Wards, Throat, Nose, and Ear  
Demonstration; 2 p.m., Surgical Wards, Eve Department.  
10 a.m. to 1 p.m., Neurological Department, Massage Department. Thurs.,  
Eye Department, Genito-urinary Department, Gynaecological; 2 p.m.,  
Fri., 10 a.m. to 1 p.m., Skin Department, Medical Wards, Special  
Medical Treatment Clinic, Electrical Department, Clinical Demonstra-  
tion; 2 p.m., Throat, Nose, and Ear Department; Special Lecture,  
4.30 p.m., Diagnosis and Treatment of Middle-Ear Infections. Sat.,  
9.30 a.m. to 1 p.m., Bacterial Throat Department; Children's Medical  
Department, Throat, Nose, and Ear (except Sat.) at  
2 p.m., Medical and Surgical

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Western Infirmary:  
Wed., 4.15 p.m., Venereal Diseases (male).

MANCHESTER: ANCONTS HOSPITAL.—Thurs., 4.15 p.m., Exophthalmic Goitre. Tea served at 3.45 p.m.

MANCHESTER ROYAL INFIRMARY.—Thurs., 4.15 p.m., Lecture: Mucous Colitis. Fri., 4.15 p.m., Demonstration of Medical Cases. Tea at 3.45 p.m.

SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.—At Royal Infirmary: Fri., 3.30 p.m., Surgical Cases.

Hampstead Division: Hampstead General Hospital. Dr. G. A. Sutherland on the Heart in Acute Infections, 8.30 p.m.  
Nuneaton and Tamworth Division: Tamworth General Hospital. Portsmouth Division: Queen's Hotel, Southsea. Dr. A. Livingstone will give an address, 9.30 p.m. Supper 9 p.m.  
Wakefield, Pontefract, and Castleford Division: Strafford Arms Hotel, Wakefield. Dr. R. A. Veale on Common Skin Diseases, 7.45 p.m.
- 9 Fri. London: Science Committee, 2.30 p.m.  
Chesterfield Division: Maternity Hospital, Chesterfield. Mr. G. S. Simpson on the Value of Operations, 8.15 p.m.
- 13 Tues. London: Committee on Causation of Puerperal Morbidity and Mortality, 2.30 p.m.  
London: Central Ethical Committee, 2 p.m.
- 14 Wed. London: Hospitals Committee, 2.15 p.m.  
Croydon Division: Croydon General Hospital. Mr. A. H. Todd on Various Hip Cases, 4 p.m.  
Lanarkshire Division: St. Enoch's Station Hotel. Dr. Charles Read on Teeth in Relation to Health, 3.30 p.m.
- 15 Thurs. London: Insurance Acts Committee, 12 noon.
- 16 Fri. London: Lunacy and Mental Disorder Committee, 2.30 p.m.  
Border Counties Branch: Storms Farm Dairy, Keswick. Mr. J. A. Spedding on the Production of Certified Milk, 3 p.m.
- 21 Wed. London: Medico-Political Committee, 2.15 p.m.

## BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcement of Births, Marriages, and Deaths is 9s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.

## BIRTHS.

COLLETT.—At Cheltenham, on February 11th, 1928, to Dorothy Collett, M.B., Ch.B.St.And. (née Millar), wife of Lieut.-Colonel G. F. Collett, D.S.O., a son.

GOMOX.—On February 28th, 1928, to Dr. and Mrs. T. R. Gordon (née Dorothy M. Harris, M.B., Ch.B.), of 39, Wellwood Road, Goodmayes, Essex, a daughter.

McCALLUM.—On February 21st, 1928, at the Clarendon Nursing Home, Glasgow, to the wife of Gavin McCallum, M.B., Ch.B., 16, Nottingham Avenue, Glasgow, W.2, a daughter.

TOPPING.—On January 15th, 1928, at 64, Binscarth Road, Toronto, Canada, to Agnes H. Topping, M.B., B.S., and Victor Topping, M.A., C.E., a second son.

## DEATH.

WILLIAMS.—On February 27th, 1928, suddenly, Sir Dawson Williams of Marlow Cottage, Bourne End, Bucks, late Editor of the *British Medical Journal*, aged 73. Funeral at Little Marlow Cemetery, Friday, March 2nd, at 3.30 p.m. No flowers.

# SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL.

LONDON, SATURDAY, MARCH 10TH, 1928.

### THE FUTURE OF HOSPITAL SERVICES.\*

BY

SIR RICHARD H. LUCE, K.C.M.G., C.B.,  
F.R.C.S., M.P.,

FORMERLY SURGEON TO THE DERBY ROYAL INFIRMARY.

I do not think I need apologize for the subject of this address. The press has recently been full of it, and all of us who are interested in the treatment of the sick and in the effect that any changes which the future may bring forth will have on the health of the people and on the medical profession will have been thinking about it during the last few months. I confess that, as chairman of a subcommittee detailed by the Hospitals Committee of the British Medical Association to try and work out a policy on the subject from the professional point of view, it has seldom been absent from my mind, and that I have felt a heavy responsibility in a very difficult task.

There is no doubt that a change in the position of hospitals has been going on for some years. The development of institutional treatment as against home treatment has advanced by leaps and bounds, and the demand for accommodation in hospitals is increasing out of all proportion to the increase of population.

The reasons for this are not far to seek. The complexity and expense of modern methods of treatment, combined with the dependence which those methods have on skilled nursing, have made it almost impossible for them to be carried out in a private house. Even among the quite well-to-do the domestic problem has made the conversion of the modern household into a temporary hospital a very difficult business, and the nursing homes, at the best, are an unsatisfactory substitute for a well-equipped hospital, and are beyond the means of the ordinary householder. Moreover, improvements in the comfort and humanity of the hospitals, and the great success of the treatment they afford, have almost entirely removed that dread of institutions which was so widespread, even within the memory of many of us.

There is a school of medical thought that regrets the fact that so large a proportion of medical work should be drifting into institutions, and would like to make an effort to stem the tide. Even if there were something in this view, which I do not admit, most of us would agree that it is impossible. The tendency must be faced, and the medical profession must adapt itself to the changing circumstances.

Until recently the vast majority of the hospitals of this country, founded in the past as charitable institutions, have been maintained by voluntary contributions. The management has been in the hands of boards elected for the most part by the regular annual subscribers to the

funds, though for some years there has been increasing representation on the boards of those workmen who make weekly subscriptions. Since the war, owing to the vastly increased cost of maintenance, most of the hospitals have passed through a time of great financial stress, and for a year or two it looked as if the voluntary funds would not be sufficient to keep them going.

This fear has for the most part proved to be groundless owing to the wonderful way in which the working classes—those who benefit by the hospitals—have come to their rescue. This has been done in a number of ways which have varied considerably in different parts of the country. In some places it has been effected by a system of graduated payments for treatment received; in others by a great increase in the subscriptions of the working classes through their Saturday funds and the like; and within the last two or three years by the introduction of definite contributory schemes by which the contributor of a weekly sum is exempted from any charge for treatment and obtains a sort of right, though generally without any definite contract, to receive treatment, when he requires it, in the hospitals covered by his contributory scheme. This comes very near to being an insurance against those forms of sickness which require institutional treatment. But it is not quite an insurance, because no definite promise of accommodation is made, and the premium is hardly ever sufficient to cover the whole cost of maintenance and treatment of the patient. A considerable proportion of the cost has still to be borne out of the charitably subscribed funds and endowments of the hospital.

#### THE HOSPITAL SYSTEM AND THE STATE.

At the same time a great development of State medicine has been going on which brings it into direct relations with the hospital system.

The State has always recognized some responsibility for the medical care of the poor. It has provided a Poor Law medical service for those who are certified to be unable to provide medical treatment for themselves, and Poor Law hospitals, for sick and infirm paupers, in connexion with the workhouses. It has for many years also provided institutions for the insane and for those who are suffering from infectious diseases. But in recent years still further advances have been made. A succession of Acts has been passed in which State responsibility has been admitted for new classes of cases. The pregnant mother, the young baby, the school child, the tuberculous, those suffering from venereal disease, and the ex-soldier have all in turn been declared to be objects for State responsibility, and public bodies have been authorized to provide treatment for them, including hospital treatment when this is necessary. In some cases this has been done by arrangement with the existing voluntary hospitals on a contract basis, but in others the responsible bodies have provided their own institutions and services.

\*An address given to a joint meeting of the Lincoln Division of the British Medical Association and the Lincoln Medical Society.

Furthermore, among those with socialist tendencies there has been growing up a desire to provide hospital treatment at the expense of the State for the whole community.

In 1920 the Labour party formulated a hospital policy in which, to quote from their report, they visualized "a completely organized hospital service, with receiving stations, cottage hospitals, and national hospitals ramifying throughout the length and breadth of the country, all working together for the speedy cure of individual sufferers, and for raising the standard of health of the whole nation. Each hospital should become the health centre of the district which it serves, and all medical activities should be gathered within its walls. The hospital system would be but part of an organized public medical service, controlled and inspired by the Ministry of Health, but administered by enlarged and reorganized local health authorities. It considers that the public medical service, including the hospital service, should be financed by the local health authorities, assisted by substantial grants-in-aid from the Ministry of Health, and should be free and open to all."

This appears to be a very pretty and idealistic scheme on paper, but from our point of view it is completely bureaucratic and would sound the death knell of the voluntary system on which the vast majority of our hospitals have been built up, to which a large proportion of the community is deeply devoted, and to which the medical profession have almost unanimously declared themselves to be wedded.

#### THE VOLUNTARY HOSPITALS.

*Policy of the British Medical Association.*  
The British Medical Association hospital policy, fully discussed and passed almost unanimously at successive Representative Meetings, lays down (Sect. II, para 5):

The Association records its belief that the voluntary method of administration of the voluntary hospitals of the country is to the advantage of the public, medical science, and the medical profession, and that it should be maintained."

What are our reasons as a profession for this belief? Let us look at the comparative records of the two systems in the past. No one could be exactly proud of the way in which the State, under its Poor Law system, has so far dealt with the sick under its charge. Though there have been some recent improvements, the Poor Law hospitals of the country do not reflect much credit on us as a nation. The responsible authorities have provided accommodation and a modicum of medical treatment for their sick charges, and that is about all. There has been no progressive policy in medical matters, no incentive to medical advance, and no initiative. As Lord Knutsford once said at a conference:

"So long as any department was connected with the State, the bare duty might be done, but no grace would be added to that duty. There never could be a heart-beat in a Government department."

#### The Voluntary System versus State Control.

Compare this with the voluntary hospitals. They have formed the centres of all medical advance, they have undertaken the whole of medical education, they have drawn into their service the best of the medical profession, and they have become the objects of all the sympathetic altruism and self-sacrificing devotion of the nation, and have provided a service which is the admiration of the world. Can we sacrifice all this for an idealistic paper scheme?

We believe that the voluntary system is best for four reasons:

- (1) Because State bureaucratic control kills freedom and initiative, damps scientific ardour, and is fatal to medical advance.
- (2) Because State medicine is extravagant medicine. With the public purse behind it, it has no incentive to economy and creates an army of officials whose work generally hampers rather than helps.
- (3) Because State control would remove that healthy rivalry and competition between individual hospitals which does so much to maintain their standard of efficiency and progress.
- (4) Because it would deprive the nation of that object for sympathetic sentiment and altruistic service which the hospitals afford them to-day, and the patients of the advantages which that sympathy and service brings them.

Can we gauge the views of the great public, who use the hospitals, on the subject? They have, of course, never been definitely expressed, but I firmly believe that in as

far as they have thought the subject out, they think as we do. Some of the working men governors of my own hospital at Derby, themselves declared socialists in other matters, have expressed their firm belief in the maintenance of the voluntary system. The working classes have shown their devotion to the voluntary hospitals by the enthusiastic way in which they have worked for them and rallied to their support in time of need.

There is, therefore, in my view no organized body of opinion, except that of a few theoretical socialists, which desires State control in our hospitals, and the great majority would do much to prevent their falling into its clutches. At the same time, whatever our wishes may be, it cannot be denied that there is a drift that way, and that economic pressure may eventually be too strong to prevent it.

In what directions may that economic pressure make itself felt?

First, there is the doubt whether, under the voluntary system, the hospitals will be able to develop fast enough to meet the demands of the public for treatment. When the Labour party drew up their statement of policy they estimated that there was a shortage of 107,906 beds in the United Kingdom. They based their estimate on a need for 2½ beds per 1,000 of population. The absurdity of this estimate and the falseness of the data on which it was based were exposed by Mr. Bishop Harman on behalf of the British Medical Association at the conference held under the auspices of the Labour party in May, 1924; but that there was then, and still is, a shortage is proved by the long waiting lists which most voluntary hospitals have for admission.

#### The Shortage of Beds in Voluntary Hospitals.

The Voluntary Hospitals Commission in its interim report of 1924 (p. 14) said:

"It cannot be maintained that the total accommodation is adequate to meet the increasing demands. The provision of additional accommodation is essential if the success of the voluntary system in the future is to be secured."

In the meantime the number of beds provided by voluntary hospitals has been growing steadily, and the money to support them has somehow been obtained also. The reports of the Joint Council of the Order of St. John and the British Red Cross Society on voluntary hospitals (excluding London) show that the number of beds in these hospitals had grown from 42,652 in 1922 to 47,515 in 1926—an increase of 11 per cent. in four years, and in spite of the increase the financial position of the hospitals is certainly no worse than it was at the earlier date. The number of beds in voluntary hospitals in London was 13,270 in 1922. In 1926 it was 14,470—an increase of 9 per cent. In addition to this, owing to better organization, the number of patients passed through the hospitals per bed has increased.

This is no small achievement for voluntarism, and shows that it still has great vitality. It cannot be denied, however, that the waiting lists of many hospitals are still far too long. This means that unnecessary suffering has to be endured, and that the community is losing a good deal of man power which might be saved to it if treatment could be carried out more expeditiously. It must be remembered, too, that this delay continues in spite of the fact that part of the pressure has been relieved in some places by the extended use of State and municipal hospitals. We cannot be certain, moreover, that the hospital tendency has yet reached its zenith. On the whole, signs go to show that it has not, and that further big expansions will be needed. There must therefore be some doubt, in spite of the wonderful efforts it has made in the past few years, if the voluntary system can alone accomplish all that is needed. In view of the extraordinary efforts that are now made, sometimes by rather doubtful expedients, to extract so-called voluntary subscriptions, it is hard to imagine where greatly increased revenues could be obtained.

#### Use of Poor Law Hospitals as General Hospitals.

A second dynamic force bringing its pressure on the voluntary system is the slow but steady increase in the activities of State medicine already referred to. By the

invasion of new branches of medicine, and by the development of the Poor Law hospitals into general hospitals, they are coming into direct competition with the voluntary hospitals.

This is an insidious force and one which is difficult to harness and direct. The proposed reform of the Poor Law, now probably postponed for a time, but inevitable in the near future, with the abolition of the guardians and the municipalization of all their medical and hospital responsibilities, would at once raise the question in an acute form. Even at present a good deal of work is going on in the direction of improving old guardian hospitals and building new ones, which, with better equipment and increased staffs, are already undertaking a good deal of the medical and surgical work which was previously done almost exclusively by the voluntary hospitals. It is only natural that this should happen, and, if it goes undirected and uncontrolled, the movement may eventually have a serious effect on the voluntary hospitals. With the public purse behind them, and the not unnatural desire on the part of the local government managers to make good, they will prove very formidable competitors. There is the possibility also that when they see that the State authorities are providing a hospital service out of public money raised by taxation to which they are forced to contribute, the public will be less and less inclined to subscribe voluntarily to voluntary hospitals also, and that the sources of voluntary and charitable contributions will be dried up.

This is a very real danger, and unless something is done to direct the new development and demarcate the respective functions of voluntary and publicly supported hospitals, the rivalry is likely to go on and eventually cripple the voluntary system without any real wish on the part of the public that this should happen.

A contingency that would effectively seal the fate of the voluntary system is the possible advent of a Labour Government determined to carry out its avowed policy of establishing a complete medical service. Such an event is on the knees of the gods, or, in view of impending legislation, on the place where the laps of the goddesses used to be. At a non-political meeting there is no need to discuss this contingency further, and the method of preventing it is obvious.

#### *Should the Voluntary Hospitals come under State Control?*

The present Minister of Health, Mr. Neville Chamberlain, has, I think, realized the position of affairs as regards the hospitals, and is anxious to do something to remedy the present confused position lest, in view of the possible contingency to which I have referred, a worse thing should happen to them.

In his own repeated statements in Parliament and elsewhere he has made it clear that he fully appreciates the good points of the voluntary system, and wishes to incorporate what he can of it in any future developments that may have to be undertaken by the Government. In the House of Commons, on December 1st last, the following question was asked:

Whether, in his proposals for the reform of the Poor Law and reorganization of the health services of the country, the Minister of Health contemplates that the voluntary hospitals should or would come under the control of the State or the local authorities.

To this Mr. Chamberlain replied:

No, Sir. On the contrary, I regard the preservation of the voluntary hospital system as a matter of essential importance in the health interests of the country. What has been impressed on my mind is the absence as a general rule at present of any systematic arrangements for co-operation in the various areas of the country between the voluntary hospitals and the hospitals and institutions carried on by the local authorities. I have therefore suggested that it is advisable that there should be consultation in the various areas with a view to arriving at an agreed plan for institutional provision which would enable each kind of hospital to play its proper part in meeting the ever-increasing need of the people for hospital accommodation. I should anticipate that under such a plan the position of the voluntary hospitals would be strengthened and not weakened, but I have never contemplated putting any compulsion upon them to come into an arrangement, their participation in which would be a matter for their own determination.

The consultation took the form of a series of questions

issued by the Ministry to the British Hospital Association for consideration by voluntary hospitals in conjunction with local authorities. They deal with the following very important points, and are to be answered in accordance with local conditions.

(1) The practicability of allocating special categories of cases, according to the hospital accommodation in the area, to voluntary and public hospitals respectively. (It is to be understood that by public hospital he means guardian or municipal hospital.)

(2) The possibility of co-ordinating and demarcating the provinces of the two classes of hospital.

(3) How such co-ordination or demarcation would modify any schemes of enlargement in hand or in contemplation.

(4) In what respect, if any, is the shortage of beds most serious—for example, surgical, medical, gynaecological, maternity, or orthopaedic? Is there vacant accommodation in public hospitals suitable or capable of being adapted for the type of case for which accommodation is specially needed?

(5) The possibility of establishing by agreement between the voluntary hospitals and the local authorities some clearing house to assist in the co-ordination.

(6) To what extent and under what conditions could the medical staffs of the voluntary hospitals undertake responsibility for cases or a definite number of beds in public hospitals, so that the patients may be secured of the special type of experience required.

These questions raise the whole matter—namely, the possibility of detailing special functions to the newly developed local government hospitals, of co-ordinating the work of the individual hospitals in their respective functions, and of ensuring that the local government hospitals shall be able to obtain the services of the same class of consultants that the voluntary hospitals have at present.

It is the duty of the medical profession as one of the interested parties, and as being probably the body best able to give an opinion on the subject, to formulate their ideas and to be in a position to give their opinion to the Minister.

In trying to do this, it is well to consider what we believe to be the essential medical services for the needs of the country.

#### THE ESSENTIAL MEDICAL SERVICES.

These are well considered and laid down in the interim report of the Consultative Council on Medical and Allied Services published in 1922, known as Lord Dawson's Report, with its primary health centres, secondary centres, and supplementary services. The proposals of that report are perhaps elaborated in too great detail, and the carrying of them out would require very considerable new additions to present provisions and a too great dislocation of existing ones. The essential requisites, as it appears to me, are:

(1) That there should be for every locality an efficient public service of preventive medicine dealing with sanitation, epidemics, and other group diseases.

(2) That every individual should have access to a general medical practitioner, who will have personal charge of his health as an individual, and who will have at his disposal some form of institution in which he can treat that individual when he cannot be adequately treated in his own home.

(3) That there should be within reasonable distance a group of consultants in all the ordinary specialties whose services will be available to help the general practitioner when he needs help.

(4) That there should be, also within easy access, an institution to which the individual can be sent for special advice, investigation, and treatment when his case requires it.

The cottage hospitals, where they exist, and at present they exist only in country districts, furnish the institutions for the general practitioner, and the general hospitals of our big towns provide the more fully equipped institutions for special consultations, investigation, and treatment, and they have as their staffs the group of consultants needed to assist the general practitioners.

The public health part of the scheme is already well developed, and corresponds with the local government areas. The individual part, though already largely existing in most parts of the country, is incomplete, ill-defined, and practically not at all co-ordinated, nor does it correspond usually with existing local government areas. Moreover, from the haphazard way in which the voluntary hospitals have grown up, there are often subsidiary hospitals and special hospitals in addition to the main general hospital

in any given area, and now there is arising the added complication of municipal and guardian hospitals, which are beginning to undertake the same sort of work that was previously done in the voluntary general hospitals, and to come into competition with them.

Unless some sort of co-ordination and demarcation of function can be brought about, there will be increasing confusion and overlapping.

It seems, therefore, that the time has come to try to bring some order out of this chaos, and, without destroying those elements of voluntarism in management which we consider to be so essential, to introduce a scheme on which the whole of the hospital services may hang together. This can only be done by the establishment of some central body, which, while having the confidence of all the parties concerned, and having sufficient authority to make its influence felt in a co-ordinating capacity, will at the same time carefully refrain from interfering with the individual units and allow them to manage their own affairs and develop along their own lines with the greatest possible amount of freedom.

#### *A Central Hospital Council.*

The first step would be to form a Central Hospital Council, appointed by the Ministry of Health. Its functions would be to advise on the general policy of hospital development, and to act as a communicating body between the Ministry and the local hospital committees of areas. The Voluntary Hospitals Commission already existing, though no longer functioning, could form the basis of this Council if it were reorganized to represent the other interests that will have to be brought into the scheme, such as the local government hospitals.

#### *Local Area Committees.*

The second step would be to map out the country into areas and appoint Local Area Committees. The areas should be large enough for their committees to deal with all the local governing bodies and all the hospitals in the area. They would probably, though not necessarily, correspond with county areas, as this arrangement would greatly facilitate their organization. The existing voluntary hospital local committees, adapted to suit their new functions, might form the basis of the hospital area committees.

There would be some difficulties in the employment of the county as the basis of the area, as in many cases the existing voluntary hospitals go well outside their own counties for their patients and spheres of interest. The local areas, on whatever basis they were formed, would probably contain more than one big general hospital, and would have to be subdivided into groups of hospitals, each with its own administrative subcommittee.

The *raison d'être* for the formation of such a group would be:

- (a) The needs of the population as ascertained by experience.
- (b) The existence of a suitable central or primary general hospital.
- (c) The position and grouping of the secondary hospitals round it.

The qualifications for a hospital to become a central or primary one would be:

- (a) That it is of adequate size and of sufficient superiority as regards staffing and equipment.
- (b) That it acts as a consultative centre.
- (c) That it is able to deal with the investigation of the more difficult cases.
- (d) That it undertakes the more specialized methods of treatment.

A hospital with which a medical school is attached would naturally fulfil these requisites, and they would be fulfilled also by most of the general hospitals of our provincial towns. Under existing conditions the primary hospitals would generally be one of our bigger voluntary general hospitals. In some cases there may be existing municipal hospitals which with some development will be suitable to take their places as primary hospitals. In other cases, especially in newly developing centres of population, where experience shows that a group should be formed, but in which there is no existing hospital suitable to take its

place as a primary hospital, such a one will have to be developed.

The duties of the group hospital subcommittees would have to be carefully defined and limited so as not to interfere with the autonomy of the individual hospitals, and would not include interference with internal finance, management, or the election of governing bodies and staffs. Its functions, chiefly advisory, might include the following:

- (a) The co-ordination of the admission and transference of in-patients.
- (b) The establishment of a clearing house or bureau to carry this out.
- (c) To advise on and direct the development of new hospital accommodation for the area.
- (d) The co-ordination of the ambulance transport service.
- (e) The insurance of a uniform system of accounts and records.
- (f) The organization and distribution of massed voluntary contributions.
- (g) The distribution of any Government grants-in-aid that may become available.

#### *Co-ordination of Hospitals.*

In any attempt to co-ordinate the various hospitals in an area, and possibly to demarcate separate functions to individual hospitals, the most important point to remember is the educational function of the primary hospital. In those hospitals with which a recognized medical school is associated this function is obvious, but it is by no means confined to them, because every general hospital is a school inasmuch as it is the training ground of its staff. The residents are all in reality advanced students learning the practical work of their profession, and the honorary staff themselves obtain their experience and train themselves and one another in their particular specialties in them, and can only really reach the requisite standard to become the consultants of their area by the practice they obtain in the hospitals.

It is essential, therefore, that a primary hospital shall not be debarred from dealing with any class of cases that may be useful from an educational point of view. It is likely that the primary hospitals will be used more and more also as centres for post-graduate and refresher work for those practitioners of the area who care to take advantage of them.

One of the most difficult parts of the work of co-ordination will be the fitting of the secondary hospitals into their position in the general scheme.

The place of cottage hospitals is simple. They will be general practitioners' hospitals, and will be equipped for, and cater for, the work which can usefully be done by them.

Special voluntary hospitals have grown up in a somewhat haphazard way to fill the gaps and provide the additional beds required in the area for their specialties; and without in any way making them subservient to the primary hospitals, or interfering with their complete freedom as units, I think much can be done to prevent overlapping and to ensure that they too may serve a useful function by carrying on their special work and by making use of their material for educational purposes.

The question of the new and newly developing public hospitals is more difficult, but it is in order to do something to bring them into line with the scheme and to prevent their becoming competitive and overlapping that the co-ordinating machinery is really necessary. As already stated, a few of them, such as some of the big Poor Law and municipal hospitals of London and some of the biggest towns, are already almost fit to be primary hospitals, and others may be developed so as to become so, but the majority will only be needed to complete and fill in gaps of the work of the existing voluntary primary hospitals.

These institutions will still have to provide accommodation for those chronic cases which have never come within the scope of the voluntary hospitals, and in future, with better equipment and more complete staffs, they will also be able to deal with a great mass of surgical and medical work which cannot at present be carried out by the voluntary hospitals owing to lack of beds.

There is no doubt that to enable them to do this many of them will have to be remodelled or rebuilt, and they will have to be staffed on a much more ample scale. But I see no reason why this should not be done, nor why they

should not drop into a very useful and satisfactory position in the general scheme, when they will do much to relieve the existing congestion in the treatment of the waiting cases. To enable them to do their part satisfactorily it will be necessary that they shall be able to call on the services of the best consultants in the area, and there is no reason why this should not be done on a part-time basis, as at present in the voluntary hospitals. Naturally, as the work will be work for the State, and not for a charitable institution, the staffs will have to be remunerated. There will be many difficulties to overcome, one of the greatest of which will be to establish working agreements between the local governing bodies which control the Poor Law hospitals and the managers of the voluntary hospitals. This will be one of the main functions of the Group Committees. Without some such co-ordination I foresee nothing but a continuance of competition and strife, which may end badly for the voluntary system.

#### Conditions in London.

I have so far not referred to London, where there are special conditions. Most of the big voluntary hospitals are grouped in the centre, and a large mass of their work comes from the periphery and with much overlapping, but there is no reason why a system of groups should not grow up there like the segments of an orange, with the pips at the centre; and the fact that the primary hospitals would be chiefly grouped near the centre would be no great bar to a successful organization. Already in London, as was described by Dr. Graham Little in his letter to the *Times* in January, a considerable amount of co-ordination between some of the big teaching hospitals and the municipal hospitals in their neighbourhood is in existence. A few of the municipal hospitals of London are already performing almost the functions of a primary hospital; others may ultimately do the same; but as far as can be seen there is no reason why the system of groups should not be applied to London. The King Edward's Hospital Fund organization, adapted for its increased duties, might serve as the basis for its Area Committee.

#### The Position of the General Practitioner.

There is one point to which I wish to make further reference. In the advance of institutional treatment there is a great danger that the general practitioner may be left high and dry; that all the better and more interesting part of his work may be taken from him, and that he may become a mere machine for sorting the more serious from the minor cases, reserving to himself for treatment only the latter. This would have a disastrous effect on him and on the profession generally. In many cases this tendency has been counteracted by the establishment of cottage hospitals, where the general practitioner can treat his own cases, but this has been chiefly confined to county districts. It has been suggested, and is, in fact, part of the policy of the British Medical Association, that greater facilities should be given for general practitioners to take part in the work of the big voluntary hospitals, but I do not think that this is a practical scheme. The beds of these hospitals are wanted, and should be reserved, for cases requiring special investigation and treatment. What is really wanted is the establishment in the towns of general practitioner hospitals, corresponding to the cottage hospitals, where the general practitioner can undertake the care and treatment of his own cases as long as they come within his scope, sending on those which require specialist treatment to the more fully equipped primary hospitals. It is difficult to see how this can be done, and I am afraid that it will only come about if the general practitioners themselves take the initiative and show that they really wish to undertake the work, and persuade the public of the advantages of such a scheme.

#### CONCLUSION.

I have only had time to state the general problem of the future of our hospitals, and to sketch very briefly the lines on which it appears to me that development should take place. If some attempt is not made to co-ordinate the existing services into a homogeneous scheme which will preserve the existing voluntary hospitals as part of that scheme, I foresee no outcome but the gradual extinction of the voluntary system and the substitution of a complete

State organization, with all its dangers and hindrances. I am not sure that we are not fighting a losing battle, and that the ruthless advance of State control may not eventually be too strong for us, but it is one of the characteristics of our race to move slowly in these matters, to patch up and make use of existing machinery, rather than to sweep clean for the introduction of new and more logical systems, and by so doing we are often able to retain the good of the old and gain some advantage from the new. I hope it may be so in our hospital development.

## British Medical Association.

### CURRENT NOTES.

#### Conference of Consulting Pathologists.

At the first meeting of the newly formed group of consulting pathologists, held at the British Medical Association House on March 2nd, Dr. Powell White of Manchester was elected chairman. The conference passed a resolution of sympathy with the family of the late Sir Dawson Williams, late Editor of the *BRITISH MEDICAL JOURNAL*. After a general discussion of the means of providing for pathological services under the National Health Insurance Acts, the following resolutions were passed:

That this conference of consulting pathologists takes this opportunity of placing on record its surprise that, sixteen years after the adoption of the national health insurance scheme, no adequate facilities are yet available under the Acts for the pathological examinations essential to efficient diagnosis, and its hope that as the study of pathological conditions is an essential factor in the successful treatment of disease, such facilities will be supplied without delay.

That this conference is of opinion that the remuneration of pathological work for insured persons should be on the basis of payment for each service rendered, and not by way of a lump sum irrespective of the work done, and further, that the fees charged should be such as adequately to cover the cost of the work done.

The following members were elected by the conference to the Group Committee: Dr. S. C. Dyke (Wolverhampton), Dr. J. G. Greenfield (Golders Green), Professor I. Walker Hall (Pucklechurch, Glos), Dr. A. Renshaw (Manchester), Dr. A. F. S. Sladden (Swansea), and Dr. C. Powell White (Manchester). This committee was instructed to report to the July meeting of the conference on the desirability of adopting a scheme of election for the next committee, based on the principle of geographical representation. The committee was also instructed to consider the conditions of service of pathologists attached to hospitals, the relations between pathologists and general practitioners under the provisions of the Coroners Acts, and the general question of drawing up a scale of fees for services to be rendered by pathologists under the schemes for treatment projected by the Spa Practitioners Group. The committee met directly after the conference, elected Dr. Powell White chairman for the session, and decided to meet on March 23rd to consider the matters referred to it. All members of the British Medical Association who fall within the definition approved by the Council at its last meeting—namely, "members (not being members of the public health service) who are working in an institutional or private pathological laboratory engaged in examining and reporting on specimens for clinical purposes"—are now members of the Consulting Pathologists Group, but it is essential, if they are to enjoy effective membership, that their names should be enrolled in the Group without delay. They are therefore requested to communicate their names and addresses to the Medical Secretary as soon as possible.

#### Medical Officer to General Post Office.

The General Post Office is advertising in the lay press for a whole-time medical officer at a commencing salary of £250 per annum, rising by annual increments of £20 to £600, with a bonus in addition, which brings the commencing salary up to £485 per annum. There are also pension rights. The advertisement was tendered for insertion in the *BRITISH MEDICAL JOURNAL*, but was refused on the grounds of inadequacy of salary. Members of the profession would be well advised to refrain from applying for such a poorly paid post, in which their prospects of advancement are negligible.

## Association Notices.

## TABLE OF DATES.

March 28, Wed.	Nomination papers available (on application at Head Office) for election of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
April 28, Sat.	Annual Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> . Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council and 4 Representatives of Public Health Service in Representative Body.
May 12, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 15, Tues.	Voting papers posted from Head Office, where there are contests in above elections.
May 19, Sat.	Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date. Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
June 2, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 7, Thurs.	Names of Representatives and Deputy Representatives must be received at Head Office by this date.
June 13, Wed.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 21, Thurs.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
June 30, Sat.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 4, Wed.	Annual Representative Meeting, Cardiff, 10 a.m.
July 20, Fri.	Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Annual Representative Meeting, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, *Medical Secretary*.

## BRANCH AND DIVISION MEETINGS TO BE HELD.

**BORDER COUNTIES BRANCH.**—A general meeting of the Border Counties Branch will be held at Storms Farm Dairy, Keswick, on Friday, March 16th, at 3 p.m. Mr. J. A. Spedding will describe and demonstrate the production of certified milk. Other speakers will be Mr. R. Simpson, chief veterinary inspector for Cumberland, and Dr. F. H. Morison, M.O.H. for Cumberland.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at St. Euoch's Station Hotel on Wednesday, March 14th, at 3.30 p.m. A paper on teeth in relation to health (with lantern illustrations) will be read by Dr. Charles Read.

**KENT BRANCH: ASHFORD DIVISION.**—At a meeting of the Ashford Division to be held at the North Street Club, Ashford, on Wednesday, March 21st, at 4 p.m., Mr. G. A. Ewart of St. George's Hospital will give a lecture on abdominal emergencies in general practice. Dr. J. W. McNee will give a lecture on new work in the diagnosis and treatment of hepatic and biliary diseases at a meeting of the Division to be held on April 18th at 4 p.m. A cordial invitation is extended to all members of the Kent Branch.

**LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.**—A meeting of the Hyde Division will be held in the Stalybridge Town Hall on Thursday, March 15th, at 8.30 p.m. Dr. T. B. Williams will deliver his presidential address.

**LANCASHIRE AND CHESHIRE BRANCH: MID-CHESHIRE DIVISION.**—A British Medical Association Lecture will be given at the meeting of the Mid-Cheshire Division to be held in the board room of the Altrincham General Hospital, Market Street, Altrincham, on Tuesday, March 20th, at 8.30 p.m., by Mr. W. Sampson Handley on radium in carcinoma. The lecture will be illustrated by lantern slides, and should prove of great interest to all medical men. Members are requested to bring as many non-members as possible.

**LANCASHIRE AND CHESHIRE BRANCH: ROCHDALE DIVISION.**—A meeting of the Rochdale Division will be held in the Lyceum, Bailie Street (Rochdale Education Committee Offices), on Wednesday, March 14th,

at 8.30 p.m. Business: Election of two representatives on the Lancashire and Cheshire Branch Council; varicose ulcer inquiry; Mr. F. Holt Diggle, surgeon to Manchester Royal Ear Hospital and aural surgeon to Ancoats Hospital, will read a paper on some factors in the prevention of deafness; the subject will be treated from the general practitioner's standpoint.

**METROPOLITAN COUNTIES BRANCH.**—The Metropolitan Counties Branch has arranged a meeting to be held at the British Medical Association House, Tavistock Square, W.C.1, on Thursday, March 22nd. Dr. E. Grahame Little, M.P., will deliver an address on "The future of medical practice: an address to senior students and young practitioners" at 5.30 p.m. Fourth and fifth year medical students and newly qualified practitioners are cordially invited; tea and coffee at 5 p.m.

**METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.**—A clinical meeting of the Camberwell Division will be held at the Bermondsey and Rotherhithe Hospital on Tuesday, March 13th, at 3.30 p.m. Cases will be demonstrated by members of the hospital staff.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The next clinical meeting of the City Division will be held at the Metropolitan Hospital to-day (Friday, March 9th), at 4.30 p.m., when Dr. J. W. Linnell will show cases.

**METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.**—A general meeting of the Kensington Division will be held at the Town Hall, Hammersmith, on Friday, March 23rd, at 8.45 p.m. An address will be given by Mr. C. A. Pannett entitled "Debatable aspects of the surgery of gastro-duodenal ulceration." The subsequent discussion will be opened by Mr. Zachary Cope. Members intending to enter for the Treasurer's Cup golf competition should notify the honorary secretary at once, since the draw will take place early next week.

**METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.**—A meeting of the Marylebone Division will be held at 11, Chandos Street, Cavendish Square, on Thursday, March 15th, at 8.15 p.m. Agenda: (1) nomination of candidates for election to Central Council; (2) election of seven representatives and deputy representatives to Representative Meeting; (3) a lecture, with lantern illustrations, by Dr. Percy Flemming: The Thames from London Bridge to Lambeth, with a note of London's early water supply. Members are cordially invited to bring ladies and friends.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, March 13th, at 9 p.m. Mr. Sidney Boyd will give an address on the diagnosis of surgical emergencies occurring in general practice.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, on Wednesday, March 21st, at 9 p.m. It will be a joint meeting with members of the dental profession, and Mr. H. L. Messenger, L.D.S., will read a paper on focal infection; discussion on matters of mutual interest to follow. The following further meetings have been arranged: April 18th, Dr. J. Bright Bannister: Ante-natal work; May 16th, annual meeting; June 20th, Dr. Margaret Ensie: Care of the infant.

**NORTH OF ENGLAND BRANCH: BLYTH DIVISION.**—The annual dinner of the Blyth Division will be held at the Slin and Garter Hotel, Blyth, on Wednesday, March 21st, at 8 for 8.30 p.m. Dr. Beaton, president of the North of England Branch, has been invited as a guest. Prior to the dinner there will be a meeting to elect officers, who will be formally installed during the function.

**NORTH OF ENGLAND BRANCH: NORTH NORTHUMBERLAND DIVISION.**—The postponed meeting of the North Northumberland Division will be held in the Infirmary, Alnwick, on Tuesday, March 13th, at 2.45 p.m. Agenda: Consideration of annual report; election of representative; fees for medical reports to coroners. At the close of the meeting an address will be given by Mr. H. Evers entitled "Uterine haemorrhage." Tea will be provided.

**SOUTHERN BRANCH: JERSEY DIVISION.**—The next meeting of the Jersey Division will be held at the General Hospital on Thursday, March 15th, at 8.30 p.m. Mr. C. A. Halliwell will read a paper on the treatment of peritonitis.

**SURREY BRANCH: CROYDON DIVISION.**—At the meeting of the Croydon Division to be held on Wednesday, March 14th, at 4 p.m., at the Croydon General Hospital, Mr. A. H. Todd will give a lecture demonstration on various hip cases, in the place of Dr. J. W. Wayte.

**SUSSEX BRANCH: BRIGHTON DIVISION.**—The next clinical meeting of the Brighton Division will be held at the Children's Hospital, Brighton, on Thursday, March 15th, at 3.45 p.m. A Divisional meeting will be held at the Queen's Road Dispensary, Brighton, on Thursday, March 22nd, at 8 p.m. Agenda: Correspondence; nomination for president-elect of Branch; election of deputy representatives for Annual Meeting; proposal to alter Rule V of the officers of the Division shall be a chairman, vice-chairman, treasurer, secretary, and assistant secretary; to consider question of calling a meeting of the staffs of hospitals to discuss the Sussex Provident scheme; annual report of the Division for 1927; reports to coroners; report of Dr. Gemmell on interview with Chief Constable of Brighton regarding police fees; Dr. Fothergill will raise the subject of advertising.

**YORKSHIRE BRANCH: HARROGATE DIVISION.**—A meeting of the Harrogate Division will be held on Saturday, March 17th, at 4.30 p.m. Dr. S. Monckton Copeman will give a British Medical Association Lecture on immunization against diphtheria and scarlet fever, illustrated with lantern slides.

## National Insurance.

INCREASE OF CLAIMS FOR SICKNESS AND  
DISABILITY BENEFIT.

## ATTITUDE OF THE INSURANCE ACTS COMMITTEE.

The following letter has been addressed by the Medical Secretary of the British Medical Association to the Secretary of the Ministry of Health dealing with the remarks made by the Minister of Health about the responsibility of insurance medical practitioners for the increase in the number of claims for sickness and disability benefit, and the interpretation put on those remarks by certain newspapers.

Sir,—At its meeting on February 23rd the Insurance Acts Committee directed me to say that the Committee had been greatly disturbed by the interpretation placed by the lay press of the country upon some remarks made by the Minister of Health at the luncheon of the National Conference of Approved Societies held on the 20th ult. In his remarks the Minister apparently made special reference to the increase in the number of claims for sickness and disability, and is construed by the press as having emphasized as a specially prominent cause of this increase the failure of practitioners to be sufficiently particular about certification, and as having suggested that this was probably due to a fear that persons refused a certificate might go to a competitor.

You will have noted the way in which certain newspapers, some of a responsible character, have utilized these remarks in accusing panel doctors as a class of being (vide the *Times* of February 23rd) unsuited to arrive at judicial decisions about the working capacities of their patients—a charge which the Committee considers to be a very grave reflection on the honour and moral and intellectual stamina of the medical profession. This is only one example. There are others in which the words of the Minister are being used, perhaps with less responsibility but with more venom, in attacking insurance practitioners as a class.

At the present time, and at the request of the Ministry, representatives of the Insurance Acts Committee and of the Ministry are together exploring a position which even preliminary investigation has shown to be very obscure and complex. Such exploration must needs be made even more difficult if an impression is created, and allowed to persist, that the Minister (and possibly his advisers) has already decided where the burden of culpability lies.

The Committee would earnestly request the Minister to take immediate steps to combat the unfortunate construction placed upon his remarks, which is conveying the impression that he has already made up his mind that the increase of sickness claims is due in the main to the fault of the doctors in the service. If this were indeed his opinion it is unnecessary to point out to you how utterly futile it would be for the Insurance Acts Committee to continue with you the discussions, already begun at the time of the Minister's speech, which we believed were to constitute a serious scientific inquiry into a difficult and complex matter.—I am, Sir, your obedient Servant,

ALFRED COX,  
Medical Secretary.

March 1st, 1928.

## Naval and Military Appointments.

## ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander J. A. O'Flynn to the *Ganges*.  
Surgeon Lieutenant Commander S. R. Johnston to the *Dauntless*.  
Surgeon Lieutenant A. de B. Joyce to be Surgeon Lieutenant Commander.  
Surgeon Lieutenants J. P. Henderson to the *Beaufort*; G. Rorison to the *Pembroke* for R.N. Barracks, Gatham; J. W. Nesbitt to the *Fitzroy*; A. E. Kingston to the *Kellett*; J. A. K. Fitzgerald to the *Flinders*.

## ROYAL NAVAL VOLUNTEER RESERVE.

Probationary Surgeon Sublieutenants E. G. Thomas to the *Courageous*; D. G. Evans to the *Champion*; J. D. J. Freeman to the *Renown*.

## ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel J. F. Whelan, D.S.O., O.B.E., having attained the age limit for compulsory retirement, retires on retired pay.  
Major E. G. Stoney retires with a gratuity.  
Major R. O'Kelly, half pay list, late R.A.M.C., retires on retired pay on account of ill health caused by wounds.  
Captain (prov.) Major C. H. G. Penny retires, receiving a gratuity, and relinquishes the rank of prov. Major.  
The following Captains to be Majors: D. Grellin, M.G. (prov.), and T. P. Buist.  
Temporary Lieutenant R. Reynolds relinquishes his commission.  
To be temporary Lieutenants: H. S. Littlepage and G. L. Grieve.  
The following Lieutenants on probation are confirmed in their rank: E. W. Hayward, M. F. N. Griffin, J. J. O'Dwyer, H. A. Ferguson, de L. Carey, M. G. de L'Isle, Sturm, and D. B. O'Sullivan-Beare.  
W. A. R. Ross and P. V. MacGarry to be Lieutenants on probation, and

are seconded under the provisions of Art. 205, Royal Warrant for Pay and Promotion, 1925.

The following have been granted commissions as Lieutenants on probation: G. L. Day, O. T. L. Archer, D. R. W. Burbury, P. J. L. Capon, P. Dwyer, K. McNeill, M. R. Burke, P. W. A. Agnew, J. C. Olfroy, J. W. Kendall, W. A. R. Ross, P. V. MacGarry, and J. G. Weston.

## ROYAL AIR FORCE MEDICAL SERVICE.

Flying Officer J. E. Foran to Palestine General Hospital.

## INDIAN MEDICAL SERVICE.

Colonel G. Browne, D.S.O., and Lieut.-Colonel W. W. Jeudwine, C.M.G., have retired from the service.

Lieut.-Colonel F. E. Wilson, Civil Surgeon, Quetta, is appointed to officiate as Residency Surgeon and Chief Medical Officer in Baluchistan, in addition to his own duties.

Lieut.-Colonel R. W. Anthony, Officiating Surgeon-General with the Government of Bombay, is confirmed in that appointment.

Lieut.-Colonel L. J. M. Deas to be Colonel, vice Colonel R. W. Knox, D.S.O.

Major O. H. Smith, O.B.E., an Agency Surgeon, on return from leave, is posted as Agency Surgeon in Bundelkhand.

To be Captain: A. J. C. Culhane (seniority September 10th, 1923). To be Lieutenants: E. G. Montgomery (seniority July 22nd, 1925), G. F. Taylor (seniority April 29th, 1926). (The notification in the *Gazette* of August 6th, 1927, in so far as it relates to these officers is cancelled.)

The provisional promotion of W. Lawie to the rank of Captain, as notified in Army Department Notification No. 1225, dated September 24th, 1926, is confirmed.

## VACANCIES.

ATH COUNTY HOSPITAL.—(1) Senior House-Surgeon. (2) Junior House-Surgeon. Males. Salary at the rate of £100 and £80 per annum respectively.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL.—Second House-Surgeon (non-resident). Salary at the rate of £150 per annum.

BIRMINGHAM AND MIDLAND HOMOEOPATHIC HOSPITAL AND DISPENSARY.—(1) Honorary Anaesthetist. (2) Honorary Consulting Ophthalmic Surgeon.

BOURNEMOUTH: ROYAL VICTORIA AND WEST HANTS HOSPITAL.—Honorary Medical Officers to the Out-patient Department for the treatment of Nervous Diseases.

BRIGHTON COUNTY BOROUGH.—Resident Medical Officer at the Borough Infectious Disease Hospital and Sanatorium (male, unmarried). Salary at the rate of £350 per annum.

CHANNY CROSS HOSPITAL, W.C.2.—(1) Assistant Surgeon. (2) Surgical Registrar; honorarium £150 per annum.

CONNAUGHT HOSPITAL FOR WILKINSON, WIMBORNE, AND LEXTON.—(1) Honorary Radiologist. (2) Senior Resident House-Surgeon. (3) Junior Resident House-Surgeon. Salary for (2) and (3) at the rate of £100 per annum.

COSHAM MEMORIAL HOSPITAL, Kingswood, Bristol.—Resident Medical Officer (male). Salary £150 per annum.

CROYDON GENERAL HOSPITAL.—Casualty House-Surgeon. Salary £125 per annum.

HEREFORD COUNTY AND CITY MENTAL HOSPITAL.—Second Assistant Medical Officer (male, unmarried). Salary £350 per annum.

HOSPITAL FOR WOMEN, Soho Square, W.1.—Resident Medical Officer. Salary at the rate of £100 per annum.

KING EDWARD VII HOSPITAL, Windsor.—Honorary Ophthalmic Surgeon.

KING'S COLLEGE HOSPITAL, S.E.5.—(1) Two Junior Surgeons. (2) Junior House-Physician for Diseases of Children.

LIVERPOOL OPEN-AIR HOSPITAL FOR CHILDREN, Leasowe.—Junior Medical Officer. Salary £200 per annum.

MANCHESTER: ANCOATS HOSPITAL.—Clinical Assistant to the Ear, Nose, and Throat Department Out-patient Clinic. Fee 10s. 6d. per clinic.

MANCHESTER: ST. MARY'S HOSPITALS.—Two House-Surgeons each for the Whitworth Street West Hospital (Maternity), and for the Whitworth Park Hospital (Gynaecological). Salary at the rate of £50 per annum each.

MERTHYR GENERAL HOSPITAL.—Resident House-Surgeon. Salary at the rate of £100 per annum.

NEWCASTLE-UPON-TYNE CITY AND COUNTY.—Assistant Medical Officer of Health. Salary £750 per annum, rising to £900.

NEWCASTLE-UPON-TYNE: HOSPITAL FOR SICK CHILDREN.—(1) Junior House-Surgeon (non-resident). (2) Resident House-Physician. (3) Resident Senior House-Surgeon. Salary at the rate of £100 per annum for (1) and £95 per annum for (2) and (3).

NIGERIA: MEDICAL RESEARCH INSTITUTE.—Biochemist and Protozoologist. Emoluments £800 per annum, rising to £960, together with seniority allowance, also staff pay at the rate of £150 per annum if possessing a medical qualification.

PALACE SANATORIUM, Montana.—Assistant Physician. Salary £400 per annum.

ROCHDALE INFIRMARY AND DISPENSARY.—Junior House-Surgeon (male). Salary £200 per annum.

ROYAL GWENT HOSPITAL, Newport, Mon.—House-Surgeon. Salary at the rate of £125 per annum.

ROYAL NORTHERN HOSPITAL, Holloway, N.—(1) House-Physician. (2) Obstetric House-Surgeon. Salary at the rate of £70 per annum each.

RUGBY: HOSPITAL OF ST. GROSS.—Senior and Junior Resident Medical Officers (males). Salary at the rate of £150 and £100 per annum respectively.

ST. MARY'S HOSPITAL: INSTITUTE OF PATHOLOGY AND RESEARCH, Paddington, W.2.—Research Studentship. Honorarium at the rate of £200 per annum.

SALFORD ROYAL HOSPITAL.—(1) House-Surgeon attached to the Orthopaedic Department. (2) House-Surgeon. Salary at the rate of £125 per annum each.

SEAMEN'S HOSPITAL SOCIETY.—Assistant Medical Officer at the King George's Sanatorium for Sailors, Liphook. Salary £200 per annum.

SHEFFIELD: ROYAL INFIRMARY.—Ophthalmic House-Surgeon. Salary £80 per annum.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—(1) Honorary Medical Registrar. (2) House-Physician. (3) Two House-Surgeons. (4) Honorary Anaesthetist. Honorarium for (1) £100 per annum, and salary at the rate of £100 per annum for (2) and (3).

WESTMINSTER HOSPITAL, Broad Sanctuary, S.W.1.—Assistant Surgical Registrar. Honorarium at the rate of £50 per annum.

Printed and published by the British Medical Association, at their Office, Tavistock Square, in the Parish of St. Pancras, in the County of London.

### PAY BEDS AND THE FUTURE OF THE VOLUNTARY HOSPITALS.

BY

C. M. WILSON, M.C., M.D., F.R.C.P.

PHYSICIAN TO OUT-PATIENTS, ST. MARY'S HOSPITAL, AND DEAN OF THE MEDICAL SCHOOL; CONSULTING PHYSICIAN TO THE PADDINGTON INFIRMARY.

THE need for these beds is, I suppose, no longer in question. It is a general and everyday experience of physicians in practice that while the homes of the middle class are ill adapted for the treatment of grave maladies, this class can no longer afford nursing home fees. It is not so much that the average minimum weekly fee—nine or ten guineas in Central London and eight guineas in the suburbs—is prohibitive, as that the cost of accessory investigations, such as x rays and laboratory tests, makes the whole procedure impossible. Accordingly this class is seeking institutional treatment, and the question at issue is really whether this will be provided in paying wards of existing hospitals or in special paying hospitals built expressly for that purpose. I am not here concerned with details, which are the province of those who have had experience of such beds in practice. It is my present purpose only to argue that the teaching hospitals in London will be driven to espouse the first alternative, alike for the proper discharge of their educational mission and to safeguard their very existence.

#### *The Position if the Voluntary Hospitals Hold Aloof.*

Consider the position that must arise if the voluntary hospitals fail to make provision of this kind. The middle class will build its own paying hospitals, and will build them, as we are told by an official of King Edward's Hospital Fund for London, for two million persons. That figure is the estimated number of the middle class in London, but it is probable that in the future this tendency will not be confined to the middle class, and that all sections of the community will eventually seek institutional treatment in grave illness. This view is based on certain figures which, in the absence of a register of nursing homes, I had prepared for the Pay Beds Committee of King Edward's Fund. As a result of systematic inquiries, of the first half of the 410 nursing homes in the Buff Telephone Book it would appear that there are in the nursing homes of London between three and four thousand beds, that one-third of these beds have no operating theatre, that less than a quarter are served by a lift, and that almost without exception they have no x-ray apparatus, no laboratory, and no resident doctor. From my own experience of these homes I am impressed with their efficiency, but they would be the first to admit that, owing to these limitations, those who use nursing homes must eventually be faced with a choice between the same two alternatives that now confront the middle class. Either these homes will

become centralized into large pay hospitals, or pay beds in existing hospitals will expand and serve the class now using nursing homes. The change will no doubt come so gradually that individual hardship will scarcely arise. In brief, if the voluntary hospitals hold aloof they must be prepared to see springing up at their doors other institutions that will enjoy the support of all those who can afford more than the maintenance fee now charged by most hospitals to those who are able to pay it.

While this is happening the Poor Law infirmaries will become municipal hospitals, only differing from the voluntary hospitals in the financial attractions they can offer to the resident and visiting staff. This change may seem to many a leap into the future, but to those of us who are intimately associated with these institutions, and who are aware of the change in their character since the war, it is only a matter of time. Mr. Neville Chamberlain may fail for the moment to persuade the Cabinet to father a bill to place the infirmaries under the London County Council, but that measure cannot be long delayed. Further, it is perhaps not generally understood that the development of the infirmaries into municipal hospitals, speaking generally, will not bring up the stumbling-block of capital expenditure. In the main it will mean increasing the number of resident medical officers, enlarging the existing arrangements with consultants, and altering the rules of admission of patients. In the present temper of the democracy it is not conceivable that these municipal hospitals, charged with the care of the sick poor, and with the rates behind them, will be content to stop short of efficiency if that depend only on an increase in annual expenditure.

If this view of the future be correct, a voluntary hospital might find itself between a large municipal hospital with well-paid consultants and residents and a large pay hospital providing institutional treatment for all those who can afford more than maintenance. Those who are friendly to the voluntary system could not view such a contingency without misgiving. On the financial side they might reasonably fear that once the sick poor are efficiently provided for out of the rates, supporters of the voluntary hospital, harassed by increasing taxation, may feel relieved of further responsibility for their care, while by their failure to provide within their walls for those who can afford to pay for treatment they would have lost a golden opportunity of attaching subscribers to their fortunes by new and more personal bonds. There are, in short, sound financial grounds for the view that if the voluntary system with its precious spirit of service is to survive, it must no longer confine its ministrations to one section of the community.

But apart from financial considerations, if a situation of this kind should arise it would probably undermine the efficiency of the voluntary hospitals in other ways. The prestige which they now enjoy depends mainly on their power to attract picked men to their staffs. Whether that power will be impaired if these men can acquire experience in municipal and paying hospitals without the long hours

and years of unremunerative, or at any rate not directly remunerative, toil is at least open to question. An argument of that kind, which opens up the whole source of consultant practice, is beyond the scope of this discussion. This much may, however, be said. It is not wrong ethically that doctors should write on disease in the columns of the lay press, but it is inexpedient, because it is an attempt to enlarge their practice by appealing directly to an ignorant laity, and not, as in the past, to a critical body of general practitioners. If the custom became prevalent it would undermine the necessity for building up a sound reputation in the profession and would put a premium on those who possess only a flair for the frailties of a democracy. It is therefore of some importance to the future of medicine that consulting physicians and surgeons should continue to look to the teaching hospitals as the direct avenue to practice. Plainly the growth of large paying hospitals altogether independent of the teaching hospitals, with the opportunities they would offer of acquiring practice without the intervention of the general practitioner, together with the creation of municipal hospitals paying considerable salaries to their consultants, offer an alternative to the method by which consulting practice has hitherto been built up—an alternative that must be jealously scrutinized if the standards of practice are to be preserved.

#### *Practical Difficulties.*

The needs of the middle class have been widely ventilated of late, and in such discussions general principles have tended to become submerged in a confusion of detail. Speakers have been busy with measures to restrict the scheme to the middle class. They have been preoccupied as to who shall decide if the patient is financially eligible—whether the secretary of the hospital or a special committee—and whether the yearly income shall be declared and the fees charged reported to the committee. But in fact there are but two practical difficulties in opening pay wards in existing voluntary hospitals; the first is concerned with the source from which the initial capital outlay will come, and the second with the position of the general practitioner in any such scheme. Probably financial difficulties will be overcome by public appeals for the necessary funds, and I believe that when the report of the Pay Beds Committee of King Edward's Hospital Fund for London is published it will be found that these appeals will receive the blessing of this Fund. This endorsement is so vital that it is perhaps relevant to give reasons for this view. It would appear from the experience of hospitals which have paying wards already that a weekly charge of five guineas meets maintenance without profit or loss if rent, lighting, and the like are charged by that hospital against these beds. The present proposal provides that the middle class should get at cost price everything that the hospital can provide except medical attendance, and those who are responsible for the administration of the King's Fund have therefore to inquire what are the advantages to the community and to the hospital which justify a section of the community in receiving medical lodging at cost price. They may conclude that the increased support which may be reasonably expected from this large section of the community would react very favourably on the subscriptions to the voluntary hospitals, and indeed that their trust on behalf of the public health is not discharged while such a large proportion of the community is denied the benefit of institutional treatment. They will certainly decide that there is no real difference in principle between taking patients paying three pounds or thereabouts, as is not unusual in the wards of voluntary hospitals at present, and taking patients into those hospitals who should pay five guineas as now proposed, if the hospital makes no profit. The difference is one of degree, not of kind. It may be said that if the doctor is paid that in itself constitutes a departure in principle, but it must be remembered that medical opinion is sharply divided already whether medical men should be paid for treating those patients who now pay for their maintenance in part or in whole, or have this paid for them by the State or by municipal bodies. The question of principle is involved only if money collected for the sick poor is spent on

another class without this indirectly benefiting the sick poor by increasing subscriptions to the voluntary hospitals. But apart from the effect on subscriptions of the desire to provide institutional treatment for the middle class, the authorities of the King's Fund may find a more considerable argument for providing accommodation in existing institutions for members of this class, and it is this—that this step may have a decisive effect in safeguarding the future existence of the voluntary hospitals.

#### *Pay Beds and the General Practitioner.*

It is, however, the second practical difficulty which threatens, if it is not handled with insight, to wreck the whole scheme. A measure of this kind and scope must ultimately stand or fall by its success in winning the support of the general practitioner. Existing schemes have been on too small a scale to arouse his interest or opposition, but if pay wards are to become general the matter would take on a different complexion. Indeed, in spite of the consensus of opinion that these beds are urgently needed they might be difficult to keep filled if the general practitioner was opposed to them. It is not, however, on grounds of expediency, however weighty, that I base my view that practitioners must be in the future more closely associated with hospitals, but rather on broader educational grounds. The day is coming when these pay beds will be found in every institution, great or small, when every doctor in the land, and not a mere fraction of the profession as now, will have frequent opportunities of treating his cases under hospital conditions, where his diagnosis must often pass the test of half a dozen laboratories before it is established, where new knowledge is automatically put before him in the process of proof, and where the cold wind of criticism blows upon credulity. He will remain in contact with his hospital not for a few years before he has obtained a diploma, but throughout his professional life, with incalculable gain to himself and to the whole practice of his calling. I say deliberately that a change of that kind, coming quietly as a side issue to a new demand upon the hospitals, might, by raising the standards of professional efficiency, do more for the health and happiness of the people than many years of considered legislation. Holding this faith—that ultimately no competent practitioner will be excluded from hospital practice—I yet believe that it is only fair to examine the question from the angle of those who are naturally jealous for the fair name and established reputation of the voluntary hospitals. These institutions are responsible for what happens within their walls, and it is plain that even if my view found sympathetic consideration, measures must be taken to safeguard existing standards of treatment and diagnosis.

It is tempting to seek a compromise, to lay down, for example, that general practitioners should be barred from surgery, but should be allowed to look after medical cases, which they already do at the houses of patients. This would probably meet the general practitioners' view, for perhaps few of them unconnected with hospitals do much surgery in London. It would be accepted as reasonable, but it would evade the real difficulty, and it could not meet the higher interests of the profession in safeguarding the standards of hospital medical practice. I am not disposed to support that assertion by elaborating in detail the prevalent view that the treatment of medical cases is necessarily more simple than that of surgical cases. Those who subscribe to such a view are perhaps better aware of the standards that may reasonably be expected in surgery than in medicine. To be precise, the consequences of a technical error in abdominal surgery are more dramatic—shall we say more blatant?—than the production of coma in the treatment of diabetes through ignorance of the laws of metabolism. The medical miscreant is sometimes ignorant of his crimes. The argument goes deeper. Unless the existence of medical consultants on the staffs of hospitals is an anachronism, their existence implies that additional years of study are necessary to acquire the standards of hospital medical treatment. If, in an attempt to exclude the weaker type of practitioner so as to safeguard the reputation of the hospital, the privilege of attending the medical pay wards is extended

only to a certain number of general practitioners, they will come to occupy in the eyes of the public much the same position as that of the medical consultant. Presently, without the additional years of study and without the unproductive hours in the out-patient department, they will reap the same advantages as the consulting staff. This is a state of affairs which is inequitable, and if it came to pass it would not level up, but level down, the whole standards of medical treatment. It would mean that few would be prepared for those additional years of study. Between the natural anxiety of hospitals, especially teaching hospitals, to safeguard the high standards of their institutions on the one hand, and on the other the desire to ensure the success of the scheme and to bring in the better type of practitioner, a way will be found by trial and error. Meanwhile it is undesirable that any higher authority should attempt to enforce on any institution the admission of general practitioners. Some will do so, some will not; experience will decide. For the present, those who have this end at heart must contrive a way out of the dangers I have indicated. We have to disarm a friendly opposition by a practical demonstration that their fears are unfounded.

## British Medical Association.

### CURRENT NOTES.

#### B.M.A. Scholarships and Grants.

##### Scholarships.

THE Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows: An Ernest Hart Memorial Scholarship, of the value of £200 per annum, and three Research Scholarships, each of the value of £150 per annum. These Scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State Medicine) relating to the causation, prevention, or treatment of disease. Each Scholarship is tenable for one year, commencing on October 1st, 1928. A Scholar may be reappointed for not more than two additional terms. A Scholar is not necessarily required to devote the whole of his or her time to the work of research, but may hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment do not interfere with his work as a Scholar.

##### Grants.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the causation, treatment, or prevention of disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

#### Conditions of Award: Applications.

Applications for Scholarships and Grants must be made not later than Saturday, June 2nd, 1928, on the prescribed form, a copy of which will be supplied on application to the Medical Secretary of the Association, B.M.A. House, Tavistock Square, London, W.C.1.

Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated, to whom reference may be made.

#### Medical Charities.

The Charities Committee on March 8th had before it a point of considerable interest, on the application of a medical woman who is a member of the British Medical Association and wishes to secure her son's admission to Epsom College as an exhibitioner. It proved on investigation that, although under the Statute Law Interpretation Act, 1889, words importing "male" in legislation must in many cases be taken to include "female," this

is not necessarily the case in Acts establishing a charitable trust such as those which govern Epsom College, and it seems improbable that any means of admitting the son of a medical woman on similar terms to those laid down for the sons of medical men can be found, short of an amending Act. Such a situation obviously bears hardly upon any medical woman whose circumstances are comparable with those of the medical men in whose interests Epsom College was founded. The Committee is making certain recommendations to the Council which, if accepted, will do something to remedy this unintentional injustice pending the removal of the legal difficulty. The Committee is glad to be able to report an appreciable increase in the contributions at its disposal for distribution to the medical charities, but the sum received is still far from adequate, and an appeal is being made to the chairmen and secretaries of Divisions to increase their efforts to secure the generous support of members.

#### Science Committee.

Among the matters considered by the Science Committee at its meeting on March 9th were the report of the special Subcommittee on Ultra-violet Light, the report of the examiners for the Sir Charles Hastings Clinical Prize Competition for 1928, the subject for the Middlemore Prize Competition in 1929, and the resolutions of the conference with representatives of medical schools. The Committee fully endorsed the opinion of the Ultra-violet Light Subcommittee as to the dangers of the indiscriminate and uninstructed use of treatment by electricity and radiation, and has sent to the Council for submission to the Representative Body recommendations to ensure that when such treatment is dispensed to the public it shall be by persons qualified for the work by an approved course of training and under the personal supervision and direction of a registered medical practitioner. This policy will be submitted to the Council, together with a summary statement of the actual dangers of existing practice in the application of these forms of treatment. The Committee accepted the recommendation of the examiners, Sir Humphry Rolleston and Professor W. E. Dixon, for the award of the Sir Charles Hastings Prize for 1928, and expressed its warm appreciation of their services in reporting upon the papers submitted. It was decided to recommend to the Council the adoption of the following subject for competition for the Middlemore Prize in 1929: "The clinical study of the vitreous body, its swellings, contractions, opacities, and reactions to toxic invasion; with special reference to glaucoma and detached retina." The Committee also considered the minutes of the recent conference of representatives of medical schools on the question of the remuneration of non-professional medical teachers and laboratory and research workers (fully reported in the SUPPLEMENT for February 18th, p. 45), and made certain recommendations on the subject for submission to the next meeting of Council.

#### Sir Charles Hastings Lecture.

The second of the Popular Lectures instituted by the British Medical Association, and associated with the name of its founder, Sir Charles Hastings, will be given by Sir George Newman, K.C.B., Chief Medical Officer of the Ministry of Health and the Board of Education, on the evening of Wednesday, March 21st. Sir George Newman has chosen as the title of his lecture "The fundamentals of health." It will be delivered in the Great Hall of the British Medical Association's House in London, and the chair will be taken at 8 o'clock by Lord Cozens-Hardy. The first Hastings Lecture was given a year ago by Sir Berkeley Moynihan, President of the Royal College of Surgeons of England, on "Cancer and how to fight it," and it attracted widespread public interest. Admission is free by tickets obtainable from the Financial Secretary, B.M.A. House, Tavistock Square, W.C.1. Seats not occupied by ticket holders by 7.50 p.m. will be available for other members of the public.

## Association Notices.

### SALISBURY AND TROWBRIDGE DIVISIONS.

NOTICE is hereby given of the following proposal made by the Trowbridge Division:

That the urban district of Warminster be transferred from the area of the Salisbury to that of the Trowbridge Division.

Written notice of the proposal has been given to the Wiltshire Branch and the Salisbury Division, and the matter will be determined in due course by the Council. Any member affected by the proposed change, and objecting thereto, is requested to write, giving reasons, to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than April 17th, 1928.

Moreh 17th, 1928.

### TABLE OF DATES.

March 28, Wed.	Nomination papers available (on application at Head Office) for election of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Annual Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
April 28, Sat.	Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 12, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 15, Tues.	Voting papers posted from Head Office, where there are contests in above elections.
May 19, Sat.	Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.
June 2, Sat.	Lost day for receipt of Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
June 7, Thurs.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.
June 13, Wed.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members.
June 21, Thurs.	Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 30, Sat.	Nomes of Representatives and Deputy Representatives must be received at Head Office by this date.
July 4, Wed.	Council.
July 20, Fri.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
July 21, Sat.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
July 23, Mon.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 24, Tues.	Annual Representative Meeting, Cardiff, 10 a.m.
July 25, Wed.	Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
July 26, Thurs.	Annual Representative Meeting, Cardiff.
July 27, Fri.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
	Council. Conference of Honorary Secretaries, Cardiff.
	Meetings of Sections, etc., Cardiff.
	Meetings of Sections, etc., Cardiff.
	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: BROMSGROVE DIVISION.**—A meeting of the Bromsgrove Division will be held at the Smallwood Hospital, Redditch, on Monday, March 19th, at 3 p.m. Agenda: To draft rules of organization; election of representative to Annual Representative Meeting; correspondence from headquarters relating to (a) hospital contributory schemes, (b) collective inquiry into varicose ulceration, (c) reports by medical practitioners at request of coroners.

**BOURNEMOUTH AND WEST HANTS BRANCH: WEST DORSET DIVISION.**—A meeting of the West Dorset Division will be held on Tuesday, March 20th, at 8 p.m., at the Weymouth and District Hospital. Agenda: Letter from the Council of the Association concerning reports by medical practitioners at the request of coroners, and action to be taken thereon. Cases will be shown and discussed. Dr. T. Colley will read a paper entitled "Some acute eye conditions met with in general practice."

**KENT BRANCH: ASHFORD DIVISION.**—At a meeting of the Ashford Division to be held at the North Street Club, Ashford, on Wednesday, March 21st, at 4 p.m., Mr. G. A. Ewart of St. George's Hospital will give a lecture on abdominal emergencies in general practice. Dr. J. W. McNeo of University College Hospital will give a lecture on new work in the diagnosis and treatment of hepatic and biliary diseases, at a meeting of the Division to be held on April 18th at 4 p.m. A cordial invitation is extended to all members of the Kent Branch.

**LANCASTHIRE AND CHESHIRE BRANCH: MID-CHESHIRE DIVISION.**—A British Medical Association Lecture will be given at the meeting of the Mid-Cheshire Division to be held in the board room of the Altrincham General Hospital, Market Street, Altrincham, on Tuesday, March 20th, at 8.30 p.m., by Mr. W. Sampson Handley on radium in carcinoma. The lecture will be illustrated by lantern slides, and should prove of great interest to all medical men. Members are requested to bring as many non-members as possible.

**METROPOLITAN COUNTIES BRANCH.**—The Metropolitan Counties Branch has arranged a meeting to be held at the British Medical Association House, Tavistock Square, W.C.1, on Thursday, March 22nd. Dr. E. Graham Little, M.P., will deliver an address on "The future of medical practice: an address to senior students and young practitioners" at 5.30 p.m. Fourth and fifth year medical students and newly qualified practitioners are cordially invited; tea and coffee at 5 p.m.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—A combined clinical meeting and dinner of the Hendon Division will be held at the Brent Bridge Hotel on Friday, March 30th, at 7.45 for 8 p.m. An address will be given by Dr. W. Langdon Brown, physician to St. Bartholomew's Hospital, on organotherapy in general practice, to be followed by a discussion. All medical practitioners are cordially invited. Dinner tickets 8s. 6d.

**METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.**—A general meeting of the Kensington Division will be held at the Town Hall, Hammersmith, on Friday, March 23rd, at 8.45 p.m. An address will be given by Mr. C. A. Pannett entitled "Debatable aspects of the surgery of gastro-duodenal ulceration." The subsequent discussion will be opened by Mr. Zachary Copo.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, March 20th, at 8.45 p.m., when Dr. W. E. Hallinan will occupy the chair. Mr. H. Wansey Bayly will deliver an address on the general practitioner and the prevention of venereal disease.

**METROPOLITAN COUNTIES BRANCH: STRATFORD DIVISION.**—A meeting of the Stratford Division will be held in the board room, Educational Offices, The Grove, Stratford, on Tuesday, March 20th, at 9.15 p.m. A lecture on the differential diagnosis of small-pox, with special reference to the difficulty of mild cases, will be given by Dr. William McConnell Wanklyn, consultant in small-pox, London, Middlesex, and Essex County Councils. It is hoped that all members will endeavour to be present.

**METROPOLITAN COUNTIES BRANCH: WESTMINSTER AND HOLBORN DIVISION.**—A meeting of the Westminster and Holborn Division will be held on Thursday, March 22nd, at 8.30 p.m., at Romano's Restaurant, Strand, preceded by a dinner at 7.30, the price, 5s., payable to the secretary at the table. Mr. P. B. Tustin, F.R.San.L., will read a paper on modern methods in the production and treatment of milk.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden General Hospital, Harlesden Road, on Wednesday, March 21st, at 9 p.m. It will be a joint meeting with members of the dental profession, and Mr. H. L. Messenger, L.D.S., will read a paper on focal infection; discussion on matters of mutual interest to follow. The following further meetings have been arranged: April 18th, Dr. J. Bright Bannister: Ante-natal work; May 16th, annual meeting; June 20th, Dr. Margaret Emslie: Care of the infant.

**NORTH OF ENGLAND BRANCH: BISHOP AUCKLAND DIVISION.**—The annual dinner of the Bishop Auckland Division will be held at the King's Hall Café, Bishop Auckland, on Tuesday, March 27th, at 7.45 for 8 p.m.

**NORTH OF ENGLAND BRANCH: BLYTH DIVISION.**—The annual dinner of the Blyth Division will be held at the Star and Garter Hotel, Blyth, on Wednesday, March 21st, at 8 for 8.30 p.m. Dr. Beaton, president of the North of England Branch, has been invited as a guest. Prior to the dinner there will be a meeting to elect officers, who will be formally installed during the function.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A scientific meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, March 21st, at 8.15 p.m., when Mr. H. Evers will give a lecture entitled "The place of the uterine curette." All members of the Division are invited to be present.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—A clinical meeting of the Portsmouth Division will be held at the Royal Portsmouth Hospital on Thursday, March 22nd, from 3 to 5 p.m.

**SURREY BRANCH: CROYDON DIVISION.**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Tuesday, March 20th, at 8.30 p.m. Dr. H. C. Cameron will discuss acute abdominal pain in children.

**SUSSEX BRANCH: BRIGHTON DIVISION.**—A meeting of the Brighton Division will be held at the Queen's Road Dispensary, Brighton, on Thursday, March 22nd, at 8 p.m. Agenda: Nominations for president-elect of Branch; election of deputy-representatives for Annual Meeting; proposal to alter Rule V of the Division.

officers of the Division shall be a chairman, vice-chairman, treasurer, secretary, and assistant secretary"; to consider question of calling a meeting of the staffs of hospitals to discuss the Sussex Provident Scheme; annual report of the Division for 1927; reports to coroners; report of Dr. Gemmell on interview with Chief Constable of Brighton regarding police fees; Dr. Fothergill will raise the subject of advertising.

**WEST SOMERSET BRANCH:**—A meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital on Tuesday, March 27th, at 3.30 p.m. Agenda: Health propaganda in the county; coroners' fees; and a paper by Dr. L. H. C. Birkbeck entitled "Twenty-five years of a country hospital." Tea will be served at the conclusion of the meeting.

**YORKSHIRE BRANCH: DONCASTER DIVISION:**—A meeting of the Doncaster Division will be held at Parkinson's Café, High Street, Doncaster, on Thursday, March 22nd, when Professor G. Lovell Gulland, Edinburgh University, will give a British Medical Association Lecture on the significance of heart murmurs. Dinner, at 8 p.m., will precede the lecture.

**YORKSHIRE BRANCH: HARRGATE DIVISION:**—A meeting of the Harrogate Division will be held on Saturday, March 17th, at 4.30 p.m. Dr. S. Monckton Copeman will give a British Medical Association Lecture on immunization against diphtheria and scarlet fever, illustrated by lantern slides.

## Meetings of Branches and Divisions.

### KENT BRANCH: AFTON DIVISION.

A MEETING of the Ashford Division was held in February, when Dr. DONALD PATERSON gave a very interesting and instructive address on some digestive diseases in children and infants.

### LANCASHIRE AND CHESHIRE BRANCH: SALFORD DIVISION.

At the annual general meeting of the Salford Division the following officers were elected for the present year:

*Chairman*, Dr. Bradley. *Vice-Chairman*, Dr. Elias. *Secretary*, Dr. Jenkins. *Representative in Representative Body*, Dr. Giles.

The meeting passed a resolution recording their sense of loss at the deaths of Dr. Cantley and Dr. Watkins.

### METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held on February 21st at the Town Hall, Catford, with Dr. W. E. HALLINAN in the chair.

Dr. J. STANLEY WHITE gave an address on some recent aspects of biological therapy, which was illustrated by lantern slides and a film in two parts, entitled "How biological products are made." In the course of his address Dr. White dealt with the preparation of antitoxin and its value, immunization against scarlet fever, and the treatment of tuberculosis and scabies.

On the motion of Dr. A. W. HARRIS, seconded by Dr. HALLINAN, a hearty vote of thanks was accorded to Dr. White for his very interesting and instructive address.

### NORTH OF ENGLAND BRANCH: CLEVELAND DIVISION.

THE annual dinner of the Cleveland Division took place on February 18th at the Grand Hotel, Middlesbrough. Ninety members and guests were present, the latter including the Mayor and Mayoress of Middlesbrough, the Archdeacon of Cleveland, the chairman and secretary of the Stockton Division, and the stipendiary magistrate of Middlesbrough. This was the first occasion on which the Division allowed ladies to be present, and full advantage was taken of the innovation. The toast of "The Cleveland Division" was proposed by Dr. M'GONIGLE and responded to by the chairman, Dr. H. MINNIE LEVICK, who described the great improvement in professional conditions that had taken place since she commenced practice in Middlesbrough about the time of the formation of the Middlesbrough and District Medical Society, which on the reorganization of the Association became the Cleveland Division. The toast of "The Sister Professions" was proposed by Dr. A. S. ROBINSON and responded to by Archdeacon LINDSAY and Mr. M. P. GRIFFITH-JONES, K.C. That of "The Ladies" was proposed by Dr. T. M. BODY and replied to by Mrs. W. S. DICKIE. "The Town and Trade of Middlesbrough" was proposed by Dr. F. J. HENRY and responded to by the Mayor and Alderman B. O. DAVIES. Dr. R. E. HOWELL proposed the health of "The Chairman," who replied.

### SURREY BRANCH: GUILDFORD DIVISION.

A MEETING of the Guildford Division was held at the Royal Surrey County Hospital, Guildford, on February 2nd, when the chair was taken by Dr. FLEMING.

Mr. WALTER G. SPENCER deputized for Sir D'Arcy Power and gave an address entitled "The French expedition to Egypt with Larrey as chief surgeon"; it was illustrated by wall maps and old French history books, and dealt with events of great political, scientific, and medical interest. Mr. Spencer first referred to the threat of invasion of England 130 years ago and the French expedition to Egypt, which was a raid upon British overland trade. This expedition included a scientific commission, which constituted itself the *Institut d'Egypte* in August, 1798, and published memoirs; its chief discovery being the Rosetta stone. Mr. Spencer next gave an account of the adventurous life of Dr. Dominique Larrey, who accompanied the expedition, and

referred particularly to his surgical skill with regard to immediate amputation, operations being performed successfully by him which had never been previously attempted in the field, and seldom even in the best hospitals at the time; of 111 amputations of the shoulder, Larrey recorded 97 survivals. Mr. Spencer also gave numerous details of Larrey's medical work, including the treatment of plague, cholera, and other diseases. Larrey remained in Egypt for two years after Bonaparte left, and returned to France in 1801, thus missing the Italian campaign and the battle of Hohenlinden. He was subsequently head of the ambulances of the Imperial Guard, and was present during the retreats from Moscow and Waterloo, after which he was in charge of the Invalides, and practised in Paris. He died in 1842, after a journey, at the age of 76, in North Africa. Mr. Spencer was cordially thanked for the great amount of interesting detail he had given about the history and medical practice of those times.

## National Insurance.

### PROPOSED CHANGES IN ADMINISTRATION AND IN TREATMENT BENEFITS.

THE Minister of Health has presented to Parliament a bill to amend the existing national health insurance legislation, the new proposals being based mainly on the majority report of the Royal Commission on Health Insurance. Accompanying the bill is a financial memorandum explaining in detail the effect of the measures suggested on the liability of the Exchequer. There has also been published a memorandum (Cmd. 3051) explanatory of the bill, which is of particular service, because the bill is, as an amending measure, comprehensible only when read in conjunction with the Act of 1924 and other relevant statutes. The proposals embodied in the bill deal mainly with administration or organization, but in several important points affect the medical side of national health insurance. No changes are proposed in the rates of contribution; neither is it proposed to abolish Insurance Committees nor to deal with the pooling of surpluses of societies. It is stated in the explanatory memorandum that the substance of the measure has received the general concurrence of the Approved Societies Consultative Councils and the Scottish Board of Health.

One of the major clauses of the bill deals with the position of persons whose insurance status is affected by their being genuinely unemployed. The memorandum explains that, under the consolidating Act of 1924, insured persons who cease to be employed remain entitled to all benefits (subject to reduction or suspension by reason of arrears) for twelve months, after which they cease to be insured for national health insurance. Their title to medical benefit only is, however, continued for a further period, averaging nine months, and during this period they are treated as insured persons for the purposes of the Widows', Orphans', and Old Age Contributory Pensions Act, 1925. Temporary legislation has been employed since 1921 to extend year by year the continuance in insurance of persons who were in regular employment but have ceased to be employed, so long as they have not taken up a non-insurable occupation. The position has been found unsatisfactory, in so far as insured persons have not been entitled to sickness and disablement benefits during a period averaging nine months, though in that period they may be incapable of work and entitled to medical benefit. Further, it is stated, persons have been retained in insurance for protracted periods, and have continued to be entitled to certain benefits, although they have not been genuinely unemployed, but have ceased from work voluntarily and have paid no contributions.

#### Position of the Unemployed.

The aim of the new provisions is to secure, as far as possible, that no penalty will attach to "genuine unemployment." All persons ceasing to be employed will remain fully insured for all benefits for an average period of one year and nine months, during which time benefits will be free from any reduction for arrears so far as they are due to genuine unemployment. Under certain conditions to be defined, a further year's extension may be given, with sickness and disablement benefits at not less than half rates. Where sickness causes unemployment the reckoning of the one year and nine months' extended insurance will not begin until the termination of sickness. A genuinely unemployed person is therefore to be given a

continuous period, averaging two years and nine months, before his insurance can be terminated, and if he returns to employment before the end of this period he avoids any break in the continuity of his insurance, both for health insurance and for pension. Provision is also made to prevent genuine unemployment causing persons to lose their title to old age pension, and for placing voluntary contributors on an equally favourable footing with that to be enjoyed by others. Power is to be taken under the bill to make regulations under which no penalties will be attached to arrears of any member which are due to genuine unemployment, and provision is made to give financial assistance to societies to assist them to bear the resulting additional burdens. It is stated that the maximum additional cost to the Exchequer is approximately £40,000 a year.

Several clauses are designed to prevent the recurrence of known abuses of the existing Act. Where benefit is being withheld from an insured person by reason of his receiving maintenance in a hospital, it is provided that at least part of the benefit shall be paid to his dependants, if any. Such action is at present left to the discretion of the approved society. Money not required for the above or for other purposes accumulating during the stay of persons in institutions must not be paid, it is proposed, in lump sums (except in the case of maternity benefit), but by weekly instalments, and the total must not exceed £50, any balance going to the central fund, which is a fund available for liquidation of deficiencies of societies on valuation.

The 1924 Act provides for the recognition, under certain conditions, of medical institutions through which insured persons may elect to receive medical benefit instead of under the normal arrangements from insurance practitioners. The Act also allowed insured persons in certain circumstances to make their own arrangements for medical benefit, and in a few cases, it is alleged, advantage has been taken of the latter provision to permit of the existence of medical institutions which have not been recognized under the former provision, and which do not in some respects satisfy the requirements of the Ministry. To meet this, the bill provides that the original recognitions shall all be annulled, though institutions now recognized will be entitled, within a prescribed period, to apply for fresh recognition, and a clause has been put in the bill to render the abuse named above impossible in future. In hospitals and similar institutions where the nursing and domestic staff obtain their medical treatment from the medical staff, a saving clause will permit the continuance of the "collective own arrangements."

#### New Additional Benefits.

At present approved societies are allowed to make subscriptions or donations to hospitals or similar charitable institutions out of the general benefit fund, and Insurance Committees have a similar right. In addition to retaining as an additional benefit the right of societies to make payments towards the cost of the treatment of their members in hospitals, the bill provides a new additional benefit under which the societies may, out of any disposable surplus, make payments to approved charitable institutions in respect of any treatment of members that is provided by the institution for the prevention or cure of disease, not being treatment within the scope of any other additional benefit or of medical benefit. Societies having no disposable surplus may also make occasional small subscriptions to hospitals or other charitable institutions out of the ordinary benefit fund, subject only to the consent of the Minister. The right of Insurance Committees to make similar payments is retained, subject to the consent of the Minister. Further, provision is made for societies to grant out of a disposable surplus occasional subscriptions or donations, up to a prescribed maximum, as charitable gifts to hospitals or similar charitable institutions, or for medical research. It is proposed to strengthen the power of the Minister to secure the maintenance of a proper standard in the administration of additional treatment benefits, which are now being given to the extent of about £4,000,000 a year.

The position of deposit contributors is dealt with in a clause which proposes the creation, for those who prove

that they are unable by reason of the state of their health to secure admission to an approved society, of a special group (the Deposit Contributors' Insurance Section), in which they will, for most purposes, be on the same footing as members of societies, receiving the ordinary benefits, but not the additional benefits, and will be freed from the disabilities they have hitherto suffered by reason of their inferior insurance status. As this section will be composed entirely of "bad lives," special arrangements are proposed to secure its solvency.

Other changes proposed include the addition of two new classes of workers within the scope of compulsory insurance, and a provision that insured women who cease work on marriage shall receive sickness benefit at the normal rate, and not at a reduced rate as at present, and that there shall be no reduction of maternity benefit for arrears.

An important "additional benefit" under the 1924 Act—namely, medical treatment and attendance of dependants of insured persons—is not retained in the bill.

The Act is intended to come into operation on July 2nd, 1928.

### INCREASE OF CLAIMS FOR SICKNESS AND DISABILITY BENEFIT.

#### POSITION OF THE MINISTER OF HEALTH.

The following letter has been received by the Medical Secretary of the British Medical Association from the Ministry of Health in reply to the letter by the Medical Secretary, reproduced in last week's SUPPLEMENT, requesting the Minister to take steps to combat the construction placed upon his recent statement regarding the increase of claims for sickness and disability benefit, and the responsibility of the medical practitioners concerned.

Sir,—I am directed by the Minister of Health to refer to your letter of March 1st, expressing the concern of the Insurance Acts Committee at the interpretation placed in some quarters upon certain remarks made by him at the luncheon of the National Conference of Approved Societies on February 20th, and to state that it will be observed from the report in the issue of the *National Insurance Gazette*, dated February 25th, that in that part of the speech to which, apparently, reference is made, he gives three possible reasons for the increase in sickness claims.

The Minister has not himself seen statements in the press which have particularly referred to his observations as the foundation of any general charge against general practitioners; he is aware that such charges have been made, but he thinks that they are based upon other statements than that to which attention is drawn in your letter.

The Minister believes the Insurance Acts Committee would agree that, as he said, some practitioners have not been as particular as they might be, but the best answer to any charge that such laxity is widespread would be the report of the joint investigations of the Insurance Acts Committee with officers of the Ministry which are now in progress, and which are in themselves the best proof that neither he nor his advisers have already made up their minds about the problem which is being investigated.—I am, Sir, your obedient servant,

March 7th, 1928.

W. A. ROBINSON.

### Correspondence.

#### Private Medical Practice.

Sir,—I have read Dr. Fothergill's article, with its concluding anthem of "Home, Sweet Home," and at the same time I had just finished reading an article on Thomas Paycocke of Coggeshall, clothier, by Miss Eileen Power. In it I read:

"It was characteristic of the period in which he lived (c. 1500) that something like a miniature factory system was establishing itself in the midst of the new outwork system. It was as though, long before it established itself in England, they had a preview of the factory system, and of the worker no longer owning either his raw material, his tool, his workshop, or the produce of his industry, but only his labour; the master weaver dwindled to a hired hand."

Industry was organized in the eighteenth and nineteenth centuries. I believe the medical profession is now undergoing a similar organization into clinics and hospitals. The community insists on having the best medical treatment. The clinics and the hospitals have been, and are now, driving it into its brain that they are the only people who can do this by their superb organization and equipment. Village and small town life has been changed by railways, motors, electricity, etc. Holmes

would have said: "Let me recommend for your serious consideration, my dear Fothergill, the increase in flats and the decrease in domestic servants."

The whole country is becoming one commune, and consequently the people's lives will be dominated by central organizations. Medical work, carried on as this generation has known it, is doomed. *Tempora mutantur, nos et mutamur in illis*, and it does not matter a scrap whether we like it or not. What we must try to avoid is the suffering and misery which the hand-loom weavers endured whilst being converted into factory hands. That is where the British Medical Association will come in.—I am, etc.,

Southend-on-Sea, March 5th.

FERDINAND REES, M.D.

#### Change of Doctor.

SIR,—The new regulation in reference to the change of doctor by panel patients seems to have been framed without due consideration of all eventualities. That it is necessary not to encourage patients to change when actually under treatment in the course of an illness no one will deny, although I believe that some provision under the Act should be made whereby they may be able to obtain a second opinion, or even a third, in the same way as private patients can. What would happen, for instance, if an insured person, who has never been ill, wishes to have another doctor than the one whose name happens to be on his medical card in case of sudden illness; or if he has, rightly or wrongly, been dissatisfied with his own doctor, in the course of a previous illness, and consequently desires a change at the beginning of a subsequent illness? What an awkward situation the enforcement of the new procedure would create, both for the patient who would thereby be deprived of the right enjoyed by everybody else, and for the new doctor of his choice, who could not start attending the patient at the commencement of his illness, but only after such time as prescribed by the new regulation.

To deprive people who are well, or who require attendance on the occasion of a fresh illness, of the right of change at any time is certainly not what is usually understood by freedom of choice, which insured persons are supposed to enjoy fully under the Act. I think the point I have raised deserves some consideration so that the anomaly, not to say injustice it involves, may be removed.—I am, etc.,

Greenhithe, March 4th.

D. W. STANDLEY.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander J. A. Clark-Hall to the *Pembroke* for R.N. Hospital, Great Yarmouth.  
The seniority of Surgeon Lieutenant H. H. Fisher has been antedated to November 5th, 1925.  
Surgeon Lieutenants E. R. Sorley to the *Irish* for R.N. Hospital, Plymouth; E. V. Barnes to the *Ambuscade*; C. B. Fox to the *Amazon*.

### ROYAL NAVAL VOLUNTEER RESERVE.

The following have entered as probationary Surgeon Sublieutenants: A. Elliott, attached to List 2 of the Bristol Division; D. M. Craig, attached to List 2 of the London Division; W. Greaves, attached to List 2 of the Tyne Division.

### ROYAL ARMY MEDICAL CORPS.

The following Captains to be Majors: M. B. King, M.C., October 1st, 1927 (substituted for notification in the *London Gazette* of October 14th, 1927); D. G. Evans, September 7th, 1926 (substituted for notification in the *London Gazette*, September 10th, 1926); D. C. Scott, G.I.R., October 14th, 1926 (substituted for notification in the *London Gazette*, October 15th, 1926); W. E. K. Coles, December 25th, 1926 (substituted for notification in the *London Gazette*, December 31st, 1926); J. E. Brooks, June 21st, 1927 (substituted for notification in the *London Gazette*, June 21st, 1927); W. J. Robertson, July 1st, 1927 (substituted for notification in the *London Gazette*, July 12th, 1927); D. Fettes, July 19th, 1927 (substituted for notification in the *London Gazette*, July 26th, 1927); E. Underhill, July 26th, 1927 (substituted for notification in the *London Gazette*, August 2nd, 1927); W. G. D. McCall, M.C., August 2nd, 1927 (substituted for notification in the *London Gazette*, August 12th, 1927); R. F. Walker, M.C., September 1st, 1927 (substituted for notification in the *London Gazette*, September 9th, 1927); L. M. Rowlette, D.S.O., M.C., September 8th, 1927 (substituted for notification in the *London Gazette*, September 15th, 1927); H. S. Moore, October 9th, 1927 (substituted for notification in the *London Gazette*, October 14th, 1927); L. S. C. Roche, M.C., November 8th, 1927 (substituted for notification in the *London Gazette*, November 15th, 1927); B. L. Davis, O.B.E., January 4th, 1928 (substituted for notification in the *London Gazette*, January 17th, 1928).  
C. V. D. Rose, late Flight Lieutenant, R.A.F. Medical Service, to be Captain with seniority next below A. E. Campbell.

### ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leaders P. T. Rutherford, O.B.E., to Princess Mary's R.A.F. Hospital, Hulton; P. C. St. C. Morton to Pathological Laboratory, Hulton; F. J. Murphy to No. 2 Flying Training School, Digby; T. McClurkin to Far East Flight.

Flight Lieutenant T. V. O'Brien to Pathological Laboratory, Hulton.  
Flight Lieutenant C. V. D. Rose resigns his permanent commission on appointment to a commission in the R.A.M.C.

The following are granted permanent commissions in the ranks stated:—Flight Lieutenants: A. F. Cook, E. J. Jenkins, and J. Magner. Flying Officers: L. Freeman and G. S. Strachen.

Flying Officers J. P. Hederman and E. J. Mockler to be Flight

Cooley to R.A.F. Depot, Uxbridge; C. P. O'Toole to Bireham Newton.

### RESERVE OF AIR FORCE OFFICERS: MEDICAL BRANCH.

Flight Lieutenant J. C. T. Fiddes relinquishes his commission on completion of service.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Major G. Bnillie, having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers.

#### SUPPLEMENTARY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS.

Lieutenant W. Boyd resigns his commission.

### TERRITORIAL ARMY.

#### ROYAL ARMY MEDICAL CORPS.

Honorary Colonel J. Griffiths, C.M.G., T.D., vacates the appointment of Honorary Colonel, R.A.M.C. Units, 54th (East Anglian) Division, T.A., on completion of tenure.

Colonel G. A. Troup, T.D., to be Honorary Colonel, R.A.M.C. Units, 54th (East Anglian) Division, T.A.

Major J. Allan, T.D., having attained the age limit, is retired, and retains his rank, with permission to wear the prescribed uniform.

Lieutenants N. W. Hammer and C. M. Bradley to be Captains.

S. J. Hartfall to be Lieutenant.

Superintendents for Service with the Officers' Training Corps.—Captain D. McNeill resigns his commission.

### TERRITORIAL ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Captain F. J. Whitelaw from Active List to be Captain.  
General Hospitals.—Captain F. G. Armstrong, having attained the age limit, relinquishes his commission and retains his rank.

## VACANCIES.

ASHTON-UNDER-LYNE DISTRICT INFIRMARY.—Third House-Surgeon (male).

Salary at the rate of £150 per annum.

AYLESFORD: BRITISH LEGION VILLAGE.—Junior Physician as Second Assistant. Salary £100 per annum.

BIRMBODYS LUNATIC ASYLUM.—Assistant Medical Superintendent. Salary £500 per annum, rising to £600.

CAMBRIDGE: ADDENBROOK'S HOSPITAL.—(1) House-Surgeon to the Special Departments. (2) House-Surgeon. Males. Salary at the rate of £120 per annum each.

CHANDLER CROSS HOSPITAL, W.C.2.—(1) Assistant Surgeon. (2) Surgical Registrar. Honorarium £150 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—Physician to Out-patients.

COSSHAM MEMORIAL HOSPITAL, Kingswood, Bristol.—Resident Medical Officer (male). Salary £150 per annum.

DERBYSHIRE HOSPITAL FOR SICK CHILDREN.—Resident Medical Officer (lady). Salary at the rate of £150 per annum.

DUMFRIES: CRICHTON ROYAL MENTAL HOSPITAL.—Clinical Pathologist (male, unmarried). Salary £400 per annum, increasing to £700.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Assistant Surgeon.

EAST LOTHIAN COUNTY COUNCIL.—Medical Officer of Health. Salary £800 per annum.

EVELINA HOSPITAL FOR CHILDREN, Southwark, S.E.1.—(1) Medical Radiographer; honorarium £120 per annum. (2) House-Surgeon, (male); salary at the rate of £120 per annum.

FORTHAMPTON PARISH COUNCIL.—Medical Officer and Public Vaccinator for the Farnham District. Annual income probably from £650 to £700.

GLASGOW ROYAL INFIRMARY.—Laboratory Assistant to the Biochemist. Salary £250 per annum.

HONG-KONG.—Two Assistant Medical Officers of Health. Salary £740 per annum, rising to £1,050.

IPSWICH: EAST SUFFOLK AND IPSWICH HOSPITAL.—(1) House-Physician. (2) House-Surgeon. (3) House-Surgeon for Ear, Nose, and Throat Department as well as General Surgery. Salary at the rate of £100 per annum each.

LIVERPOOL HEART HOSPITAL.—Honorary Assistant Physician.

MARCHESTER VICTORIA MEMORIAL JEWISH HOSPITAL.—Senior House-Surgeon (male). Salary £250 per annum.

MERTHYR GENERAL HOSPITAL.—Resident House-Surgeon. Salary at the rate of £100 per annum.

MERZBURGH ASYLUMS BOARD.—Junior Assistant Medical Officer at The Towns Hospital for Children, Sutton. Salary £500 per annum.

MIDDLESBROUGH UNION.—Assistant Resident Medical Officer for the Holgate Hospital. Salary £250 per annum.

NORWICH: NORFOLK AND NORWICH HOSPITAL.—Honorary Surgeon in charge of Ear, Nose, and Throat Department.

NOTTINGHAM GENERAL DISPENSARY (BRANCH).—Resident Lady Surgeon. Salary £250 per annum, rising to £300.

PAISLEY DISTRICT ASYLUM.—Clinical Assistant (non-resident). Salary at the rate of £100 per annum.

PLYMOUTH: SOUTH DEVON AND EAST CORNWALL HOSPITAL.—(1) House-Surgeon (male). (2) House-Physician. Salary at the rate of £50 per annum.

PRINCE OF WALES'S GENERAL HOSPITAL, Tottenham, N.15.—(1) House-Surgeon. (2) Special House-Surgeon. (3) House-Physician. (4) Junior House-Surgeon. (5) Junior House-Physician. Salary at the rate of £120 per annum for (1), (2), and (3), and £80 per annum for (4) and (5).

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—Physician in charge of Skin Department.

ROCHDALE INFIRMARY AND DISPENSARY.—Junior House-Surgeon (male). Salary £200 per annum.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—Resident Anaesthetist.

SHANGHAI MUNICIPAL COUNCIL.—Second Assistant Commissioner of Public Health. Salary Taels 600 per mensem.

SOUTHAMPTON: FREE EYE HOSPITAL.—Locumtenent Ophthalmic House-Surgeon. Salary £6 6s. per week.

SOUTH LONDON HOSPITAL FOR WOMEN, Clapham Common, S.W.4.—(1) House-Physician. (2) Three House-Surgeons. Females. Salary at the rate of £50 per annum each.

STOKE AND WOLSTANTON UNION.—Second Assistant Resident Medical Officer at the London Road Institution. Salary £200 per annum.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—(1) Honorary Medical Registrar. (2) House-Physician. (3) Two House-Surgeons. (4) Honorary Anaesthetist. Honorarium for (1) £100 per annum, and salary at the rate of £100 per annum for (2) and (3).

WESTON-SUPER-MARE HOSPITAL.—Resident Medical Officer (male, unmarried). Salary £130.

WHITEHAVEN AND WEST CUMBERLAND HOSPITAL.—Junior House-Surgeon. Salary at the rate of £100 per annum.

WILKESDEN GENERAL HOSPITAL, Harlesden Road, N.W.10.—Resident House-Surgeon (male, unmarried). Salary at the rate of £100 per annum.

WILTS COUNTY COUNCIL.—Assistant County Medical Officer of Health and Assistant School Medical Inspector. Salary £600 per annum.

CERTIFYING FACTORY SURGEON.—The appointment at Westerham (Kent) is vacant. Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

MEDICAL REFEREE UNDER THE WORKMEN'S COMPENSATION ACT, 1925, for the Districts of the Axminster, Honiton, Tiverton (Circuit No. 57); Exeter, Newton Abbot and Torquay (Circuit No. 58) County Courts. Applications to the Private Secretary, Home Office, Whitehall, London, S.W.1, by April 4th.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

### APPOINTMENTS.

FOX, I. S., M.B., Ch.B. Liverp., Certifying Factory Surgeon for the Chester District.

HUDSON, Eric H., M.R.C.S., L.R.C.P., House-Surgeon, Taubridge Wells and Counties General Hospital.

MILNE, Miss Isabella Agnes, M.B., Ch.B. Glas., Junior Resident Assistant Medical Officer at the Booth Hall Infirmary for Children, Manchester, E.

NICOL, W. W., M.B., Ch.B. Aberd., Certifying Factory Surgeon for the Inverurie District, Aberd.

STEVENS, W. E., M.B., B.S. Durh., Medical Superintendent of the Ministry of Pensions Hospital, Maghull.

### DIARY OF SOCIETIES AND LECTURES.

#### ROYAL SOCIETY OF MEDICINE.

Special General Meeting of Fellows.—Tues., 5.30 p.m.

Section of Pathology.—Tues., 8.30 p.m., Election of Officers and Council for 1928-29. Communications.—Cuthbert Dukes: Observations on Pyuria; S. P. Bedson and J. Bland: Cross Immunity between Vaccina and Herpes Virus; J. H. Orr and W. A. Campbell: The Action of Welch's Toxin on Red Cells in vitro. Demonstrations by R. W. Searl: Carcinoma of Oesophagus, Mycin Kidney.

Section of Urology.—Thurs., 8.30 p.m., Discussion: Treatment of Stricture by Excision. To be opened by Mr. Frank Kidd.

Section of Disease in Children.—Fri., 4.30 p.m., Cases.

Section of Epidemiology.—Fri., 8 p.m., Dr. C. O. Stallybrass: Season and Disease.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W.1.—Tues., 5 p.m., Third Goulstonian Lecture by Dr. T. Izod Bennett: Some Problems of Nephritis. Thurs., 5 p.m., First Lumsdane Lecture by Dr. James S. Collier: Epilepsy.

CHILDREN'S CLINICAL SOCIETY, Hotel Rembrandt, Thurlow Place, S.W.—Tues., 8.30 p.m., Discussion: Modern Aspects of Dentistry; to be opened by Dr. H. Fielden Briggs and Dr. A. Livingstone. To be preceded by dinner at 7.30 p.m.

HUTCHINSON SOCIETY.—Mon., 7.30 p.m., Dinner Meeting at Simpson's Restaurant, Chancery, E.C.2. 8.30 p.m., Discussion: Hiccups. To be opened by Dr. Robert Hutchison and Sir Farquhar Buzzard.

MEDICO-LEGAL SOCIETY, H. Chancery Street, W.1.—Thurs., 8.30 p.m., Dr. Gerald Slot: Pain in its Medico-legal Aspects; to be followed by a discussion.

### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Lecture, Medical Society of London, 11, Chandos Street, W.1: Mon., 5 p.m., Dull and Backward Children. Hospital for Diseases of the Throat, Golden Square, W.1: Thurs., 6.30 p.m., Special Clinical Demonstration. Royal Free Hospital, Gray's Inn Road: Thurs., 5 p.m., Special Lecture Demonstration. Brompton Hospital, S.W.3: Intensive Course for one week; fee £3 3s. Homestead General Hospital, Haverstock Hill, N.W.3: Practitioners' Course in Medicine, in Surgery, and in the Specialties, Mon. to Fri., 4.30 to 6 p.m.; fee £1 1s. Royal National Orthopaedic Hospital, 234, Great Portland Street, W.: All-day Course—Clinics, Operations, Lectures; fee £2 2s. Copies of all syllabuses sent on application, also details of general course work and specimen copies of the Post-Graduate Medical Journal. Apply Secretary, Fellowship of Medicine, 1, Wimpole Street, W.1.

CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Fri., 4 p.m., Indications for Radical Mastoid Operation.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Thurs., 4 p.m., Eruptions of the Napkin Area in Infants.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thurs., 4 p.m., X-Ray

LONDON W.C.2.—St. John's Hospital, Leicester Square,

Benign Growths of the Skin. Thurs., 5 p.m.,

NATIONAL HOSPITAL, Queen Square, W.C.1.—Mon., Tues., Thurs., Fri.,

2 p.m., Out-patient Clinics. Mon., 12 noon, Pathology of the Nervous

System; 3.30 p.m., The Narcolepsies. Tues., 3.30 p.m., Disorders of

Sensation. Thurs., 3.30 p.m., Treatment of Pain by Electrical Methods.

Fri., 12 noon, Anatomy and Physiology of the Nervous System; 3.30 p.m.,

Surgery of the Spinal Cord. Operations: Tues. and Fri., 9 a.m.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General

Hospital, Tottenham, N.15.—Mon., 2.30 p.m.,

Cases; 2.30 to 5 p.m., Medical, Surgical, and

Operations. Tues., 2.30 p.m., Demonstration of

5 p.m., Medical, Surgical, Throat, Nose, and

Wed., 2.30 to 5 p.m., Medical, Skin, and

Thurs., 11.30 a.m., Dental Clinics; 2.30 p.m.,

for X-Ray; 2.30 to 5 p.m., Medical, Surgi

Throat Clinics; Operations. Fri., 10.30 a.m.

Clinics; 2.30 p.m., Demonstration of Medical Cases, 2.30 to 5 p.m.,

Surgical, Medical, and Children's Diseases Clinics; Operations.

St. Peter's Hospital, Endell Street, W.C.2.—Thurs., 4.30 p.m., Stone in the

Bladder, with Special Reference to Treatment by Lithotripsy.

SOUTH-WEST LONDON POST-GRADUATE ASSOCIATION, St. James's Hospital,

Queensway Road, Balham, S.W.12.—Wed., 4 p.m., The Post-mortem

Eye Department. Thurs., 10 a.m. to 1 p.m., Neurological Department,

Message Department; 2 p.m., Eye Department, Genito-urinary Depart-

ment, Fri., 10 a.m. to 1 p.m., Skin Department,

Treatment Clinic, Electrical Department,

Throat, Nose, and Ear Department.

Sat., 9.30 a.m. to 1 p.m., Bacterial Therapy Department, Children's

Medical Department, Throat, Nose, and Ear Operations. Daily (except

Sat.) at 2 p.m., Medical and Surgical Out-patients; Operations.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Royal Infirmary: Wed.,

4.15 p.m., Skin Cases.

MANCHESTER: ANCOITS HOSPITAL.—Thurs., 4.15 p.m., Visceroproctis. Tea at

3.45 p.m.

MANCHESTER ROYAL INFIRMARY.—Tues., 4.15 p.m., Lecture: Treatment of

Enlarged Prostate. Fri., 4.15 p.m., Demonstration of Medical Cases.

Tea at 3.45 p.m.

##### MARCH.

- 16 Fri. London: Lunacy and Mental Disorder Committee, 2.30 p.m.
- 17 Sat. Harrogate Division: B.M.A. Lecture by Dr. S. Monckton Copeman on Immunization against Diphtheria and Scarlet Fever, 4.30 p.m.
- 19 Mon. Bromsgrove Division: Smallwood Hospital, Redditch, 3 p.m.
- 20 Tues. London: Organization Committee, 2 p.m.
- Croydon Division: Croydon General Hospital, Dr. Hector C. Cameron on Acute Abdominal Pain in Children, 8.30 p.m.
- Lewisham Division: Town Hall, Catford, Mr. Wansley Bayly on the General Practitioner and the Prevention of Venereal Disease.
- Mid-Cheshire Division: Altrincham General Hospital, Market Street, Altrincham. B.M.A. Lecture by Mr. W. Sampson Handley on Radium in Carcinoma, 8.30 p.m.
- Salford Division: Educational Office, The Grove, Stratford. Dr. W. McConnell Wanklyn on Differential Diagnosis of Small-pox, 9.15 p.m.
- West Dorset Division: Weymouth and District Hospital. Dr. T. Colley on Acute Eye Conditions in General Practice, 8 p.m.
- 21 Wed. London: Medico-Political Committee, 2.15 p.m.
- Ashford Division: North Street Club, Ashford, Mr. G. A. Ewart on Abdominal Emergencies in General Practice, 4 p.m.
- Blyth Division: Annual Dinner, Star and Garter Hotel, Blyth, 8.30 p.m.
- Sir Charles Hastings Lecture, 1923, by Sir George Newman, Great Hall, B.M.A. House, Tavistock Square, W.C., 8 p.m.
- Sunderland Division: Scientific Meeting, Royal Infirmary, Sunderland. Mr. H. Evers on the Place of the Uterine Curette, 8.15 p.m.
- 22 Thurs. Wilkesden Division: Wilkesden General Hospital, Harlesden Road. Mr. H. L. Messenger, L.D.S., on Focal Infection, 9 p.m.
- London: Puerperal Morbidity and Mortality Committee, 2 p.m.
- Brighton Division: Queen's Road Dispensary, Brighton, 8 p.m.
- Doncaster Division: Parkinson's Café, High Street, Doncaster. B.M.A. Lecture by Professor G. Lovell Gulland on the Significance of Heart Murmurs. Dinner, at 8 p.m., precedes the Lecture.
- Metropolitan Counties Branch: B.M.A. House, Tavistock Square, W.C.1. Address by Dr. E. Graham Little, M.P., to Senior Students and Young Practitioners, on the Future of Medical Practice, 6.30 p.m.
- Portsmouth Division: Clinical Meeting, Royal Portsmouth Hospital, 3 p.m.
- Westminster and Holborn Division: Romano's Restaurant, Strand, W.C. Mr. P. B. Tustin, F.R.San.I., on Modern Methods in the Production and Treatment of Milk, 8.30 p.m.; preceded by dinner at 7.30.
- 23 Fri. London: Consulting Pathologists' Group Committee, 2.30 p.m.
- Kensington Division: Town Hall, Hammersmith. Mr. O. A. Pannett on Gastro-duodenal Ulceration, 8.45 p.m.
- 24 Wed. London: Conference between Representatives of B.M.A. and Society of Medical Officers of Health, 11 a.m.

##### APRIL.

- 11 Wed. London: Council, 10 a.m.

### BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcement of Births, Marriages, and Deaths is 2s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.

#### MARRIAGE.

ROBB-BUCHANAN.—At Broughton Place U. F. Church, Edinburgh, on Wednesday, March 7th, by Rev. G. M. Fairweather, M.C. M.A., assisted by the father of the bridegroom, John J. Robb, M.C., F.R.C.S., Lerwick, elder son of Rev. R. Robb, B.D., and the late Mrs. Robb, Blairdail, Aberdeenshire, to Mary Alexandra Buchanan, M.B., Ch.B., younger daughter of Mr. and Mrs. A. Buchanan, 12, Deanpark Crescent, Edinburgh.

#### DEATHS.

BROWNE.—On March 7th, 1928, at 195, Hagley Road, Edgbaston, Birmingham, Henry William Langley Browne, O.B.E., LL.D., M.D., F.R.C.S. Ed., J.P., aged 79 years.

ENNION.—At Harlech House, Burwell, Cambridgeshire, on March 11th, 1928, Octavius Roberts Ennion, M.R.C.S., L.R.C.P., aged 55 years.

MACDONALD.—At his residence, 8, Queen's Road, Southport, on Saturday, March 10th, David Macdonald, M.D. Glas.

### The Hastings Popular Lecture ON THE FOUNDATIONS OF NATIONAL HEALTH.

DELIVERED IN THE GREAT HALL OF THE BRITISH MEDICAL  
ASSOCIATION ON MARCH 21ST

BY

SIR GEORGE NEWMAN, K.C.B., M.D., F.R.C.P.,  
CHIEF MEDICAL OFFICER TO THE BOARD OF EDUCATION AND TO THE  
MINISTRY OF HEALTH.

This lectureship commemorates Sir Charles Hastings, the founder of the British Medical Association. He was born in 1794 at Ludlow in Shropshire, the old walled town which was formerly the seat of government in the borderland of the Marches. When 16 years old he was apprenticed to a doctor at Stourport, and graduated in medicine at Edinburgh in 1818, in the illustrious time of Sir Walter Scott and Lord Jeffrey. He settled at Worcester, and in the Board Room of the old Infirmary there he started in 1832 a medical society which was to become the British Medical Association. Quite apart from this particular achievement Dr. Charles Hastings was one of the small but remarkable group of men who, almost unconsciously, became the pioneers of the national health in the great age of the Reform Bill.

#### THE CONDITION OF ENGLAND IN 1832 AND 1928.

The condition of England was then very different from that with which we are familiar a century later. Even the outward appearance of the country was different. In 1832 the population of Great Britain, then twenty millions, had for fifty years been steadily collecting in towns; the desertion of the fields was far advanced; the Stockton and Darlington railway train had been running for seven years; the ancient iron industry had been moving from the south to the north to be near the coal; Brindley and Bridgewater had made canals, and MacAdam and Telford roads; the towns had been built too rapidly, and the majority of Englishmen dwelt in mean streets, "divorced from nature but unreclaimed by art"; and for the mass of people life was drab and dreary, and "drink and religion strove for the souls of men." By 1832 the time of the Great Divide had arrived. Jeremy Bentham had handed on his philosophy and his work to Southwood Smith, Chadwick, and the Mills; the Poor Law Commission had been appointed; Parliament had commenced its famous series of inquiries into the condition of the English people; and the Reform Bill had been passed. From these four sources profound changes were to arise.

To-day we look upon a very different Britain. The population is 43 millions, of whom 21 millions are enfranchised. *Intercommunication* has increased almost beyond belief; there are 20,000 miles of railway and 180,000 miles of road; there has been enormous development of shipping, of postal service, and of newspapers; there is now also the telegraph and telephone, the aeroplane and wireless. These methods of intercommunication, being world-wide, have revolutionized industry and changed the face of our civilization. For improved intercommunication has made actual the enormous potential wealth and capacity of the country. It has enlarged the social life of the people and brought them into the sunlight and fresh air. It has carried them to and from their work. It has furnished their tables with nourishing food, and spread newspapers and books before them, filling their minds with new interests and enabling them to enter a wider citizenship. It has changed both war and peace, and "covered the world with a network of wonderful hours." It is the first great contribution to the saving of life and the postponement of death. Then a compulsory system of *Education* for all classes has been introduced over the length and breadth of the land; an ample and varied food supply comes to us daily from the ends of the earth; the conditions of labour, and the opportunities of leisure, have been immensely improved. Above all, there has been an *amazing transformation in the health of the people*, for whom life is wider, better, and longer, and death is more remote. Though the population has more than doubled, the general death rate for England and Wales has been halved since 1838; the child mortality under 5 for London is now about one-third of what it was; the number of deaths under 50 years of age is now 38 per cent., as compared with 71 per cent. in 1838; and the expectation of life at birth has been extended by as much as twelve years for boys and fourteen years for girls. In other words, the premature death of little children has been enormously reduced, the infectious sickness of adults has been more than halved, the great fatal pestilences of cholera and small-pox have vanished, and life has been prolonged.

	General Death Rate.		Infant Mortality Rate.		Deaths Under 5.		Deaths Under 50.	
	1838-9.	1926.	1832-9.	1926.	1838-9.	1926.	1838-9.	1926.
England and Wales	22.0	11.6	150	70	Per cent. 39.5	Per cent. 15.8	Per cent. 71	Per cent. 38.2
London	28.1	11.5	174	64	40.2	14.6	73.6	37.3

An age of inquiry into the condition of the people had arrived.

"The great source of the misery of mankind is not their numbers but their imperfections, and the want of control over

the conditions in which they live," said Dr. Farr of the General Register Office. "Without embarrassing ourselves with the difficulties which the vast theories of life present, there is a definite task before us—to determine from observation the *sources of health* and the direct *cause of death* in the two sexes at different ages and under different conditions. The exact determination of evils is the first step towards their remedies."<sup>1</sup>

Farr revealed to the nation that a vast increase of population was going on in a small island which could not itself expand; that a rural people were becoming urban, an agricultural people becoming industrial; that the ravages of pestilence were competing with the evils of social degeneration, and that both of them must be brought under control; that there is a definite relationship between the price of wheat and the death rate, between poverty and disease, between personal conduct and health.

More important and far-reaching than the actual doings of the time was the new spirit of the nation after the Reform Bill, which showed itself in a wonderful period of constructive statecraft. We have had a century of it. Observe what has happened. Predominant political power has been transferred from an hereditary aristocracy and the middle class to the nation as a whole. Government of the people, by the people, and for the people has brought to the front the vital and domestic issues of life. The centre of gravity has moved from the interests of dynasties to the well-being of the people. "Power has only one duty," said Disraeli, "to secure the social welfare of the people." There has been an enormous extension of the conception of the State and of its sphere of operation. We have witnessed the enthronement of the scientific spirit. We have seen the discoveries and inventions of science allied for the first time with industry and commerce, and insurance against risks of every kind has extended and ramified in a truly extraordinary way, becoming even a subtle international agency. Lastly, we have seen an intenser humanity towards children, animals, victims of disease, criminals, and all men and women in need of succour. During the century there has thus been an astonishing growth in human knowledge and contrivance, almost beyond the power of the mind to conceive; a growth and a spirit by which a small nation renewed its youth, spread its influence all over the world, builded an Empire by confederating both alien and kindred races, and at the same time learned for itself more and more of the supreme art of *how to live*. It is indeed one of the most moving stories in the history of mankind.

#### THE SOCIAL FACTOR.

Let us consider and look around. These great achievements depended on the survival, health, and capacity of the body and mind of man. "Inquiry what the event actually was," said Lord Morley, "its significance and interpretation, becomes secondary to inquiry *how it came about*." How did it come about? Why, in fact, was human life a longer and a healthier thing in the nineteenth century than in the fourteenth? I think the answer is twofold, Social and Scientific, and it is important we should fully understand it.

First, there was the social factor, the vast improvement in the ordinary domestic life of the people. More than two thousand years ago Hippocrates had taught the influence of the external world of air, water, soil, and climate on health and length of human life; but it is only in modern times that we have learned that the genius of agriculture, of engineering, of industry, of trading, and of commerce, all the world over, are intimately concerned with the maintenance or impairment of human health. For it is by these means we get our food, our coal, our clothing, our houses, our lighting, our water supply, and our wages. Nor are these alone. There has been the all-pervading and transmuted effect of social custom and estate; of tradition and religion; of occupation and employment; of eating and drinking; of fashions of dress and personal appearance; of recreations and amusements (golf, tennis, cricket, football, athletics, swimming and dancing, winter sports); the week-end habit; gardening; country rambles; mountain climbing; enjoyment of the seaside and sea-bathing; travel and change of air; the manifold uses of leisure—all these daily occupations, avocations, and amenities have played a large and primary part in the

creation and maintenance of personal and public health. We must give up the idea that health is comprised in sewerage, disinfection, the suppression of nuisances, the burial of the dead, notification and registration of disease, fever hospitals, and endless restrictive by-laws and regulations. Health springs from the domestic, social, and personal life of the people. It is, as the Greeks said, the fruit of the more abundant life.

#### THE SCIENTIFIC FACTOR.

The second great influence in the rise of the national health in the nineteenth century was the extraordinary advance in scientific discovery and the adoption of the scientific spirit. Put down on a piece of paper some of the great political and social events of the last hundred years—the Reform Bill, the abolition of slavery, the factory system, the repeal of the Corn Laws, penny postage, the newspapers, free education, the trades unions and the co-operative movement, the four extensions of the franchise, the reform of criminal law, old age pensions, and the immense cultivation and extension of literature; and then put down by their side some of the landmarks of science—the application of steam to ships and railways, the electric telegraph, the great exhibition of 1851, the Atlantic cable, spectrum analysis, the Suez Canal, the telephone, the internal combustion engine in 1835, Marconi's wireless, the discovery of the North Pole and the South Pole, the aeroplane, Darwin's *Origin of Species*, and the incomparable advance of medical science; add up the account and see where the balance lies. The story of the relation of these scientific advances to the health and happiness of man would read like a fairy tale, but it would have the advantage of being true. Let me remind you of two examples, and let us be sure that we understand them.

In the *Origin of Species* Mr. Darwin told us of the origin of the nature of the human body, and the laws which directly control it—the Law of reproduction and growth, the Law of heredity, the Law of variation (owing to "use or disuse"), the Law of natural selection. There is, he said, no escape from the operation of these four laws, for they are universal.<sup>2</sup> They are the principal contributors to the cosmic process as it concerns man, a process of which the human species forms part. It is these laws and this cosmic process which gives man the body in which he lives; and this body is set in the midst of nature, subject to many external influences. "In every case," said Darwin, "there are two factors—namely, the nature of the organism and the nature of the conditions" under which it lives; but, he added, "the former seems to be much the more important."<sup>3</sup> A generation later Huxley reminded us that "much may be done to change the nature of man himself" by the control or modification of his internal and external conditions.<sup>4</sup> Indeed, the character of these conditions, what has been called *nurture*, is the factor which is most under our direct control in improving the body of man.

Here, then, we have, according to Darwin, the two fundamental things, the nature of man and his nurture—the impress on his nature of all the factors and all the influences which affect him, his total environment. The growth of our knowledge of physiology in modern times has immensely expanded our understanding of man's nature, and the potential capacity of the functions of the human body and of its extraordinary powers of defence and repair. Nor must we overlook or set aside social and ethical factors which play a part, and, as civilization grows, an ever-increasing part, in the nurture of man. Human life at its best is, therefore, a balance between nature and nurture, a harmony of all the functions and faculties (whether physical, mental, or moral) moulded and directed by nurture. The body is not merely a machine, what the engineer would call an "assembly of its parts": it is something much more than the sum of its parts—a unified living adaptable organism, with a potential capacity, always susceptible of growth, development, or degeneration.

For in practice we know that there is often disharmony, which may be due to inborn defect, or accident, or neglected nurture, or disease. What is disease? We have not yet found the full answer to this question. But we

have learned that disease is not something arbitrary, capricious, or occult, but due always to definite causes; and we know it is not an external entity or agent—a sort of black dragon outside ourselves which we have to slay or exterminate. There is no external thing which we can call disease. It is something within the living organism. *It is the reaction of the human body to irregularities or agencies in its environment to which it has not become habituated, and which if prolonged may lead to an actual alteration or degeneration in the tissues of which the body is constructed. It is the disturbance of the harmony of the body which is disease.* It is, as Metchnikoff said, a “disarmament”; or again, it has been well described as “the dissociation of the functional unity” of the body. There may be (a) inborn flaws or defects in the structure of the body, irregularities in assembling the parts, even inherited taints and blemishes; or (b) in the ordinary stresses of life, parts of the machinery of the human body may be strained, impaired, or even broken; or (c) owing to faults of nurture, habit, or way of life, the functioning of the body and even its structure may have become misdirected or ill-formed; or, lastly, (d) the body may be invaded by the agents of infection—parasites. These are examples of the kind of injurious influences and conditions to which the body is liable, and in the presence of which the body itself reacts, producing the signs and symptoms which we call disease.

In short, when we think of the foundations of health, Darwin and his disciples have taught us that we have two main groups of facts to consider—namely, the body of man with its natural powers of reproduction and resistance; and the laws of Nature as the governing factors in its survival. Hygiene or preventive medicine depends, on the other hand, upon (i) the knowledge and practice of the nurture of the body, and (ii) the organized prevention or control of the external agencies injurious to it. Thus there is a Science of Life (biology) which includes our knowledge of the Nature of Man and the laws and conditions under which he can live and flourish as a part of the cosmic process; and there is a practice of Health (Hygiene or Preventive Medicine) which includes our knowledge of the positive nurture of man and the negative prevention of injurious influences acting upon him. We must not expect to apprehend either the science or the practice from hucksters' tips or from the “hits and bobs” of propaganda in an advertisement of a patent medicine. We must learn to look upon the whole business as a science, concerned with no less a subject than the Evolution of Man, governed by the immutable laws of the universe, and demanding from us patient learning, vigilant understanding, and strict obedience. For the penalty of the Court for disobedience of the laws of Nature is a degeneration of type or an earlier death sentence.

#### THE ADVANCE OF MEDICINE.

This leads me to the next step we must consider—namely, the outstanding advances of medical science. The eighteenth and nineteenth centuries were exceptionally rich in medical discovery, familiar to us all. John Hunter's living pathology, Jenner's vaccination, the work of Sir Humphry Davy and Sir James Simpson on the abolition of pain by anaesthesia, that of Louis Pasteur and Robert Koch on the causes of infective disease, Lord Lister's triumphant application of that knowledge by the introduction of antiseptic surgery, and the development of the methods of preventive medicine—these are six of the epoch-making advances which, with the Darwinian hypothesis, have given us a wholly new outlook upon, and new powers for, the control of disease, the relief of suffering, and the prolongation and betterment of life. They have made brilliant and constructive the period in which we live, beyond any other century. They mark the greatest historic advance of the science and art of medicine.

Whilst it is unnecessary to describe them, it is appropriate to draw attention to two facts in regard to them. First, each of these discoveries originated in previous work on the same subject, and each of them has opened up new fields of knowledge and life-saving applications. For instance, Jenner's work showed not only that vaccinia

could be transferred from the calf to man, and from man to man, but he proved the validity of the proposition that vaccinia in man diminished the liability to attack by small-pox. In so doing he introduced an artificial method of producing immunity, which has since been applied for the prevention or cure of many other diseases. He opened a door which is always opening wider; he proved a secret of Nature's ways to be true. Sir Almroth Wright's dictum, that “the physician of the future will be an immunizer” is a logical deduction from the ever-growing practical experience of medicine. Further, the study of immunity has shown that in many infective diseases substances appear in the blood which are antagonistic either to the invading micro-organism or its toxins, suggesting both that a process of immunization is going on in the body during the attack, and that it is due to antibodies developed by the reaction of the tissues to the invading infective agent. In other words, the study of natural immunity has revealed the fact that *the healthy body itself fosters defensive properties and resistant potentialities. These are four in number.*

(i) The resistant power arising from the physiological reserve of health, the power of hypertrophy, and of increased functioning and metabolism in emergency.

(ii) There is the control by the “vasomotor” nerve system, which regulates the blood supply of any given part of the body, flushing it on demand with the refreshing current of the blood stream.

(iii) There is a defence established by means of cells in the blood, lymph, and tissues, which have the remarkable power of first catching and then absorbing into their own substance any invading germ or foreign element with which they come into contact.

(iv) There are the newly discovered biochemical powers represented partly by the normal secretions of the ductless glands (hormones), and partly by the group of *antitoxins* which follow in the wake of toxins and are the direct reaction of the healthy body to their presence.

These four separate lines of defence are powerful, but it must be remembered that they never act in isolation. They are mutually interrelated, they co-operate together under a unified command, and they depend for their very existence upon a healthy and well-nourished state of the body. When, therefore, an infecting bacillus attacks man, it sets up, automatically, a chain of natural defences—(a) increased functional activity; (b) a fuller blood supply; (c) the stimulation of the catching and absorbing cells (*phagocytosis*) and the excretor secretions (*hormones*); and (d) a new formation of cells and substances antagonistic to, or assimilative of, the toxic products of the bacillus. When we ponder upon this array of defences called into operation by the act of infection we cannot be surprised that one attack of a disease is not followed by another, and that a natural immunity against certain diseases may be established. We begin to see the true philosophy of the action of antitoxins and vaccines; we understand a little better the survival of man's body in Nature; and we learn once and for all the necessity of bodily health as the strong and primary foundation of Preventive Medicine.

Secondly, each of these six momentous medical advances has not only won triumphs in its own sphere of the medical or surgical treatment of disease, but it has indirectly furnished new methods and confirmations in regard to the foundations of health itself. Their principles have been, in fact, applicable to the creation and maintenance of health as well as to the treatment of disease. Pasteur not only elucidated the cause of fermentation and particular infections, but his work changed the whole attitude of men's minds to the relation of cause and effect in all forms of infection and bodily condition. “What hopes seized upon me,” he said, “when I realized that there must be laws behind so many obscure phenomena.” Lord Lister not only taught the antiseptic principle and method of dealing with surgical wounds or compound fractures, but the supreme importance of similarly attacking all forms of septic poisoning—in fact, to the necessity of cleanliness and asepsis to a healthy body.

## THE NURTURE OF THE BODY.

The fundamental problem of health, then, is the wise and scientific nurture of the body. Now can we say in plain and categorical terms in what such nurture consists? Here is your body with its nature, its heredity, its variation, its inborn instincts, impulses, and organic functions, the instrument of emotion, intellect, and will—a living organism of long biological ancestry, the whole man—can we define the best nurture for it? I think we can, but only in general terms. Perhaps indeed one term, *nutrition*, is the answer. It is when we attempt to be prescriptive and dogmatic in detail that we go astray, for each human body is, as Galen pointed out, individual in its "preparation" for health or disease. Yet some general rules of nurture mankind has learned through thousands of years of experience. The trouble is that he will not practise them.

The elements of nutrition for the body are six in number: Food, Fresh air and sunlight, Exercise of the body, Warmth, Cleanliness, and Rest. If these necessities be provided we may have some "approximation," as Emerson called it, to full physical life; but if they are withheld or inadequate we shall assuredly have insufficiency, poor physique, disease, and even premature death. Though this knowledge is as old as the history of the human family, it is still only partially applied to the building of men or the rearing of a race. For though the general proposition is simple, its application is complex and variable. What is the ideal form of nutrition in any given climate or for any given age of life, and how can we follow it? How can we live in the open air if we also live in houses and in cities? By what means can we secure sufficient exercise, and of what nature should it be? And how can we escape the condemnation by Galen of the over-specialization of Greek physical culture? The answer to these questions comes only by *education and experience*. For, given a "living wage," and given a sufficient yield of the proper food necessary to man's health—and, speaking generally, these desiderata are available in this country—there can be but one answer: People do not live the healthy life *because they lack knowledge*. As the Duke of Devonshire said in 1904, "the people perish for lack of knowledge." It is ultimately a matter of the instinct, education, and experience of the individual.

## Food.

Let us consider for a moment the most important of these six—Food. The products of digestion enter the blood from the alimentary canal, and thus all parts of the body are nourished. It is of vital importance to eat the food which will build, repair, warm, and energize the body. Ignorance of a sensible dietary is the direct cause of much preventable disease, and more people suffer from eating too much than too little. It is common knowledge that man's diet should be mixed and varied; should be sound in quality and sufficient in quantity; consumed at regular intervals; and appetizing and digestible. It should contain some *proteins*, such as occur in meat, fish, milk, bread, cheese, eggs, peas, beans, lentils; some *fats*, as in cream, butter, suet, lard, dripping, olive oil, etc.; some *carbohydrate*, as in sugar, bread, potatoes, rice, and starchy foods. The body also needs *mineral salts* (calcium, iodine, magnesium, sodium, and potassium), contained in milk, cheese, eggs, green vegetables, and fruit, the last two furnishing a considerable bulk of fibrous material valuable in stimulating alimentary movement. Lastly, there are certain substances essential for growth and nutrition known as *vitamins*, present in extremely minute quantity in various foods.

Several principal kinds of vitamins are recognized, and are called vitamins A, B, C, D, etc. Vitamin A, found especially in milk, butter, cheese, yolk of eggs, and green vegetables, is necessary for growth and the maintenance of body resistance against infective disease. Vitamin B, found mainly in cereals, pulses, and yeast, is also necessary for growth and for the maintenance of nervous stability. Vitamin C, found in various fruits and leaves, but especially in lettuce, cabbage, and oranges, is effective in the prevention of scurvy. Vitamin D occurs richly in cod-liver oil, oily fishes (such as herrings), and egg-yolk; it is concerned in the proper development of bone and teeth, and its absence may lead to rickets.

Goitre may follow insufficiency of intake of iodine, as stunted growth may result from poorness of proteins or excessive or unbalanced cereals (which should always be

associated with milk, eggs, and green vegetables). It should be remembered that the vitamins exercise joint and interdependent action and may be destroyed by overcooking. A plentiful supply of sunlight to the skin will make up for certain deficiencies. In addition to these various requirements of living protoplasm we must add *water*. The transmission of all nutritive substances to parts of the body is done by "water transport." So, too, excretion of waste.

But merely to devise ideal dietaries is not enough. If a chemically ideal and model food be prepared in the laboratory with the proper amounts of each essential constituent, and then it be sterilized, dried, or otherwise "preserved," it will be deprived of some or all of its vital and natural principles. Hence, dried foodstuffs, preserved vegetables, proprietary foods, overcooked foods, and tinned meats, though possessing some practical advantages, are reduced in value as foods. Fixed foods become auxiliary only, for they are deprived in some measure of their vital elements of appetite, of taste and disposition, and of variety of composition. Moreover, nutrition does not consist only of pabulum, the food. There must be healthy activity of those physiological processes which have to do with mastication and preparation, with absorption and assimilation, metabolism and excretion. Healthy and complete nutrition is infinitely more comprehensive than mere feeding, mere filling of the stomach. It connotes a healthy body in all respects, a brain and nervous system in tone, a healthy muscular and digestive system, circulation of blood and lymph. Now, when we turn to the dietetic conditions of the great mass of the workers we find a tale of ham and beef, of beer and bread, of tea and pickles, of tinned meat and proprietary foods, or a weary round of bacon and herring and cheese—and of an unstable digestive system and an impaired physique. But variety, mixture, appetizing cookery, freshly prepared or natural food, the healthy conditions of sound digestion—these are the essential things so often ignored. This is partly due to our medical neglect of rational physiological feeding, which is worth more than all the drugs in the market; partly to the vicious custom of the sedentary worker to combine an excessive consumption of unsuitable food with an entire lack of daily exercise; partly to ignorance and bad habit.

Finally, there are some food rules which it is expedient to adopt. (a) Strict and persistent moderation in diet tends to longevity, and excess tends to early mortality. (b) Nature has provided that food should be masticated, should reach the stomach slowly, and not too frequently. (c) The number of meals taken daily is a matter of individual practice and custom, but for persons over forty years of age they are usually too frequent. (d) No food should be taken between such regular meals, as eating promiscuously gives the body no rest. (e) A small quantity of beverage with the meal is desirable, but there should be no excess of alcohol—alcohol is not in ordinary circumstances necessary to health; there should be, as a rule, no alcohol before meals or between meals, and none for children. (f) There should be no active exercise immediately after a meal.

## Fresh Air and Sunlight.

I have not time to discuss at the same length the other essentials of true nurture; but each of them is important. Fresh air is almost as valuable to health as food. It is, indeed, another element in nutrition, for the living processes carried on in every cell of the body require oxygen. This reaches the body through the nose, passes to the lungs, enters the blood stream, and is thus carried, like the products of digestion, to all parts. Breathing should always be through the nose, in order that the air may be properly filtered and warmed before reaching the lungs. The fresh incoming air conveys oxygen and expels the used-up air of the lungs. Its physical properties of coolness and movement are valuable as conducive to the increase of metabolism and stimulation of the skin and the appetite. There can be no more far-reaching or beneficial method of improving the health of the people as a whole than the wider practice of the open-air life. As Walt Whitman said in the *Song of the Open Road*:

"Now I see the secret of the making of the best persons.  
It is to grow in the open air."

Every school should be an open-air school and every home an open-air home. It is the stagnant overheated air, loaded with moisture and organic impurity, which is harmful in factories, offices, homes (especially bedrooms), or schools. The means of avoiding it is effective ventilation which shall give us fresh, clean, cool, moving air, without draught. Therefore ventilation should be "cross" or "through," which means that inlet and outlet must be opposite to each other. The temperature of the room should be about 60° F.

One of the principal advantages of the open-air life is that it affords more opportunity of gaining benefit from direct sunlight. All the rays of the sun are advantageous, but the invisible ray beyond the violet (ultra-violet) is believed to exert special health-giving benefit. Unfortunately the ultra-violet ray is filtered out by ordinary window glass, hence its health-giving property is only obtainable in the open air. It is now used widely in its natural form in the treatment of debility, rickets, tuberculosis of the skin, bones, and joints (*heliotherapy*), and artificially for some of these conditions by means of the arc lamp. Atmospheric smoke and the indoor life of English towns are without doubt depriving large portions of the population from enjoying the health obtainable by sunlight and fresh air.

#### *Exercise and Rest.*

The daily exercise of the body is another primary need. Various forms of exercise tend to strengthen all the muscles (including the heart), deepen and increase the rate of respiration, produce body heat, induce the skin to perspire, secure and maintain equilibrium, and develop the motor and sensory centres of the brain. They are essential if proper benefit is to be derived from food, if the digestive organs and the alimentary canal are to be kept in good working order, if proper secretion through the kidneys, skin, and lungs is to be ensured, and if the nervous regulation of the body is to develop. George Meredith, the novelist, used to say that every man "should get into a sweat at least once a day." It is not a bad rule. Motoring has advantages, but we must beware of becoming "all liver and no legs." To walk to the station is better than to take a bus. It should be remembered that ordinary active forms of free exercise are wisely supplemented by more regular and systematized forms of exercise, including games, swimming, and dancing, which play a part in the harmonious training of the body as a whole (such as the Swedish system), which lead to improvement in the general physique, the correction of faulty attitudes, and the acquirement of habits of self-discipline, control, and ready response. But we must not overdo physical exercise, or allow any system to become a thralldom or fetish—or be specially violent in exercise on Saturdays and negligent of it for the remainder of the week.

It is important that we should recognize that physical exercise is something vastly more than "drill and jerks." It is one of the means by which the Law of Variation fulfils itself, the means by which we "exercise" and use all the organic functions of the body—respiration, circulation, digestion, excretion, reproduction—the means by which we train the organs of special sense, and educate the nervous regulation of the body: "Use or disuse" lies at the basis of variation in our bodies.

Speaking generally, it may be said that most people stand in greater need of rest than of movement. "The first and second secrets of Nature," said Emerson, "are Motion and Rest." Our American cousins and ourselves are getting much too restless for good health, or even mental capacity and balance. There is an excess of noise, clatter, chattering, and meaningless activities which have no value or virtue in themselves, and for children are directly harmful. Indeed, children require time, peacefulness, and rest in order to grow and ripen, and there is wisdom in Madame Montessori's excellent injunction "Silentio" on the walls of her House of Children at Rome. Children under 15 need ten to twelve hours in bed every night. For them also it is particularly important to secure and maintain a nice balance between the production and loss of body heat. The newborn infant is unable to effect this accommodation, and its power of heat regulation is undeveloped. The very young and the old are particularly

susceptible to external conditions of atmosphere and temperature, and we have yet much to learn in the practice of warmth and its relation to hygiene.

#### *Cleanliness of Body.*

Lastly, there is cleanliness—within as well as without. In the Middle Ages people did not wash, they went dirty; and this disregard of cleanliness must be associated with their neglect of other items of our model six, which was perhaps one of the chief causes for their very unhealthy and shortened lives. The skin of the body cannot perform its most important functions unless it be clean; but the teeth, lungs, stomach, bowels, and blood must also be kept clean, if we are to be unconscious (as we ought to be) of their existence. A clogged machine does not work well.

#### *Some Conclusions and Dangers.*

Before leaving these maxims of body nurture there are three things I have to say about them which are not of less importance because they can be said shortly. The first is this: All these six principles of nutrition must be followed if we would obtain true nurture of the body. It is idle, and indeed harmful, to advocate any one or other of them at the expense of the remainder. The loss of any one of them will impair man's health and eventually imperil his life. The neglect of them is the occasion of disease. Yet, as Thucydides, the Greek historian, said, "So little pains will most men take in search for truth, so much more readily will they turn to what comes first." Secondly, each of these principles must be followed in moderation and not to the extreme. The Greeks were wise in their admonition: "Know thyself; and be moderate." In fact, the pathway to health of body and mind is lifelong education, that the mind may rule the body and the body be, as Cicero said, "fit to obey the prescriptions of the mind." Thirdly, the practice of each of them must accord with the total normal functioning of the body, the end and object of which is health. The body has many powers of protection, defence, and repair, but the laws of Nature are exacting and even severe on any assault upon, misuse, or abuse of, vital functions. In other words, the body will stand considerable strain along the line of its own powers, but no disharmony with impunity.

In these days of public education in health it is necessary to avoid two subtle dangers. On the one hand we must beware of "stunts" and "panaceas"; Nature is too varied and the world too wide for ultimate truth to lie along that road. On the other hand, perverse or ignorant unwillingness to accept the established findings of science is likely to deprive us of valuable aids in the struggle for life and the survival of the best. He is a wise man who finds out the faculties and powers of his own body and nurtures them rather than misdirecting or neglecting them. The spirit we need to cultivate should spring from an effective and reasonable co-operation between the dictates of humanity, the rights of the individual, and the established truths of science. It was Laertius the Stoic who said, long ago: "The end is to act in conformity with Nature, with the Nature that is within us and with the Nature of the universe."

#### *THE ORGANIZATION OF HEALTH BY THE COMMUNITY.*

Finally we must ask ourselves the question, How can these essential conditions of nurture be organized? The position is this. We have first to deal with the nature of man's body and its individual nurture in order to secure a resistant, effective, and reproductive body; then, in a civilized State, we have to provide the opportunity for all men to ensure for themselves and their families this nurture. Some can do much without communal aid, the majority cannot; in any event, no man can live unto himself. Whether we like it or not, we are members one of another. As in nature, so in society, solidarity and interdependence are inherent. Hence, in a civilized State it is the nature and nurture of the individual and the communal organization of opportunity which are the Foundations of National Health. The organization of health, which is the organization of life, is the primary, though not the supreme, business of Government, of statecraft, whether central or local.

Now the purpose of Preventive Medicine may be expressed in simple words. It is to improve the total environment of man's body, to develop and maintain his innate capacity, to avoid or reduce disharmony and disease in its early stages (in order to escape or postpone its later and mortal results in the body), to prolong and enlarge man's days, and to extend the frontiers of life.

The community will adopt diverse means for the fulfilment of such a policy: some methods will be voluntary or professional, others will be undertaken by official administration, central or local. "Power," said John Stuart Mill, "may be localized, but knowledge, to be most useful, must be centralized." What are the main lines of this policy?

(1) First, there must be created and maintained a *sanitary environment*, the external scaffolding of health: housing, water supply, drainage and refuse removal, sanitary workplaces, sound roads, clean streets, and well-ordered towns.

(2) Secondly, there must be *systematic nurture*, beginning before birth—the protection of motherhood, infant welfare, child hygiene, the care of the adolescent, a practical, comprehensive, and liberal education, and a wholesome food supply.

(3) Thirdly, there must be a *Preventive Organization*, by which the agencies of infection and disease are brought under control—the segregation of infectious persons, disinfection, quarantine, supervision of the channels and materials of infection, the reduction of mass infection, the production of immunity, the provision of antitoxins, the special and direct attack upon all forms of epidemic disease.

(4) Lastly, there must be public and private *medical services* (of which the medical man is, and always must be, the exponent and practitioner) in order that correct diagnosis and sound treatment may be available for the whole community—general medical practice, clinics, dispensaries, sanatoriums, hospitals, factory medical service, a health insurance system, and medical accommodation for the poorest. Western civilization relies upon insurance as the most effective means of placing the people in a position to obtain and use the resources of the science and art of medicine.

There you have the great Articles of the modern practice of Preventive Medicine. They all belong to each other, and no local authority can afford to neglect any one of the four. They constitute the elements of the modern programme of Preventive Medicine, a programme introduced by the medical practitioners of the eighteenth century. "Germs of disease" are important, but we must not go germ-mad. Sanitary and medical experts have their place; but health is Everyman's duty. It must be every man's Quest ere it can become a national Conquest. The essential thing is the healthy and resistant body of man, and the maintenance of his harmonious functioning, in relation to Nature and his environment, and in relation to human society. Progress depends more upon personal, social, and moral evolution than the advance of sanitary science—more upon wisdom than knowledge. The vastly improved health of the people in our generation has no doubt been partly due to the fuller application of medicine and sanitation, but still more to the forces of education, sociology, and biology.

If we reflect upon these considerations we shall discover that the preservation of human life, the enlargement of its capacity, and the increase of its productivity, is not a mere doctor's stunt, but springs from deep human instincts and is established upon broad social and economic conditions. It is, in fact, social and medical in structure, though economic and moral in inspiration. It is, I submit, the primary need, as it is the chief asset, of a nation.

## British Medical Association.

## CURRENT NOTES.

## The Chairman of Council in South Africa.

THE Medical Secretary has received a letter from Dr. Brackenbury giving an account of the arrival of himself and Mrs. Brackenbury at Capetown and their reception by representatives of the Cape Western Branch. Dr. Brackenbury says: "The kindness and hospitality of everybody have been overwhelming, and we have done so much in four days that we have the impression of having been here quite a long time." He mentions Dr. Impey, the Secretary of the Branch; Dr. Leipoldt, Organizing Secretary of the Medical Association of South Africa (British Medical Association); and Drs. Murray, Marais, Kruger, Moffat, and Sandes (who will be remembered as attending the Edinburgh Meeting), as having been principally concerned in their journeyings, which they have thoroughly enjoyed. The Branch gave them a luncheon on February 29th, and they proposed to move on to Johannesburg soon after writing. Characteristically, Dr. Brackenbury was got into harness soon after his arrival, and in addition to useful talks with various influential members of the profession he had an hour and a half with a parliamentary committee which is discussing national health insurance, and was shown over Parliament House by Mr. Sampson, who is whip of the Labour party. Dr. Brackenbury adds: "I find that even a few days in the country, and personal contact with the men working in it, not only add great interest to the problems that have to be solved, but also put a somewhat different complexion on them, in spite of their similarity to our problems at home and one's theoretical familiarity with the situation here." It will reassure his many friends to hear that Dr. Brackenbury is in good health.

## Association Prizes for Essays by Students.

The Council of the Association gave notice in March last that it was prepared to award prizes of £10 each for essays by final-year medical students on "The signs and symptoms of heart failure." The essays have been examined by the following members of the Association: Dr. W. Gordon, F.R.C.P. (Exeter), Dr. Philip Hamill, F.R.C.P. (London), Dr. John Parkinson, F.R.C.P. (London), Dr. W. H. Wynn, F.R.C.P. (Birmingham). In accordance with the examiners' marks, prizes—a certificate signed by the President of the Association and a cheque for £10 in each case—have been awarded as follows:

## Group of Medical Schools.

## Prizewinner.

Queen's University of Belfast; University of Dublin (Trinity College); National University of Ireland (University College, Cork; University College, Dublin; University College, Galway); Royal College of Surgeons in Ireland (Schools of Surgery).	Mr. F. F. KANE, Queen's University, Belfast.
University of Birmingham; University of Bristol; University of Wales.	Miss PHOEBE C. VINE, University of Bristol.
University of Durham; University of Leeds; University of Sheffield.	Mr. J. H. KAHN, University of Leeds.
University of Edinburgh; School of Medicine of the Royal Colleges.	Mr. G. I. ROBERTS, Edinburgh University.
University of Glasgow; Anderson College of Medicine; Queen Margaret College School of Medicine for Women; St. Mungo's College.	Mr. W. J. L. FRANCIS, Glasgow University.
University of Liverpool; Victoria University of Manchester.	Mr. M. SILVERSTONE, University of Liverpool.
Charing Cross Hospital Medical School; King's College Hospital Medical School.	Mr. A. GILPIN, King's College Hospital Medical School.
Guy's Hospital Medical School; London Hospital Medical School.	Mr. J. B. ROBINSON, Guy's Hospital Medical School.
	Mr. G. E. LEWIS, London Hospital Medical School (£10 each).
London (Royal Free Hospital) School of Medicine for Women; University College Hospital Medical School.	Mr. R. M. SARGENT, University College Hospital Medical School.

*Group of Medical Schools.*

Middlesex Hospital Medical School; St. Mary's Hospital Medical School.

St. Bartholomew's Hospital Medical School; St. George's Hospital Medical School.

St. Thomas's Hospital Medical School; Westminster Hospital Medical School.

*Prizewinner.*

Mr. C. E. DOLMAN, St. Mary's Hospital Medical School.

Mr. F. W. LINTON-BOGILL, St. Bartholomew's Hospital Medical School.

Mr. R. G. L. WALLER, Westminster Hospital Medical School.

The prizes in respect of the London groups were presented to the winners at the meeting for senior students and recently qualified medical practitioners held in the Great Hall of the Association on March 22nd. The prizes in the other groups will, as far as possible, be presented at the meetings being held by the Divisions or Branches concerned to welcome the newly qualified members of the profession. Particulars of the result of the competition have been sent by post to the deans of the medical schools and to all the competitors.

**Association Notices.****TABLE OF DATES.**

March 28, Wed.	Nomination papers available (on application at Head Office) for election of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
April 23, Sat.	Annual Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> . Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 12, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of election of (i) 24 members Branches in British Isles; also members of Council, and also Public Health Service in Representative Body, where there are contests in above elections.
May 15, Tues.	Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.
May 18, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service Members of Council, and 4 Representatives of Public Health Service in Representative Body.
June 2, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.
June 2, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members.
June 7, Thurs.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members. (On application at Head Office of members of Council by grouped Branches in British Isles, and Deputy Representatives must be received at Head Office by this date.

ALFRED COX, Medical Secretary.

**BRANCH AND DIVISION MEETINGS TO BE HELD.**

**BIRMINGHAM BRANCH: DUDLEY DIVISION.**—A meeting of the Dudley Division will be held at the Guest Hospital, Dudley, on Thursday, April 5th, at 8.30 p.m. Agenda: Election of representative at Annual Representative Meeting, and demonstration of clinical cases, etc.

**DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.**—A meeting of the Bournemouth Division will be held on Thursday, March 29th, at 4 p.m. Dr. G. C. Anderson, Deputy Medical Secretary, will give an address on the British Medical Association's contribution to public health. Non-members are cordially invited.

**LANCASHIRE AND CRESHIRE BRANCH: SOUTHPORT DIVISION.**—A meeting of the Southport Division will be held at 52, Houghton Street, Southport, on Friday, March 30th, at 8 p.m., when Dr. E. P. Cumberbatch will deliver a British Medical Association Lecture on the use of ultra-violet rays in general as well as in skin diseases. It is hoped that there will be a large attendance of members.

**METROPOLITAN COUNTIES BRANCH: HENNON DIVISION.**—A combined clinical meeting and dinner of the Hennon Division will be held at the Brent Bridge Hotel on Friday, March 30th, at 7.45 for 8 p.m. An address will be given by Dr. W. Langdon Brown, physician to St. Bartholomew's Hospital, on organotherapy in general practice, to be followed by a discussion. All medical practitioners are cordially invited. Dinner tickets 8s. 6d.

**METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.**—A general meeting of the Kensington Division will be held at the Town Hall, Hammersmith, to-day (Friday, March 23rd), at 8.45 p.m. An address

will be given by Mr. C. A. Pannett entitled "Debatable aspects of the surgery of gastro-duodenal ulceration." The subsequent discussion will be opened by Mr. Zachary Cope.

**METROPOLITAN COUNTIES BRANCH: NORTH MINBLESEX DIVISION.**—At the meeting of the North Middlesex Division to be held on Wednesday, March 28th, Dr. L. R. Yelland will read a paper on dyspnoea in nervous diseases.

**NORTH OF ENGLAND BRANCH: BISHOP AUCKLAND DIVISION.**—The annual dinner of the Bishop Auckland Division will be held at the King's Hall Café, Bishop Auckland, on Tuesday, March 27th, at 7.45 for 8 p.m.

**NORTH OF ENGLAND BRANCH: NEWCASTLE-UPON-TYNE DIVISION.**—The Newcastle-upon-Tyne Division will hold a reception and dance in aid of medical charities at the College of Medicine on Thursday, March 29th, from 8 p.m. to 1 a.m. Mr. F. C. Pybus, chairman of the Division, and Miss Pybus will be the host and hostess. Tickets, 5s. for fourth- and fifth-year students and 7s. 6d. for members, can be obtained at the College of Medicine or from the honorary Secretary of the Division, Dr. S. W. Davidson, 7, Windsor Terrace, Newcastle-upon-Tyne.

**OXFORD AND READING BRANCH: OXFORD DIVISION.**—The next meeting of the Oxford Division will be held at the Radcliffe Infirmary on Wednesday, March 28th, at 2.30 p.m. Agenda:—Dr. Collier: An episode in the life of a country practitioner; Dr. Stohie: A case of thoracoplasty; Dr. J. Stanley White: Some recent aspects of biological therapy, illustrated by lantern and cinematograph.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH: SOUTH-WEST WALES DIVISION.**—A meeting of the South-West Wales Division will be held at the Carmarthenshire Infirmary, Carmarthen, on Thursday, March 29th, at 3 p.m. Sir Ewen J. Maclean will open a discussion on maternal mortality and morbidity. Tea will be provided at the close of the meeting.

**SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.**—A meeting of the South Suffolk Division will be held in the board room of the East Suffolk and Ipswich Hospital to-day (Friday, March 23rd), at 3.30 p.m. Agenda: Business arising out of minutes; lecture by Dr. W. Brooks Keith (medical superintendent of St. Audrey's Hospital) on the diagnosis of early mental disease.

**SURREY BRANCH: CROYDON DIVISION.**—A meeting of the Croydon Division will be held at the Croydon General Hospital on Wednesday, March 28th. Dr. R. C. Lightwood will give a lantern demonstration on cyclic vomiting of childhood and its treatment. Preceded by tea at 4 p.m.

**WEST SOMERSET BRANCH.**—A meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital on Tuesday, March 27th, at 3.30 p.m. Agenda: Health propaganda in the county; coroners' fees; and a paper by Dr. L. H. C. Birkbeck entitled "Twenty-five years of a country hospital." Tea will be served at the conclusion of the meeting.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH: HEREFORD DIVISION.**—A meeting of the Hereford Division will be held at 20, East Street, Hereford, on Monday, March 26th, at 3.30 p.m. Agenda: Report of Executive Committee; election of representative to Annual Representative Meeting; notice of motion—Dr. Steed will move, "That all previous resolutions in connexion with mileage fees in emergency midwifery cases be reconsidered"; varicose ulceration; proposed lectures; monthly circular; correspondence..

**Meetings of Branches and Divisions.****BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.**

A record attendance was attained by the Dumfries and Galloway Division at its meeting held in the Royal Infirmary, Dumfries, on February 21st, when Professor EDWIN BRAMWELL delivered a British Medical Association Lecture on some clinical aspects of pain. The lecturer handled his subject in his usual inimitable style, and the touches of dry humour enhanced the effect.

At the end of the lecture a series of questions was asked, to which Professor Bramwell replied, and a hearty vote of thanks was accorded to him. Tea was provided by the chairman.

**SUFFOLK BRANCH: SOUTH SUFFOLK DIVISION.**

The annual meeting of the South Suffolk Division was held at the Crown and Anchor Hotel, Ipswich, on January 6th.

The annual report and financial statement was presented and adopted.

The following officers were elected for 1928:

Chairman, Dr. H. Henry. Vice-Chairman, Dr. S. S. Heyland. Secretary, Dr. R. O. Eades. Deputy Secretary, Dr. Addey. Charities Secretary, Dr. Gutch.

Dr. A. M. N. PRINGLE, having explained the memorandum of the Association regarding public education in health, the following motion was unanimously adopted, and a subcommittee of four was appointed to deal with the subject:

That this meeting endorses the policy of the British Medical Association with respect to propaganda for the education of the public.

A letter was read from Dr. Walker, chairman of the Charities Committee of the Association, regretting his inability to be present, and expressing his willingness to attend a future meeting.

A vote of thanks was accorded to Dr. Henry for providing tea.

## VACANCIES.

ASHTON-UNDER-LYNE: DISTRICT INFIRMARY.—House-Surgeon. Salary at the rate of £150 per annum.

BIRMINGHAM LUNATIC ASYLUM.—Assistant Medical Superintendent. Salary £500 per annum, rising to £600.

BOURNEMOUTH: ROYAL VICTORIA AND WEST HANTS HOSPITAL.—House-Surgeons at Poole Road and Boscombe Branches. Males, unmarried. Salary at the rate of £120 per annum each.

BRIGHTON: NEW SUSSEX HOSPITAL.—House-Surgeon (female). Honorarium at the rate of £50 per annum.

BRISTOL HOMOEOPATHIC HOSPITAL.—Resident Medical Officer. Salary £100 per annum.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN.—Out-patient Physician.

BURY INFIRMARY.—Third House-Surgeon (male). Salary at the rate of £150 per annum.

CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—(1) House-Surgeon to the Special Departments. (2) House-Surgeon. Males. Salary at the rate of £130 per annum each.

CARDIFF ROYAL INFIRMARY.—(1) Gynaecological House-Surgeon. (2) Ophthalmic House-Surgeon. Salary at the rate of £50 and £75 per annum respectively.

CHURCH CROSS HOSPITAL, W.C.2.—(1) Assistant Surgeon. (2) Surgical Registrar; honorarium £150 per annum.

CORNWALL UNION.—District Medical Officer and Public Vaccinator. Salary £75 per annum and vaccination fees.

COSSHAM MEMORIAL HOSPITAL, Kingswood, Bristol.—Resident Medical Officer (male). Salary £150 per annum.

CROYDON UNION.—Resident Assistant Medical Officer at the Mayday Road Hospital (male). Salary £300 per annum.

DERBYSHIRE HOSPITAL FOR SICK CHILDREN.—Resident Medical Officer (lady). Salary at the rate of £150 per annum.

DUBLIN: CITY OF DUBLIN SKIN AND CANCER HOSPITAL.—(1) Resident House-Surgeon. (2) Resident Deep X-ray Therapist.

DURLEY: GUEST HOSPITAL AND EYE INFIRMARY.—House-Surgeon (male). Salary £150 per annum.

EVELINA HOSPITAL FOR CHILDREN, Southwark, S.E.1.—House-Surgeon (male). Salary at the rate of £120 per annum.

FORTINGALL PARISH COUNCIL.—Medical Officer and Public Vaccinator for the Rainnloch District. Annual income probably from £650 to £700.

GLASGOW EYE INFIRMARY.—Three Clinical Assistants.

HONG-KONG.—Two Assistant Medical Officers of Health. Salary £740 per annum, rising to £1,040.

KNOCKANDO PARISH.—Parochial Medical Officer and Public Vaccinator. Salary £45 per annum.

LANARK COUNTY.—Assistant Medical Officer (male) under the Maternity and Child Welfare Scheme. Salary at the rate of £500 per annum.

LIVERPOOL HEART HOSPITAL.—Honorary Assistant Physician.

LONDON TEMPERANCE HOSPITAL, Hampstead Road, N.W.1.—Surgical Registrar. Honorarium 40 guineas.

LUTON UNIVERSITY.—Professor of Anatomy. Salary Rs.1,450 per mensem.

MELBOURNE: CHILDREN'S HOSPITAL.—Medical Superintendent of the Orthopaedic Section. Salary £1,000 per annum, plus board and residence, or £1,250 with no board or quarters.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—Honorary Physician to the special Department for Children. Honorarium 20 guineas per annum for travelling expenses.

MINISTRY OF HEALTH.—Deputy Regional Medical Officers. Remuneration £800 per annum, rising to £1,100.

NOTTINGHAM GENERAL DISPENSARY (BRANCH).—Resident Lady Surgeon. Salary £250 per annum, rising to £300.

PADDINGTON GREEN CHILDREN'S HOSPITAL, W.2.—(1) House-Physician. (2) House-Surgeon. Males, unmarried. Salary at the rate of £150 per annum each.

PRINCE OF WALES'S GENERAL HOSPITAL, Tottenham, N.15.—(1) House-Surgeon. (2) Special House-Surgeon. (3) House-Physician. (4) Junior House-Surgeon. (5) Junior House-Physician. Salary at the rate of £120 per annum for (1), (2), and (3), and £80 per annum for (4) and (5).

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—Physician in charge of Skin Department.

ROCHDALE INFIRMARY AND DISPENSARY.—Junior House-Surgeon (male). Salary £200 per annum.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—(1) Resident Anaesthetist. (2) Casualty Officer (male); salary at the rate of £150 per annum.

SUNDERLAND: CHILDREN'S HOSPITAL.—House-Physician (female). Salary at the rate of £100 per annum.

SUNDERLAND: ROYAL INFIRMARY.—Two House-Surgeons (males). Salary at the rate of £140 per annum.

WICKFIELD CITY.—Deputy Medical Officer of Health. Salary £625 per annum.

WIMBORNE AND DISTRICT GENERAL HOSPITAL, Waterloo, near Liverpool.—Resident House-Surgeon. Salary £50 per annum.

## DIARY OF SOCIETIES AND LECTURES.

## ROYAL SOCIETY OF MEDICINE.

Section of *Odontology and Electro-Therapeutics*.—Mon., 8 p.m., Special Discussion: The Impassable Tooth. Speakers for Section of *Odontology*: Mr. Frank Coleman, Mr. Owen C. Morphy, Mr. A. T. Pitts, Dr. A. Livingston, Mr. St. J. Steadman, Mr. B. Mendelson, and Mr. A. F. MacCallan; for Section of *Electro-Therapeutics*: Dr. H. M. Worth, Dr. G. Murray Levick, Dr. Meyrick Jones, Dr. J. F. Brailsford, Mr. Norman Grellier, Dr. A. C. Jordan, and Dr. G. B. Batten.

Section of *Medicine*.—Tues., 5 p.m., Dr. F. Parkes Weber: A Note on Idiosyncrasies and Abnormalities in Human Beings; Professor D. W. Carmichael-Jones: New Zealand Views on Goitre.

Section of *Comparative Medicine*.—Wed., 5 p.m., T. Dalling, J. H. Mason, and W. S. Gordon: Intradermic Tuberculin Testing in Cattle; (2) Transference of Maternal Immunity in Sheep. J. W. Trevan: The Present State of Knowledge of Sex Hormones. H. J. Parish: B.C.G. Experiments in Guinea-pigs. C. C. Okell: Diphtheria Infections and Diphtheria Immunity in Horses.

Section of *Psychiatry*.—Thurs., 8.15 p.m., Discussion: The Etiology of Alcoholism. To be opened by Dr. Bernard Hart and Dr. Edward Mapother, and Dr. Edward Glover and Dr. Crichton Miller.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W.1.—Tues. and Thurs., 5 p.m., Lumsden Lectures by Dr. James S. Collier: Epilepsy.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.1.—Mon., 8.30 p.m., Discussion: Advances in the Treatment of Cancer of the Cervix Uteri. To be opened by Dr. Herbert R. Spencer and Dr. Max Cheval (Brussels).

## POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Hampstead General Hospital, Hampstead Hill, N.W.3.—Practitioner's Course in Medicine, Surgery, and the Specialties. Mon. to Fri., 4.30

to 6 p.m.; Lecture and Demonstration. *Royal National Orthopaedic Hospital*, Great Portland Street, W.1: All-day course—Clinics, Operations, Lectures. Copies of all syllabuses sent on application, also details of general course work and specimen copy of the *Post-Graduate Medical Journal*. Apply Secretary, Fellowship of Medicine, 1, Wimpole Street, W.1.

CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Fri., 4 p.m., The Musculature of the Vocal Cords.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—Thurs., 4 p.m., Diphtheria.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Thursday, 4 p.m., Oral Hygiene.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Thurs., 5 p.m., Scleroderma, Neurofibromatosis. Thurs., 5 p.m., Diseases of the Nails.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.15 p.m., Demonstration of Medical Cases; 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 p.m., Demonstration of Surgical Cases; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

### British Medical Association.

#### METROPOLITAN COUNTIES BRANCH.

##### RECEPTION TO STUDENTS AND THE NEWLY QUALIFIED.

A MEETING to which fourth- and fifth-year students and recently qualified practitioners were invited was held by the Metropolitan Counties Branch on March 22nd in the Great Hall of the Association's House. A very large number were entertained to tea, and were afterwards addressed by Dr. Graham Little, M.P.

The chair was taken by Mr. E. B. TURNER, F.R.C.S., Branch President, who first of all presented to the prizewinners from the London schools the certificates and prizes awarded by the Council of the Association for competition essays by final-year students. The full details of the results of the competition were published in last week's *Supplement*. Those who received the prizes on this occasion were Mr. A. Gilpin (King's College), Mr. J. B. Robinson (Guy's), Mr. G. E. Lewis (The London), Mr. R. M. Sargent (University College), Mr. C. E. Dolman (St. Mary's), Mr. F. W. Linton-Bogic (St. Bartholomew's), and Mr. R. G. L. Waller (Westminster). All were heartily applauded as they stepped forward to the dais. Mr. Turner said that he had been informed that the standard of work shown in the competition was exceedingly high, and every one of the men who had gained a prize thoroughly deserved it. But he reminded them all that the great value of the competition was not the winning, but the striving.

##### THE FUTURE OF MEDICAL PRACTICE.

ADDRESS BY DR. E. GRAHAM LITTLE, M.P.

The text of his address, Dr. Little said, was furnished by the resolution carried at the last Annual Representative Meeting on the encroachments upon private practice. It had been obvious for a long time that the position of the general practitioner had been undergoing subtle and insidious changes, owing in part to altered relations with the public, and in part to the progress in complexity of medicine in this generation. The outstanding feature of medical education was the multiplication of subjects to be taken in the undergraduate stage. A large proportion of the audience he saw in front of him was groaning under a burden such as the older generation of practitioners never knew, and the average period of study at the present time demanded for a first qualification in medicine was stretching well into seven years. A list of more than thirty subjects was already prescribed by the General Medical Council, and public opinion was ever calling for more. In some ways it had been an advantage to have the catholic training which this curriculum indicated, but there was a certain misgiving, widely entertained, that the time allowed for individual subjects made it impossible to secure real mastery of any of them, and that some readjustment was called for. Some selection would have to be made of subjects which were regarded as of primary importance.

##### "A Glorified Casualty Medical Officer."

The object of the future might well be to equip the medical practitioner by his first qualification to undertake something of the duties which were now performed by the casualty medical officer of a great hospital. The general practitioner would, in fact, be a very glorified casualty medical officer. His function would be largely to sift out cases and to instruct the patients who passed through his hands to consult the person or department most able to diagnose and treat individual conditions. The lecturer saw no reason why the general practitioner of the future should object to such a role. The casualty medical officer was one of the most important cogs of the hospital wheel. Upon him rested the responsibility for detecting disease in its earliest stages. He sorted out the cases in which diagnosis was unusually difficult, and sent them to the appropriate department for further investigation and treatment. The waste of time, and quite often the loss of real opportunity for service, when patients went in the first instance to consultants without having had the advice of their general practitioner in the choice of consultant, was often to be deplored.

Dr. Graham Little wished particularly to avoid the suggestion that there was any conflict of interest between consultants and general practitioners. They were all members of one body, and the one could not exist without the other. While he thought it an extremely mischievous tendency of the public to go to consultants without first receiving the advice of their family practitioner, he thought also that the family practitioner was sometimes unnecessarily reluctant to seek the advice of the expert in cases where he himself was not personally qualified to make a diagnosis. That golden quality of reciprocity was clearly indicated here. The interest of the public was the final law. It was to the interest of the public that early diagnosis and treatment should be obtained from the general practitioner, and, if doubt existed as to diagnosis, early advice from the consultant was equally important. With this conception of the part to be played by the general practitioner of the future the curriculum would obviously undergo some change. Many subjects would be dropped so far as the undergraduate stage was concerned; the period of undergraduate study might even be profitably shortened, and those who wished to take up some special subject would be able to add to it by way of a post-graduate course. The broad basis of a good general education must be insisted upon as an entrance to the profession. He had always set his face against the too early teaching of the medical sciences. Again, competition in medicine had become so severe that it was more and more important that the student should, at the very outset of his career, recognize the importance of taking the examinations for a degree in one or other of the universities in preference to the qualifications of colleges, however eminent, which could not give degrees. In London the choice usually lay between reading for a University of London degree and for the diplomas of the Royal Colleges; many students took both as a sort of re-insurance against failure. The medical degrees of London University were perhaps the best in the country, and the examinations were not much more difficult to well-trained students than the examinations for the diplomas of the Royal Colleges. When applying for appointments the young medical practitioner usually found that candidates with degrees were

preferred to candidates with diplomas; such preference was often wholly undeserved, for there were many provincial universities which gave degrees representing a considerably lower standard than the diplomas, for example, of the Royal Colleges in London.

#### *Irregular Practice.*

The inordinate length of the curriculum had led indirectly to the growth of various forms of irregular practice, which were usually mere short cuts to qualification. These short cuts entailed varying durations of study. Osteopathy exacted, on paper, three to four years, but the teaching given in that time was not comparable with that afforded by the medical schools. Chiropractic might be acquired, apparently, in about six months. A determined effort was being made by the osteopaths to promote legislation which would place them on the same level as practitioners qualified by seven years of study, and a committee of the House of Commons having for its sole purpose the promotion of such legislation was still in existence.

Dr. Graham Little here quoted from the article by Dr. E. R. Fothergill in the *Supplement* of March 3rd the melancholy list of departments which had been withdrawn from the purview of the general practitioner. He could not help saying that in some of these instances if the general practitioner had lost ground it was his own fault. Midwifery was handed over to midwives largely because general practitioners refused to take on this work; the apathy of the doctors surrendered the position to the enthusiasm of the nurses. Sight-testing had nearly gone the same way. Dr. Graham Little recounted the recent history of the attempt on the part of the sight-testing opticians to introduce legislation to establish a register for themselves. But, incredible as it might appear, there were actually consulting ophthalmic surgeons who declared that sight-testing by the general practitioner was impossible, and that it was far better done by the irregular practitioners, who had, as a rule, more up-to-date appliances for testing sight. The only hope of defeating this dangerous move was for the British Medical Association to come forward, as he was glad to see it was doing, and convince the public that there were sufficient numbers of qualified persons in the medical profession to carry out sight-testing upon the large scale which the Insurance Act would ultimately demand. Other departments in the list of which he had spoken were, he feared, inevitable encroachments upon the general practitioner's field of practice, and had come to stay. The treatment of venereal diseases had become so complicated, and was hedged about by such peculiar social difficulties, that this class of case was probably permanently lost to the general practitioner. Diseases which required institutional treatment were at least partially withdrawn. The impoverishment of the middle-classes under the burden of taxation had made almost unavoidable the provision of institutional treatment for them. Some method would have to be devised by which the general practitioner would have a share in the treatment of his patients in institutions.

#### *The Voluntary Hospital System.*

The Minister of Health had announced a very ambitious scheme of transferring the Poor Law hospitals from the control of boards of guardians to that of municipalities, and anxiety was felt lest this should mean an attack upon the whole voluntary system, which would thus be brought under State control. Here, again, the apathy of the medical profession had been one of the most remarkable and disquieting features of the position. The editor of a great London daily newspaper had roundly said to him that the medical profession seemed to have no desire to defend the voluntary system in medical practice. Dr. Graham Little's own opinions had been pungently voiced at the Representative Meeting last year by the chairman on the present occasion, Mr. Turner, the report of whose speech he read to the meeting. A State medical service would comprise the whole profession, consultants as well as general practitioners, and its ultimate effect upon the progress of medicine would be disastrous.

This generation had seen the most phenomenal advances in medicine—had seen "the sun rise on a darkened world," in the words of the late Professor Starling—and he thought perhaps they had become a little intoxicated with their success, for that was the only explanation he could offer for a very remarkable contemporary development of thought in the profession. There was a desire, evident on many sides, to introduce the entirely new system of compulsory treatment of disease. Perhaps the community might even be approaching the position depicted in a very familiar advertisement which showed a man arraigned before a court of law for the crime of being unhealthily! He went on to refer to the Edinburgh Corporation Bill, now awaiting a second reading, which would make the treatment of venereal disease compulsory within a certain area, the compulsion to be enforced by detention. This principle, once adopted, would be sure to spread; the laryngologists would press for the compulsory enucleation of tonsils,

and the dental surgeons for the compulsory removal of teeth. There would be no finality in the claims thus made.

#### *The Neglect of Clinical Study.*

A partial explanation of this curious trend of thought lay in the immense expansion of what might be called laboratory as opposed to clinical methods. There was an unfortunate tendency among senior students to forsake the wards for the laboratory, and the examinations revealed a somewhat disquieting neglect of clinical study. A sympathetic knowledge of sick men and women would be more important to the young practitioner than any other knowledge he could acquire. It was with human beings, not with corpses or test tubes, they would have to live their future lives. There was no more valuable preparation for medical practice than the earnest clinical study, which had been the distinguishing note of English medicine. The old physicians spent many hours in the wards and acquired an amazing instinct for diagnosis. Laboratory medicine seemed so certain, its exponents developed the cocksure temperament, which was inevitably chastened by the experience of clinical medicine. Unhappily the certainty of laboratory results was by no means commensurate with the confidence with which those methods were urged upon the profession. A laboratory diagnosis unchecked by clinical knowledge was the most fallacious of all judgements.

The speaker believed the principle of compulsory treatment to be wholly and entirely wrong. Those who sought to enforce it, in his opinion, were bad psychologists, and therefore insufferably bad doctors. The history of this old and proud nation should surely have taught any observer who was teachable that the average inhabitant of these islands was easy to lead, but "gey ill to drive." He hoped with all his heart that the medical profession would refuse this invidious and impossible role which was prescribed for them, and that the bill introducing the principle of compulsory treatment would be laughed out of court when it came before Parliament, as it was expected to do within the next few days. Until complete certainty of diagnosis and treatment was reached compulsory treatment could not be a practical proposition. Closely linked with this question was the question of the propriety of revealing professional confidences. There had been an unhappy recurrence of cases in which doctors had been compelled by a court of law to make known facts imparted to them by the patient. He had had the honour to introduce into Parliament a short bill which might remove this compulsion; it was a great satisfaction to him that its terms had received the approval of so great a legal authority as Lord Atkin, and he thought there was some ground for hoping that it might become law.

#### *Women in Medicine.*

Finally, the speaker touched on the question of women in medicine, hotly debated at the moment. Comparison with men students would probably show that no disproportionate number of women failed to make a living by medicine, exception being made of the special condition of marriage, which commonly resulted in a woman relinquishing her profession. Medical women made admirable wives, and were naturally enough sought by the discerning man. Their medical education made them ideal companions; husband and wife could scale the peaks of knowledge hand in hand, and her medical training made the woman specially fit to undertake the bearing and rearing of the child, which the most typical of mid-Victorian poets said was "woman's wisdom." But when medical women elected to remain unmarried—and it was for the most part an election—they had little difficulty in finding work to do. Their emoluments compared favourably with the rewards they might look for in any other walk in life. Vast new fields of practice remained to be tilled by them. Medicine was the most promising of professional careers for daughters of professional men. Whether men liked it or not, the women had come to stay, and he personally gave them the heartiest of welcomes. By introducing medical women into departments of practice now largely occupied by unqualified women the profession of medicine as a whole would benefit, and the public would obviously be far better served by trained medical women than by very much less well trained and unqualified persons.

In closing, Dr. Graham Little urged upon his hearers the importance of enrolling themselves immediately upon qualification with the great professional bodies whose purpose it was to give such help as the solitary man could never command for himself. The greatest of all these bodies was the British Medical Association. They would also be wise to join one of the organizations which undertook individual legal defence for their members.

Two of the students made admirable little speeches in proposing and seconding a vote of thanks to Dr. Graham Little.

Mr. R. M. SARGENT (University College) said that as one who was about to enter the profession of medicine he was

rather perturbed by the lecturer's vision of the future practitioner as a kind of superlative casualty officer, and he felt that Dr. Graham Little did not mean entirely that the sole function of the general practitioner should be to refer cases to specialists or departments. He also begged the representatives of the profession to take action in combating the exploitation of medical subjects in the newspapers, but he did not suggest any means by which this might be done.

Miss IRENE ROGERS (King's College) said that she thought the students ought to be grateful for such advice as Dr. Graham Little had given them. The trouble about good advice was that it often came too late, but here was advice proffered while there was still time to act upon it. Like the proposer, she had her view of the tasks which the British Medical Association as representative of the profession might undertake. She hoped that it would speak with a clear voice with regard to the position of women medical students, about whose future there was some anxiety owing to the action taken or contemplated by some of the medical schools.

## British Medical Association.

### CURRENT NOTES.

#### The Chairman of Council in South Africa.

THE Medical Secretary has received a letter from the Chairman of Council from Johannesburg, dated March 6th. He had read of the death of Sir Dawson Williams in the *Cape Times*, and expressed his deep sorrow that it would not now be his privilege to move the proposal of the Council at the Annual Representative Meeting that Sir Dawson Williams should be made a vice-president of the Association. Dr. Brackenbury has been kept very busy since his arrival in Johannesburg, which seems to have lived well up to its reputation in that respect. Dr. A. J. Orenstein, the president of the South African Federal Council, and Sir Spencer Lister met Dr. and Mrs. Brackenbury on their arrival, and everybody has been most kind and attentive. In addition to seeing over the principal medical institutions, Dr. Brackenbury has met a good many of the prominent men and talked over the medical problems of South Africa. On the day he wrote there had been a Branch dinner and a useful discussion afterwards, and on the next day Dr. Brackenbury was to address a general meeting of the Branch on the subject of national health insurance, about which, he says, the profession in South Africa is beginning to get excited. Dr. and Mrs. Brackenbury were due to leave for Bloemfontein on March 11th, and, after a week spent at the Congress, would leave for Durban on the 17th and thence to Capetown on the 21st. All being well, Dr. Brackenbury would leave Capetown on March 23rd, and is expected home on April 9th.

#### Insurance Acts Committee.

##### Spa Treatment for Insured Persons.

On March 15th the Insurance Acts Committee had before it, in accordance with the rules of the British Medical Association governing the new procedure, reports from the Spa Practitioners Group, the first of such groups to be formed within the Association. The findings of the Group Committee on a scheme for the provision of spa treatment for insured persons formulated by the Federation of British Spas were considered by the Insurance Acts Committee, which will submit them, with its own comments, to the Council of the Association at its next meeting.

#### London Clinic for Treatment of Rheumatism.

In the *British Medical Journal* for January 28th some account was given of a proposed clinic for the treatment of rheumatic diseases in London, and the appeal made by the British Red Cross Society for funds for this purpose. This proposal has received considerable publicity in the lay press. An appeal has been made for support from the insurance committees and approved societies, some of which have already sent subscriptions, and on March 20th the *Times* published a general appeal for funds signed by the Prime Minister, Mr. Ramsay MacDonald, Mr. Lloyd George, and others, including prominent medical men, together with a sympathetic leading article on the project. The clinic appears to be intended primarily, though not

exclusively, for the use of insured persons. The Insurance Acts Committee had before it a report that a request had been received for the support of the British Medical Association in the general appeal for funds, but that in the absence of any guarantee as to the relations of the clinic to the private practitioner the Medical Secretary, after consultation with the Acting Chairman of Council, had replied that it would not be possible to commit the Association to a formal approval of the clinic. Inquiries upon this point had, however, been addressed to the British Red Cross Society as soon as the scheme was made public, and the Committee had before it a report of a resolution passed by the medical subcommittee of the proposed clinic on March 8th, to the effect that no patients should be treated at the proposed clinic except on the recommendation of a duly qualified medical practitioner. In view of the assurance conveyed in this resolution the whole question will be considered further by the Committee at its next meeting, and will be the subject of a report to the Council.

#### Medical Benefit Regulations.

The Committee gave instructions as to final adjustments in the proposed amendments of the Medical Benefit Regulations. It is expected that the new regulations will come into operation at an early date.

#### National Health Insurance Bill.

The Insurance Acts Committee has under consideration the clauses affecting the medical profession in the National Health Insurance Bill, introduced on March 5th. Some account of the provisions of this bill was given in the *Supplement* of March 17th (p. 89).

#### Hospitals Committee.

On March 14th the Hospitals Committee approved, for submission to the Council at its next meeting, the scheme for the co-ordination of hospital provision drawn up by the special subcommittee. The Committee has now arranged to call a conference of representatives of medical staffs of voluntary hospitals to discuss the policy of the Association as to contributory schemes, and the conference will take place on June 6th. In the *Times* of February 7th last a letter signed by Lord Donoughmore stated that the Royal Automobile Club and the British Hospitals Association were considering the question of the cost of hospital treatment in connexion with motor casualties, and that a conference would probably be called to discuss the matter. It is understood that the King Edward's Hospital Fund for London is taking the initiative in this matter, and the Fund has been requested to arrange for the participation of representatives of the British Medical Association in the proposed conference. The Committee appointed its chairman, Sir Richard Luce, and the Medical Secretary and Deputy Medical Secretary to represent it in this connexion, should the need arise.

#### Cardiff Annual Meeting: Reduced Railway Fares.

We are glad to be able to state, on the authority of the Railway Clearing House, that reduced fares will again be granted to persons travelling to attend the Annual Meeting at Cardiff next July. The railway companies in Great Britain (except the Metropolitan, Metropolitan District, and London Electric Railway Companies) have agreed to issue return tickets to passengers travelling to Cardiff in this connexion at the ordinary single fare and one-third, fractions of 3d. to be reckoned as 3d., and the minimum adult fare to be 1s. A voucher of the usual type must be surrendered when the ticket is bought; these vouchers, signed by the Financial Secretary of the Association, will be obtainable from him in due course on application.

#### The Hempson Prize.

Mr. W. E. Hempson has placed at the disposal of the Council, upon his retirement from the post held by him for thirty years of Solicitor to the Association, and as a mark of esteem for the Association and appreciation of his happy relations therewith, a sum of twenty-five guineas, to be awarded as a prize for the best essay or treatise on some phase or branch of public health. The subject approved by the Council for the prize is "A study

of personal experiences in the inspection and treatment of school children under the auspices of an elementary education authority." The following conditions govern the award of the prize:

1. Only members of the Association are eligible to compete.
2. Studies must be sent to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than December 31st, 1928, and the prize will be awarded at the Annual General Meeting of the Association at Manchester in 1929.
3. No study that has been published in the medical press or elsewhere will be considered eligible.
4. If any question arises as to the eligibility of the candidate or the admissibility of his study, the decision of the Council on any such point shall be final.
5. Each study must be typewritten or printed, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto and enclosing the candidate's name and address.
6. Inquiries relative to the prize should be addressed to the Medical Secretary.

### B.M.A. CHARITIES FUND.

The following is a list of subscriptions and donations to the British Medical Association Charities Fund from June 1st, 1927, to February 29th, 1928, forwarded for use at the discretion of the trustees of the Fund (the members of the Council of the Association for the time being in office):

- £50.—Medical Insurance Agency.  
£60 6s. 9d.—Collection at St. Giles's Cathedral, Edinburgh, July, 1927.  
£50.—Dorset Local Medical and Panel Committee.  
£19 6s. 6d.—South Essex Division.  
£29 6s. 6d.—South-West Essex Division.  
£21 14s.—Members of the Fife Branch.  
£21 10s.—East Norfolk Division.  
£21 10s.—Tyneside Division.  
£20 6s. 8d.—Hastings Division.  
£12 2s.—North Northumberland Division.  
£15 8s.—Dumfries and Calloway Division.  
£15.—Lanarkshire Division.  
£12 17s.—Coventry Division.  
£10 10s.—North Staffordshire Division, William Gilchrist.  
£10.—R. P. White, W. G. Pridmore.  
£8 8s.—Major E. C. Kennedy.  
£5 5s.—Dumfriesshire Panel Committee; Hyde Division; Medical Staff, Andover Mental Hospital; W. D. Frew, J. McDonald, R. G. McCowan, Sir Ewen J. Maclean, W. H. Hey, F. O'Kinealy.  
£5.—J. R. Humphrey Owen, H. Fairbairn, F. Husband Clutton, J. C. Matthews, Hon. Mrs. L. Hamilton, W. G. Moore.  
£4 15s.—Plymouth Panel Committee.  
£4 12s.—R. D. Clarkson.  
£4 8s.—P. E. Tressider.  
£4 6s.—R. Reid Duncan.  
£4 4s.—J. L. Lunham, O. O. Hawthorne, R. Langdon-Down.  
£3 15s. 6d.—John G. Currid.  
£3 5s.—South Suffolk Division, E. Colston Williams, H. Calger, "Host" (in lieu of wines at a medical dinner), J. B. Macalpine, R. M. Courtauld, A. D. Hamilton, P. Macdonald, T. D. Davies.  
£3 2s.—Bedfordshire Division.  
£2 2s.—Colonel J. L. Lunham, Colin Mearns, E. B. Hastings, W. S. Wallace, A. J. Milbank-Smith, Longsight District Medical Society (per J. D. Ewart), C. C. Anderson, T. J. McGlade, J. Morley, Major W. C. Poole, A. H. Hopkins, C. C. Easterbrook, H. N. Fletcher, H. Calger, A. W. Nuthall, J. R. Scott, M. R. B. Bishopp, H. Miller, R. F. V. Hodge, R. A. R. Wallace, Hon. W. W. Macleay, H. B. Brackenbury, F. H. Robbins, C. G. O. Scudamore, K. B. Williams, J. B. Munro, E. H. Hastings, W. Mitchell-Innes, A. Cox, M. C. Robertson, G. G. Macdonald, R. B. Skrimshire, T. N. Wood, N. A. Boswell, P. O. Coles, F. L. Thom, J. A. Naismith, E. H. Ablett, W. H. Carse, C. Andrews, C. Carruthers, Kingsley W. Lewis, F. J. Baildon, Adam Moss, O. W. G. Bain, J. H. Clover, W. Duncan, J. H. Simpkins, H. Cuy Dain, F. J. McGlade, H. Brostoff, H. Souttar, Watson Noble.  
£2.—M. J. Moir, E. Knight, Isaac V. Yoffa.  
£1 10s. 6d.—Kensington Division.  
£1 17s. 6d.—Sunderland Division, C. S. Pantin, M. M. Artlur, W. A. Tweedle.  
£1 8s. 6d.—T. C. MacIntyre, Janet McI., Stewart.  
£1 16s.—E. P. Stibbe, H. McC. Hansell, W. A. M. Swan, H. D. Watson, E. T. Power, J. W. Wood, N. T. Whitehead, A. B. Wade, C. J. Henderson, G. A. Johnston, C. E. Smith, C. B. Baislie, C. F. Clinn, John Hugh, H. Carpenter, W. C. Rendle, E. F. Paige, W. H. Helm, H. M. Masina, F. W. McKenna, J. Stratford Hall, J. John Cilmore, J. M. McQueen, J. Walker Brash, Duncan Mackintosh, W. Wilson, Harry Platt, L. E. Lewis, D. H. Pennant, J. Robinson, J. M. Stirling, E. Vipont Brown, P. B. Spurgin, H. S. Beadles, H. B. Boueher, W. F. Attwater, David Anderson, S. H. Clarke, M. O. Raven, J. A. Delmege, R. Jaques, Helen D. Watson, H. Staddon, A. Turner, M. A. Archdale, J. J. Peterson, C. A. K. Ledger, A. Linnell, A. Campbell Holmes, Robert P. and Helen Garrow, T. Fawcitt, P. V. Anderson, H. Leader, W. Howat, B. R. Johnston, R. Sunderland, Henry Tempest, R. S. Lawson, J. D. Jenkins, W. D. Chapman, J. A. Macdonald, M. C. Tod, H. S. Burniston, R. S. Hubberty, H. S. Anderson, E. Muirhead Little, A. S. Wilson, B. V. Watkins, H. Young Maasfield, J. M. Dewar, A. M. Humphrey, J. D. B. Snell, E. M. Rooke, F. R. Sutton, Frank Heber, C. W. Healey, H. Christal, W. E. Hayes, D. J. Rose, A. T. Jones, S. Murdoch, R. J. Gregory, J. A. Ball, L. E. W. Stephens, Major E. Underhill, J. R. Drever, A. S. Herbert, J. W. E. Cole, David McKislie, J. M. Petrie, E. F. H. Vickery, L. Kilroe, J. C. Russell, G. P. B. Page, W. H. T. Jones, Mabel Muncey, L. Crossley, K. Frazer, R. Hilliard, T. C. Blackwell, A. H. Morris, H. P. Catkiness, H. W. Moss, S. Vere Pearson, C. G. Pugh, H. C. H. Braeay, C. W. Pilcher, E. N. Butler, G. R. Paterson, A. E. Struthers, F. Saunders, J. K. A. Robertson, E. S. Fry, C. J. Tabor, J. N. Marshall, H. C. Rollin, Major L. G. Bourdillon, W. A. Alexander, E. K. Mackenzie, W. H. Wisbart, J. P. McG. Sloan, J. B. Alderson, W. Turner, W. H. Paine, David Watson, R. Todd, C. W. Marshall, C. Elliott, C. Sanders, J. C. Campbell, S. Crown, A. V. Dill, J. J. McMillan, R. R. Traill, J. E. Haneock, C. S. Staddon, H. P. Wincer, J. P. Brown, P. G. R. Crahan, A. M. Mitchell, H. M. M. Mackay, L. F. Wilson, C. W. M. Mackay, L. M. Hawkesley, W. I. Parker, Mark R.

Taylor, G. C. Williams, H. Scholefield, H. G. Donald, J. B. Barnett, W. J. Smyth, John Stevens, P. H. C. Eardley, F. Rawlings, S. H. Bown, G. F. Porter, C. G. Smith, P. J. Gomez, H. Gray, C. D. Hattrick, C. M. Kennedy, J. N. Cruickshank, C. W. Fitzhenry, H. B. Dodwell, A. R. Berrie, W. E. Thomas, D. O. Evans, H. R. Frederick, O. K. Stevenson, E. Goffon, O. Marriott, H. M. Rohson, J. A. Tomb, J. Pender, R. A. Stark, C. M. Binney, E. I. Lloyd, C. B. Lawson, J. B. Simpson, E. J. Targett, May J. N. Bowie, F. Mannington, W. H. Fisher, J. Patrick, W. Thistlewaite, N. S. Turnbull, V. S. Tryon, H. H. Kendrick, J. M. Thomson, A. C. McCillivray, F. W. Farrod, G. Vernon Bull, R. V. Goodlife, G. H. Batterbury, F. R. Bray, A. M. Masters, A. B. Stick, William Paterson, G. B. Hillman, R. Macleod, A. H. D. Smith, F. L. Angier, J. M. Heron, J. H. Tennent, R. A. W. Procter, J. H. Bletscoe, H. W. L. Nicholas, B. A. Symons, H. S. Robinson, S. Noy Scott, William Steven, T. Baker, C. J. S. Dismorr, T. M. Angior, R. J. Adamson, R. S. Morhead, Lieut.-Colonel W. Alpin, J. White Thomson, J. L. Timmins, J. B. Stevens, F. Hawthorn, C. D. Bishop, John Matheson, G. A. Dickson, C. McK. Craig, Kathleen F. Kitchen, E. N. Jupp, R. D. Aylward, A. Fulton, J. A. Pridham, R. Kenyon, S. Phillips Bedson, R. G. Cordon, Lieut.-Colonel A. Whitmore, John Hume, E. C. Frend, Major W. D. Keyworth, N. S. Twist, E. S. Edwards, C. Master, Lieut.-Colonel W. M. Houston, K. S. Brown, C. E. Mathias, A. C. Hinks, E. O. Bond, C. B. T. Musgrave, R. Kennon, John Aitken, J. P. McKevy, M. C. Cooper, F. E. Jardine, R. McAdoo, Major A. C. Jebb, Colonel H. S. Roch, Major W. J. Webster, Colonel A. E. Hamerton, H. J. Clutterbuck, W. M. Dinwoodie, J. M. Mitchell, Lieut.-Colonel A. N. Thomas, J. B. Cyle, E. M. McGarrison, L. D. Roberts, H. Downes, F. R. Todd, R. F. Jones, E. J. Power, R. Wallace Henry, G. F. Oldershaw, E. Johnstone, A. M. Smith, E. K. Lo Fleming, W. F. Dearden, J. Robinson, J. Dewart, J. Howe, J. Wilson Wood, John T. Dier, A. J. Will, A. M. Webber, May W. G. Paton, E. John Staddon, A. E. Brindley, E. J. Brevin, H. C. McCullagh, R. A. Milne, W. Anderson, E. F. White, E. F. D. Dawson, C. C. Lunn-Barker, A. E. Walter, T. S. Cochrane, P. Ross, E. W. C. Bradfield.  
18s. 6d.—Flight Lieutenant T. W. Wilson.  
17s.—R. G. McIntyre, C. A. Macdonald.  
16s.—W. S. D. Bird.  
15s. 6d.—Angus Lamont.  
10s. 6d.—K. A. C. Gillie, O. B. Jennings, A. R. Waddell, J. H. Conyers, D. Phillips, Ferguson Watson, Dorothy Wood, C. Vipont Brown, D. J. Bowen, A. M. V. Bonhote, E. F. Neve, W. E. Haigh, J. M. Morris, A. H. Keynaston, T. L. Pires, J. S. Arkle, T. E. Roberts, W. A. Bruce Young, W. C. Lowry, A. Bryce, Morris Cutner, J. F. Coughoun, H. C. Jennings, Helen Boyle, Moses Cohen, D. S. Pracy, F. C. Lawson, Helen E. Moore, M. L. M. Thomson, G. W. Rogers, G. J. Lewis, L. E. Wigram, D. J. McLeish, Lieut.-Colonel J. V. Salvage, G. Clark, L. P. Garden, S. T. Gevers, R. N. Aston, O. E. R. Stephenson, J. C. K. Chilcott, H. J. Du Boulay, J. D. Wilson, A. G. J. Elwin, D. E. Walpole, C. Stanley Jones.  
10s.—H. Graf, J. B. Primmer, Annie Greenep, H. T. P. Young, Lieut.-Colonel F. P. Connor, E. Lewis, J. S. Roberts, T. E. Cordon, G. G. Morrice, Stanley Child, C. P. O'Brien, E. H. Snell, E. B. Fenell, E. D. Granger, E. Whidborne, K. M. Bowman-Manfield, Lieut.-Colonel H. G. L. Wortabet, Agnes Moncrieff, M. B. Carr, G. S. Lund, F. M. G. Butler, E. F. Dott, T. H. Massey, Duncan McCullum, J. H. Aikman, Janet M. MacMillan, John C. Heal, Colonel C. W. Johnson, P. Heffernan, W. A. Stokes.  
And further small sums amounting to £11 14s. 6d. have been subscribed.

### SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

#### Scholarships.

The Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows: An Ernest Hart Memorial Scholarship, of the value of £200 per annum, and three Research Scholarships, each of the value of £150 per annum. These Scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State Medicine) relating to the causation, prevention, or treatment of disease. Each Scholarship is tenable for one year, commencing on October 1st, 1928. A Scholar may be reappointed for not more than two additional terms. A Scholar is not necessarily required to devote the whole of his or her time to the work of research, but may hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment do not interfere with his work as a Scholar.

#### Grants.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the causation, treatment, or prevention of disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

#### Conditions of Award: Applications.

Applications for Scholarships and Grants must be made not later than Saturday, June 2nd, 1928, on the prescribed form, a copy of which will be supplied on application to the Medical Secretary of the Association, B.M.A. House, Tavistock Square, London, W.C.1.

Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated, to whom reference may be made.

## Association Notices.

## TABLE OF DATES.

April 23, Sat.	Annual Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> . Last day for receipt at Head Office of nominations: (i) by a Division or not less than 5 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 12, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of election of (i) 24 members Branches in British Isles; also members of Council, and Public Health Service in Representative Body. Voting papers posted from Head Office, where there are contests in above elections.
May 15, Tues.	Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.
May 19, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service Members of Council, and 4 Representatives of Public Health Service in Representative Body.
	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.
June 2, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 7, Thurs.	Names of Representatives and Deputy Representatives must be received at Head Office by this date.
June 13, Wed.	Council.
June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
July 4, Wed.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 20, Fri.	Annual Representative Meeting, Cardiff, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Annual Representative Meeting, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

## BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: COVENTRY DIVISION.**—A clinical meeting will be held by the Coventry Division at the Coventry and Warwickshire Hospital on Tuesday, April 3rd, at 8.30 p.m.

**BIRMINGHAM BRANCH: DUDLEY DIVISION.**—A meeting of the Dudley Division will be held at the Guest Hospital, Dudley, on Thursday, April 5th, at 8.30 p.m. Agenda: Election of representative at Annual Representative Meeting, and demonstration of clinical cases, etc.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—At the meeting of the Nuneaton and Tamworth Division to be held at the Nuneaton General Hospital on Wednesday, April 18th, Dr. C. F. Rudd will read a paper on an ophthalmic subject.

**BORDER COUNTIES BRANCH: ENGLISH DIVISION.**—A meeting of the English Division will be held to-day (Friday, March 30th), at 3.30 p.m., at the Whitehaven and West Cumberland Hospital, Whitehaven. Programme: Paper on the Whitehaven and West Cumberland Hospital by Dr. G. B. Muriel; demonstration of cases by Drs. G. B. Muriel, V. W. Maxwell, and E. H. Ablett; conducted tour round the hospital, including demonstrations in the special departments by the honorary medical staff; 5 p.m., tea, by invitation of the maitron.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at St. Enoch Station Hotel on Wednesday, April 11th, at 3.30 p.m. Dr. John Mortimer will read a paper on the commoner eye affections as occurring in general practice.

**KENT BRANCH: ASHFORD DIVISION.**—At a meeting of the Ashford Division to be held at the North Street Club, Ashford, on Wednesday, April 18th, at 4 p.m., Dr. J. W. McNeo of University College Hospital will give a lecture on new work in the diagnosis and treatment of hepatic and biliary diseases. A cordial invitation is extended to all members of the Kent Branch.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—A meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, April 3rd, at 9.30 p.m. Drs. Longborough and T. H. G. Shore will discuss the treatment of fibrositis.

**METROPOLITAN COUNTIES BRANCH: FINCHLEY DIVISION.**—A meeting of the Finchley Division will be held at the Finchley Memorial Hospital on Tuesday, April 3rd, at 8.45 p.m. Mr. W. S. Herman, L.D.S., will read a paper on the dental treatment of fractured jaws.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—A combined clinical meeting and dinner of the Hendon Division will be held at the Brent Bridge Hotel to-day (Friday, March 30th), at 7.45 for 8 p.m. An address will be given by Dr. W. Langdon Brown, physician to St. Bartholomew's Hospital, on organotherapy in general practice, to be followed by a discussion. All medical practitioners are cordially invited. Dinner tickets 8s. 6d.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—At the meeting of the Lewisham Division to be held at the Town Hall, Catford, S.E.6, on Tuesday, April 17th, at 8.45 p.m., Dr. W. V. Goldsmith will read a paper on pigmentation of the skin.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, April 10th, at 9 p.m. Dr. Donald Paterson will give a lecture on the prevention of summer diarrhoea.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—At the meeting of the Willesden Division to be held at the Willesden General Hospital, Harlesden Road, on Wednesday, April 18th, Dr. J. Bright Bannister will give an address on ante-natal work.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Royal Hospital, Chesterfield, on Wednesday, April 18th, at 3 p.m., when there will be a series of clinical demonstrations.

**MIDLAND BRANCH: HOLLAND DIVISION.**—A meeting of the Holland Division will be held in the White Hart Hotel, Boston, on April 12th, at 3 p.m., when an address will be given by Dr. J. Wilkie Scott (Nottingham) on some aspects of vomiting. Members of neighbouring Divisions will be welcomed.

**NORFOLK BRANCH.**—A meeting of the Norfolk Branch will be held at the Norfolk and Norwich Hospital on Wednesday, April 11th, at 3.30 p.m. Sir Hamilton Ballance, K.B.E., president of the Branch, will be in the chair, and a paper will be read by Dr. Ian D. Dickson on neurasthenia in general practice.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A meeting will be held at the Royal Infirmary, April 18th, at 8.15 p.m. Dr. A. F. paper on the present status of the

jaundice problem.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, April 19th, at 8.30 p.m. Lieut.-Colonel P. J. Marett will read a paper on some lung affections.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—The final address of the winter session of the Portsmouth Division will be held at the Queen's Hotel, Southsea, on Thursday, April 12th, at 9.30 p.m., preceded by a supper at 9 p.m. Dr. J. Stanley White will give an address on some recent aspects of biological therapy, illustrated by a cinematograph demonstration of research work carried on in Messrs. Parke, Davis and Co.'s research laboratories. This will be the last address, preceded by a supper. The business meeting will be held on May 10th, at 9 p.m., and the annual dinner on May 16th.

**SUFFOLK BRANCH: WEST SUFFOLK DIVISION.**—The West Suffolk Division has arranged, with the assistance of the committee of the West Suffolk General Hospital, the following post-graduate course of lectures and clinics at the West Suffolk Hospital:

March 31st.	Mr. Aleck W. Bourne. Lecture: The Action of Pituitrin and of Ergot.
April 14th.	Mr. C. W. G. Bryan. Lecture: The Acute Abdomen in Childhood.
" 15th.	Clinic: Surgical Cases.
" 21st.	Dr. R. D. Lawrence. Lecture: Simplicity in the Treatment of Diabetes.
" 22nd.	Clinic: Cases of Diabetes.
May 5th.	Mr. T. H. Just. Lecture: Diagnosis and Treatment of Acute Inflammatory Conditions of the Ear.
" 6th.	Clinical Demonstration.
" 19th.	Sir Thomas Horder. Lecture: Etiological Factors in Fibrosis and their Bearing on Treatment.
" 20th.	Clinic: Medical Cases.

The lectures on Saturdays will be given at 8.45 p.m., and coffee will be served at 8.30; the Sunday clinics will begin at 11 a.m. The course is open to medical practitioners in West Suffolk and any guests they may care to bring. There is no fee, but donations will be invited towards the cost of organization. Members are invited to bring any cases of interest to the appropriate clinic.

**SURREY BRANCH: CROYDON DIVISION.**—A meeting of the Croydon Division will be held at the Croydon General Hospital on April 4th, at 4 p.m. Dr. G. E. E. Brayne-Nicholls will give a lantern demonstration on tuberculosis of the bowels. It will be preceded by tea at 4 o'clock. The annual dinner of the Division will take place at the Greyhound Hotel on Wednesday, April 11th, at 8 p.m.

**SURREY BRANCH: GUILDFORD DIVISION.**—A clinical meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, April 5th, at 4 p.m.; tea served at 3.45.

**SUSSEX BRANCH: HASTINGS DIVISION.**—The next meeting of the Hastings Division will be held at the Queen's Hotel, Hastings, on Tuesday, April 3rd, at 8.15 p.m. Dr. E. I. Spriggs, director, Ruthin Castle, will give an address on diverticulosis. The annual dinner will take place at the Royal Victoria Hotel on Friday, April 20th, at 7.15 for 7.30 p.m. Tickets 10s. 6d. Members are requested to notify the honorary secretary as soon as possible how many tickets they will require for themselves and their friends.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Stratford Arms Hotel, Wakefield, on Thursday, April 19th. Dr. J. le F. Burrow, assistant physician, Leeds General Infirmary, will give a lecture on the diagnosis of acute cerebro-spinal diseases. The lecture will be preceded by a supper at 7.45 p.m., price 3s. The annual meeting of the Division will take place on Thursday, May 10th.

## Meetings of Branches and Divisions.

### BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

An ordinary meeting of the Nuneaton and Tamworth Division was held at Tamworth General Hospital on March 8th. Mr. F. B. GILLESPIE read a paper on the tonsils.

After some remarks on anatomy and methods of examination Mr. Gillespie referred to the difficulty sometimes experienced in determining when the tonsils were septic. He thought the presence of pus or muco-pus, which could be expressed from under the anterior pillar, was a good criterion. He referred to the large number of diseases in the development of which tonsillar infection was now believed to be a determining factor, mentioning tuberculosis, rheumatism, and diseases of the respiratory, gastro-intestinal, and urinary tracts. He thought that chest conditions such as bronchiectasis and abscess after tonsil operations were perhaps more frequent than was suspected. He warned against promising too good results from tonsillectomy, and in this connexion referred to the weedy child with enlarged tonsils, glands in the neck, and persistent slight rises of temperature. The results of tonsillectomy were often disappointing in these cases. In children with nasal discharge and enlarged tonsils he thought that, where possible, the maxillary antra should be examined by transillumination before operation.

Mr. Gillespie mentioned the various diseases affecting the tonsil and their diagnosis, and compared the guillotine operation with the operation by dissection. He believed that the pendulum had swung too far in favour of dissection, and held that the guillotine was more suitable in many cases. He thought that in young children, when it was necessary to remove adenoids, it was often advisable to leave the tonsils unless there was some very definite indication for their removal.

The paper was followed by a discussion in which many members took part. Mr. GILLESPIE replied, and a hearty vote of thanks was accorded him for his address.

Circular D 15, regarding reports by medical practitioners at the request of coroners, was considered, and after some discussion the secretaries were instructed to take action on the lines suggested.

### EDINBURGH BRANCH.

The clinical meeting of the Edinburgh Branch was held in the Edinburgh Royal Infirmary on February 29th. Demonstrations in the various special departments were given by members of the Infirmary staff from 9 a.m. At a clinical demonstration at 3.15 p.m. in the surgical theatre there was a large attendance of members, guests from other branches, and senior students, the theatre being well filled. Interesting cases were shown by members of the staffs of the Royal Infirmary and Royal Hospital for Sick Children. It was generally felt that the meeting was one of the most successful arranged by the Branch.

A dinner was held at the North British Station Hotel at 7.15 p.m., when there was a gathering of sixty members and guests under the chairmanship of Dr. JOHN STEVENS, president of the Branch. The toast of "The City of Edinburgh," proposed by Sir ROBERT PHILLIP, President of the British Medical Association, was acknowledged by Bailie NASMYTH. The toast of "The British Medical Association," proposed by Councillor PETER GIVEN, was acknowledged by Dr. ALFRED COX, Medical Secretary, who, on rising to reply, received a cordial tribute. Dr. W. R. MARTINE proposed the toast of "The President of the Branch," to which Dr. STEVENS responded. The toast "Floreat Res Medica," proposed by the CHAIRMAN, having been duly honoured, those present joined in singing "Auld Lang Syne," after which "God Save the King" was sung with great enthusiasm.

### LANCASHIRE AND CHESHIRE BRANCH.

A SCIENCE meeting was held at the Salford Royal Hospital on February 23rd. The chair was taken by Dr. J. H. MONKS, president of the Branch, and there was an attendance of about 190 members. The programme took the form of a series of short papers, followed by an exhibition of cases, a display of exhibits from the pathological laboratory, and a demonstration by Dr. R. GIBSON on the treatment of varicose veins by injection.

Mr. GARNETT WRIGHT, in a paper on volvulus of the sigmoid, referred to the comparative rarity of the condition in this country compared with Russia and Eastern Europe, adding that a large number of the cases in Great Britain occurred in mental institutions. The anatomical predisposing factors were a long meso-sigmoid and a narrow attachment of the meso-sigmoid to the abdominal wall. Mr. Wright regarded constipation as a result rather than a cause of the condition. In most cases careful inquiry showed that acute obstruction had been preceded by symptoms of a chronic and recurrent nature; hence the presence of visible peristalsis in most instances. Mr. Wright recommended excision of the sigmoid in two stages; less radical measures were very liable to be followed by recurrence.

Mr. R. OLLERENSHAW showed a series of cases to illustrate various types of fracture in the region of the elbow. A fracture of the olecranon was first shown, and Mr. Ollerenshaw expressed himself as being in favour of non-operative treatment in most fractures of this nature. The details of treatment by full extension for six weeks, followed by flexion, with careful control of the fragments, under an anaesthetic at the end of that period was demonstrated. Cases showing fracture of the head of the radius followed, illustrating the results of conservative methods and of excision of the head of the bone for severe smashes. The more common injuries of the lower end of the humerus were then shown, and a case in which the fracture had occurred a week previously, where gross displacement had been present and reduction had been effected under the x-ray screen, was demonstrated. Five other cases showing the frequent association of peripheral nerve injuries with elbow fractures were exhibited. In two of these the musculo-spinal nerve had been completely divided and subsequently sutured; in one the ulnar nerve had been transposed forwards to remove it from bony pressure; in another the median had been torn by a fracture dislocation. In the fifth case a crushing of the posterior interosseous nerve had necessitated a tendon transplantation, which provided excellent function.

Dr. G. J. LANGLEY contributed a paper on some problems of glycosuria. After referring to the general conditions of the insulin treatment in diabetes, he expressed the opinion that the best results were obtained with a minimum diet combined with small but adequate doses of insulin. He admitted that the patient usually desired a larger diet, but was not willing to undergo the more frequent injections of insulin which a larger diet required; a compromise had often to be made. Dr. Langley then emphasized the importance of recognizing that the recurrence of pyrexia—for example, influenza—in diabetes required immediate increase of carbohydrate and insulin. Operations could now be undertaken in diabetes without hesitation; either was the best anaesthetic, and should be preceded by glucose and insulin. Dr. Langley then referred to renal glycosuria, and expressed the opinion that this was fairly common. He also called attention to the occurrence of glycosuria under other conditions—after mental strain, after cerebral

Mr. E. . . . . ssed the treatment of urethral stricture and the after-care of patients operated . . . . . sults of 160 men treated by him personally in the genito-urinary department of the Salford Royal Hospital. He considered that the best results were obtained if instrumentation was always carried out by the same surgeon, who carefully regulated the attendance of each individual; forcible dilatation was condemned. Three points were emphasized in treatment: first, urinary infection must be guarded against; secondly, over-dilatation must be avoided; thirdly, the intervals between attendance must be so regulated that contraction was not permitted to progress. He concluded that the present operations for stricture should be regarded as palliative, not curative, and must be followed by dilatation at longer or shorter intervals. Careful and well-regulated dilatation could maintain health and prevent the development of sequels.

### LANCASHIRE AND CHESHIRE BRANCH: ROCHDALE DIVISION.

A MEETING of the Rochdale Division was held in the Lyceum, Rochdale, on March 14th, when Dr. E. H. COX, D.S.O., was in the chair.

Mr. F. HOLT DIGGLE (honorary surgeon, Manchester Royal Ear Hospital, and honorary aural surgeon, Ancoats Hospital) read a paper on some factors in the prevention of deafness. He gave a lucid and instructive account of the measures necessary in cases of catarrhal otitis media and suppurative otitis media, in which groups most of the cases of preventable deafness may be said to occur.

On the motion of Dr. JEFFERSON, seconded by Dr. RAMSBOTTOM, a vote of thanks was unanimously accorded to Mr. Diggle for his address.

### METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

A MEETING of the Camberwell Division was held at the Bermondsey and Rotherhithe Hospital on March 13th, when Dr. COX was in the chair.

Dr. HARKNESS demonstrated and discussed the diagnosis of an unusual case of abdominal neoplasm. Members showed a keen interest and expressed their opinions as to its origin. Dr. FORMAN showed the following cases: (1) pernicious anaemia, with signs of subacute combined degeneration; (2) two cases of aortic aneurysm; (3) syringomyelia; (4) abscess of lung. The cases were illustrated by a series of excellent x-ray films, those dealing with the case of abscess being of especial interest. The focus had been clearly identified, enabling a successful operation for drainage of the cavity to be carried out. Dr. EVANS showed a girl with Schlatter's disease, in which signs followed two months after a slight injury to the knee, and an elderly woman with myxoedema.

During the discussion which followed members were entertained to tea by the matron of the hospital. A vote of thanks to the staff was carried with acclamation.

### METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.

A MEETING of the Lambeth and Southwark Division was held at the Lambeth Carlton Club, Coldharbour Lane, S.W.9, on February 22nd, when Dr. V. S. PARTRIDGE was in the chair.

Mr. F. McG. LOUGHNANE read a detailed paper on the differential diagnosis of haematuria. Mr. Loughnane enumerated the causes of haematuria under the headings of renal, urteric, vesical,

prostatic, and urethral; he pointed out that haematuria due to some affection of the kidney was the most likely to occur. In the case of renal calculi haemorrhage might follow some jolting movement, and would be preceded by colic; whereas if a malignant growth was present the bleeding would come before the colic. Pyuria was slight, unless pyonephrosis was present. Diagnosis was made by radiography and pyelography; cystoscopy gave little assistance in a case of renal calculus, since the ureteric orifices changed only when a stone was impacted in the vesical intramural portion of the ureter. Tuberculosis of the kidney caused slight bleeding, but considerable pyuria; and cystoscopy might reveal tubercles or ulcers in the bladder, and a "golf-hole" ureter. A pyelogram would show "worm-eaten" calyces. A renal neoplasm gave rise to serious haemorrhage only rarely; it was usually moderate, intermittent, capricious, and uninfluenced by movement, pyelography usually enabling a diagnosis to be made. In adults hypernephroma and papilloma were the commonest tumours, and in infants embryoma, a palpable tumour being always found in the loin in the last case. "Essential" haematuria should only be a tentative diagnosis after the elimination of all known causes. Aneurysm of the renal artery was rare.

The source of vesical haemorrhage was readily detected by cystoscopy, and was usually a papilloma, except in elderly men, when a malignant growth or an enlarged prostate might be concerned. A clear medium for cystoscopy could be obtained by using liquid paraffin or a 1 in 400 dilution of hydrochloric acid. Urethral haematuria in children was generally due to impacted calculus or to a foreign body; in adults to infection, papilloma, or enlarged prostate. The speaker emphasized the importance of employing modern methods in the differential diagnosis so as to ensure the detection of early disease; no patient with constant or recurrent haematuria should be kept very long on medical treatment only.

On the motion of Dr. E. COYNE, seconded by Dr. J. MELLOTT, a vote of thanks was accorded to Mr. Loughnane for his address, and to Mr. E. CANNY RYALL for the excellent illustrations he provided.

A clinical meeting of the Lambeth and Southwark Division was held at the Belgrave Hospital for Children, Clapham Road, on March 7th, when Mr. R. A. RAMSAY showed the following cases: (i) an obscure swelling of the upper end of the femur in a child aged 1 year 5 months; (ii) a case of dermoid cyst on the temporal region; (iii) a case of congenital atresia of the external auditory meatus; (iv) a case of congenital hypertrophic pyloric stenosis, successfully operated on, and treated afterwards with intramuscular injections of whole blood; (v) a case of empyema; (vi) a case of cervical adenitis.

#### METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.

A MEETING of the Marylebone Division was held at 11, Chandos Street, W.1, on March 15th, when Dr. W. JOSEPH HORNE, chairman of the Division, presided.

The following were appointed representatives in the Representative Body for the ensuing year: Drs. Hawthorne, Roxburgh, Temple Grey, Eleanor Lowry, E. Graham Little, M.P., George Weston, and W. Griffith; and Dr. Joseph Horne, Mr. McAdam Eccles, Mr. Bishop Harman, and Mr. Souttar were elected deputy representatives.

Dr. PERCY FLEMING gave a lecture with lantern illustrations on the Thames from London Bridge to Lambeth in old days, with a note on London's early water supply. The address was extremely interesting and was much appreciated.

#### METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.

A MEETING of the South-West Essex Division was held at Whipps Cross Hospital on March 6th, when a communication from the Medical Secretary was read concerning the collective investigation into the treatment of varicose ulceration. A number of members agreed to take part in the investigation.

Dr. MUIR, superintendent of the hospital, showed a number of interesting cases, including two of Banti's disease; one of Parkinsonism following encephalitis lethargica, which simulated cervical caries very closely; lupus of the thighs, associated with a positive Wassermann reaction; a popliteal aneurysm organizing after ligation of the femoral artery; an amputation at the hip-joint for angiosarcoma of the femur in a man of 76; a coxa vara; a tumour in the region of the third ventricle in a child, with hydrocephalus and slow spontaneous decompression.

At the close of the meeting a hearty vote of thanks was accorded Dr. and Mrs. Muir.

#### NORTH OF ENGLAND BRANCH: MORPETH DIVISION.

The annual dinner of the Morpeth Division was held on March 9th in the Queen's Head Hotel, Morpeth, when Dr. HUGH DICKIE was in the chair. The guest of the evening was Mr. Harvey Evers (Newcastle-upon-Tyne). The toast of "The British Medical Association" was proposed by Mr. CATCHSIDE and replied to by Dr. FRANK BEATON, honorary secretary of the Division and this year's president of the North of England Branch of the Association. There was a good attendance, several members being present from other Divisions. With song, story, and sentiment a very enjoyable evening was spent, the function being declared one of the best yet held.

#### NORTH WALES BRANCH: DENBIGH AND FLINT DIVISION.

The first meeting of the Denbigh and Flint Division since the reorganization of the Division was held at the Queen's Hotel, Chester, on March 3rd. In the unavoidable absence (through

influenza) of Dr. Katharine Drinkwater the chair was taken by Dr. J. C. DAVIES.

With regard to reports by medical practitioners furnished at the request of coroners, it was decided to follow the suggestion from the head office to write first to the coroners and subsequently to approach the county councils by letter.

It was proposed to circularize the members of the Division to ascertain if they would have their names submitted for the inquiry into the treatment of varicose ulceration.

The proceedings ended with tea provided by the chairman of the Division, Dr. Katharine Drinkwater, and much regret was expressed at her absence.

#### SIERRA LEONE BRANCH.

The annual meeting of the Sierra Leone Branch was held on December 30th in the Medical Offices, Water Street. In the absence of the president and vice-president Dr. WOOP, the senior member of the Council, took the chair. After the minutes of the last meeting had been adopted the president-elect, Dr. PEACOCK, took the chair, and expressed his high appreciation of the honour of being elected president for the second time; he proposed a vote of thanks to the outgoing officers, which was adopted. He said that in the absence of the representative, Dr. INNESS, he had had the pleasure of representing the Branch at the Annual Meeting of the Association at Edinburgh last year, and expressed the hope that it would be possible to find a representative for the 1928 meeting at Cardiff.

Dr. Peacock referred to the severe loss sustained by the Branch and by the colony in the death of Dr. M. JACKSON, who had possessed in a remarkable degree the confidence and affection of the community; both European and African. On the motion of Dr. Peacock an expression of condolence was directed to be sent to Dr. JACKSON's relatives.

The following officers were elected:

President-Elect, Dr. McDouall. Vice-President, Mr. Quintin Stewart, Honorary Secretary and Treasurer, Dr. Wright.

The SECRETARY reported that the Branch had thirty-two members. During the year three scientific clinical meetings had been held, and the financial statement showed a satisfactory credit balance.

A circular with regard to the election of a representative on the Council of the Association was considered, and it was decided that the Sierra Leone Branch should not register a vote on account of its small size compared with the Branches with which it was grouped.

#### SOUTH-EASTERN OF IRELAND BRANCH.

An ordinary meeting of the South-Eastern of Ireland Branch was held in Kilkenny on March 10th, when the president, Dr. MYLES, was in the chair. The annual report of the Branch was unanimously adopted.

On the motion of Dr. D. WALSH, seconded by Dr. MYLES, it was unanimously resolved:

That having learned of the serious illness of Dr. R. O'Brien (Clonmel), the honorary secretary be directed to convey to him the wishes of the Branch for his speedy recovery.

Dr. O'Brien has been a very old and esteemed member of the South-Eastern Branch.

Dr. R. ROWLETTE (Dublin) delivered a British Medical Association Lecture on the medical treatment of gastric and duodenal ulcers, illustrated by a lantern demonstration. The lecture was very much appreciated, and the following members took part in the discussion: Drs. DENIS WALSH, MYLES, D'ABREU, and DRENNAN.

Cordial votes of thanks were accorded to Dr. Rowlette for his most instructive lecture, and to Dr. Grace for arranging it.

#### SOUTHERN BRANCH: PORTSMOUTH DIVISION.

A MEETING of the Portsmouth Division was held at the Queen's Hotel, Southsea, on March 8th, when Dr. LYTLE was in the chair. Mr. ORD, in the absence through illness of Dr. Livingstone, gave an address on the dental problems of medicine to a mixed audience of dental surgeons and doctors.

The speaker thought that it was difficult to believe that pyorrhoea was of much importance in the causation of disease, but Mr. R. W. HENRY of Leicester, speaking for ophthalmic surgeons, referred later to certain diseases of the eye in which pyorrhoea was an important factor, and Mr. STANLEY HILLMAN thought that if, in pyorrhoea, the teeth were removed in the early stage of joint and other manifestations, further trouble would be avoided. Apical root trouble was considered to be of importance, but it was thought to be unwise to extract many teeth at a time, since a temporary exacerbation of joint symptoms might follow. It was emphasized that where organic change had taken place no obvious improvement would result from extraction. The advisability of using local anaesthesia in these cases was doubted.

The use of the tooth brush was questioned, but most of the dental surgeons thought that there was nothing to take its place. Mr. CROFT, however, advocated vigorous lavage of the mouth with water, and Surgeon Commander GIVEN supported him from his experience of the Chinese, among whom there was said to be very little pyorrhoea. Their method of cleansing was by lavage and finger friction. It was suggested also that consideration of vitamins might be neglected, since most people obtained enough in their food, but Dr. GRIFFITHS believed that an appreciable percentage of the population suffered from mild forms of scurvy. Dr. LYTLE called attention to the condition of the mouth in Vincent's angina.

Mr. WARREN, president of the Portsmouth Dental Association, proposed a vote of thanks to Mr. ORD, and Dr. McASKEW, seconding, expressed the hope that a dental evening would be an annual event.

## SOUTH WALES AND MONMOUTHSHIRE BRANCH: SWANSEA DIVISION.

A MEETING of the Swansea Division was held at the General Hospital, Swansea, on March 15th, when Dr. DANIEL E. EVANS, chairman of the Division, presided.

Mr. T. E. HAMMOND of Cardiff gave an admirable address entitled "Infections of the urinary tract: their diagnosis and treatment." A vote of thanks was accorded to the lecturer for his lucid and helpful address.

## SUFFOLK BRANCH.

THE spring meeting of the Suffolk Branch was held at the Angel Hotel, Bury St. Edmunds, on March 6th. Dr. MALCOLM DONALDSON of London read a paper on the uses of radium in gynaecology. He dealt in a most able and clear manner with the work at St. Bartholomew's Hospital in both innocent and malignant conditions. He pointed out that without some knowledge of the physical properties of radium no treatment could be really efficient, and that many of the poor results obtained in the past were due to the fact that people had not realized this fact, and had used it indiscriminately. Having described some of these physical properties, he then passed on to the radium treatment of non-malignant conditions found in gynaecology. He dealt with the treatment of haemorrhage during abnormal menopause, and emphasized the necessity of an early correct diagnosis in such cases, so as to exclude malignant disease; and the advisability of keeping the radium in position forty-eight to seventy-two hours, rather than the twenty-four hours which was the common practice. He then discussed the treatment of fibroids by means of radium, and the type of case in which it was indicated. Turning to the treatment of malignant disease of the female genital tract, he dwelt at some length on the treatment of carcinoma of the cervix. He pointed out that the statistics from English sources of patients who had survived five years were not yet sufficient to make a comparison between radiotherapy and Wertheim's operation, but that if the figures from Continental sources were taken it was obvious that there was very little difference in the results. In the case of radiotherapy, however, an additional 12 to 16 per cent. of the inoperable cases could be saved for at least five years. Furthermore, he pointed out that, owing to the very simple technique required, the mortality by this method of treatment was less than 1 per cent., whereas that of Wertheim's hysterectomy was in the neighbourhood of 10 per cent. in the case of most operators.

## TANGANYIKA BRANCH.

A SCIENTIFIC meeting of the Tanganyika Branch was held on January 9th at the European Hospital, Dar-es-Salaam; the Director of Medical and Sanitary Services, Dr. J. O. Shireore, was present as a guest of the Branch.

Mr. McILHURNEY, Government paper on the distribution and interesting

Drs. J. WILLIAMSON and four clinical cases—an old African woman with a fungating mass in the right breast and pathological fractures of the right humerus and femur; an African boy with a hard, ill-defined swelling in the quadriceps of the right leg; an Indian woman with hepatic and splenic enlargement, associated with continuous fever, which had not yielded to quinine; and a young African male with obscure meningitic symptoms. Much discussion followed, and Dr. SHIREORE suggested that the first case, while superficially suggesting carcinoma, was in reality a combination of tertiary yaws with osteoporosis.

Dr. W. K. CONNELL described a method which he had devised for obtaining a complete and satisfactory cutaneous investment for the penis after the radical operation for elephantiasis of the male external genitalia. His method consisted of embedding the penis temporarily in a subcutaneous tunnel on the inner aspect of the thigh, and subsequently liberating it by means of a simple flap operation. He demonstrated a case which had been treated by this method.

## YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.

A MEETING of the Wakefield, Pontefract, and Castleford Division was held at the Strathford Arms Hotel, Wakefield, on March 8th, when Dr. T. GIBSON was in the chair. A message of sympathy was sent to Dr. Neale, who was unable to lecture owing to indisposition.

Dr. J. T. INGRAM, dermatological physician to Leeds Infirmary, gave an interesting discourse on skin diseases, based on personal study and experience, stating that in his belief the skin was more often offended against than offending, and that rest, rather than attack, was the proper line of treatment in the majority of cases. He emphasized the necessity for the general examination of the patient, and exposure of the whole of the body in dealing with skin diseases, and advised early epilation for syphilis. He considered vaccines to be of definite value in the case of boils and acne vulgaris, and thought that boils were a definite indication of ill health, and that a holiday or, failing that, artificial sunlight, influenced treatment very much. He dealt with general skin diseases commonly experienced, and with industrial dermatological conditions, pointing out that many skin diseases had a psychological basis.

His address was very much appreciated by the members, and in the discussion Drs. GIBSON, BUTLER, LISTER, STEVEN, and THOMAS took part.

## GENERAL MEDICAL COUNCIL.

## EXECUTIVE COMMITTEE.

A MEETING of the Executive Committee of the General Medical Council was held on February 27th, under the chairmanship of the President, Sir DONALD MACALISTER, Bt.

## General Medical Council Finance.

The sums received for registration fees during 1927 were £5,813 by the English Branch Council, £2,675 by the Scottish Council, and £1,467 by the Irish Council, together with £1,135 received by the General Council in respect to colonial and foreign medical qualifications. Fees and expenses for attendance at meetings of the General Council and its committees amounted to £2,723.

## An Italian Degree.

At its session in May, 1927, the Council decided that the entry of the name of a practitioner in the Foreign List of the *Medical Register* in virtue of the M.D. Pavia was incorrect, and must be erased. Since then communications have been received from the Ministry of Foreign Affairs at Rome announcing the annulment of the decision of the Royal University of Pavia that the degrees granted to certain American practitioners by that university should be considered as equivalent in every respect to degrees in medicine and surgery granted in Italy. Two other applications for registration in virtue of the Pavia degrees were before the Council, and the Registrar was instructed to refuse them.

## Reciprocity with Ontario.

Reciprocity with Ontario ceased at the end of 1927, but some correspondence was brought before the Committee on the subject. In a previous communication the Registrar of the College of Physicians and Surgeons of Ontario had instanced the registration of a certain practitioner resident in Ontario as one of the causes which led to reciprocity being brought to an end, and referred to the "humiliation" of having to grant this practitioner his registration following upon his registration in the United Kingdom. On this communication being brought to the notice of the University of Western Ontario, Dr. Howitt, of the staff of the medical school, wrote an account of the circumstances, which was stated by the dean to be more accurate than that given by the Registrar of the College. Dr. Howitt's letter, which is printed in full in the Committee's minutes, alleges grave unfairness in the treatment of this practitioner by the Ontario Medical Council, especially after he had willingly incurred great financial loss in meeting a condition which the Council had imposed.

## British Doctors in Madeira.

From some telegraphic correspondence between the British Consul at Funchal, Madeira, and the British Ambassador at Lisbon, it appeared that a notice to discontinue practice was given by the chief of police to foreign doctors in Madeira on February 16th. The Consul protested to the acting civil governor, who had been proceeding on suggestions—not having quite the force of instructions—from the Portuguese Minister of the Interior. The governor, however, was induced grudgingly to promise that no action should be taken pending an appeal to Lisbon, where the matter is now being taken up by the Ambassador. It is stated that British doctors have attended British residents in and visitors to Madeira since 1866. Madeira has become practically a hospital for convalescents and persons needing sun and sea bathing. Thousands of British subjects visit Madeira annually, many of whom would not do so but for the fact that British qualified doctors are in attendance at the hotels. [This matter is referred to by Dr. Michael Grabham in a letter published in this week's *Journal* at page 571.]

## Colonial Legislation.

An amendment of the law relating to dentists in the State of Victoria has been made. It was reported to the Committee that one effect of the new legislation is that persons registered under the Dentists Act, 1921, are no longer registrable in Victoria, which was one of the few dominions where, owing to the wording of the previous law, they had hitherto been able to register. This conforms to the custom in the United Kingdom of declining to register as dentists persons registered in the dominions solely on account of previous practice or apprenticeship and without a qualification obtained after a recognized course of study and curriculum.

## University of Calcutta.

The University of Calcutta sent a communication stating that transitory provisions had been made by the senate whereby the new medical regulations would become immediately applic-

able to existing students as desired by the General Medical Council. This followed upon a resolution of the Executive Committee of the Council at its previous meeting relating to the recognition of the medical degrees of Calcutta. Colonel Needham reported on the provisions that they complied with the Council's requirements, although certain anomalies inevitable to a change-over period remained. Thus, while the Final Examination under the new regulations would be held for the first time in April, 1928, the old Final Examination would be continued until November, 1929, so that senior students would have the option of taking either the old or the new Final. The Committee agreed that on the receipt of a satisfactory report from an approved inspector as to the conduct of the new Final Examination to be held in April next, the Council would be prepared to consider an application for the recognition of the degrees of the university granted under the new regulations.

#### Applications for Incorporation.

Following upon a communication considered at the last meeting of the Committee with regard to an application to the Board of Trade for the Society of Actinology and Actinotherapy to be registered without the use of the word "Limited," a letter was read from Sir Henry Gauvain, president of the society, stating that the application was unauthorized. A journal interested in the subject with which the society dealt—that is, the physics and physiology of light—had offered to bear the expenses of formal incorporation, but this assistance had been declined.

The Committee also considered an application which had been made to the Board of Trade on behalf of the British College of Obstetricians and Gynaecologists to be registered without the use of the word "Limited." The Committee saw no objection, provided that the memorandum and articles of association included a provision that every certificate or diploma issued by the body should bear an intimation that it did not confer or purport to confer any legal qualifications to practise gynaecology or midwifery.

#### Administration of Drugs by Midwives.

The Ministry of Health had forwarded to the Committee a leaflet issued by the Central Midwives Board concerning the drugs which might properly be carried and administered by midwives. The Committee resolved to inform the Ministry that it did not think it expedient in the public interest to distribute to midwives for use in their practice such a schedule of drugs as was set out in this memorandum, and was of opinion that the rule of the Board requiring the midwife to note in her register each occasion on which she applied a drug, with other details, should incorporate the wording of the corresponding rule as framed by the Central Midwives Board for Scotland.<sup>1</sup> The revised rules of the Scottish Board were also considered by the Committee, and no objection was taken.

#### Removal of Name at Practitioner's Own Request.

The Committee considered an application from Harold Dearden, registered as M.R.C.S.Eng.1911, L.R.C.P.Lond.1911, for the removal of his name from the Registrar on the ground that he had ceased to practise. The Royal Colleges had no objection, and the Committee agreed to recommend the Council to accede.

### DENTAL BOARD.

#### RETENTION FEE FOR DENTAL REGISTRATION.

THE case of Tattersall v. Sladen, which was decided by Mr. Justice Astbury on January 20th, was a test case on the liability of a registered dentist to pay a retention fee to the Dental Board.

The Dentists Act, 1921, provides that a fee may be charged for the retention of a name on the Register, and the Dental Board thereupon made a regulation that if a registered dentist failed to pay his retention fee before the end of the year preceding that for which it should be paid his name might be removed, whereupon, if he continued practising dentistry, he would lay himself open to prosecution as an unregistered practitioner. In England such prosecutions have been undertaken in a number of cases. In Scotland prosecutions cannot be instituted by the Board, but only by the procurator-fiscal, and following upon some prosecutions the Lord Advocate issued instructions to procurators-fiscal that they were not to prosecute in cases where a name had been removed merely for non-payment of a retention fee. The Lord Advocate, on being interviewed on the subject, adhered to his view, but said that he would reconsider his decision if a case were decided in the opposite sense by a judge of the High Court. A friendly action was commenced between two dentists who were in partnership under a deed which provided that if either did anything which laid him open to prosecution by the Board the

partnership would be dissolved. One of these dentists failed to pay his retention fee, whereupon the other gave notice of dissolution of partnership, and on the first refusing to accept such notice, brought an action for a declaration that the partnership was dissolved.

Mr. Justice Astbury, in giving judgement, held that the use of the term "retention fee" implied that unless a man paid this fee his name was not to be retained on the Register, and, further, that the regulations made by the Board for erasure from the Register were valid and binding. It followed, in his lordship's opinion, that if the name of the defaulter was erased from the Register and he continued to practise he would be liable to prosecution.

It was reported to the Dental Board, at a recent meeting "in committee of the whole Board," that the Lord Advocate had accepted this decision, and had given fresh directions to the procurators-fiscal.

### National Insurance.

#### COST OF PRESCRIBING.

##### ABOLITION OF THE "PHARMACOPOEIA CESTRIENSIS."

THE following letter has been addressed to the Clerk to the Insurance Committee of the County Palatine of Chester by Dr. Lionel J. Picton, on behalf of the Local Medical and Panel Committee. While his primary subject is the abolition of the *Pharmacopoeia Cestriensis*, the letter is of interest as embodying the views of the Cheshire Panel Committee on the current discussion on increasing costs of prescribing. Dr. Picton's letter reads:

The Panel Committee accepts, with misgiving and regret, the suggestion of the Insurance Committee that the *Pharmacopoeia Cestriensis* be done away.

The Drug Fund is fixed at a figure inadequate to meet the chemists' tariff charges; the chemists, though receiving the whole fund, are losing the difference. That is a state of affairs which can only be brought to an end by less or cheaper prescribing. It is because it recognizes these facts that the Panel Committee acquiesces. Its misgiving and regret proceed from the knowledge that the step is backward. The *Pharmacopoeia Cestriensis* was based on the well-known pharmacopoeia of a great hospital. It was pruned, altered, and enriched in the light of the experience of a group of general practitioners; it set a high standard; it was adapted to supply broadly the whole range of general practice. On its issue the *British Medical Journal* spoke of it more highly than of any comparable publication. It met the need; now that it is to be scrapped the need will not be met.

The report of the Insurance Committee's subcommittee on the "revision"—which is to result in the destruction—of the *Pharmacopoeia Cestriensis* speaks of the medical members agreeing that the substitution of a list of a few mixtures, etc., printed on a card "will not in any way be detrimental to the interests of the insured persons." They have been misreported. What they said was that the alterations proposed in the particular mixtures selected from the *Pharmacopoeia* for retention in the list would not be detrimental to the efficacy of those particular medicines. The Panel Committee would have no objection to, indeed would welcome, similar alterations in any other items in the *Pharmacopoeia*, were it possible to retain it. The nature of the alterations is the omission of spirit. This is on account of the present high duties on it. Concentrated infusions were requested by the authorities when the *Pharmacopoeia* was drawn up, as being cheaper; but as they are made with spirit they are now dearer. The Panel Committee never wanted them and welcomes this revision, but their satisfaction ends there; if the whole *Pharmacopoeia*, so revised, could be retained it would be a matter of congratulation.

The financial impasse will not permit of this. By an Act of Government a rigid limit is set, and cheaper treatment alone can keep within it. It is on that account the Panel Committee has misgivings. Cheaper treatment will inevitably mean dearer illness—not always, but often enough, and commonly enough, to tell against the patients and against the funds which the societies administer. The arbitrary imposition of a cost limit to prescribing tells against the freedom of medical treatment. That is the gravamen of the charge. If a doctor knows he will likely be surecharged if he orders so-and-so, he won't order it—a quixotic or rich doctor might. But no doctor can be the first long unless he is the second, and few are that. In a recent Cheshire case a doctor was accused of using cod-liver oil and malt too often. "It is hard to give convincing reasons why you should give it to one and not to another," he told the referees. "They find it does them good, and come and ask for it. I find it does good to a large class of patients. Now I am telling them that exception has been taken to its prescription, and I don't prescribe it." That is an example of the effect of sudden and restrictive economy.

Before the present new phase of Governmental activity the Panel Committee was engaged in working out a system of criticizing and curbing extravagance, which was applied domestically, within its own walls, so to speak, and would, the Committee believes, have issued in enhanced adherence to the principles which should guide doctors in spending the Drug Fund moneys to the best advantage. Real economy was in sight. Further, the Panel Committee has always, from the early days

<sup>1</sup> It may be noted that the Executive Committee's resolution makes no distinction as between the various drugs set out in the schedule, which includes simple aperients, antiseptics such as lysol, stimulants such as brandy, as well as opium.

when it issued its own special drug list with stipulations as to quality, had its eyes fixed on the freshness, standard, and purity of the drugs used.

Now all these endeavours go by the board. There seems no room for local effort in the system. I am to write frankly to the Insurance Committee, as above, in order that it, as representing the insured people, may be made aware of the light in which the Panel Committee views the recent developments in connexion with the Drug Fund. They may be inevitable, but they are not satisfactory.

#### LONDON PANEL COMMITTEE.

A MEETING of the London Panel Committee took place on February 21st, with Dr. H. J. CARDALE in the chair.

##### *Proprietary Preparations and the Drug Fund.*

A long discussion took place on the question whether various proprietary preparations formed a legitimate charge upon the Drug Fund. The committee agreed to inform the Insurance Committee than in its opinion fenamint and formamint tablets should not be allowed at the cost of the fund, but a similar recommendation with regard to sphagnol ointment was referred back, Dr. H. ROBERTS protesting that if the committee sought the exclusion of any preparation it should at least suggest an allowable equivalent.

It was reported that a letter had been received from British Drug Houses, Limited, protesting against a recent decision of the committee that radio-malt should not be allowed at the cost of the Drug Fund. The committee, however, after further discussion, decided to adhere to its previous decision, pointing out that this was a new preparation and that its therapeutic value could only be ascertained by experience. Dr. V. S. PARRINCE said that the sole question that the committee had to consider was whether radio-malt was a food or a drug. It was true that cod-liver oil and malt were allowable, but those preparations had occupied a special position in national insurance dispensing, dating back from the days of sanatorium benefit. He added that the committee was in no way concerned with the cost of a preparation, and that the fact that a preparation was more costly was no reason for its exclusion.

The next case considered was that of the proprietary preparation known as bynogen. The committee had previously decided that bynogen should be classified similarly to extract of malt, but it was now reported that in the view of the Minister of Health bynogen should rank with sautoegen, with regard to which both the Panel and Insurance Committees had agreed that it was of the nature of a food and not allowable at the cost of the Drug Fund. It appeared to the Minister to be clear that the malt and wheat in both these preparations were included for their food value, and that it would be difficult to contend that the small amount of special soluble malt extract which bynogen contained could have been added for any medicinal value it might possess. The committee therefore decided, in view of the information supplied by the Ministry, to regard bynogen as a food and as a preparation not allowable at the cost of the Drug Fund.

A letter from the Insurance Committee was read asking that the Panel Committee should enter upon a joint discussion with itself and the Pharmaceutical Committee on the whole question of proprietary preparations, but the Panel Committee reaffirmed a previous decision that there was no reason to interfere with the discretion of practitioners generally in ordering proprietary preparations for their patients, as adequate machinery existed under the regulations whereby practitioners could be called upon to explain what might appear to be excessive prescribing. The CHAIRMAN said that every case of this kind had to be decided on its merits. All practitioners received notice of certain preparations which were not considered allowable at the cost of the Drug Fund, but he thought that if a practitioner from his own experience in practice was able to justify the use of a proprietary preparation as against some more orthodox remedy no penalty would be imposed.

##### *Prescribing by Insurance Practitioners.*

The committee had before it the "Memorandum on prescribing for the guidance of insurance practitioners" issued by the Insurance Acts Committee, but after a brisk little discussion, during which Dr. CHASE complained of the Panel Committee's use of language which was unnecessarily provocative, the committee agreed by a majority to a resolution acknowledging the receipt of the memorandum and informing the Insurance Acts Committee that for some years it had issued a booklet on this subject which it considered of greater value to its constituents than the one now presented.

#### BIRMINGHAM PANEL COMMITTEE.

A MEETING was held on February 21st at the office of the committee, when Dr. DAIN presided over a good muster of members. Dr. Burges was congratulated on his election as vice-chairman of the Birmingham Insurance Committee. The CHAIRMAN drew attention to the great amount of useful work in connexion with health insurance which had been done by Dr. Williams-Freeman on behalf of the panel doctor, especially rural practitioners, and it was decided to contribute twenty guineas to the Williams-Freeman Testimonial Fund. An appeal was made for subscriptions to the B.M.A. Charities Fund, and it was decided to appoint a secretary to carry out a collection.

The letter from the British Medical Association with regard to the new method of changing doctor will be circulated to all panel doctors in the area, and their attention specially drawn to the contents. A letter from the Pharmaceutical Committee containing

suggestions making for economy in prescribing will be brought to the notice of all panel practitioners in the area through the medium of the *Birmingham Medical Review*. Comparison of the area figures for November and December last showed a more favourable position of affairs. An invitation to the committee to appoint a representative to the Birmingham Hospitals Council was received, but as it was considered that one representative was not sufficient the appointment was deferred pending correspondence on the subject. Claims for emergency, anaesthetic, and special service fees were considered. An appeal was again made to panel doctors to send to headquarters statistics of practice receipts and expenditure; forms for this purpose may be obtained from the Secretary of the Panel Committee, 154, Great Charles Street, Birmingham. The committee expressed an earnest hope that a good proportion of the doctors would respond, so that the ease of the Insurance Acts Committee (acting on behalf of the doctors) might be strengthened in possible future discussions with the Ministry of Health.

#### WARWICKSHIRE PANEL AND LOCAL MEDICAL COMMITTEE.

A MEETING of the Warwickshire Panel and Local Medical Committee was held at Leamington on February 23rd, when Dr. HERBERT MALINS presided over a good attendance. A considerable amount of routine business was transacted. In the course of a discussion on the working of the new "change of doctor" arrangements divided opinions were expressed as to whether the procedure was satisfactory and equitable, and it was agreed that the matter should receive continued review so that the committee's suggestions thereon could be prepared in good time for the autumn Panel Conference. The Pharmaceutical Committee put forward a list of proposed alterations in the *Formulary* adopted by the West Midlands Conjoint Group of Panel Committees; these suggestions mainly tended to the cheapening of certain mixtures.

## Correspondence.

### *The Workman's Value?*

SIR,—It seems worth while calling attention to the following interesting details connected with the payment by Government of the only unbiased examiner into an accident taking place in a factory.

Having taken over the appointment of surgeon under the Factory Acts in this district, I was requested to proceed to a factory about one mile distant, examine into the cause of an accident, examine the machine responsible for the accident, interview the persons concerned, and altogether spend the best part of half to three-quarters of an hour at the factory. I was then asked to furnish a full report of the case after examining the injured man.

For these services a cheque for 3s. was forwarded from the Home Office. I wrote and asked what the 3s. was for: was it for car hire one way, or what? When requested to render my account I put down a guinea as the charge for the report as the usual fee in similar cases not "under Government."

The whole appointment is not worth 30s. a year, and is no credit to anyone concerned. But my point is this: the only unbiased opinion in a case of a working man losing his life is given by an educated professional man, who is paid 3s. for a journey of about one mile and back, half an hour at the factory, and furnishing a full medical report. The cheque for 3s. is pinned up on the wall, but what it is for I do not know. —I am, etc.,

IAN JEFFERISS,  
Medical Officer of Health, Totnes.

March 19th.

### *Future of Hospital Services.*

SIR,—I have not seen any comments on Sir Richard Luce's address on the future of hospital services, published in the *Supplement* of March 10th (p. 77), and I suggest that some points arising out of it deserve attention.

There will be general sympathy with his appeal for the maintenance of the voluntary system. At the same time, anyone who knows anything of the pioneer work done under Poor Law, and the sacrifices made, will feel the injustice of his remarks about that service.

It seems clear, however, that he drew a contrast between one system that is known and another that is little known. He fears that the voluntary system will be swallowed up. This is evident from his quotation of the Socialist programme, and anxiety as to the permanence of financial support given in recent years. Stress was laid upon the funds now being raised by workmen. Is it realized that increasing numbers are going into Poor Law hospitals from choice, not necessity, and that the amount paid into Poor Law funds rivals the amount contributed by patients to voluntary hospitals?

Would it not be well that all the facts obtainable should be sought? Authoritative statements are made, for example, that so many thousand sick beds in the Poor Law service are

permanently empty. For practical purposes these figures are visionary. What they illustrate is the difficulty of getting at the truth about Poor Law. Yet this much-abused and condemned system holds the key position among problems of this nature.

Is it too much to hope that an effort may be made to bring together men who at present seem out of touch with each other—doctors with working knowledge of the different sections of Poor Law medicine, who are the only ones who have direct acquaintance with a somewhat incoherent system?

If the information that each of them could bring were put with what is already known a clear and safe policy might be arrived at. These are matters which concern all of us. We have a growing body of clinics, organized directly or indirectly by the State. We have also the workmen's funds that have successfully supported voluntary hospitals. These together have begun to throttle private practice.

If the private practitioner is to be destroyed, as he will be when the arrangements on foot develop fully, what use is there in considering future developments? He is the foundation of any kind of medical system likely to survive. If he goes under the two contending parties of State and voluntary effort will be left with their schemes in ruins.—I am, etc.,

Southend-on-Sea, March 25th. R. A. S. SUNDERLAND.

#### Pay Beds and the Future of Voluntary Hospitals.

Sir,—Upon some of the matters in the valuable article by the Dean of St. Mary's Hospital Medical School discussing the introduction of pay beds and the future of the voluntary hospitals (*Supplement*, March 17th, p. 85) it would be unbecoming for me to offer any observations; but there is one point in his article to which I should like to draw attention. Dr. Wilson says that "the Committee of King Edward's Hospital Fund] will certainly decide that there is no real difference in principle between taking patients paying three pounds or thereabouts, as is not unusual in the wards of voluntary hospitals at present, and taking patients into those hospitals who should pay five guineas as now proposed, if the hospital makes no profit. The difference is one of degree, not of kind." I submit that this is a one-sided statement, because it leaves out of account the position of the patient. There is all the difference in the world to a self-respecting individual between occupying a bed in which he is not the recipient of charity and one where he has to call upon the charitable funds. Moreover, in the large majority of cases he has a desire to pay for the professional attendance to the best of his ability.

The supporter of the hospital, too, appreciates the difference. More and more he requires that the hospital authorities should take care that the patients admitted into the general wards of the hospital are incapable of contributing the full cost. If they can do so, then the need to make other provision for them is clear. Apart from charters and Acts of Parliament, it must be remembered that the charitable public of the past gave their support for those who could not provide for themselves, and the charitable public of the present is equally alive to the primary objects of the foundation of the great London hospitals. The discussions on this subject too often fail to give full effect to the keen desire of the great majority of the middle class to maintain their independence, and at the same time their self-respect, by supporting themselves, even in a serious illness, to the utmost of their ability. It would be a real misfortune if, in providing for their bodily health, any damage were done to their strength of character.—I am, etc.,

C. E. A. BEDWELL,  
House Governor, King's College Hospital,  
London, S.E.5.

March 19th.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders J. Fullerton and G. E. H. Hamillon are placed on the retired list with the rank of Surgeon Captain.  
Surgeon Commander A. C. V. Green to the *Danae* on recommissioning.  
Surgeon Lieutenant Commanders G. E. Heath to the *Flora* for R.N. Hospital, Cape of Good Hope; E. R. P. Williams to the *Douglas* on completing.

Surgeon Lieutenants A. D. Sinclair to the *Wallflower*; W. Flynn to the *Tiger*.  
P. B. Jackson and D. R. Campbell have entered as Surgeon Lieutenants and appointed to the *Victory* for R.N. Hospital, Haslar.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenants G. F. Abercrombie and S. W. Davidson to be Surgeon Lieutenant Commanders.

### ROYAL ARMY MEDICAL CORPS.

Captain A. J. Beveridge, M.C., to be Major, July 19th, 1927 (substituted for notification in the *London Gazette*, July 26th, 1927).  
Captain E. S. Cuthbert to be Major, April 2nd, 1927 (substituted for notification in the *London Gazette*, June 7th, 1927).  
Lieutenant G. C. Phipps to be Captain (prov.).  
Temporary Lieutenant R. J. Monahan relinquishes his commission.  
To be temporary Lieutenants: E. A. Stroud and R. A. Kennedy.

### ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leaders R. J. Aberne, M.C., to Headquarters, Middle East; P. H. Young to Headquarters, Iraq.  
Flight Lieutenants J. A. Perdrau to No. 3 Flying Training School (Cadre), Spittlegate; R. Boog-Watson to R.A.F. Station, Upavon.  
Flight Lieutenant D. B. Smith is transferred to the Reserve, Class D.II.  
The following Flight Lieutenants are granted permanent commissions in this rank: J. D'I. Rear, J. McE. Wilder, and J. I. Hyder.  
Flying Officer G. S. Strachan is promoted to the rank of Flight Lieutenant.  
Flying Officers J. Twohill to R.A.F. Training Base, Leuchars; G. T. O'Brien to R.A.F. Practice Camp, Sutton Bridge; M. Clancy to R.A.F. Practice Camp, Weston Zoyland; G. W. J. Williams to R.A.F. Practice Camp, North Coates Fitties; L. Freeman, G. W. McAleer, E. P. Carroll, J. P. McGovern, and W. Heron to Headquarters, Iraq.

### INDIAN MEDICAL SERVICE.

Lieut.-Colonel R. W. Anthony to be Major-General, vice Major-General A. Hooton, C.I.E., K.H.P.  
Lieut.-Colonel J. Husband is posted as Legation Surgeon, Nepal, and ex-officio Assistant to the British Envoy at the Court of Nepal.  
Lieut.-Colonel T. H. Gloster is permitted to retire from the service.  
Lieut.-Colonels J. A. Shorien and H. M. Inman retire from the service.  
Majors to be Lieutenant-Colonels: W. E. Brierley, J. B. Lapsley, M.C., C. H. Fielding, W. L. Watson, O.B.E., J. W. Barnett, M. L. Puri, R. B. Lloyd, A. C. Munro, R. N. Chopra, A. G. Tresidder, C.I.E., G. G. Jolly, C.I.E., H. Stott, O.B.E., A. A. C. McNeill, G. F. Graham, M. D. Wadia, T. D. Murison, S. S. Vazifdar, J. J. H. Nelson, O.B.E., M.C., E. S. Phipson, D.S.O., P. F. S. Smith, and T. C. Boyd.  
Major R. H. Malone has resumed charge of his appointment as Officiating Assistant Director, Central Research Institute, Kasauli.  
Captains to be Majors: R. C. Mathotra, O.B.E., H. C. Tait, M.B.E., and J. C. Chukerbuti.  
Captain A. M. Ghosh to be Major.  
Lieutenant T. D. Donegan is permitted to resign the service.

### TERRITORIAL ARMY.

#### ROYAL ARMY MEDICAL CORPS.

Colonel A. Ducau, D.S.O., T.D., having attained the age limit, is retired and retains his rank, with permission to wear the prescribed uniform.  
Captains to be Majors: H. A. B. Whitelecke, with precedence as from May 5th, 1927; A. C. Haddow.  
Captain (prov.) R. S. Creed is confirmed in his rank.  
Lieutenant O. F. W. Robinson to be Captain.  
Lieutenant E. T. Birkinshaw resigns his commission.  
General Hospitals.—Lieutenant W. H. A. Dodd, from General List, to be Lieutenant, with precedence as from July 6th, 1923.

### TERRITORIAL ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Major E. Alderson, D.S.O., T.D., from the active list, to be Major.

### COLONIAL MEDICAL SERVICES.

Dr. J. B. Kirk to be Director of the Medical and Health Department, Mauritius.  
Dr. R. P. Cormack to be Senior Bacteriologist, Kenya.  
Dr. N. P. Jeauch, M.C., to be Resident Surgical Officer, Nairobi Hospital, Kenya.  
Dr. W. L. Webb to be Deputy Director of the Medical Service, Uganda.  
Dr. H. B. Owen, D.S.O., to be Medical Superintendent and Principal of the Medical School, Mulago Hospital, Uganda.  
Dr. G. C. Edwards to be Medical Officer, West African Medical Staff.  
Dr. G. W. Pope to be Medical Officer of Health, Hong-Kong.  
Dr. F. W. Vint to be Assistant Bacteriologist, Medical Department, Kenya.  
Dr. D. T. Birt, W.A.M.S., to be Senior Medical Officer, Sierra Leone.  
Dr. E. I. Bieber to be Medical Officer, Nigeria.  
Drs. A. MacPherson, M. Jackson, and A. Walker to be Medical Officers, Gold Coast.  
Dr. J. H. Reford has retired from his appointment as Director of Medical and Sanitary Services, Uganda.

### VACANCIES.

BELGRAVE HOSPITAL FOR CHILDREN, Clapham Road, S.W.9.—(1) House-Surgeon. (2) Assistant House-Physician. Salary at the rate of £100 per annum each.  
BIRMINGHAM AND MIDLAND HOSPITAL FOR WOMEN.—Honorary Radiologist.  
BOURNEMOUTH: ROYAL VICTORIA AND WEST HANTS HOSPITAL.—(1) House-Surgeon at Poole Road Branch. (2) House-Surgeons and Casualty Officer at Boscombe Branch. Salary at the rate of £120 per annum each.  
BRISTOL HOMOEOPATHIC HOSPITAL.—Resident Medical Officer. Salary £100 per annum.  
BURTON-ON-TRENT INFIRMARY.—Junior Resident House-Surgeon (male). Salary £150.  
CAMBRIDGE: ADDENBROOKE'S HOSPITAL.—Resident Anaesthetist (male). Salary at the rate of £180 per annum.  
CARLISLE NON-PROVIDENT DISPENSARY.—Resident Medical Officer. Salary £250 per annum.  
CANNONVOSHIRE AND ANGLESEY INFIRMARY, Bangor.—House-Surgeon (male). Salary £200 per annum.  
COUNTY MENTAL HOSPITAL, Whittingham, Preston.—Sixth Assistant Medical Officer (unmarried). Salary £350 per annum, rising to £450.  
DARLINGTON COUNTY BOROUGH.—Health Visitor. Salary £172 16s.  
DERBYSHIRE ROYAL INFIRMARY.—(1) House-Surgeon. (2) Assistant House-Surgeon and Casualty Officer. Males. Salary at the rate of £150 per annum each.  
DORCHESTER: ROYAL INFIRMARY.—Third House-Surgeon (male). Salary at the rate of £150 per annum.  
DUBLIN: CITY OF DUBLIN SKIN AND CANCER HOSPITAL.—(1) Resident House-Surgeon. (2) Resident Deep X-ray Therapist.  
EXETER: ROYAL DEVON AND EXETER HOSPITAL.—House-Physician (male). Salary at the rate of £130 per annum.  
FORTINGALL PARISH COUNCIL.—Medical Officer and Public Vaccinator for the Rannoch District. Annual income probably from £650 to £700.  
GLASGOW: UNIVERSITY COLLEGE.—(1) Professorship of Midwifery and Gynaecology. (2) Professorship of Therapeutics, Pharmacology, and Maternal Medicine. Salary £300 to £320 a year each.  
HOLBORN UNION.—Second Assistant Medical Officer at the Holborn and Finchbury Hospital, Archway Road, N.19. Salary £300 per annum.

**HÔPITAL FRANÇAIS**, 172, Shaftesbury Avenue, W.C.2.—(1) Physician in In-patients. (2) Physician to Out-patients. (3) Junior Resident Medical Officer (male, unmarried). Salary for (3) £100 per annum.

**HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST**, Brompton, S.W.3.—House-Physicians. Honorarium £50 for six months.

**HOSPITAL FOR EPILEPSY AND PARALYSIS**, Maida Vale, W.9.—(1) Resident Medical Officer. (2) House-Physician. Salary £150 and £100 per annum respectively.

**HOSPITAL FOR SICK CHILDREN**, Great Ormond Street, W.C.1.—House-Surgeon, House-Physician, and Assistant Casualty Officer for six months. Salary £50.

**HOSPITAL FOR WOMEN**, Soho Square, W.1.—Assistant Anaesthetist.

**KNOCKANDO PARISH**.—Parochial Medical Officer and Public Vaccinator. Salary £46 per annum.

**LEIGH INFIRMARY**, Lancashire.—Resident House-Surgeon (male, unmarried). Salary at the rate of £150 per annum.

**LIVERPOOL EYE AND EAR INFIRMARY**.—Third Honorary Anaesthetist.

**LONDON FEVER HOSPITAL**, Islington, N.1.—Honorary Surgeon.

**LUTON UNIVERSITY**.—Professor of Anatomy. Salary Rs.1,450 per mensem.

**MANOR HOUSE HOSPITAL**, Golders Green, N.W.11.—House-Surgeon (male, unmarried). Salary at the rate of £200 per annum.

**MILNAY MISSION HOSPITAL**, Austin Street, E.2.—(1) Senior Resident Medical Officer (male). (2) Assistant Casualty Officer (non-resident). Salary at the rate of £140 and £100 per annum respectively.

**MILLER GENERAL HOSPITAL**, Greenwich Road, S.E.10.—Casualty Officer (male, unmarried). Salary £150 per annum.

**MINISTRY OF HEALTH**.—Deputy Regional Medical Officers. Remuneration £800 per annum, rising to £1,100.

**PADDINGTON GREEN CHILDREN'S HOSPITAL**, W.2.—(1) House-Physician. (2) House-Surgeon. Males, unmarried. Salary at the rate of £150 per annum each.

**PRINCE OF WALES'S GENERAL HOSPITAL**, Tottenham, N.15.—(1) House-Surgeon. (2) Special House-Surgeon. (3) House-Physician. (4) Junior House-Surgeon. (5) Junior House-Physician. Salary at the rate of £120 per annum for (1), (2), and (3), and £90 per annum for (4) and (5).

**PRINCESS LOUISE KENSINGTON HOSPITAL FOR CHILDREN**.—(1) House-Physician. (2) House-Surgeon. One will be appointed Resident Medical Officer and be regarded as senior with salary at the rate of £100 per annum, the other will receive £75 per annum.

**QUEEN'S HOSPITAL FOR CHILDREN**, Hackney Road, E.2.—Physician in charge of Skid Department.

### British Medical Association.

#### CURRENT NOTES.

##### Medico-Political Committee.

Among other matters of interest the Medico-Political Committee, on March 21st, had before it the draft regulations drawn up by the Ministry of Health under the Nursing Homes Registration Act, 1927. This Act comes into force on July 1st next, and the precise wording of the regulations is important to members of the medical profession, for the Act affects the medical as well as the lay owners of nursing homes. The Committee has suggested for the consideration of the Ministry of Health certain amendments in the draft submitted to it. The Committee had also under consideration at this meeting certain difficulties reported as arising in connexion with the new form of death certificate. It seems that delay has been found to occur in cases in which doctors are not familiar with the names and addresses of the registrars of subdistricts covered by their practices. This matter has been referred to the Registrar-General, who has replied that the regulations require that any registrar receiving from a practitioner a medical certificate which has reference to a death required to be registered in some other subdistrict shall forthwith transmit it to the registrar to whose subdistrict it relates; further, it has long been the duty of superintendent registrars to print from time to time a list of the registrars of births and deaths within the district, stating their names, offices, etc., and approved days and hours of attendance, and to supply a copy of such list to every registered medical practitioner practising within the district. Steps have been taken to ensure that on the reissue of any lists since the commencement of the 1926 Act such lists should include additional assistance to enable a practitioner to comply with the new obligation. The Committee hopes that these arrangements will for all practical purposes meet the difficulty which has arisen.

##### Consulting Pathologists Group Committee.

The committee of the recently constituted group of consulting pathologists met on March 23rd to consider the matters referred to it by the meeting of the group conference on March 2nd (*Supplement*, March 10th, p. 81). It was chiefly occupied in a preliminary review of the details of such local schemes as are already in operation for the provision of pathological services under the National Health Insurance Acts.

##### Election of Central Council.

The attention of Division and Branch secretaries and members generally is drawn to the announcement in the Table of Dates under "Association Notices" (*Supplement*, p. 114) that nomination papers for election of the twenty-four members of Council by the grouped Branches in the British Isles are now available on application to the Medical Secretary.

#### NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

##### Membership and Acceptance of Post which is Subject of "Important Notice."

**BY NORTH MIDDLESEX:** That no medical practitioner shall be eligible for membership of the Association who has obtained and holds a position to which he was appointed whilst it was the subject of an "Important Notice" in the *British Medical Journal*.

##### Medical and Dental Examinations of Insured Persons.

**BY WINDSOR:** That in the opinion of this meeting the establishment of periodical medical and dental examinations of all persons insured under National Insurance laws is urgently called for as an economic proposition, having regard to the return so to be obtained in health and productive efficiency; every such insured person, when accepted as a patient on a doctor's panel, shall be by that doctor medically examined, and the result of that examination placed on record. Preliminary examination should apply also to dental examination, when that additional benefit is included and available under the National Insurance laws.

#### SCHOLARSHIPS AND GRANTS IN AID OF SCIENTIFIC RESEARCH.

##### Scholarships.

The Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows: An Ernest Hart Memorial Scholarship, of the value of £200 per annum, and three Research Scholarships, each of the value of £150 per annum. These Scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State Medicine) relating to the causation, prevention, or treatment of disease. Each Scholarship is tenable for one year, commencing on October 1st, 1928. A Scholar may be reappointed for not more than two additional terms. A Scholar is not necessarily required to devote the whole of his or her time to

the work of research, but may hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment do not interfere with his work as a Scholar.

#### Grants.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the causation, treatment, or prevention of disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

#### Conditions of Award: Applications.

Applications for Scholarships and Grants must be made not later than Saturday, June 2nd, 1928, on the prescribed form, a copy of which will be supplied on application to the Medical Secretary of the Association, B.M.A. House, Tavistock Square, London, W.C.1.

Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated, to whom reference may be made.

## Association Notices.

### A CALCUTTA BRANCH.

NOTICE is hereby given to all concerned of the formation by the Council of the Association of a Calcutta Branch, the area of the Branch to comprise that portion of Bengal which lies to the south and west of the Ganges, the Branch coming into existence as from the date of publication of this Notice.

### TABLE OF DATES.

April 28, Sat.	Annual Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.
	Last day for receipt at Head Office of nominations: (i) by n Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 12, Sat.	Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
	Voting papers posted from Head Office, where there are contests in above elections.
May 15, Tues.	Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.
May 19, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
	Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.
June 2, Sat.	Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members.
	Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 7, Thurs.	Names of Representatives and Deputy Representatives must be received at Head Office by this date.
June 13, Wed.	Council.
June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.
July 4, Wed.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 20, Fri.	Annual Representative Meeting, Cardiff, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Council, Cardiff.
	Annual Representative Meeting, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
	Meetings of Sections, etc., Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—At the meeting of the Nuneaton and Tamworth Division to be held at the Nuneaton General Hospital on Wednesday, April 18th, Dr. C. F. Rudd will read a paper on an ophthalmic subject.

**CAMBRIDGE AND HUNTINGDON BRANCH.**—A meeting of the Cambridge and Huntingdon Branch with the Cambridge Medical Society will be held at Addenbrooke's Hospital on Friday, April 13th, at 2.30 p.m. Mr. Arthur Cooke: The results of treatment of gastric and duodenal ulcer; Mr. W. H. Bowen and Dr. Ff. Roberts: The operative treatment of oblique fracture of the femur; Dr. Ff. Roberts: Localization of a golf-ball in a dog by the barium meal.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at St. Enoch Station Hotel on Wednesday, April 11th, at 3.30 p.m. Dr. John Mortimer will read a paper on the commoner eye affections as occurring in general practice.

**KENT BRANCH: ASHFORD DIVISION.**—At a meeting of the Ashford Division to be held at the North Street Club, Ashford, on Wednesday, April 18th, at 4 p.m., Dr. J. W. McNee of University College Hospital will give a lecture on new work in the diagnosis and treatment of hepatic and biliary diseases. A cordial invitation is extended to all members of the Kent Branch.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The next clinical meeting of the City Division will be held on Friday, April 13th, at the Metropolitan Hospital, when Mr. P. M. Heath will show surgical cases. Tea at 4.15 p.m., meeting at 4.30.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—At the meeting of the Lewisham Division to be held at the Town Hall, Catford, S.E.6, on Tuesday, April 17th, at 8.45 p.m., Dr. W. V. Goldsmith will read a paper on pigmentation of the skin.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, April 10th, at 9 p.m. Dr. Donald Paterson will give a lecture on the prevention of summer diarrhoea.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—At the meeting of the Willesden Division to be held at the Willesden General Hospital, Harlesden Road, on Wednesday, April 18th, Dr. J. Bright Bannister will give an address on ante-natal work.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Royal Hospital, Chesterfield, on Wednesday, April 18th, at 3 p.m., when there will be a series of clinical demonstrations.

**MIDLAND BRANCH: HOLLAND DIVISION.**—A meeting of the Holland Division will be held in the White Hart Hotel, Boston, on April 12th, at 3 p.m., when an address will be given by Dr. J. Wilkie Scott (Nottingham) on some aspects of vomiting. Members of neighbouring Divisions will be welcomed.

**NORFOLK BRANCH.**—A meeting of the Norfolk Branch will be held at the Norfolk and Norwich Hospital on Wednesday, April 11th, at 3.30 p.m. Sir Hamilton Ballance, K.B.E., president of the Branch, will be in the chair, and a paper will be read by Dr. Ian D. Dickson on neurasthenia in general practice.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, April 18th, at 8.15 p.m. Dr. A. F. Bernard Shaw will read a paper on the present status of the jaundice problem.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, April 19th, at 8.30 p.m. Lieut.-Colonel P. J. Maret will read a paper on some lung affections.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—The final address of the winter session of the Portsmouth Division will be held at the Queen's Hotel, Southsea, on Thursday, April 12th, at 9.30 p.m., preceded by a supper at 9 p.m. Dr. J. Stanley White will give an address on some recent aspects of biological therapy, illustrated by a cinematograph demonstration of research work carried on in Messrs. Parke, Davis and Co.'s research laboratories. This will be the last address, preceded by a supper. The business meeting will be held on May 10th, at 9 p.m., and the annual dinner on May 16th.

**SUFFOLK BRANCH: WEST SUFFOLK DIVISION.**—A meeting of the West Suffolk Division will be held on Saturday, April 14th, at 8.45 p.m., when Mr. C. W. G. Bryan will give a lecture on the acute abdomen in childhood. Coffee will be served at 8.30.

### B.M.A. CHARITIES FUND.

In the list of subscriptions and donations to the B.M.A. Charities Fund published on page 104 in the *Supplement* of March 31st, the sum of £1 15s. 6d. was entered as from the Kensington Division. This sum should have been credited as subscriptions from Surgeon Rear-Admiral W. G. Axford, C.B., Dr. Mary A. Silcock, and Captain Armitage L. Forbes.

In addition to the amount of £1 15s. 6d., subscriptions had been received from the following members of the Division, and these have been entered in the individual names: Miss Dorothy Wood; Dr. Katherina A. C. Gillie, Dr. E. A. Barton, Dr. G. Denton Winston, Dr. W. G. Beadle, Dr. E. R. Sweeney, Colonel W. G. Pridmore, C.M.G., Dr. A. S. Herbert, and Dr. Ford Caiger.

A subscription was shown as having been received from the Andover Mental Hospital. This should have read "Andover War Memorial Hospital."

## Meetings of Branches and Divisions.

### ABERDEEN BRANCH: ABERDEEN DIVISION.

THE Executive Committee of the Aberdeen Division on March 27th entertained to tea the medical graduates of Aberdeen University. Out of a total of twenty-seven there were present twenty-one. Copies of the *Handbook for Recently Qualified Medical Practitioners*, issued by the British Medical Association, were distributed to the new graduates, and the chairman and vice-chairman of the Division, Dr. SKINNER and Dr. THOMAS FRASER, addressed the guests, and explained the advantage of joining the Association. The meeting was informal and was generally voted a success.

### BIRMINGHAM BRANCH: BROMSGROVE DIVISION.

A GENERAL meeting of the Bromsgrove Division was held at the Smallwood Hospital on March 19th, when Dr. E. A. SMITH was in the chair.

The rules of organization of the Division, as suggested by the Central Council, were discussed and adopted, with a few minor modifications.

A circular from headquarters regarding hospital contributory schemes was discussed. As the Birmingham hospital-contributory scheme has now conceded the three main items in the British Medical Association policy, further discussion was considered useless. It was decided to ask the Dudley Division to select a representative to the Annual Representative Meeting this year.

With reference to the inquiry into the treatment of varicose ulcers, the secretary was instructed to submit the names of Drs. Protheroe Smith, Mitchell, and Lewis of Redditch, and Dr. Bodger of Studley.

A discussion took place on a memorandum from headquarters regarding reports of practitioners at the request of coroners. The secretary was instructed to write to the Birmingham Branch suggesting that the county councils concerned should be approached by the Branch, as having more weight than the Divisions.

### BORDER COUNTIES BRANCH.

A GENERAL meeting of the Border Counties Branch was held at Storms Farm, Keswick, on March 16th, at the invitation of Mr. J. A. Spedding. More than fifty members and friends were present, the latter including leading members of the Border Counties Branch of the Association of Veterinary Surgeons. The whole process of the production of certified milk was demonstrated, and after tea Mr. Spedding gave an address on pure milk production and grading.

Mr. R. SIMPSON, chief veterinary officer to the Cumberland County Council, read an instructive and interesting paper on the subject of milk production and bovine tuberculosis in relation to public health. After referring to the food value of milk, he remarked that bacterial contamination was to a large extent preventable if suitable methods were employed, though the position in regard to tuberculous infection was still far from satisfactory. Recent legislation would be productive of good, provided that there was strict and uniform administration throughout the country. The education of the public with regard to the value of milk should be intensified in order that recognition of the danger of dirty milk might induce people to pay the higher cost of graded milk. Mr. Simpson insisted that the elimination of tuberculosis in man must to a very large extent be dependent on its eradication from cattle, where it was still very prevalent; in this country it was by far the most important animal disease. He then referred to the satisfactory improvement in Newcastle as regards the fall in the number of samples collected of tuberculous milk. He also alluded to the difficulties in tracing infected cattle, and summarized the steps taken to prevent human infection, with special reference to legislation and the various orders, indicating the lines on which further development should proceed.

Dr. F. H. MORRISON, medical officer of health for Cumberland, considered the subject of graded milk from the public health point of view.

After a short discussion hearty votes of thanks were passed to Mr. and Mrs. Spedding for their hospitality, and to the speakers. A resolution of condolence was sent to the widow and family of Dr. William Scott of Ruthwell, a recent president of the Branch.

### DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.

A MEETING of the West Dorset Division was held on March 20th at the Weymouth and District Hospital. The letter from the Council concerning reports by practitioners to coroners was discussed, and it was decided to approach all coroners in the Divisional area and to ascertain their views.

Dr. GRAY showed a "Mongol" boy, aged 9. In addition to the usual symptoms of Mongolism he had webbing of the middle and fourth fingers, both hands, and a similar condition of the toes.

Dr. HORTON showed a lad, aged 17, who, four years ago, had suffered from tuberculous tip disease on the left side, which was now cured. Subsequently the left forearm became swollen and a sinus opened, which also had quite healed. An x-ray photograph showed tuberculous disease of the left ulna. Early in 1928 he had suffered from severe pain in the left arm, and high fever. The left humerus appeared to be enlarged, and an x-ray photograph showed periostitis. The periosteum was incised; there was no pus, but a *Streptococcus longus* and a coliform bacillus were recovered. A section of the periosteum showed fibrous osteitis and no evidence of tuberculous or malignant disease. Dr. HORTON also showed a boy who suffered from fragilitas ossium affecting

the leg bones. He had had many fractures. The right tibia and fibula had become bent at a right angle. Dr. HORTON had performed a wedge-shaped osteotomy of the tibia and plated it in good position. The wound had now healed. Dr. HORTON exhibited a section of an encapsulated lunion removed from the pectoralis major of a male patient; the section showed myeloid sarcoma.

Dr. PRIDHAM showed a lad, aged 19, presenting the Parkinsonian syndrome following encephalitis lethargica.

After refreshments had been served Dr. T. COLLEY read an interesting and practical paper entitled "Some acute eye conditions met with in general practice." He discussed the differential diagnosis and treatment of acute glaucoma, acute iritis, and acute conjunctivitis.

### ESSEX BRANCH: MID-ESSEX DIVISION.

A MEETING of the Mid-Essex Division was held on March 2nd. The following officers were elected for 1928:

*Chairman*, Dr. J. P. Wells. *Secretary and Treasurer*, Dr. R. H. Veicoe. *Representative in Representative Body*, Dr. H. G. L. Haynes. *Deputy Representative in Representative Body*, Dr. R. H. Veicoe.

THE SECRETARY reported on the year's work and accounts of the Division. After a discussion on attendance of medical practitioners at road accidents, it was decided that the only hope of being paid for attendance at such accidents would be for legislation to be enacted so that motorists to be insured to cover accidents to the cost of medical treatment, ambulance, and hospitalization.

Some discussion took place on the treatment of chronic varicose ulceration in general practice. Various methods of treatment were discussed, including ultra-violet light and injections into the veins of sodium salicylate. Several members offered to complete case sheets if sent to them.

A letter from the Medical Secretary on reports furnished by medical practitioners at the request of coroners was read; it was decided to write to the Branch Secretary asking him to notify the county council that 10s. 6d. was considered a proper fee for such reports.

Dr. LYSTER asked if there were a ruling as to a fee for dental gas given by a medical practitioner. He was informed that the accepted fee was 10s. 6d., although the Dental Benefit Joint Committee under the National Insurance Act had approved a fee of 7s. 6d. in certain cases.

### LANCASHIRE AND CHESHIRE BRANCH: MID-CHESHIRE DIVISION.

A MEETING of the Mid-Cheshire Division was held at the Altrincham General Hospital on March 20th, when Mr. SAMPSON HAXLEY gave a lecture on radium in carcinoma. The lecture was illustrated by lantern slides, and was much appreciated by thirty-five members of the Division, and by nine non-members, who had also been invited to be present.

At the close of the lecture an engraved silver inkstand and a blotter were presented by members of the Division to Dr. T. W. H. GARSTANG as a token of esteem and in appreciation of his services to this Division and to the British Medical Association. The CHAIRMAN (Dr. Chisholm) appropriately described these services. Dr. GARSTANG, in thanking the members, said that he was always ready to advise them in case of any difficulty, and that he would next autumn give them a lecture on his personal experiences in organizing British Medical Association work.

### METROPOLITAN COUNTIES BRANCH: CITY DIVISION.

A MEETING of the City Division was held on March 6th, with Dr. PHILIP HAMILL in the chair, when Mr. NORMAN PATTERSON, dermatologist to the Royal Northern Hospital, read a paper on difficulties in diagnosis in connexion with throat and ear trouble.

Mr. Norman Patterson began by pointing out some difficulties in connexion with diagnosis of certain conditions in the mouth. One of these was sublingual cellulitis. Patients suffering from this complaint, owing to restricted opening of the mouth and the apparently large size of the tongue, were difficult to examine, and the correct treatment, which generally consisted in making a free incision from the outside, was not always adopted. He mentioned submaxillary calculus, and described the best method of palpating for a small stone; a second calculus was sometimes present, as indicated by a facet of the first calculus removed. He discussed the diagnosis between acute tonsillitis and diphtheria, and pointed out the importance of examining for the Klebs-Löffler bacillus in patients showing paralysis of the palate or suffering from other signs of post-diphtheritic paralysis. As secondary syphilis of the throat was frequently mistaken for an inflammatory condition, stress was laid on the special features of the former disease. A case of paralysis of the vocal cord resulting from secondary syphilis was mentioned, and the diagnosis between Vincent's angina, diphtheria, and syphilis discussed. The likelihood of mistaking a gumma of the soft palate for an acute inflammation was mentioned. The necessity in some cases of examining infants for retro-pharyngeal abscess was stressed, as symptoms might sometimes be misleading. Many deaths had occurred from this disease without any suspicion having arisen in the mind of the practitioner that such a condition was present. The diagnosis between keratosis pharyngis and follicular tonsillitis was discussed. Some remarks were made on the search for a primary growth in a case of malignant glands of the neck, and three cases were referred to in which an insignificant primary tumour had given rise to massive secondary tumours. In one case the primary growth was represented by a slight area of roughness on the tonsil, and in another there was a tiny localized area of induration in the same region. The importance of examining the nasopharynx for a primary growth, and the difficulty of locating such a growth should it be situated in the pyriform fossa, at the back of the tongue, or in

the hypopharynx, was remarked on. Any obstructing mass in the nasopharynx occurring in a child need not necessarily be adenoids; other conditions, such as a polypus, tumour, or congenital occlusion, might be present. Emphasis was laid on the extreme importance of diagnosing epithelioma of the vocal cord in its early stage, as the operative results in early cases were better than those obtained in any other part of the body. The speaker insisted on the importance of investigating most thoroughly any case of hoarseness occurring in patients over 40 and lasting for more than a few weeks. Misleading symptoms in association with carcinoma of the oesophagus were mentioned, and the diagnosis of carcinoma from other conditions affecting the gullet was considered. The importance of a correct reading of the laryngeal picture was discussed in connexion with such diseases as aortic aneurysm and locomotor ataxy. Consideration was given to the mistakes likely to occur in cases of foreign bodies in the pharynx, larynx, etc., and special mention was made of pitfalls in connexion with foreign bodies located below the level of the vocal cords.

Continuing, Mr. Norman Patterson stated that in swellings in the neighbourhood of the orbit a thorough examination of the nose was necessary. Very many of these cases were in some way connected with the nose or nasal sinuses. A coloured drawing of a case of primary sore of the nasal vestibulo was shown, and the differential diagnosis discussed. Tertiary syphilis of the nose was often misinterpreted. The chief clinical signs were alluded to, and suggestions were made with regard to avoiding errors in diagnosis. The characteristic appearances of simple nasal polypi were described, and the importance of occluding the nose in order to bring into view polypi which otherwise might be invisible, and of examining the nasopharynx, was emphasized. Distinctions between nasal polypi and malignant disease were mentioned, and it was pointed out that polypi might conceal a malignant growth. The characteristics of malignant disease when affecting the nasal sinuses were passed under review. The speaker remarked on the symptom of referred pain in nasal sinus disease; he also considered the differential diagnosis between antral suppuration, dental cyst, and polypus in the antrum. False conclusions might be drawn from transillumination. The necessity for a careful examination of the nose and a bacteriological report in cases of rhinitis occurring in children was emphasized.

Turning to the question of the ear, Mr. Patterson dealt with the distinguishing features between acute conditions of the external auditory meatus and those affecting the middle ear and mastoid. Cases were mentioned in which serious intracranial complications had developed in the presence of what appeared to be a practically normal ear. The diagnosis of various conditions of the external auditory meatus, tympanic membrane, and middle ear was discussed. Two cases were mentioned in which herpes had been mistaken for mastoiditis. The importance of always examining both ears was insisted on, and the speaker concluded by referring to the differential diagnosis of lateral sinus disease and certain other conditions.

A lively discussion followed the reading of the paper, and the meeting terminated with a very hearty vote of thanks to the lecturer for a most instructive evening.

#### METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held at the Town Hall, Catford, S.E.6, on March 20th, when Dr. W. E. HALLINAN was in the chair, and Mr. H. WANSEY BAYLY gave an address on the general practitioner and the prevention of venereal disease.

Mr. Bayly said that the public health department and the specialists had failed as regards prevention, which consequently devolved upon the general practitioner. The law decreed that only a qualified medical practitioner could give advice on prevention, so it was now impossible for chemists to sell preventive packets with instructions such as were used in the army during the war. Prophylaxis was very successful in the army and navy, and would produce 90 per cent. decrease in venereal diseases. Syphilis was a cause of more deaths than was shown by the registrars' returns. The method advised was to swab with a 1 in 1,000 solution of potassium permanganate, a salt which was cheap, non-poisonous, and could be obtained anywhere in any country. Calomel ointment might also be used.

Drs. GILCHRIST, HALLINAN, G. JONES, H. EVANS, BEATTIE, BAIN, and BUCHAN joined in the discussion, and a vote of thanks was passed to the lecturer.

#### METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.

A CLINICAL meeting of the Division was held on March 22nd at the Willesden General Hospital. This was a joint meeting with the dentists of the north-western district. Mr. H. L. MESSENGER, M.C., L.D.S., read an interesting paper on focal infection, which was followed by an instructive general discussion. Mr. Messenger dealt particularly with dental sepsis and its sequelae. He outlined the pathology of dental sepsis, which he divided into two types—the closed, as typified by a root abscess in a dead tooth, and the open type, as seen in pyorrhoea alveolaris. Emphasis was laid on the greater danger from the closed type. Such conditions as arthritis, endocarditis, and iritis undoubtedly arose from septic conditions of the teeth, and cases were quoted illustrating their occurrence; but Mr. Messenger pointed out the difficulty in many cases of excluding other probable foci in tonsils and intestinal tract which were the real source of infection, though associated with a dental infection. Many cases in which the teeth were the alleged source of infection had failed to show improvement after extraction, and Mr. Messenger deprecated the casual manner in which extensive extractions were often done in various chronic infections when other possible foci were insufficiently investigated.

In the discussion which followed Dr. DAUGHERTY outlined the radiographic appearances in dental sepsis, and indicated some

of the pitfalls in the interpretation of the plates. Other speakers discussed the importance of preventive measures in the treatment of dental infections, the education of the public in the care and hygiene of the mouth, and in dietetic matters, particularly in the case of children. It was observed that medical men occasionally ordered extraction of teeth without reference to the dental surgeon, and sometimes in opposition to the opinion of the dental surgeon; such practice was considered to be ill advised.

A vote of thanks to Mr. Messenger for a very enlightening paper was moved by Dr. G. W. R. SKENE, seconded by Dr. C. DE BOUDEVY THOMSON, and carried unanimously.

#### NORTHERN COUNTIES OF SCOTLAND BRANCH.

A MEETING of the Northern Counties of Scotland Branch was held at the Northern Infirmary, Inverness, on March 15th. Dr. T. MACDONALD, president, was in the chair, and there was an attendance of thirty-two members.

The first part of the programme was a paper by Dr. E. K. MACKENZIE on some views upon midwifery practice. Dr. Mackenzie's views were based on his experience at 865 confinements which he had attended during the last twelve years. Careful notes had been kept by him of all his cases, and the result was a very interesting and informative paper. After the paper there was a free discussion, in which Drs. D. G. CAMPBELL, J. W. MACKENZIE, KELLY DICKIE, W. D. MACKINNON, and the President took part.

Mr. A. J. C. HAMILTON gave a demonstration of surgical cases, which also proved very interesting. The cases shown were as follows:

- (1) Case of Perthes's disease of right hip: A girl, 9 years of age; limp and occasional pain in hip since December, 1925; x rays.
- (2) Case of Köhler's disease (arsen phenoiditis): Child 6 to 7 years of age; pain and some swelling in foot for a fortnight; x rays.
- (3) Case of epithelioma of lip: A male, 24 years of age; Wassermann test negative; piece removed for examination; radical operation—three stages, September to October, 1927—(a) excision of glands right side of neck, (b) resection of whole lower lip and plastic repair, (c) excision of glands left side of neck, fourteen days between each stage.
- (4) Case of carcinoma of pelvic colon: A woman, aged 53; progressive constipation of several months' duration; sigmoidoscopic examination negative; barium enema; September 3rd, 1927, laparotomy and three-stage operation of Mikulicz initiated.
- (5) Case of empyema treated by Sorel's cannula: Patient, aged 64, had left-sided empyema and mixed infection of streptococci and pneumococci; operation February 18th, 1928; x rays.
- (6) Calculus from pelvis of left half of a horseshoe kidney; specimen only.
- (7) Case of hydronephrosis; x rays only.

After the meeting tea was provided by the matron of the hospital.

#### NORTH OF ENGLAND BRANCH: BLYTH DIVISION.

THE annual dinner of the Blyth Division was held on March 21st. The toasts of "The King," "The British Medical Association," and "The Guests" were duly honoured. Dr. BEATON, president of the North of England Branch, replied for the British Medical Association. Dr. C. F. FAIRLIE and Mr. CLARKO gave a selection of original and delightful songs, while Mr. MAUGHAN, Dr. BROWN, and Dr. HUDSON provided musical items.

Prior to the dinner the following officers were elected for the ensuing year:

Chairman, Dr. CRAIG (Dudley). Vice-Chairman, Dr. BROWN (Bedlington). Honorary Secretary, Dr. W. C. LOWRY.

The officers were installed with due ceremony by the outgoing chairman during the course of the dinner.

Dr. Lowry presented to the Division a money-box made in the shape of a camel, and intended to be placed in front of the chairman at each meeting, for him to pass round, those present being invited to put something into the box for medical charities. The honorary secretary will take charge of the box and render an account of the money received, and forward the contributions to the proper quarter.

Dr. HUDSON having raised the question of miners' levy for the doctors, the honorary secretary was instructed to deal with the matter.

#### SOUTH INDIAN BRANCH.

THE report of the South Indian Branch for 1927 records that during the year five meetings were held, with good attendances. There was a diminution of thirteen in the membership of the Branch at the close of the year, due mainly to members leaving the area. At the annual meeting in March, 1927, rules were framed to regulate grants for research under the auspices of the Branch, and at the October meeting Dr. M. Kesava Pavi was appointed representative of the Branch in the Representative Body of the Madras Branch, British Social Hygiene Council. A paper on medical education, read by Lieut.-Colonel E. W. G. BRADFIELD, I.M.S., at the November meeting to a distinguished audience of medical men and others interested in the subject raised considerable interest. The Branch purchased for Rs.2,333 propaganda films from the British Social Hygiene Council, and a grant of Rs.961 was made to Major Newcomb to pay the salary of a research assistant for work on iodine metabolism and kindred subjects. The financial statement showed a credit balance of Rs.3,521 at the end of the year.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH.

A CLINICAL meeting of the South Wales and Monmouthshire Branch was held at the Aberdare Hospital on March 22nd, with the president, Dr. J. MORGAN REES, in the chair. It is some years since the Branch met at Aberdare, and the meeting was a success in every way.

Mr. WILLIAM EVERETT demonstrated cases and specimens of resection for malignant disease of the gastro-intestinal tract.

(1) A specimen from a woman, aged 61, showed a large columnar carcinoma filling the pyloric antrum, with herniation of the growth into the duodenum, but with arrest at the pyloro-duodenal junction. Billroth's No. 2 operation had been performed more than two years previously; the patient was now fit and well and had gained over a stone in weight. (2) A man, aged 46, had undergone an ileo-hepatic resection for columnar carcinoma of the caecum five years previously, the carcinomatous ulcer having a diameter of three and a half inches. There had been no signs of recurrence. It was explained that the prognosis was much more favourable in resection for cancer of the caecum than for a similar growth in any other part of the colon. (3) An interesting specimen was exhibited of a fungating columnar carcinoma of the transverse colon which had become adherent to the descending colon with the formation of an intercolonic fistula. Hepato-pelvic resection had been performed with subsequent relief for eleven months. (4) A woman, aged 60, had been operated on three and a half years previously for carcinoma, abdomino-pelvic resection being performed. There had been no recurrence, and the patient had gained and maintained an increase in weight of over a stone. A feature of this case was the control of the bowel, the patient having an evacuation regularly each morning; the artificial anus was then dressed with absorbent paper and covered with a flat celluloid disc kept in place by an ordinary corset. She led an active public life, and was able to attend to all her duties without inconvenience or discomfort from the colostomy.

Dr. H. BANKS demonstrated (1) a trephine he had devised for use with Albee's motor for opening the medullary cavity in acute osteomyelitis. Dr. Banks thought that the use of chisel and mallet was not free from possible danger in an acute infection of this kind. The trephine perforated the bone with a minimum of effort; a series of trephine openings were rapidly made, the discs of bone being easily levered out. (2) He then showed a case of bilateral pneumothorax in a man working underground who had been run over, both clavicles and several ribs being fractured. He was admitted in a state of extreme collapse, with extensive surgical emphysema of neck and chest extending from the level of the zygoma to below the pectoral muscles, and across the shoulders. Respiration had almost stopped. A trocar and cannula was introduced into the chest, and was followed by an escape of air with an immediate improvement in the respirations. A similar operation was performed on the other side, the lividity disappeared, and further improvement in the breathing was noted. The patient made an excellent recovery and resumed his work. Skiagrams showed that four ribs were fractured at their angle on one side and five ribs on the other. (3) Dr. Banks showed next a case of pernicious anaemia treated with liver. A man, aged 53, had been admitted to hospital in September, 1927, with marked anaemia and enlarged heart; the blood count showed variation in size and shape of the red cells, with occasional polychromatophilia, and 2,100,000 red cells per c.mm. were present. One pound of liver was given each day, half a pound being raw, and half a pound lightly cooked with orange juice. A fortnight later the patient was out of bed and feeling much better; the red cells had increased to 3,900,000 per c.mm. The man had returned to work, appeared well, and was still taking half a pound of liver a day.

Dr. DANIEL EVANS (Swansea) described some cases of anaemia under his care; blood transfusion had been found unsatisfactory. He had found that bullock's liver gave the best results; it should be given raw or very lightly grilled, and orange juice could be added. The acid of the fruit juice might be the beneficial factor, since achlorhydria was often present. Dr. Evans warned against undue optimism in treating these cases, which varied considerably; treatment had to be continued for several months. How the liver acted in pernicious anaemia was not understood, but some element was present which allowed the red corpuscles to mature. There were several liver essences on the market, but the disadvantage was the cost of the preparations. Dr. H. G. COOK (Cardiff) also spoke, and compared the empirical treatment of diabetes with insulin and general paralysis with malaria injections.

Dr. B. THOMAS showed a case of carcinoma of the breast operated upon five and a half years ago. The condition had been discovered when the patient reported with an abscess of the breast following confinement. There had been no recurrence. He also showed a ruptured hydatid cyst in a boy aged 9. A swelling had been noticed under the ribs on the right side, which caused no discomfort, but following a fall the boy was brought to hospital with symptoms of "acute abdomen"; the swelling had disappeared. The abdomen was opened and the cyst evacuated and drained. Recovery had been uninterrupted. Dr. Thomas gave the history of a case of stricture of the urethra to show the difficulties of treatment and complications. The operative treatment was discussed.

Dr. T. R. DAVIES (Llanelli) demonstrated a modification of the binaural stethoscope which he had devised. This consisted of a plug-in end-piece to which various types of chest-piece could be attached.

After the meeting the members were entertained to tea at the hospital, and inspected the new children's pavilion and light department.

compared very favourably with those of the United States of America, Canada, and New Zealand, there was a very serious problem to be faced. He urged those present to take an active part in any investigations which might be made in the near future.

Many took part in the discussion, among them the CHAIRMAN, Dr. D. H. PENNANT, Dr. C. A. BRISTOCKE, Dr. OSCAR WILLIAMS, Dr. T. J. JENKINS, Dr. E. JONES, J.P., Dr. WILLIAMS, Dr. NEILSON, Dr. JEAN MACKINTOSH, and Dr. A. H. D. SMITH. There seemed to be unanimity on the lack of careful ante-natal supervision and on the necessity of providing facilities for dealing with cases which ante-natal examination had shown to need special care. A strong plea was made for midwives with full hospital training, though some of the rural practitioners who worked in areas where no midwives practised said they would be satisfied with the ordinary trained midwife. Dr. MACKINTOSH produced statistics from the Llanelly borough health department, covering the last seven years, and said that in this area the general practitioners had for many years shown great zeal in ante-natal work; the average mortality figures for the last seven years was stated to be 2.6, while the average mortality rate from puerperal sepsis was 0.13. Unnecessary use of the forceps was considered by all to be a cause of increased mortality and morbidity, but opinion was divided as to whether forceps application was now as frequent as in the past. The opinion of all speakers was that the profession as a whole should make an early and earnest effort to deal with this very important subject.

On the motion of the CHAIRMAN, seconded by Dr. BRISTOCKE, a very hearty vote of thanks was accorded to Sir EWEN MACLEAN, who suitably responded. After the discussion members were entertained to tea at the infirmary.

#### SUSSEX BRANCH: HASTINGS DIVISION.

A WELL-ATTENDED meeting of the Hastings Division was held at the Queen's Hotel, Hastings, on March 16th. Dr. A. E. LARKING read a paper entitled "Hospitals, general practitioners, and others."

Dr. Larking dealt first with the relations of medical practitioners to the public and to each other, and later with the hospital question. The profession, he said, had allowed certain encroachments into private practice to be established; school clinics and the so-called hospital benevolent funds were instances. These were both helped by practitioners acting on their own behalf and without any consultation with the general body. They must endeavour in future to have every project dealing with medical matters fully discussed in a general meeting before any individual member supported it. They were being exploited in a most flagrant manner. In twenty years the general practitioner would be a very poor creature, treating only the most trivial complaints; all other cases would go to hospitals. It was quite time they recognized this and did something to prevent it. They must educate the public to realize that a general practitioner was just as competent to treat cases as those at the hospital, unless skilled nursing and major operations were required.

The greatest difficulty was in dealing with the men on town councils and other public authorities, which were often under the thumb of a clique who took no notice of opposition or protest. If the medical men of a large town were to determine to take action in any public matter they could wield a tremendous influence. But it was essential for them all to meet together and discuss matters beforehand; the pity was that there were men in the profession who apparently took no interest in medical matters. There were many members of the British Medical Association who never attended a meeting and did nothing whatever to promote the general interests of the profession. It was a great misfortune for any town if the men on the staffs of the local hospitals did not take an active part in helping to promote professional union. With the health insurance scheme they were all becoming more or less civil servants, and with the extension of the Act providing specialists, consultants, and pathologists, it was most important for all of them to unite.

The work done at the voluntary hospitals was not at all fully appreciated by the general public. Few of them realized that all the work at the hospital was done by the doctors quite free of charge. There was nothing comparable in any other profession or industry to this voluntary work. Many men devoted much more time to hospital work than they could afford, and the time would come, sooner or later, when they would have to be paid. Hospitals were being boomed so much that there was arising a view among the general public that no treatment was of any good except hospital treatment, yet hospitals that were short of funds, instead of economizing and limiting the work, tried to get money to open new departments. The wholesale treatment of anybody at hospitals was a public scandal. Many serious cases were kept on the waiting list for long periods in consequence. All motor accident cases ought to be charged full maintenance fees.

Hospital committees were composed mainly of people who knew very little about hospital management. Many took up the work as a hobby; the general practitioners of the town were not represented on the committee as a whole. The few who were on it were members of the staff and were prejudiced. If the general practitioners were represented as a whole, by selected medical men there would be much more chance of stopping hospital abuse. The so-called hospital benevolent funds were all very well in their place, and if kept to the right people, but there were many who thought that by joining the fund they were entitled to be treated free and could claim admission. They also had no idea that the medical men did not get a penny of their money.

Hospitals and general practitioners should not be antagonistic, but should work together for their common benefit and that of their patients. The present method of electing certain general practitioners to the staff of the local hospital, except in very large towns, was all wrong. It was not fair to select one man and not

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH: SOUTH-WEST WALES DIVISION.

A MEETING of the South-West Wales Division was held on March 29th at the Carmarthenshire Infirmary, Carmarthen, when Sir EWEN J. MACLEAN, President-Elect of the British Medical Association, and professor of midwifery, the Welsh National School of Medicine, opened a discussion on maternal mortality and morbidity.

Sir Ewen Maclean commented on the present unsatisfactory state of affairs, and showed how high the maternal mortality and morbidity still stood in this country. Even though our statistics

another. All general practitioners should be allowed to attend their patients at the hospital if they wished. If all were on the staff it would increase the general efficiency of the profession tremendously. The greatest drawback to general practice was often its deadly dullness; the treatment of trivial ailments pulled. Without special work or hospital work many became apathetic, degenerate, and lost interest in their profession. Hospitals should either be staffed by pure consultants or every practitioner should be allowed to be on the staff if he wished. When there was a specially selected staff, not only should they be the best qualified men, but they should be the men most likely to work amicably with the general practitioners of the locality.

Many patients were kept in hospital far too long, and the long waiting lists were a very serious blot on the present methods: large numbers could be sent to the Poor Law infirmary when convalescent if they had no home suitable for them. There was a growing desire on the part of the public to cover every risk by insurance, and the profession should be able to meet the need. A public medical service adapted to all classes would do much in this respect; it would demand some effort and trouble to start, but would result in great benefit and avoid many bad debts. It would diminish the number of the out-patients at the hospitals considerably.

Dr. Larking said, in conclusion, that in the past the British Medical Association had done an immense amount of useful work for the profession; the sooner it took up the question of hospital abuse the better. It was urgent and brooked no delay. Private practice must be preserved, and the rush for hospital treatment checked. The medical profession demanded good health and a strong constitution. At times the anxiety and responsibility were too much, and when financial troubles were added it became unbearable. If they could do anything to ensure that private practice could give a man a good income and freedom from financial worry, they would have done a good work.

A very keen discussion followed the reading of the paper.

#### WEST SOMERSET BRANCH.

A MEETING of the West Somerset Branch was held at the Taunton and Somerset Hospital on March 27th, when Dr. E. N. Jupp, the president, was in the chair.

It was decided to send a letter to the Somerset County Council asking that authority be given for the payment of a fee of 10s. 6d. to practitioners who supply to coroners written reports in connexion with a death.

There was some discussion of the question of recommending a definite fee to be paid by boards of guardians to their medical officers for the inspection of casuals at workhouses in pursuance of the Ministry of Health Circular 859—small-pox among casuals. It was decided to take no action in view of the facts that the average number of casuals inspected in the various workhouses in the area varied largely in numbers, that the guardians would not be agreeable to payment on a case basis, and that some medical officers had already come to a satisfactory arrangement with their board of guardians. It was left to each individual doctor to make his own arrangements with his board of guardians.

The suggested scheme of the Somerset Insurance Committee of health lectures by practitioners to their patients was considered; it was decided to take no action in the matter for the present.

Dr. L. H. BURKBECK, honorary surgeon to the Taunton and Somerset Hospital, read a very interesting paper on his experience during the last twenty-five years as a surgeon to the hospital. In a discussion that followed many suggestions were made by those present for the improvement of hospital service from the point of view of the neighbouring practitioners.

## National Insurance.

### LONDON INSURANCE COMMITTEE.

#### Chairmanship of Medical Service Subcommittee.

At the meeting of the London Insurance Committee on March 22nd many tributes were paid to the work of the late Mr. Henry Mills, J.P., who at the time of his sudden death was vice-chairman of the committee (of which he had been a member for fifteen years) and chairman of the Medical Service Subcommittee. Mr. W. EDWARDS, chairman of the committee, proposed that in appointing a successor to Mr. Mills as chairman of the Medical Service Subcommittee a departure from precedent should be made by selecting someone who was not a member of the committee. He submitted the name of Mr. R. W. HARRIS, secretary of the London School of Hygiene and Tropical Medicine, and formerly on the staff of the Ministry of Health, where he gained a close acquaintance with the administration of national health insurance. The nomination was supported by Sir THOMAS NEILL, and, on behalf of the medical members, by Dr. H. J. CARDALE, and was agreed to unanimously. The regulations provide that an outside chairman may be appointed, provided he is not an insured person, an officer (other than a trustee) of an approved society, a practitioner, or a registered pharmacist, and he may attend the meetings of the full committee and speak, but may not vote.

#### Drugs and Appliances.

A return was submitted to the committee comparing the total number and cost of prescriptions dispensed by chemists for insured persons in the county of London during the five years 1923-27. This showed that the number of prescriptions had risen steadily from 6,132,356 in the first of these years to 8,743,249 in the last, that the total cost had risen from £205,619 to £297,605, that the average cost per prescription had gone up slightly from 8.05 pence to 8.17 pence, and that the average

cost per person had gone up more markedly from 30.93 pence to 40.16 pence. In the fifteen years since the commencement of national insurance administration the prescriptions issued and dispensed for insured persons in the committee's area have numbered 86,611,690, and the total cost has been £2,803,050. Dr. CARDALE pointed out that the increase in the number of insured persons from 1923 onwards had an important bearing on the totals given. It was also reported that during 1927 the chemists on the committee's list dispensed 10,533 prescriptions for insulin at a cost of £5,824, and 2,219 prescriptions for serums and vaccines at a cost of £555.

### LONDON PANEL COMMITTEE.

A MEETING of the London Panel Committee was held on March 20th, Dr. H. J. CARDALE presiding. A sympathetic tribute was paid to the work of the late Mr. Henry Mills, chairman of the Medical Service Subcommittee, who, Dr. Cardale said, had occupied that position, which he took on at a time of great difficulty, in such a way as to gain the entire confidence of the members, whether representatives of approved societies or of practitioners.

#### Lectures to Medical Students.

A suggestion was considered that the Panel Committee should undertake a series of lectures to students at medical schools upon national health insurance practice and contract practice generally. It was felt, however, that the committee must confine itself to insurance practice only, and it was agreed to convey to the deans of the London medical schools the opinion that a lecture dealing with the problems of insurance practice could usefully be delivered annually to senior students.

#### Payment for Emergency Treatment.

A subcommittee recommended that a fee for a second attendance for emergency treatment should be disallowed. Dr. PALMER said that he had a good deal of sympathy with the practitioner concerned because he had taken much trouble in connexion with the case, which was one of acute abdominal pain. He thought it unwise to discourage a practitioner from seeing a patient a second time in such circumstances. Dr. PARTIDGE, however, hoped the committee would not be led away into any misinterpretation of the word "emergency." The first attendance was properly an emergency, but the practitioner arranged to re-examine the patient, and by no stretch of imagination could the second attendance be regarded as an emergency. Dr. STREASING said that the subcommittee had taken the view that the case was one of emergency throughout, but under the regulations not more than one fee could be paid. This was one of those cases in which a practitioner did a great deal for a small reward.

The recommendation disallowing the second fee was carried.

#### Refusal of Urgent Cases at Hospitals.

One of the subcommittees has had its attention drawn to the action of hospitals in refusing to admit serious cases requiring immediate attention. The chairman of the subcommittee reported that he had obtained evidence of some fifty cases in which patients were refused admittance. The subcommittee was of opinion that this action on the part of the hospitals was one which was likely to bring them into disrepute, and therefore had directed the secretary to draw the attention of the hospitals concerned to the cases submitted by the chairman, and to request information as to why they were not admitted. The committee approved this action taken by the subcommittee.

#### Certificates and Pay-days.

A letter from a medical practitioner was read submitting a communication from the clerk of the Insurance Committee with regard to the issue of certificates on a particular day of the week. The practitioner had originally advised one of his patients, who had received a letter from his society pointing out that the dates had received the certificates did not correspond with its pay-days, to send the letter to the Insurance Committee in order that the attention of the approved society concerned might be drawn to the fact that this action was a contravention of the regulations. A reply from the clerk of the Insurance Committee was received informing him that while it was not necessary that certificates should be given on any particular day to the usual pay-days of approved societies, it was agreed to draw the attention of the Insurance Committee to this action of the clerk, which was thought to be contrary to a correct interpretation of the regulations regarding certification.

### BIRMINGHAM PANEL COMMITTEE.

A MEETING of the Birmingham Panel Committee was held on Tuesday, March 20th, when Dr. H. G. DAIN presided over a good attendance.

It was decided that the form detailing arrangements approved by the Board of Inland Revenue, under which payments made by members of trade protection and similar associations to those associations may be allowed as trade expenses in computing members' profits for assessment to income tax, be signed. It was agreed that further representatives of the profession should be elected to the Birmingham Hospitals Council. An alteration in the election of the standard dressings in the drug tariff was suggested, emergency and anaesthetic fees were passed, and a figures for January, 1928, and January, 1927, were compared, a slight reduction in cost being reported. A discussion on the issue also on the number of patients referred to the regional medical officer who are certified by him as fit for work, took place, and the secretary was instructed to take certain steps in these matters. It was decided to ask the Insurance Committee to supply annually, to each practitioner, the figures showing individual averages of cost of prescribing, together with the averages for the area.

## Correspondence.

## Ophthalmic Benefit.

SIR,—I have just received a long printed letter from the British Medical Association on the subject of ophthalmic benefit for persons insured under the National Insurance Acts. In this letter the Association states that the present scheme for ophthalmic benefit has been a partial failure owing to its non-support by the leading approved societies.

The original scheme was that insured persons desiring to have their eyes examined should apply to their panel doctor for a certificate, this certificate stating whether the doctor thought the services of an ophthalmic surgeon or optician were necessary. The approved society then made an appointment with the surgeon or optician as the case might be. A special panel called the Ophthalmic Panel was formed, including practically all the ophthalmic surgeons in Great Britain—about eight hundred in number. These agreed to see panel patients in their private consulting rooms for a fee of one guinea. As might have been expected, large numbers of persons desired to see an ophthalmic surgeon, there being about fourteen million insured persons in the country. The funds of the approved societies available for ophthalmic benefit were speedily exhausted. The larger societies began sending all their cases to opticians in the first instance, only referring to ophthalmic surgeons those cases to which the opticians could not manage to give satisfaction. The approved societies report that the scheme has worked well, and there have been few complaints.

In the past, when the ordinary man was troubled with some defect of vision he went either to an optician or to a hospital. A small percentage of the community visited an ophthalmic surgeon first. We must remember that Great Britain contains forty-five million inhabitants. The insured class numbers about one-third of this total. The remaining two-thirds still act as they did in the past, visiting opticians and hospitals. At an outside figure there may be about one thousand doctors practising ophthalmic surgery, and perhaps half this number may be in the staffs of various hospitals. Presumably there are no more, as the country does not supply a livelihood to a greater number. It is usually computed that a town of 50,000 inhabitants can support one ophthalmic surgeon only.

We are all agreed that it is the ideal that every man having eye trouble should be examined by an ophthalmic surgeon in the first instance; but this is a counsel of perfection. It is as reasonable as the demand that every woman in her confinement should be attended by a gynaecologist. The ideal may be attained in the future, but not in our day.

I believe that there are about 14,000 dentists in England, and these suffice for the dental needs of the country, both insured and uninsured. Perhaps a man may not have to see someone about his eyes as often as about his teeth, but a comparison of the number of ophthalmic surgeons as compared with dentists shows that the number of ophthalmic surgeons would have to be multiplied many times before they could give an ideal service to the community; and who is going to pay for their remuneration?

Now, what is the British Medical Association's remedy for this State of affairs? It proposes, first, that ophthalmic surgeons shall reduce their fees for seeing insured persons to half a guinea. I do not think that this will be agreed to. It must be remembered that specialists are being employed. It is the first time that this has been done for insured patients. The specialist can usually command a fee of two or three guineas. The beginner at a specialty may possibly accept less at first. The question is, Is he worth it?

The Association's other proposal is that a committee shall be formed consisting of representatives of the approved societies, of ophthalmic surgeons, and of the Association of Dispensing Opticians (it is to be noted that the vast majority of ordinary or prescribing opticians are thus left out), and shall found a series of clinics throughout the country at which groups of patients shall be collected for examination. The disadvantages of these clinics are, to me, obvious. They will be nothing more than superior hospital out-patient departments, with all their disabilities, such as prolonged waiting before being seen, hurry and lack of individual attention, and without the right of admission to wards that obtains in an ordinary hospital for cases needing it. In fact, if a person requires in-patient treatment a visit to a clinic will be simply a waste of time, as the investigation will have to be carried out again at the hospital. It must be remembered that these proposed clinics may have to deal with a much more difficult type of case than an ordinary school clinic, which only deals with refractions in the young. These school clinics can be dealt with quite satisfactorily by junior men with a knowledge of refraction work, but without much general ophthalmic knowledge.

I say, let the present system remain. Insured patients much appreciate the right to a private consultation at an ophthalmic

surgeon's rooms by appointment without the delays of hospital; they feel that a personal interest is being taken in their case. But I do say that, if an approved society refers a case to an optician, before any spectacles are ordered a certificate should be sent to the society stating the strength of the lenses to be supplied, and that normal vision was obtained in each eye with these lenses, and that no obvious ocular disease was present. It would be worth while for the larger societies to employ medical assessors to review opticians' prescriptions with a view of referring doubtful cases to ophthalmic surgeons. It should be remembered that many of the societies pay a small sight-testing fee to the opticians.

Lastly, let us as a profession cease our opposition to the registration of opticians. Chemists are registered, and we do not object to it in spite of the fact that we know that a large amount of prescribing and doctoring goes on across their counters. We never hear of architects or engineers objecting to the registration of plumbers. If opticians are registered their knowledge will tend to improve, as some of them are very ignorant now. Proper safeguards can be introduced in the Act of Parliament limiting them to sight-testing and the manufacture of spectacles, prohibiting them from dealing with eye diseases or the use of mydriatic drugs, with penalties for infringement. Prohibiting them from prescribing for elementary school children would not be unreasonable. I have recently come across a case of an optician who had been prescribing glasses for a small child with squint for many months.—I am, etc.,

London, W.1, March 25th.

ADRIAN CADDY.

## Exploitation.

SIR,—The letter under the heading "The workman's value" in the *Supplement* of March 31st (p. 110) reveals the shocking extent to which the medical profession is being exploited by certain Government departments. Almost on a par with the experience recorded by Dr. Jefferiss may be mentioned that of any practitioner who is called upon by the head teacher of the local elementary school to examine one of his or her pupils. He must find out what the child is suffering from and certify as to the probable period of enforced absence from school, for which service he is offered the handsome fee of 1s. by the county education committee.

Is it quite out of the question to approach the departments concerned, so that what is obviously a gross undervaluation of our services, and the slight to the profession resulting therefrom, may be swept away? We pride ourselves on doing a great deal of gratuitous work; but are we, on that account, to let officialdom use our disinterestedness as a bait for any indignity it may wish to offer us?—I am, etc.,

Greenhithe, Kent, March 31st.

D. W. STANDLEY.

## Naval and Military Appointments.

## ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander E. L. Markham, O.B.E., to the *President* for course at H.M. Experimental Station, Pocton.

## ROYAL ARMY MEDICAL CORPS.

Captain J. A. Crawford to be Major.  
Lieutenant J. M. Johnston resigns his commission.

## ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leaders H. L. Burton to Central Medical Establishment; C. P. Barbe to R.A.F. Base, Gosport; R. W. Ryan to No. 3. Flying Training School, Grantham; F. E. Johnson to School of Army Co-operation, Old Sarum.

Flight Lieutenants R. L. C. Fisher to R.A.F. Hospital, Cranwell; W. D. McKewen to No. 45 Squadron, Middle East; J. P. Hederman to R.A.F. Depot, Uxbridge.

Flight Lieutenant G. E. Church is granted a permanent commission in this rank.

Flying Officers R. J. I. Bell to No. 111 Squadron, Sutton's Farm; R. G. Freeman to R.A.F. Officers' Hospital, Uxbridge; J. O. Priestley to Princess Mary's R.A.F. Hospital, Halton; F. E. Lipscomb to R.A.F. Station, Kenley; J. Hinchieson to R.A.F. Training Depot, Leuchars; J. Kemp to Princess Mary's R.A.F. Hospital, Halton; B. B. Kennedy to R.A.F. Depot, Uxbridge; J. J. MacAndrews to Aeroplane and Armament Experimental Establishment, Martlesham Heath; R. F. MacLachy to the Marine Aircraft Experimental Establishment, Felixstowe; J. B. Murphy to No. 1 Flying Training School, Netheravon; J. C. Kelly to R.A.F. Station, Upper Heyford; F. A. O'Connor and Leo O'Connor to R.A.F. Station, Uxbridge.

## INDIAN MEDICAL SERVICE.

Lieut.-Colonel F. E. Wilson appointed Residency Surgeon and Chief Medical Officer in Baluchistan, and to officiate as Civil Surgeon, Quetta, in addition to his own duties, with effect from January 1st, 1928.

Lieut.-Colonel C. A. Sprawson, C.I.E., has been appointed Honorary Surgeon to the Viceroy and Governor-General, vice Lieut.-Colonel F. F. Elwes, C.I.E., retired.

Lieutenant S. P. Joshi to be Captain.

The promotion to his present rank of Major S. R. Prall is antedated to February 12th, 1927.

## VACANCIES.

**ASTFORD HOSPITAL, Kent.**—House-Surgeon. Salary £160 per annum.

**BRISTOL ROYAL INFIRMARY.**—Two House-Surgeons (unmarried). Salary £150 per annum.

**CAMBRIDGE:** ADDENBROOKE'S HOSPITAL.—Resident Anaesthetist (male). Salary at the rate of £180 per annum.

**CARLISLE NON-PROVIDENT DISPENSARY.**—Resident Medical Officer. Salary £250 per annum.

**CARNARVONSHIRE AND ANGLESEY INFIRMARY, Bangor.**—House-Surgeon (male). Salary £200 per annum.

**COUNTY MENTAL HOSPITAL, Whittingham, Preston.**—Sixth Assistant Medical Officer (unmarried). Salary £350 per annum, rising to £450.

**DARLINGTON COUNTY BOROUGH.**—Health Visitor. Salary £172 16s.

**DERBYSHIRE ROYAL INFIRMARY.**—(1) House-Surgeon. (2) Assistant House-Surgeon and Casualty Officer. Males. Salary at the rate of £150 per annum each.

**GLASGOW EYE INFIRMARY.**—Clinical Assistant. Honorarium at the rate of £30 per annum.

**GRAVESEND AND NORTH KENT HOSPITAL.**—(1) Resident Medical Officer. (2) House-Surgeon. Salary at the rate of £250 and £150 per annum respectively.

**CULDFORD: ROYAL SURREY COUNTY HOSPITAL.**—House-Surgeon. Salary £150 per annum.

**HALIFAX: ROYAL HALIFAX INFIRMARY.**—Third House-Surgeon (male). Salary £100 per annum.

**HAMPSHIRE GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.**—(1) House-Physician. (2) Two House-Surgeons. (3) Casualty Medical Officer. Salary at the rate of £100 per annum respectively.

**HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST, Brompton, S.W.3.**—House-Physicians. Honorarium £50 for six months.

**Huddersfield Infirmary.**—Honorary Anaesthetist.

**JOHANNESBURG: UNIVERSITY OF WITWATERSRAND.**—Senior Lecturer in Physiology. Salary £516 per annum, rising to £726.

**LABORATORIES OF PATHOLOGY AND PUBLIC HEALTH, 6, Harley Street, W.1.**—Assistant Pathologist (male). Salary £500 per annum, rising to £650.

**LIVERPOOL EYE AND EAR INFIRMARY.**—Third Honorary Anaesthetist.

**LONDON HOSPITAL, E.1.**—First Assistant and Registrar to one of the five Surgical Firms. Salary £300 per annum.

**LONDON JEWISH HOSPITAL, Stepney Green, E.1.**—Assistant Surgeon.

**LUTON UNIVERSITY.**—Professor of Anatomy. Salary Rs.1,450 per mensem.

**METROPOLITAN HOSPITAL, Kingsland Road, E.8.**—(1) Senior and Junior House-Physicians. (2) Senior and Junior House-Surgeons. (3) Two Casualty Officers. (Males.) Salary £100 per annum each.

**MINISTRY OF HEALTH.**—Deputy Regional Medical Officers. Remuneration £600 per annum, rising to £1,100.

**NORFOLK AND NORWICH HOSPITAL, Norwich.**—Casualty Officer and House-Surgeon (male). Salary £120.

**ROCHDALE UNION.**—Assistant Resident Medical Officer at the Birch Hill Hospital and Institution. Salary £250 per annum.

**St. Mary's Hospital for Women and Children, Plaistow, E.15.**—Assistant Resident Medical Officer. Salary at the rate of £130 per annum.

**St. Vincent's ORTHOPAEDIC HOSPITAL, Eastcote.**—Resident Medical Officer (male). Salary at the rate of £150 per annum.

**SEYMEN'S HOSPITAL SOCIETY: DREIDNIGHT HOSPITAL, Greenwich.**—(1) Anaesthetist. Honorarium 50 guineas per annum. (2) Surgeon with charge of out-patients.

**SHEFFIELD ROYAL INFIRMARY.**—Honorary Radiologist.

**STRONACH PARISH.**—Medical Officer and Parochial Vaccinator. Salary £130.

**TORBAY HOSPITAL, Torquay.**—Resident Medical Officer. Salary £200 per annum.

**WAKEFIELD: COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE.**—Third Assistant Medical Officer (resident) at the Middleton-in-Wharfedale Sanatorium. Salary £250 per annum.

**WALSLEY COUNTY BOROUGH.**—Clinical Tuberculosis Officer, Assistant Medical Officer of Health, and Assistant School Medical Officer (male). Salary £750 per annum.

**WALSLEY GENERAL HOSPITAL.**—House-Surgeon. Salary £125 per annum.

**MEDICAL REFEREE OR REFEREES UNDER THE WORKMEN'S COMPENSATION ACT** (1) for the districts of the Northampton and Towcester, Newport Pagnell, and Leighton Buzzard County Courts (Circuit No. 23); (2) Ophthalmic Specialist for all County Courts in Circuits 1 and 2 (Northumberland and Durham). Applications to the Private Secretary, Home Office, Whitehall, S.W.1, by April 7th and 11th respectively.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

## APPOINTMENTS.

**MACKIE, E. G., M.B., B.Ch., F.R.F.P.S.,** Specialist Medical Referee for ophthalmic cases in the following county courts:—Circuit No. 16: Beverley, Bridlington, Goole, Great Driffield, New Malton, Scarborough, Whitby, Thorne; Circuit No. 17: Barton-on-Humber, Brigg and Scunthorpe, Great Grimsby, Louth, Boston, Holbeach, Skefford, Spalding, Spilsby, Calnsborough, Grantham, Lincoln and Horncastle, Market Rasen and Caistor.

**KING'S COLLEGE HOSPITAL AND MEDICAL SCHOOL.**—Junior Physician: James L. Livingston, M.D., M.R.C.P. Junior Physician for Diseases of Children: Wilfred P. H. Sheldon, M.D., M.R.C.P. Junior Surgeon: John B. Hunter, M.C., M.Chir., F.R.C.S. Harold C. Edwards, M.B., B.S., F.R.C.S. Junior Anaesthetist: A. L. Moorby, M.R.C.S., L.R.C.P. Senior Medical Registrar: Charles E. Newman, M.D., M.R.C.P. Sombrooke Medical Registrar: Ronald Cove-Smith, M.B., B.Chir., M.R.C.P. Registrar to the Ear, Nose, and Throat Departments: W. I. Daggett, M.B., B.Chir., F.R.C.S. Second Casualty Officer: J. L. Newman, M.R.C.S., L.R.C.P. House-Physician: A. P. Casswell, M.R.C.S., L.R.C.P. Resident Assistant-Physician to Dermatological Department: L.R.C.P. Radiologist: Miss G. Batten, B.M. (Firm A) Miss E. Whidborne, M.R.C.S., L.R.C.P. (Firm B) J. I. Sapwell, M.R.C.S., L.R.C.P. (Firm D) J. C. R. Chilcott, B.M., B.Ch. (Firm E) J. V. B. H. W. M.R.C.S., L.R.C.P. (Firm F) MacMyn, M.R.C.S., L.R.C.P. (Firm G) Sheppard, M.R.C.S., L.R.C.P. (Firm H) W. H. Scriven, M.R.

ment: (Senior) Mrs. I. R. Humphreys-Owen, M.R.C.S., L.R.C.P.; (Junior) G. J. Gross, M.R.C.S., L.R.C.P. Aural and Throat Departments: C. S. Erraby, M.R.C.S., L.R.C.P. House-Surgeon, Ophthalmic Department: Miss E. G. Lammex, M.R.C.S., L.R.C.P. Junior House-Anaesthetist: T. de L. Walker, J.S.A. Junior House-Surgeon to Aural and Throat Departments: K. S. May, M.R.C.S., L.R.C.P. Assistant Casualty Officers: Miss C. P. Giles, M.R.C.S., L.R.C.P. Miss O. H. Lister, B.M., B.Ch., Miss M. P. Shackle, M.R.C.S., L.R.C.P.

**CERTIFYING FACTORY SURGEONS.**—L. G. Llewellyn, M.R.C.S., L.R.C.P. for the Clynderwen District, co. Pembroke; S. Stewart, M.B., B.Ch., B.A.O.Bell, D.P.H., for the Montgomery District, co. Montgomery.

## DIARY OF SOCIETIES AND LECTURES.

**ROYAL SOCIETY OF MEDICINE.**  
War Section.—Fri., 4 p.m., Annual General Meeting: Election of Officers and Council for 1928-29.  
Sections of War and Otolaryngology.—Fri., 4.30 p.m., Special Discussion: Effects of Middle-Ear Disease on Efficiency in Civil and Military Life. Openers: Wing Commander D. Ranken, R.A.F., Mr. Sydney Scott, Lieut.-Colonel T. B. Layton, Mr. T. Ritchie Rodger, Major Hare, R.A.M.C., and Surgeon Commander Maxwell, R.N.

## POST-GRADUATE COURSES AND LECTURES.

**WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.**—Mon., 10 a.m. to 12 p.m., Surgical Patients' Wards; 2 p.m., Veneral Diseases; 10 a.m. to 1 p.m., Medical Wards, Pathological Demonstration; 2 p.m., Surgical Wards, Eye Department. Thurs., 10 a.m. to 1 p.m., Neurological Department, Massage Department; 2 p.m., Eye Department, Genito-urinary Department. Fri., 10 a.m. to 1 p.m., Skin Department, Medical Wards, Dental Department, Electrical Department, Clinical Demonstration; 2 p.m., Throat, Nose, and Ear Department. Sat., 9 a.m. to 1 p.m., Throat, Nose, and Ear Department. (Thurs. and Sat. at 2 p.m., Medical and Surgical.)

**GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.**—At Hawkhead Mental Hospital: Wed., 4.15 p.m., Mental Cases.

## British Medical Association.

OFFICES, BRITISH MEDICAL ASSOCIATION HOUSE,  
TAVISTOCK SQUARE, W.C.1.

## Departments.

**SUBSCRIPTION MANAGER.** Secretary and Business Manager. (London).  
**MEDICAL SECRETARY.** (London).  
**EDITOR.** (London).  
Telephone numbers of British Medical Association and British Medical Journal, Museum 9851, 9852, 9853, and 9854 (internal exchange, four lines).  
**SCOTTISH MEDICAL SECRETARY:** 6, Drumsheugh Gardens, Edinburgh. (Telegrams: Associate, Edinburgh. Tel.: 24351 Edinburgh.)  
**IRISH MEDICAL SECRETARY:** 16, South Frederick Street, Dublin. (Telegrams: Bacillus, Dublin. Tel.: 4737 Dublin.)

## Diary of the Association.

- APRIL**
- 10 Tues. St. Pancras Division: B.M.A. House, Tavistock Square, W.C.1. Dr. Donald Paterson on the Prevention of Summer Diarrhoea, 9 p.m.
- 11 Wed. London: Council, 10 a.m.  
Croydon Division: Annual Dinner, Greyhound Hotel, 8 p.m.  
Lanarkshire Division: St. Enoch Station Hotel. Dr. John Mortimer on Common Eye Affections, 3.30 p.m.  
Norfolk Branch: Norfolk and Norwich Hospital. Dr. Ian D. Dickson on Neurasthenia in General Practice, 3.30 p.m.
- 12 Thurs. Holland Division: White Hart Hotel, Boston. Dr. J. Wilkie Scott on Some Aspects of Vomiting, 3 p.m.  
Northern Counties of Scotland Branch: Clinical Meeting, District Asylum, Inverness.  
Portsmouth Division: Queen's Hotel, Southsea. Dr. J. Stanley White on Biological Therapy, 9.30 p.m. Supper, 9 p.m.
- 13 Fri. Cambridge and Huntingdon Branch: Addenbrooke's Hospital, 2.30 p.m.  
City Division: Clinical Meeting, Metropolitan Hospital, 4.30 p.m.
- 17 Tues. Lewisham Division: Town Hall, Catford, S.E.6. Dr. W. V. Goldsmith on Pigmentation of the Skin, 8.45 p.m.
- 18 Wed. London: Grants Subcommittee, 2.30 p.m.  
Ashford Division: Dr. J. W. McNece on Hepatic and Biliary Diseases, 4 p.m.  
Willesden Division: Willesden General Hospital, Harlesden Road. Dr. J. Bright Bannister on Ante-Natal Work.
- 19 Thurs. London: Insurance Acts Committee, 2.30 p.m.

## BIRTHS, MARRIAGES, AND DEATHS.

*The charge for inserting announcement of Births, Marriages, and Deaths is 9s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.*

## MARRIAGE.

**McCALLUM-LACAILLE.**—At St. Columba's Church of Scotland, Pont Street, S.W., on March 31st, 1928, by the Rev. Dr. Fleming, assisted by the Rev. G. Leithead, Alexander Grigor McCallum, M.B., Ch.B., of Woodbourne, Streatham, S.W.16, to Marion Bowie Lacaille of Uillhead, Glasgow.

## DEATHS.

**Dow.**—On March 26th, at his home, The Corner, Cowley Hill, St. Helens, S.W., John Hardman Dow, M.R.C.S., L.R.C.P., aged 59 years.

**FORREST.**—On March 28th, at his residence, Holly Bank, 46, Alexandra Road, Southport, William Forrest, physician, the beloved husband of Helen Forrest, in his 77th year. Interred at Southport Cemetery on Saturday last.

### Meetings of Branches and Divisions.

#### DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.

MEETING OF THE BOURNEMOUTH DIVISION was held on March 29th at St. Peter's Hall, Bournemouth.

Dr. ASTEN, who was in the chair, expressed the sorrow of the Division at the loss by death since the last meeting of four members—Drs. Davidson, Marriner, Prentice, and Saberton—all of whom had taken an active part in the work of the Division.

Dr. G. C. ANDERSON, Deputy Medical Secretary, gave a very interesting and lucid account of the activities of the Association. He grouped his remarks under the headings of (1) maintenance of professional standards of pre- and post-graduate education; (2) promotion of scientific research; (3) influence of the Association on the development of the national health policy; (4) advocacy of reforms in Lunacy and Mental Deficiency Acts; (5) public education in health matters; (6) hospital policy of the Association; (7) medical charities.

After the address several members took part in a discussion. In proposing a vote of thanks to Dr. Anderson for coming to the Division, Dr. WEATHERLY said that he had been a member of the British Medical Association for more than fifty years, and never before had he heard such a very clear and interesting account of the work of the Association. Mr. VERNON, seconding the vote, said that he had listened to all Dr. Anderson had said with very great interest; he regretted that there had not been a much larger attendance of members.

#### KENYA BRANCH.

THE annual meeting of the Kenya Branch was held at the Native Hospital, Nairobi, on January 20th, and the annual dinner at the Nairobi Club on January 21st. This is the third occasion of an annual celebration by the Branch; it may be taken as certain that so successful a function will not be allowed to lapse in future years.

At the business meeting the following were elected as officers for 1928:

*President*, Dr. A. J. Jex-Blake. *President-Elect*, Dr. G. V. W. Anderson. *Vice-President*, Dr. J. H. Sequeira. *Honorary Secretary*, Dr. F. J. C. Olmstone. *Honorary Treasurer and Assistant Secretary*, Dr. J. A. Arman.

After an interval for tea the meeting reassembled for the reading of two papers—one by Dr. J. H. SEQUEIRA on some diseases caused by filterable viruses, the other by Dr. J. L. GILKS giving a medical view of Kenya during 1927.

At the annual dinner there were present thirty-seven members, together with the guests of the Association, including the Governor, Sir Edward Grigg; the Chief Justice, Sir Jacob Barth; the Colonial Secretary, Sir Edward Denham; the Chief Native Commissioner, the Hon. G. V. Maxwell; the Mayor of Nairobi, Mr. A. A. Wood; the president of the Associated Chambers of Commerce, Mr. A. C. Tannahill; the president of the Law Society of Kenya, Mr. E. K. Figgis; and the president of the Veterinary Association, Major H. H. Brassey-Edwards. In the absence of the president of the Branch the chair was taken by the vice-president, Dr. J. H. SEQUEIRA. After the toast of "The King," the Vice-President proposed "The British Medical Association," recounting the activities of the Association throughout the world, and in Kenya in particular. This was followed by "The Health of Kenya," proposed by the Director of Medical and Sanitary Services, Dr. J. L. GILKS. In the course of his speech Dr. Gilks reviewed the medical history of the past year, mainly on the lines of his paper read to the Association the previous day. Dealing with the economic value to the colony of the work done by the medical department in the native reserves, he quoted the following passage from a letter written by the representative of a large estate in Kenya: "I should like to tell you how much the future of the estate will depend on the continuance of the work now being done in the reserve. This is having the effect of helping to get

labour locally—and healthy labour at that." In conclusion, he referred to the scheme now under consideration for regulating subsidies to medical missions and to the valuable work of the Lady Grigg Welfare League. The toast was replied to by the Governor, who expressed his appreciation of the work done by the medical profession in Kenya, and his cordial interest in their activities. The health of the guests was proposed by Dr. C. J. Wilson, and replied to by Mr. E. K. Figgis.

The annual golf competition for the Gilks Challenge Cup was held on January 21st at the Nairobi Golf Club, which had extended hospitality to the Association. Considering the state of the course, the winner, Dr. M. Mackinnon, put up a very fine performance in finishing square with bogey. The runner-up was Dr. J. B. Clarke.

#### NORTH OF ENGLAND BRANCH: CONSETT DIVISION.

THE members of the Consett Division held their second combined ordinary and social meeting of the winter session in the Imperial Hotel, Stanley, on March 28th. After the items on the agenda had been dealt with, there was an animated discussion on matters of local interest relating to colliery practice.

After the meeting the members entertained Mr. Norman Hodgson, honorary assistant surgeon, Newcastle Royal Victoria Infirmary, to a complimentary supper, the president, Dr. W. M. Monson of Catechgate, taking the chair.

Mr. Hodgson subsequently addressed the meeting on injuries and infections of the hand, describing first the essential features of its anatomy, with a brief reference to the recent investigations of the late Dr. Fifield and others. He discussed the treatment of wounds and infections of the hand in general, animadverting on indiscriminate poulticing and the prolonged application of boric fomentations, for which, he said, spirit or dry dressings should be substituted as early as possible. Various injuries and infections were then considered, and the most effectual incisions for dealing with them were described and illustrated by photographs and diagrams. A vote of thanks to the lecturer for a most excellent and practical address brought to a close a very enjoyable evening.

#### NORTH OF ENGLAND BRANCH: HARTLEPOOLS DIVISION.

At a meeting of the Hartlepool Division on February 22nd Dr. W. WARNER COOK being in the chair, Mr. NORMAN HODGSON (Newcastle) gave an address on infections of the hand.

Mr. Hodgson reviewed the recent anatomical work of Knarvel and Fifield, and indicated its bearing on the spread of infection in the hand. He referred to the part played by the fibrous bands which, running from the skin to the periosteum, formed compartments in the terminal phalanx, and showed how, by a crescentic incision, free drainage could be obtained, and necrosis of the terminal phalanx be prevented in most cases. The value of a general anaesthetic in facilitating adequate incisions and the proper inspection of the affected area was emphasized. The after-treatment and the importance of fixation in order to anticipate any resulting stiffness in the fingers were discussed. The address was illustrated by recent dissections, diagrams, and pathological specimens.

#### NORTH OF ENGLAND BRANCH: TYNESIDE DIVISION.

THE annual meeting of the Tyneside Division was held on March 23rd at the Tynemouth Victoria Jubilee Infirmary, with Dr. H. ADAMS in the chair, and Dr. Harvey Evers as the guest of the evening.

The following officers were elected:

*Chairman*, Dr. H. Adams. *Vice-Chairman*, Dr. E. Goffon. *Honorary Secretary*, Dr. N. R. Rawson. *Representative in the Representative Body*, Dr. Williamson.

Dr. STONIER reported that the Golf Committee had fixed the meeting to decide the representative in the Treasurer's Cup competition for May 13th at Hexham. It was decided to hold, as in the previous year, a dance in October, a dinner in January, and two clinical evenings; meetings would be on Tuesdays and Fridays alternately.

It was resolved to raise a voluntary levy of 5s. per member toward the out-of-pocket expenses of the representative in the Representative Body, and other incidentals.

After refreshments, provided by the matron, Dr. HARVEY EVERS gave a carefully reasoned and very instructive address on the indications for curettage of the uterine cavity. An interesting discussion followed, and the evening closed with a hearty vote of thanks to Dr. Evers.

#### STAFFORDSHIRE BRANCH.

A MEETING of the Staffordshire Branch was held under the chairmanship of Dr. J. A. M. CLARK, the president of the Branch, at the General Hospital, Walsall, on March 29th; forty-five members were present.

Dr. S. C. DYKE read a paper on the liver treatment of pernicious anaemia, and exhibited a large number of charts. He expressed the view that pernicious anaemia was a disease in which the bone marrow gave rise to red corpuscles, which, on account of their immaturity and concomitant faulty formation, were immediately destroyed by the organs of the reticulo-endothelial system, notably the spleen, the function of this system being to destroy red blood corpuscles after they had become effete. In pernicious anaemia, however, the red blood corpuscles produced by the bone marrow were so immature that they were readily destroyed by the reticulo-endothelial system; their sojourn in the circulation was so short that a marked and rapidly increasing anaemia was produced. Dr. Dyke stated that the success which he had had from the use of liver was very great, and that in some cases the results obtained were actually dramatic. The observations which he had made included red blood counts, estimation of the haemoglobin and bilirubin percentages, and calculation of the proportion of reticulocytes. He had come to the conclusion that liver therapy was only effective for pernicious anaemia. He believed that liver substance had a specific effect upon the cells of the red marrow, enabling them to produce mature and properly formed red blood cells instead of the immature forms characteristic of pernicious anaemia. The reticulo-endothelial system was not able to destroy these mature cells until they had become effete; they thus had time to function, the patient had a normal supply of red blood corpuscles, and his anaemia was relieved. Dr. Dyke exhibited various proprietary preparations of liver; he stated that equally good results were obtained with fresh liver and with any of the proprietary preparations he had tried.

Dr. JOLLY opened a discussion on the small-pox of to-day, and recounted the clinical features of a number of cases of mild small-pox he had seen, emphasizing the fact that for all practical purposes, except severity, the so-called mild small-pox of to-day was the same as the disease generally known as variola. He raised the question whether the same precautions were necessary in the prevention of the disease in its present type as were considered requisite for combating the old-fashioned and more lethal variola, alluding to the disturbance of business and general life which resulted from anything in the nature of a small-pox scare. The subsequent discussion centred round the efficacy of vaccination in preventing both types of the disease, the supervision of small-pox contacts, and the spread of the disease by vagrants.

Mr. FREDERICK EDGE, in a paper on some points in gynaecological surgery, reported many unusual cases which had occurred in his practice. He showed how a thorough routine examination prevented a second condition from being missed, when a more superficial examination suggested that only one abnormality was present. He instanced, in this connexion, a most interesting case of incomplete abortion combined with a ruptured tubal gestation. Mr. Edge described the geography of the "blind spot" of the pelvis, and indicated how the existence of this led to difficulty in diagnosis. He emphasized the necessity for care in making up normal saline solutions for rectal infusion, recounting his experience with some solutions which were hypertonic. He deprecated the use of milk as a food immediately after abdominal operations, but expressed his belief in the good results which were obtained by allowing the patient, as soon as she had recovered from the anaesthetic, to have water, glucose solution, and the cup of tea which had such a beneficial effect upon the feminine mind.

#### SURREY BRANCH: GUILDFORD DIVISION.

An ordinary meeting of the Guildford Division was held at the Royal Surrey County Hospital on March 1st, with Mr. H. B. BUTLER in the chair. In the unavoidable absence of Sir Thomas Lewis, Dr. R. T. GRANT, research worker in the cardiac department of University College Hospital Medical School, gave a most interesting lecture on the diagnosis of subacute infective endocarditis.

Dr. Grant said that this malady occurred more frequently than was commonly thought; it was often overlooked, and yet in most cases it was easily recognizable. The infection tended to develop in those who already suffered from chronic valvular disease of the heart, and was one of the factors which rendered prognosis of this malady uncertain. When its onset was recognized in a case of valvular disease a fatal ending within a few months could be foretold almost with certainty. Dr. Grant then summarized the main pathological features of the disease: (1) the infecting organism was usually *Streptococcus viridans*; (2) large vegetations were found in the valve cusps; (3) the valves showed also, as a rule, either old disease of the rheumatic type or congenital malformation; (4) the vegetations tended to spread over the cusp and on to the neighbouring parts of the heart wall; (5) streptococci were present in the vegetations; (6) the heart muscle, as a rule, was not involved. Associated findings were enlargement of the spleen, glomerular nephritis, and embolism of various organs

without suppuration. The lecturer then dealt in some detail with the clinical findings on which diagnosis was based, and emphasized particularly the age of the patient, usually between 20 and 40; the existence of valvular disease; the insidious onset; the presence of pallor, petechiae, and Osler's nodes; the clubbing of the fingers; the enlargement of the spleen; the occurrence of embolism; the fever, which was usually low and irregular; the presence of red blood cells in the urine and of streptococci in blood cultures; in addition to other signs. Negative blood cultures, when the other signs were clear, did not hinder a diagnosis from being made. The course of the disease was not always steadily downhill, and there might be periods of remission. The average duration was five or six months, but it might be only a few weeks, or two or three years. Diagnosis and treatment were hopeless. Dr. Grant concluded by giving the histories of five representative cases.

## Association Notices.

### TABLE OF DATES.

April 28, Sat.	Annual Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> . Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.
May 12, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body. Voting papers posted from Head Office, where there are contests in above elections.
May 15, Tues.	Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.
May 19, Sat.	Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service Members of Council, and 4 Representatives of Public Health Service in Representative Body. Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.
June 2, Sat.	Publication in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available on application at Head Office for election of 12 members of Council by grouped Representatives (British Isles).
June 7, Thurs.	Names of Representatives and Deputy Representatives must be received at Head Office by this date.
June 13, Wed.	Council.
June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
July 4, Wed.	Amendments must be received at Head Office by this date.
July 20, Fri.	Annual Representative Meeting, Cardiff. Nomination papers available on application at Head Office for election of 12 members of Council by grouped Representatives (British Isles).
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Annual Representative Meeting, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.**—An ordinary meeting of the Nuneaton and Tamworth Division will be held at the Nuneaton General Hospital on Wednesday, April 18th, at 3.30 p.m. Dr. C. F. Rudd will read a paper on oedema of the eyelids. Agenda: Minutes; rules of organization; reports by medical practitioners at request of coroners; Treasurer's Cup golf competition; election of representative and deputy representative; letter from secretary of London Public Medical Service.

**CAMBRIDGE AND HUNTINGDON BRANCH.**—A meeting of the Cambridge and Huntingdon Branch with the Cambridge Medical Society will be held at Addenbrooke's Hospital to-day (Friday, April 13th), at 2.30 p.m. Mr. Arthur Cooke: The results of treatment of gastric and duodenal ulcer; Mr. W. H. Bowen and Dr. F. Roberts: The operative treatment of oblique fracture of the femur; Dr. F. Roberts: Localization of a golf-ball in a dog by the barium meal.

**GLASGOW AND WEST OF SCOTLAND BRANCH: Ayrshire Division.**—The annual meeting of the Ayrshire Division will be held in the Infirmary, Kilmarnock, on Monday, April 23rd, at 3.30 p.m. Agenda: (1) Election of office-bearers; (2) appointment of repre-

sentatives to (a) Branch Council. (b) the Representative Body. (c) County Maternity and Child Welfare Committee; (3) annual report; (4) Messrs. Kodak, Ltd., will show five medical cinematograph films at 4 p.m.

**KENT BRANCH: ASHFORD DIVISION.**—At a meeting of the Ashford Division to be held at the North Street Club, Ashford, on Wednesday, April 18th, at 4 p.m., Dr. J. W. McNee of University College Hospital will give a lecture on new work in the diagnosis and treatment of hepatic and biliary diseases. A cordial invitation is extended to all members of the Kent Branch.

**KENT BRANCH: ROCHESTER, CHATHAM, AND GILLINGHAM DIVISION.**—The annual meeting and dinner of the Rochester, Chatham, and Gillingham Division will take place at the Bull Hotel, Rochester, on Wednesday, April 18th, at 7.30 p.m. Agenda: Election of officers for the current year; post-graduate lecture by residents of St. Bartholomew's Hospital. Mr. E. Cecil Harris, coroner for the Sittingbourne Division of Kent, has accepted an invitation to dine, and will speak. Those intending to be present are asked to notify the honorary secretary as soon as possible, and not later than Monday morning, April 16th.

**METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.**—A meeting of the Camberwell Division will be held at St. Giles's Hospital, Camberwell, on Tuesday, April 24th, at 9 p.m. Dr. Guy Bonsfield (St. Giles's Hospital) will read a paper on modern methods of combating diphtheria.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The next clinical meeting of the City Division will be held to-day (Friday, April 13th), at the Metropolitan Hospital, when Mr. P. M. Heath will show surgical cases. Tea at 4.15 p.m., meeting at 4.30.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held on Tuesday, April 17th, at 8.45 p.m., at the Town Hall, Catford, S.E.6, when Dr. W. V. Goldsmith will speak on the diagnosis and treatment of pruritic skin conditions.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRA'S DIVISION.**—The next meeting of the St. Pancras Division (postponed from April 10th) will be held on Tuesday, April 17th, at 9 p.m., at the Association's House, Tavistock Square, W.C.1. Dr. Donald Paterson (physician to the Hospital for Children, Great Ormond Street) will deliver an address entitled "The prevention of summer diarrhoea."

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—At the meeting of the Willesden Division to be held at the Willesden General Hospital, Harlesden Road, on Wednesday, April 18th, Dr. J. Bright Bannister will give an address on ante-natal work.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Royal Hospital, Chesterfield, on Wednesday, April 18th, at 3 p.m., when there will be a series of clinical demonstrations.

**NORTH WALES BRANCH.**—The spring meeting of the North Wales Branch will be held at Llandudno on Tuesday, May 1st. The Branch secretary, Dr. E. Lewys-Lloyd, Rhiafa, Towyn, Merioneth, will be glad to receive names of members willing to read papers or show cases not later than April 20th.

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The third clinical meeting of the Northern Counties of Scotland Branch will be held at the District Asylum, Inverness, on Thursday, April 19th, at 3.30 p.m., when a paper will be read by Dr. T. C. Mackenzie entitled "Some notes of the epochal insanities." This will be followed by a demonstration of cases by members of the Branch. Members willing to show cases are asked to communicate with the honorary secretary of the Branch by April 16th at the latest, so that arrangements can be made. Tea will be served at the end of the meeting. A fourth clinical meeting is being arranged to be held at Golspie on May 19th.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, April 19th, at 8.30 p.m. Lieut.-Colonel P. J. Maret will read a paper on some lung affections.

**SUFFOLK BRANCH: WEST SUFFOLK DIVISION.**—A meeting of the West Suffolk Division will be held on Saturday, April 14th, at 8.45 p.m., when Mr. C. W. G. Bryan will give a lecture on the acute abdomen in childhood. Coffee will be served at 8.30.

**SUSSEX BRANCH: BRIGHTON DIVISION.**—A conjoint meeting of the Brighton Division with the Sussex Law Society will be held at the Queen's Road Dispensary on Thursday, April 26th, at 8.15 p.m., when the honorary secretary of the Brighton Division, Dr. L. A. Parry, will read a paper on criminal abortion, with special reference to the case of Dr. Collins. It is hoped that the subsequent discussion will elicit the views of both professions. The next clinical meeting of the Division will be held at the Lady Chichester Hospital, Hove, on Wednesday, April 18th, at 3.45 p.m.

**SUSSEX BRANCH: HASTINGS DIVISION.**—The annual dinner of the Hastings Division will take place at the Royal Victoria Hotel on Friday, April 20th, at 7.15 for 7.30 p.m. Tickets 10s. 6d. Members are requested to notify the honorary secretary as soon as possible how many tickets they will require for themselves and their friends.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—A meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Trafford Arms Hotel, Wakefield, on Thursday, April 19th. Dr. J. le F. Burrow, assistant physician, Leeds General Infirmary, will give a lecture on the diagnosis of acute cerebro-spinal diseases. The lecture will be preceded by a supper at 7.45 p.m., price 3s. The annual meeting of the Division will take place on Thursday, May 10th.

## Correspondence.

### Colliery Surgeons and Unemployment.

SIR,—I have seen no reference to the grievous losses colliery surgeons sustain because they are expected to, and do, attend the dependents of unemployed miners without any remuneration whatsoever. I do not know the arrangements made in England and Wales, but in Scotland the employed miner is at present paying the arrears covered by the strike period, and will be fully paid up in October. The fact, however, is not generally known that with a large increase in unemployment the colliery surgeons, even with the temporarily increased oftakes, are actually receiving less than they did before the coal stoppage, so that the remuneration for attendance upon miners' dependents during the strike period must simply be written off as a bad debt. Matters will be aggravated when the arrears are fully paid. With a further immediate extensive closing down of the pits—and every closure means a further deduction in the colliery surgeon's income, though his work remains the same—there will be a very marked reduction in his emoluments. In Scotland after October the diminished sum will be reduced by one-third. I find that by that time my colliery fees will have fallen to about 50 per cent. less than before the stoppage.

I suggest that the colliery surgeons in each area should meet together for joint action. We cannot be expected to pay assistants and procure new cars if this present situation continues. Only an appeal to the men is needed to secure discussion of ways and means for putting the matter on a proper basis. Three solutions, more or less practicable, have been suggested to me: (1) Continuation of present increased payment by the men employed until the coal trade revives, the employed paying for the dependents of the unfortunate unemployed; (2) the formation of a joint club run by colliery surgeons, the unemployed to make a small contribution weekly, less than that paid by the employed; (3) the Government to grant facilities for a small deduction from the unemployment benefit. As regards the second proposal, when members of other trades are unemployed they continue to pay into our clubs, but not so the miner.

I feel certain that the British Medical Association will give us support in our efforts to improve the condition of colliery surgeons in stricken areas, where the young men at least suffer in silence.—I am, etc.,

Fife, March 31st.

COLLIERY SURGEON.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander P. M. Rivaz to the *Victory* for R.N. Barracks, and for duty with Medical Officer-in-charge, Haslar Hospital, and as Naval Health Officer.

Surgeon Lieutenant E. O'Reilly to the *Constance*.  
Surgeon Lieutenant Commander E. B. Kelley to rank of Surgeon Commander.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant J. B. Hutchison to the *Valiant* for training.  
Probationary Surgeon Lieutenant C. A. Mason to the *Rodney* for training.

### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel A. E. B. Wood, Regular Army Reserve of Officers, to be Major whilst re-employed, and relinquishes the rank of Lieutenant-Colonel.

Major E. C. Stoney is re-employed.  
Captain R. le G. Worsley to be temporary Captain, and temporarily relinquishes the rank of Captain.

Lieutenant E. H. Hall is seconded for duty with the Sudan Defence Force.  
J. E. Swyer to be Lieutenant on probation.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant H. W. Corner to R.A.F. Hospital, Cranwell.

### RESERVE OF AIR FORCE OFFICERS: MEDICAL BRANCH.

Hon. Flight Lieutenant W. G. Weston is promoted to the rank of Hon. Squadron Leader.

### INDIAN MEDICAL SERVICE.

Lieut.-Colonel A. W. C. Young retires.  
The services of Major N. Briggs, I.M.S., are placed permanently at the disposal of the Punjab Government for employment in the Jails Department, with effect from March 24th, 1925.  
Captain W. E. R. Dimond to be Major.

### TERRITORIAL ARMY.

Colonel M. B. Ray, T.D., having attained the age limit, is retired on completion of his tenure of appointment as A.D.M.S., 47th (2nd London) Division, and retains his rank, with permission to wear the prescribed uniform.

Lieut.-Colonel (Brevet Colonel) L. D. Bailey, M.C., T.D., from General List, R.A.M.C., T.D., to be Colonel, with precedence as from December 6th, 1926, and to be A.D.M.S., 47th (2nd London) Division.

## ROYAL ARMY MEDICAL CORPS.

Major A. E. Evans to be Lieut.-Colonel and to command the 140th (County of London) Field Ambulance.  
Captains (prov.) W. Simpson and G. F. Kealinge are confirmed in their rank.  
Lieutenants to be Captains: P. J. Stokes, A. Swindale, C. A. Cowie, W. R. A. Lewis, F. R. Sandford, M.C.  
H. B. Trumper to be Lieutenant.

## VACANCIES.

ADDENBROOKE'S HOSPITAL, Cambridge.—House-Surgeon (male, unmarried). Salary at the rate of £130 per annum.  
ASHFORD HOSPITAL, Kent.—House-Surgeon. Salary £160 per annum.  
BIRROW-IN-FUENESS: NORTH LONSDALE HOSPITAL.—House-Surgeon (male). Salary £130 per annum.  
BEIT MEMORIAL FELLOWSHIPS FOR MEDICAL RESEARCH.—Junior Fellowships up to the annual value of £400.  
BIRMINGHAM UNION.—House-Surgeon (male) at the Dudley Road Hospital. Salary at the rate of £200 per annum.  
BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.11.—Out-patients' Officer for the Ophthalmic Department. Salary £65 per annum.  
EADFORD ROYAL INFIRMARY.—House-Physician and two House-Surgeons (male). Salary £150 per annum.  
BURY AND DISTRICT JOINT HOSPITAL BOARD.—Resident Assistant to the Medical Superintendent. Salary £400 per annum, rising to £450.  
DEVON MILITARY HOSPITAL, Exminster.—Junior Assistant Medical Officer (male, unmarried). Salary £300 per annum, rising to £350.  
EAST LONDON HOSPITAL FOR CHILDREN AND DISPENSARY FOR WOMEN, Shadwell, E.1.—(1) Resident House-Surgeon. (2) Whole-time Casualty Officer. Salaries at the rate of £125 per annum.  
FARINGDON GENERAL DISPENSARY, Holborn Circus, E.C.4.—Honorary Physician for Electrotherapeutic Clinic.  
CLOUCHESTER ROYAL INFIRMARY AND EYE INSTITUTION, Gloucester.—Assistant House-Surgeon (male). Salary £120 per annum.  
GLASGOW ROYAL INFIRMARY.—Deputy Superintendent and Senior Medical Resident. Salary £200 per annum.  
GUILDFORD UNION.—Resident Medical Officer. Salary £500 per annum.  
HOSPITAL FOR EPILEPSY AND PARALYSIS, Maid Vale, W.9.—(1) Resident Medical Officer. (2) House-Physician. Salaries at the rate of £150 and £100 per annum respectively.  
LEEDS: ST. JAMES HOSPITAL.—House-Physician and Surgeon (male). Salary £200 per annum.  
LEICESTER ISOLATION HOSPITAL AND SANATORIUM, Groby Road.—Resident Medical Officer. Salary £350 per annum.  
LIVERPOOL EYE AND EAR INFIRMARY.—Third Honorary Anaesthetist.  
LORD MAYOR TRELOR CRIPPLES' HOSPITAL AND COLLEGE, Alton, Hants.—Second Assistant Resident Medical Officer (male, unmarried). Salary £300 per annum, rising to £400.  
LOUGHBOROUGH AND DISTRICT GENERAL HOSPITAL AND DISPENSARY.—Resident House-Surgeon (female, unmarried). Salary £125.  
MANCHESTER ROYAL INFIRMARY, Central Branch, Roby Street.—Junior House-Surgeon (male). Salary, eight months' at £100 per annum, and four months at £200 per annum.  
MINISTRY OF PENSIONS: BIRMINGHAM PENSIONS HOSPITALS COMMITTEE.—Resident Junior Medical Officer at the Highbury and Uffellme Hospitals. Salary £300 per annum.  
NOTTINGHAM GENERAL DISPENSARY, Broad Street, Nottingham.—Resident Surgeon (male, unmarried). Salary £250 per annum, rising to £300.  
PORTSMOUTH PARISH.—First Assistant Resident Medical Officer. Salary £350 per annum.  
ROTHERHAM HOSPITAL.—House-Physician (male). Salary £180 per annum.  
ROYAL CHEST HOSPITAL, City Road, E.C.1.—(1) Resident Medical Officer. (2) House-Physician. Salaries at the rate of £150 and £100 per annum respectively.  
ROYAL COLLEGE OF SURGEONS OF ENGLAND.—Examiners for the Fellowship and under the Conjoint Board.  
ROYAL WATERLOO HOSPITAL FOR WOMEN AND CHILDREN, Waterloo Road, S.E.1.—House-Surgeon (male). Salary at the rate of £100 per annum.  
SARAJEVO PACE HOSPITAL FOR WOMEN, Marylebone Road, N.W.1.—Registrar. Salary £100 per annum.  
SEAMEN'S HOSPITAL SOCIETY: DAREDOUGHT HOSPITAL, Greenwich.—(1) Anaesthetist. Honorarium 50 guineas per annum. (2) Surgeon with charge of out-patients.  
SHEFFIELD ROYAL HOSPITAL.—Resident Anaesthetist (male). Salary £80 per annum.  
WEST CORNWALL MINERS' AND WOMEN'S HOSPITAL, Redruth, Cornwall.—Radiographer.  
WEST END HOSPITAL FOR NERVOUS DISEASES, 73, Welbeck Street, W.1.—Registrar (male). Salary £200 per annum.  
WYNDSON: KING EDWARD VII HOSPITAL.—Junior House-Surgeon (female). Salary at the rate of £100 per annum.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Finedon (Northamptonshire), Wivenhoe (Essex), Accrington (Lancashire). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

MEDICAL REFEREE UNDER THE WORKMEN'S COMPENSATION ACT, 1925, for the Districts of the Aylsham, Downham Market, East Dereham, Fakenham, Holt, King's Lynn, North Walsham, Norwich, Swaffham, Thetford, and Wymondham County Courts (Cireuil No. 32). Applications to the Private Secretary, Home Office, London, S.W.1, by April 25th.

This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.

## APPOINTMENTS.

COOK, Miss Eva D. M.B., B.S.Lond., House-Surgeon to the New Sussex Hospital for Women and Children, Brighton.  
HUNT, Elizabeth, M.D., Ch.B.Liverp., Honorary Senior Medical Officer, Liverpool Hospital for Cancer and Skin Diseases.

STINGLIER, Mrs. Isabella Morison, M.B., Ch.B.Ed., Temporary Assistant Medical Officer for Schools under the Government of Hong-Kong.

WESTMINSTER HOSPITAL.—Resident House-Physicians: J. H. Wainwright, L.R.C.P., M.R.C.S., A. M. McQuibb, L.R.C.P., M.R.C.S., Resident House-Surgeon: T. W. Morgan, L.R.C.P., M.R.C.S., Resident Obstetric Assistant: C. R. Greene, L.R.C.P., M.R.C.S.

CERTIFYING FACTORY SURGEONS.—W. L. Tullis, M.D.St. And., D.P.H., for the Newburgh District, co. Fife; T. W. Howie, M.B., Ch.B.Glas., for the Rothsay District, co. Inverclyde; A. G. Walter, M.R.C.S., L.R.C.P., for the Wallingford District, co. Berks.

## DIARY OF SOCIETIES AND LECTURES.

## ROYAL SOCIETY OF MEDICINE.

General Meeting of Fellows.—Tues., 5.30 p.m., Ballot for Election to the Fellowship.

Section of Neurology.—Thurs., 8 p.m., Clinical Meeting at West End Hospital for Diseases of the Nervous System, Out-patients' Department, Welbeck Street, W.1.

Section of Obstetrics.—Fri., 8 p.m., Specimens:—Mr. C. D. Read: (1) Teratomatous Ovarian Tumour with Torsion of Pedicle; (2) Columnar Carcinoma of Fundus Uteri with Metaplastic Change to Epithelioma. Papers:—Mr. H. H. Parameer: Eclampsia and its Treatment: an Experience with Spinal Anaesthesia; Professor W. Blair Bell: The Malignant Functions of the Chorionic Epithelium.

## POST-GRADUATE COURSES AND LECTURES.

MANCHESTER ROYAL INFIRMARY.—Tues., 4.15 p.m., Dr. W. Fletcher Shaw: Failed Forceps. Fri., 4.15 p.m., Dr. T. H. Oliver: Demonstration of Medical Cases.

## British Medical Association.

OFFICES, BRITISH MEDICAL ASSOCIATION HOUSE,  
TAVISTOCK SQUARE, W.C.1.

## Departments.

SUBSCRIPTIONS AND ADVERTISEMENTS (Financial Secretary and Business Manager. Telegrams: Articulate Westcent, London).

MEDICAL SECRETARY (Telegrams: Mediscera Westcent, London).

EDITOR, British Medical Journal (Telegrams: Attitology Westcent, London).

Telephone numbers of British Medical Association and British Medical Journal, Museum 9851, 9852, 9853, and 9854 (internal exchange, four lines).

SCOTTISH MEDICAL SECRETARY: 6, Drumsheugh Gardens, Edinburgh. (Telegrams: Associate, Edinburgh. Tel.: 24361 Edinburgh.)

IRISH MEDICAL SECRETARY: 16, South Frederick Street, Dublin. (Telegrams: Baellius, Dublin. Tel.: 4737 Dublin.)

## Diary of the Association.

## APRIL.

- 13 Fri. Cambridge and Huntingdon Branch: Addenbrooke's Hospital, 2.30 p.m.  
City Division: Clinical Meeting, Metropolitan Hospital, 4.30 p.m.  
17 Tues. Lewisham Division: Town Hall, Catford, S.E.6. Dr. W. V. Goldsmith on Pruritic Skin Conditions, 8.45 p.m.  
St. Pancras Division: B.M.A. House, Tavistock Square, W.C.1. Dr. Donald Paterson on the Prevention of Summer Diarrhoea, 9 p.m.  
18 Wed. London: Grants Subcommittee, 2.30 p.m.  
Ashford Division: Dr. J. W. McNee on Hepatic and Biliary Diseases, 4 p.m.  
Brighton Division: Clinical Meeting, Lady Chichester Hospital, Hove, 3.45 p.m.  
Chesterfield Division: Royal Hospital, Chesterfield, 3 p.m.  
Nuneaton and Tamworth Division: Nuneaton General Hospital. Dr. C. F. Rudd on Oedema of the Eyelids, 3.30 p.m.  
Rochester, Chatham, and Gillingham Division: Annual Meeting, Bull Hotel, Rochester, 7.30 p.m.  
Willesden Division: Willesden General Hospital, Harlesden Road. Dr. J. Bright Bannister on Ante-Natal Work.  
19 Thurs. London: Insurance Act Committee, 2.30 p.m.  
Jersey Division: General Hospital. Lieut.-Colonel P. J. Marett on Some Lung Affections, 8 p.m.  
Northern Counties of Scotland Branch: District Asylum, Inverness. Dr. J. J. Macdonald on Infantile Insanities, 3.30 p.m.  
Wakefield Division: Strafford Arms Hotel, Wakefield. Dr. J. J. Macdonald on Acute Cerebro-spinal Diseases. Meeting preceded by Supper at 7.45 p.m.  
20 Fri. Hastings Division: Annual Dinner, Royal Victoria Hotel, 7.30 p.m.  
23 Mon. Ayrshire Division: Annual Meeting, Infirmary, Kilmarnock, 3.30 p.m.  
24 Tues. Camberwell Division: St. Giles's Hospital, Camberwell. Dr. Guy Bonsheld on Combating Diphtheria, 9 p.m.

## BIRTHS, MARRIAGES, AND DEATHS.

The charge for inserting announcement of Births, Marriages, and Deaths is 9s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.

## MARRIAGES.

GORDON-NORWELL.—At Chananar, Chili, on April 3rd, 1928, Robert Russell Gordon, third son of the late Mr. and Mrs. R. R. Gordon, Balgait, to Dorothea May Norwell, M.B., Ch.B., D.P.H., eldest daughter of Mr. and Mrs. J. K. Norwell, Ardenale, Perth. (By cable.)

KAY-WOOD.—At Union Street Wesleyan Church, Bury, on April 4th, by Rev. David Rycroft, assisted by Rev. J. Whitaker, Bond and Rev. G. Evans Watson, L. Ward Kay, M.B., Ch.B., 2, Newlyn Road, Sheffield, to Annie, only daughter of Mr. and Mrs. Walter Wood of Bury.

## DEATH.

STARK.—On March 18th, at 57, Wanstead Park Avenue, E.12, Arthur Campbell Stark, M.B., B.S.Lond., Ph.C., L.S.A.Eng., aged 63.

## British Medical Association.

### PROCEEDINGS OF COUNCIL.

Wednesday, April 11th, 1928.

A MEETING of the Council of the British Medical Association was held at the Association's House, Tavistock Square, on April 11th. Dr. H. B. BRACKENBURY, who was warmly welcomed on his return from his visit to South Africa, was in the chair, and the following were present:

Dr. C. O. Hawthorne (Chairman of Representative Body), Mr. N. Bishop Harman (Treasurer), Mr. R. G. Hogarth (Past President), Sir Ewen Maclean (President-Elect), Dr. A. Lyndon (Deputy Chairman of Representative Body), Sir Robt. Past Chairman of Council), Dr. J. Barer ...  
 Armstrong, Dr. F. J. Baidon, Sir Alfred ...  
 Bone, Dr. H. C. Bristowe, Dr. G. F. Buchan, Dr. H. G. Daiu, Dr. C. E. Douglas, Mr. W. McAdam Eccles, Dr. D. E. Finlay, Dr. T. Fraser, Dr. F. J. Gomez, Dr. F. W. Goodbody, Dr. R. Wallace Henry, Dr. G. B. Hillman, Dr. J. Hudson, Dr. I. W. Johnson, Dr. R. Langdon-Down, Dr. E. K. Le Fleming, Dr. R. W. Leslie, Dr. E. Lewys-Lloyd, Dr. J. Livingstone Loudon, Sir Richard Luce, M.P., Dr. S. Morton Mackenzie, Dr. A. Manknell, Dr. O. Marriott, Dr. J. C. Matthews, Dr. Christine Murrell, Mr. A. W. Nuthall, Lieut.-Colonel F. O'Kinealy, Dr. W. Paterson, Mr. J. Patrick, Dr. R. C. Peacocke, Dr. J. R. Prytherch, Dr. F. Radcliffe, Dr. E. H. Snell, Dr. E. A. Starling, Dr. John Stevens, Lieut.-Colonel Ashton Street, Dr. W. E. Thomas, Dr. G. Clark Trotter, Mr. E. B. Turner, Sir Jenner Verrall, Dr. J. F. Walker, and Mr. A. M. Webber.

Apologies for absence were received from Sir Robert Philip (President), Mr. T. P. Dunhill, Dr. J. A. Macdonald, Dr. J. G. McCutcheon, Dr. G. W. Miller, Group-Captain N. J. Roche, Mr. H. S. Souttar, Dr. Lockhart Stephens, Dr. D. Walshe, Sir William Wheeler, and Dr. W. E. A. Worley.

The illness of Dr. J. A. Macdonald was reported, and the Council sent a sympathetic message.

The Chairman said that since the last meeting of Council the death of Sir Dawson Williams, Editor of the *British Medical Journal*, had taken place. He could only draw attention to the large number of personal tributes to the late Editor which had been printed, several of them by members of the Council, and he knew that the Council generally would endorse all that had been said with regard to the personality and work of a great journalist, a great medical man, and a sagacious counsellor. ("Hear, hear.")

The Council had also to deplore the deaths of Dr. H. W. Langley Brown of West Bromwich, Dr. James Davison of Bournemouth, and Dr. Henry L. McKisack of Belfast, former members of Council, and Dr. James Wheatley, president of the Society of Medical Officers of Health.

The Council, by standing in silence, signified its desire that letters of condolence be sent.

Sir G. Lenthal Cheatle, K.C.B., was appointed delegate of the Association at the forthcoming annual meetings of the Canadian Medical Association and the American Medical Association; Professor W. E. Dixon, F.R.S., was appointed to represent the Association on the Council of the Lister Institute in place of the late Sir Dawson Williams; and Mr. Bishop Harman was asked to continue for a further period of three years as representative upon the Professional Classes' Aid Council.

#### *The Finance of the Association.*

The Treasurer presented the financial statement of the Association for 1927. The year, he said, had been one of very successful working; the expense of maintaining the full activities of the Association had been well met by the subscriptions, the receipts from advertisements in the *British Medical Journal*, and other revenue, and there was a surplus on the year, which surplus had eased the task of the Finance Committee in dealing with the anticipated liabilities and responsibilities of the Association. On the expenditure side there was an increase in the cost of the Annual Representative Meeting, due to the distance from headquarters (Edinburgh) at which it was held last year. The year 1927 was the first normal year of housekeeping in the new premises, and the cost was shown to be about £2,500 a year more than at 429, Strand. But the family was larger and required more accommodation, the Association's earning powers were greater, and its vitality was enhanced. He read the auditors' report, and then moved that the financial statement be approved, which, after a few questions had been asked and answered, was agreed to.

Mr. Bishop Harman then went on to report on a matter referred to the Finance Committee by the Council—namely, the question of the payment to members attending Council and committee meetings of out-of-pocket expenses in addition to railway fares. This was the subject of a resolution at the last Annual Representative Meeting, which instructed the Council to consider the proposal. Mr. Harman said that to pay a subsistence allowance in these cases would involve an expenditure of £1,000 a year. The Finance Committee took exception on financial grounds to such a proposal. Dr. Wallace Henry thought that there might be reasons other than financial for which the Council could not approve the proposal. Dr. Buchan asked, in view of the excellent financial condition of the Association, what were the financial grounds on which the committee had turned it down. Sir Robert Bolam thought it

best that it should simply be stated that the Council, having referred the matter to the appropriate committees (the Organization Committee had also considered the matter, but submitted no recommendation), deemed it inadvisable that this expense should be undertaken. The Chairman pointed out that "financial considerations" involved something more than financial ability or otherwise to draw a cheque for the amount. The subject then dropped.

#### *The Association Professionnelle Internationale des Médecins.*

The question whether the British Medical Association should join the Association Professionnelle Internationale des Médecins came forward again on a report by the Finance Committee, embodying a note by the Medical Secretary concerning the financial commitments of such a proposal. The expenditure involved would be £250 a year, and it was reported that the voting in the Finance Committee on a motion "taking exception to this expenditure" was equal, whereupon the chairman of the committee gave his casting vote as taking exception.

Dr. Lyndon now moved a resolution affirming the opinion that the estimated expense of joining this international body was in no way excessive, and further, that only by so joining could the British Medical Association make its influence felt with the International Labour Office, the League of Nations, and other organizations concerned with social insurance abroad, and afford much-needed help to the medical profession in other countries to obtain just and equitable conditions in relation to insurance law. He felt that the position taken up by some members of the Finance Committee was rather parochial. A great body like the British Medical Association was big enough to help members of the profession on the Continent who were in a less fortunate position than their British colleagues. The profession in some countries of Europe was most anxious to have such help in fighting for those rights which had, happily, been secured here. Moreover, it was only in this way that the Association could get into official contact with the League of Nations, which was increasing in importance every year, and the International Labour Office, a very important factor where social legislation was pending.

Dr. C. E. Douglas seconded the motion. He said that this was not a matter to be decided on financial considerations alone. It should be looked at from a larger point of view. By joining this body the Association would be able to carry in a sort of missionary fashion its great ideal beyond the bounds of its own nation. There had been an attempt on the part of the German representatives in this movement to get the British Medical Association to "come over and help us." Internationally that was a gesture of great importance, the more so because, if the British Medical Association stayed outside, the German element would be predominant in Europe in medical matters. In the matter of State sickness insurance the Association could make a contribution of great importance from the experience of this country. He also mentioned that the approved society movement was now taking an international orbit, and he thought it would be rather a sorry position if the British Medical Association were left outside.

Dr. Bone moved:

That the Council is not willing in present conditions to become a constituent member of the A.P.I.M.; but wishes to put on record its willingness at all times to furnish other medical associations, whether national or international, with any information which may be at its disposal by reason of its experience of social legislation in relation to medicine.

He said that this international organization was not connected at all with the League of Nations. Its object was the collection of information by the issue of questionnaires to the constituent bodies. The annual meeting was held only to decide what questionnaires should be issued.

Dr. Dain, in seconding this amendment, disclaimed any parochial spirit, but asked what practical use this organization was likely to be. He thought the British Medical Association could best help other countries, while remaining apart, by improving and maintaining its own standards as an example of what might be done and an encouragement to others.

The Medical Secretary gave some details of the organization, and said that the annual conference in Paris, which he had attended, was concerned with much more than the discussion of questionnaires to be sent out. By far the greater part of the time was spent over answers to questionnaires and in general

discussion. As to the connexion with the League of Nations, at the last meeting in Paris a representative of the Institute of Intellectual Co-operation, which was a League organization, attended, and it was probable that representatives from the international medical body would be invited to Geneva next June to give certain information.

Mr. Bishop Harman reminded the Council of the origin of the international association. It was said that the Association if it joined could withdraw at any time, but, of course, in common decency it could not do so. This international body in its present infant state would cost the Association £250 a year, which represented a capital sum of £5,000, and if it grew to lusty youth it would cost very much more, perhaps £1,000 a year. Such movements had a tendency to grow upon themselves.

Dr. Hawthorne said that Dr. Bone rejected this proposition because the international body was so small, and Mr. Harman because it was likely to be so expensive and expensive. No one would deny that it was in harmony with the tendency of the times and the spirit of the age to organize international co-operation for purposes of mutual benefit. It might be said that under this arrangement the Association would give more than it received, but in so doing it would earn the promised blessedness. In addition, it was now certain that this organization would have a voice in the League of Nations. The speaker was much influenced in this matter by Dr. Cox's judgement.

The Chairman pointed out, in reply to observations by Dr. Barcroft Anderson, that the decision of the Dominion organizations was to postpone consideration pending the decision of the British Medical Association.

Mr. E. B. Turner spoke against the proposal, though not on financial grounds. He was afraid, after long experience of international organizations, that there was a fundamental difference as to ideas of procedure between Continental nations and ourselves. He thought the Association should watch this movement, but not join it, at all events at present.

Dr. Bone's amendment was carried by 30 votes to 11, so that the proposal to join the international body was negatived.

#### *Provision of Spa Treatment for Insured Persons.*

This matter arose on the report of the Insurance Acts Committee, which incorporated a scheme of the British Spa Federation for spa treatment of insured persons which had been before the Spa Practitioners Group Committee. Dr. F. G. Thomson of Bath was present at the meeting of the Council during this discussion in his capacity as chairman of the Group Committee. The Group Committee asked that the proposed scheme might be recommended to the Representative Body for approval, subject to the incorporation of certain conditions which were set out. The full details of the scheme will be embodied in the Annual Report of Council to be published next week.

Dr. Dain, chairman of the Insurance Acts Committee, said that this was the first occasion on which the chairman of a standing committee had presented the report of a group. His committee had not itself expressed any opinion on some of the matters in the report.

The Chairman of Council drew attention to reference in the proposed scheme to "clinics"—"That provision should be made under the scheme for each locality keeping medical records at the clinic," etc.—and asked what was meant by this. Dr. Thomson said that the idea was that some place must be provided at the spa for the treatment of these people, who were of the out-patient class. It was felt that some special consulting room should be provided.

The Chairman said that the Representative Body had been very emphatic that in any extension of insurance benefits an endeavour should be made to maintain the private practitioner character of any specialized treatment. He thought it would be better to emphasize the ordinary methods of consultation, either at the house of the specialist, the general practitioner, or the patient, rather than any special clinic. That was the general system the Association had laid down, and he wanted to know how far the Spa Practitioners Group had taken it into consideration.

Dr. Thomson said that it had not been considered at all, because it was felt that the great organization connected with this work of spa treatment provision could only be done at

some central consulting room, otherwise separate records would have to be kept by every practitioner. It had been suggested that the clinics might be run as a sort of out-patients' department to the mineral water hospitals, but the hospitals did not see their way to undertake the responsibility, and so it was suggested that a clinic should be instituted by the governing committee composed of the physicians and the spa authorities.

Sir Robert Bolam said that this point was of importance because it seemed rather to prejudice the kind of consulting and specialist service that would be set up under the national health insurance scheme when the authorities saw fit to put such a scheme into operation. This would inevitably be used as an illustration of the way to conduct a particular specialist service, and the clinic idea would be given a general application. He thought there should be a clause put into the scheme rendering it possible for the advice of the spa physician to be obtained apart from the clinic. He did not see any provision in the scheme at present for the bedridden patient.

Dr. Dain pointed out that in the extension of insurance benefits which were of a treatment character—dental, for example—it had been agreed that clinics were a suitable method of administering the benefit; there was nothing new in the clinic idea. Sir Robert Bolam said that he was not objecting to clinics, which in certain cases were an economical method, but he was concerned that any group should say they were the only method. There were spas where it might be better to deal with these patients privately.

Sir Ewen Maclean said that in the evidence given by the Association to the Royal Commission on National Health Insurance the clinic was suggested as a method when other methods failed.

Eventually it was agreed, on the motion of Dr. Wallace Henry, Dr. Thomson concurring, that a paragraph should be inserted declaring that rheumatic cases which were considered suitable under this scheme should be treated either at private consulting rooms in the locality or at clinics established for the purpose, and that wherever the clinic was mentioned in the scheme the phrase should be "consulting room or clinic."

Dr. Dain then moved the following definition of spa treatment for submission to the Representative Body:

"Spa treatment may be defined as treatment at a place possessing a supply of natural mineral waters of known therapeutic value with facilities for their application. This implies the existence of suitable buildings, apparatus, and trained personnel for work in bath-houses and other physio-therapeutic departments."

He said that some such definition was necessary inasmuch as while the proposed scheme of the Spa Federation contemplated treatment at the spas the clinic recently established in London under the aegis of the British Red Cross Society evidently had no connexion with treatment at spas. On the suggestion of Dr. Hawthorne the word "reputed" was substituted for "known" in the definition.

#### *The Association Prizes.*

Dr. Morton Mackenzie, for the Organization Committee, brought forward a scheme for the regrouping of the medical schools for the purpose of the prize essay competition by final-year medical students. The number of students competing—only 26 in 1927-28—had been rather disappointing, and this was due, in his committee's opinion, to the inadequacy of the prize (£10). It was therefore proposed to divide the prize money into six prizes of £25 each in place of fifteen prizes of £10 each. The six groups of schools were two for London, one for the provinces and Wales, one for Scotland, one for Ireland, and one for overseas schools. The grouping was not entirely satisfactory, especially as regards Scotland, where approximately 600 students qualified annually, as compared with between 300 and 400 in each of the other home groups, but the scheme was experimental for one year only.

Mr. Bishop Harman thought the proposed scheme was an improvement on the existing one, but he still believed the prize was wrong in its incidence. It was an inducement to men who ought to be striving for qualification to turn aside and browse for a while on some special subject in the hope of winning an Association prize. He moved as a rider to instruct the Organization Committee to consider the advantage of altering the status of candidates eligible for this prize to

post-graduates instead of undergraduates. Dr. Douglas seconded this rider, which was agreed to.

#### *The Constitution of the Association.*

Dr. Morlon Mackenzie, in bringing forward a recommendation regarding the grouping of Home Branches for representation in the Representative Body, involving the creation of three new independent constituencies, said that his committee recognized that the whole question of the size of the Representative Body was getting ripe for discussion. In recent years the membership of the Association had increased by 40 or 50 per cent. It was proposed to ask the Organization Committee next year to explore the situation.

He next proceeded to move a series of recommendations for the adjustment of the articles and by-laws. The only really new matter comprehended was a provision for the possible formation of groups within the Association, but advantage was taken of the opportunity to substitute in about forty places the term "Great Britain and Ireland" for the now obsolete term "United Kingdom." The only discussion arose with regard to Article 9, relating to termination of membership, where it was proposed to extend the present wording to read "upon erasure on the ground of professional misconduct from any *Medical Register* for the time being established for the Irish Free State or for India or any British Dominion, Colony, or Dependency, or any Province or State forming part thereof respectively, or for any British Protectorate or Mandated Territory." As at present it read "any British Colony or Dependency."

The Chairman mentioned a case which came before the General Medical Council in 1925 (*Supplement*, December 12th, 1925, p. 204), in which a practitioner at Lagos had been removed from the Nigerian Register, but appealed to the General Medical Council, who decided that there had been a miscarriage of justice, and refused to erase his name. The Chairman thought that if Article 9 was altered at all the matter ought to be considered in its widest aspects. It was a matter for the Association Council to determine whether, if a member was not erased on the instruction of the General Medical Council, but was removed only from some local Register, his membership of the Association was affected.

It was agreed to refer the whole question of this article to the Ethical Committee.

On a by-law dealing with the reduced subscription of members engaged whole-time in medical instruction, Dr. Hawthorne sought to have the word "private" inserted before "medical practice" in the following proposed clause:

"Any member who is not engaged in medical practice, whether as consultant or otherwise, and is a whole-time member of the teaching staff of a university or medical school, and has signed and transmitted to the Treasurer a declaration to the foregoing effect in relation to the year for which the subscription is due . . . 2 guineas."

Dr. Hawthorne said that he was thinking of the young medical man who received a fixed salary, his duty being to take part in teaching and research work, but who would be excluded from the benefit of this scheme as it stood because he attended in the out-patient department, for which, of course, he received no pay.

Mr. Bishop Harman opposed the amendment, and indicated certain classes of practitioners who might, if the door were opened in this way, come in at a reduced subscription when such was not the intention of the scheme.

The amendment to insert the word "private" before "medical practice" was lost, 9 voting in favour and 11 against.

In concluding the report of the Organization Committee, Dr. Mackenzie mentioned that more new members for the Association were being obtained in proportion to registrations this year than last.

#### *The Chairman's Visit to South Africa.*

Dr. Brackenbury said a few words at this point about his recent visit to South Africa. He was only twenty-six days actually in the country, but when everybody conspired to make one see as much as possible quite a large amount of ground could be covered in that space of time. He was able at one or other of the places visited to get in touch with all classes of practitioners—Government officials, medical officers of health,

specialists, men engaged in research work, and general practitioners, including among the last several in the most rural districts. In each of the four large towns visited a special meeting of practitioners was called, which he addressed. Fortunately for him, the subject in which they were interested was national health insurance. [An article on this appears in the body of the *Journal* at page 673, and a report of the Congress at page 684.] National health insurance and hospital policy were the two big things they were concerned about; with regard to the latter they were passing through at present the stage reached by the Association at home some three or four years ago. In addition, he saw quite a number of influential members of Parliament, and one or two important civil servants, and gave evidence before a Parliamentary Commission appointed to consider schemes of pensions and sickness and unemployment insurance. The Congress in Bloemfontein was not numerously attended as compared with our own meetings, but was very successful. There were only thirty-five practitioners all told in the capital of the Orange Free State and its neighbourhood, and the numbers attending the Congress were perhaps 200. The Congress was to some extent upon the lines of an Annual Meeting of the Association at home, with a number of quite interesting—some of them very valuable—papers. The accompanying entertainments were excellently organized. Dr. Brackenbury thought the object for which the Council had asked him to go out had in fact been accomplished. The unity of the profession in South Africa, already achieved, had been placed, as a result of this Congress, on firm foundations, and to this end the action of the Association at home in sending representatives had contributed. (Applause.)

#### *Lunacy and Mental Disorder.*

Dr. Langdon-Down, Chairman of the Lunacy and Mental Disorder Committee, brought forward a memorandum on the report of the Royal Commission. [This will appear as an appendix to the Annual Report of Council in the next *Supplement*.] He said that the memorandum was long, not because it covered many topics, but because it dealt very fully with the topics that it did cover. This was done in order that members of Council and members in the Divisions and the Representatives might thoroughly understand the issue. The Council had already had recommendations from the committee with regard to one important question—namely, the protection of the certifying doctor. The reason for dealing with the report of the Commission piecemeal was that they were given to understand that the Government had in view the introduction of a short measure to give effect to two parts of the Royal Commission's report which were believed to be non-controversial—namely, the extension of the provisions for voluntary boarders in mental hospitals so as to enable a public institution to deal with them, and the question of protecting the medical man; but, in fact, he had seen no reference in the programme of the Government to any such measure this session. His committee regarded the report of the Royal Commission with mixed feelings. It was very appreciative of the report, but was strongly opposed to certain parts of it because they failed to achieve the great objects in view. The committee did not and could not agree with the proposals for bringing patients under treatment by what was called the Provisional Treatment Order. In so far as the Commission extended the facilities for voluntary boarders it carried out the plan, which the Association's committee supported, of treatment without certification; but what the committee had greatly hoped and desired was that these facilities for treatment without certification should be greatly increased. In fact, the proposals with regard to the Provisional Treatment Order were in no degree less rigid or formal than in the case of the ordinary full certification order of a justice. Why was it that the machinery for carrying out the principle of treatment without certification had not been provided? The committee believed that the Commission had taken a wrong basis for classification of cases. The Commission persisted in classifying patients into two main groups—voluntary and involuntary, and took as the basis for the classification of the latter the probable duration of the illness—a most vague and impracticable criterion. What the committee said was that the basis of classification which should determine the intervention of legal machinery was, in the nature of things, the mental attitude of the patient towards treatment; but in regard to those people who were incapable of expressing an

opinion, there was no need to bring in the justice. The committee was of opinion that for all patients brought under treatment there should be a preliminary month of trial, the authorization for treatment being supported by two medical recommendations. In that way the hesitation of people to place themselves under treatment would be overcome, and it might be hoped that patients in the early acute or early mild stage would be ready, all proper safeguards having been taken, to come under treatment. In addition, such an arrangement would provide some intermediate ground between full freedom of treatment of ordinary mental ailments and formal certification by a justice. He was glad to say that the memorandum had carried with it substantial agreement in his committee; there was substantial agreement also with the Royal Medical-Psychological Association; and he claimed for the report and its recommendations that they carried out to a practical issue the general principles which the Royal Commission had laid down more nearly than did the recommendations of the Commission itself. He believed that in this memorandum there was embodied a policy which was worth putting before the country as promising a real reform in the treatment of mental cases in the future.

Dr. Hawthorne agreed that the report of the committee now brought forward rested upon well-defined principles. The thesis which it announced was, he took it, that in the issue as between sane and insane in the individual person reliance had to be placed upon the judgement and opinion of the medical profession, and that the intervention of a legal official was unnecessary, and might in certain cases be harmful. To put the doctrine in other words—for a decision whether as a method of treatment the patient's liberty ought or ought not to be restricted the medical profession must be trusted, not the judgement of the lawyer. He would go further than that: he recognized that this doctrine was consistently and thoroughly applied in the report, which thus became a document capable of legal defence. Once again, the report did recognize that there were limited circumstances in which for practical reasons the thesis for which it stood could not be applied, and it defined those exceptions by means of argument. Therefore, if this report were the only voice with which the committee had spoken to the Council, he would have been ready to maintain that no one was in a position to contradict its argument, unless, indeed, he was prepared to challenge the whole principle on which it was based. The report, however, was not the first report which had come to the Council from the committee. To go back to the beginning, what was the basis of the committee's evidence given on behalf of the Association to the Royal Commission? It was that no patient should have his liberty taken away except upon the approval and warrant of a legal representative. It was agreed that this might not hold good in occasional circumstances of emergency and for a temporary period, but that was the broad position for which the Association stood. In its evidence the Association endeavoured to make this principle still more effective by proposing certain changes in the law. It was argued that the magistrate should be compelled in every case to examine the patient, and that the emergency certificate should be shortened from seven days under the present law to three days, once again indicating that in the Association's judgement it was law and not medicine which was responsible for restricting the patient's liberty. It was upon this claim for prompt and universal legal intervention that the committee had proceeded to argue that the position of the doctor in these proceedings was that of a witness, and that the instrument which restricted the patient's liberty was the magistrate's order, not the opinion of the doctor, who, being a witness, should enjoy the immunities of a witness. All these doctrines had now been thrown overboard, and, swinging to the opposite extreme, the committee now proceeded to say that, except in those cases where the patient deliberately or by resistance or violence opposed the doctor's intervention, the great majority of patients should be admitted to an asylum—and might be kept there by means of renewed certificates for two years or longer—upon the recorded wish of the relatives supported by certificates from two medical practitioners, and without any legal knowledge or intervention in the whole proceeding. The present report preached the full-blooded medical doctrine that insanity was a form of illness which, like other forms of illness, required medical opinion. That was not an unattractive doctrine—far from it; but in adopting this report the Association did give itself an awkward corner to turn

found. It must go forward with a little less confident tone. The chairman of the committee (Dr. Langdon-Down) had criticized the Royal Commission for the terms and conditions of the Provisional Treatment Order; he had objected to the presence of the magistrate, to the signature of one doctor, and to the temporary duration of the certificate or order. It was an excellent piece of destructive criticism of what the Royal Commission had proposed, but what the Royal Commission had proposed was exactly what the Association had suggested to it that it should propose in the evidence given at the outset. It would become the Association to adopt a somewhat contrite tone, even if not the full penitential dress. At the last Representative Meeting the proposal which was made for the protection of the certifying practitioner included three possibilities: a change of onus in cases where an application for a stay of action was being heard; a medical assessor sitting with the judge who heard such application; and the counter-signing of the original certificate by the magistrate at the outset as a proof that the doctor was acting in good faith. But a smaller measure of protection would now be proposed to the Representative Body than on the last occasion. He (Dr. Hawthorne) was concerned only to point out in advance the difficulties which must arise when this report was presented. He was, however, going to vote in favour of the report because it did meet to some extent the views he had pressed upon the Council and the Representative Body. He was prepared to hold that there were certain avenues for discussion and modification and change in this report. He did not think it absolutely shut the door upon the possibility of gaining full protection for the practitioner. He himself would have liked to bring in the magistrate in these transactions in an administrative, not a judicial, capacity.

Dr. Langdon-Down agreed that the attitude on this question taken up by the committee had changed, though not to the extent Dr. Hawthorne had suggested. When those concerned first took up this question they had to educate themselves and one another in many aspects of lunacy law and procedure. He did not think they were bound for all time by what they had recommended when the Royal Commission was sitting. Had not the Royal Commission itself swept away many doubts and difficulties? The circumstances were entirely different in the light of the Royal Commission's report and in view of the discussions at the Annual Meeting at Edinburgh and elsewhere. Approval was given to the report unanimously.

#### *Puerperal Morbidity and Mortality.*

Sir Ewen Maclean, chairman of the Committee on the Causation of Puerperal Morbidity and Mortality, brought forward a report on that subject which will be printed as an appendix to the Annual Report of Council in next week's *Supplement*. He suggested a revised wording for the last paragraph in the report, before the recommendations, as follows:

"A proposal that there should be a medical investigation into all maternal deaths has found some support. Such medical investigation, however, should be carefully controlled by the conditions indicated in the letter of the Council to the Ministry of April 28th, 1926, to the effect that the investigation should be conducted by a competent and experienced medical officer, and for the purposes exclusively of scientific inquiry and the advancement of public health."

He said that there must be no censorious form of inquest with consequent possible imputation of blame to individuals.

Dr. Manknell thought that, in view of the popular prejudice with regard to *post-mortem* examinations, the fact of such an examination might be regarded as a *prima facie* case against the doctor in attendance.

The Chairman pointed out that what was intended was a purely medical and scientific examination, not a compulsory *post-mortem* examination.

Dr. Manknell thought that the doctor might not be in a strong position to object to a necropsy if such were suggested.

It was agreed that the paragraph he altered in the way Sir Ewen Maclean had suggested, and certain of the recommendations printed at the end of the report were agreed to without discussion. These laid down the objectives of further experimental research, the need for increased facilities for training medical students, for the further provision of beds for maternity cases in institutions, for the keeping of regular records by the practitioner in midwifery cases, and the desirability that a condition of the payment of maternity benefit should be that

the mother had had at least one ante-natal examination by a medical practitioner. On a further recommendation that a standing committee of the Association should be set up to watch the course of events, Sir Ewen Maclean said he thought it necessary that some body should be charged with seeing that the Association and its great machinery were used in the right direction. The proposed committee should include the Officers of the Association, representatives of the bodies which took part in the conference at the House of the Association in January last, and general practitioners.

Dr. Dain said that this was an extremely interesting and hope-raising report, but it was also disappointing because it did not offer under the authority and with the approval of the British Medical Association those advantages which were now being enjoyed by the patients of the external departments of the midwifery schools who were confined in their own homes. It was not necessary to await the results of research or the practicability of the extensive provision of beds. It had been shown that by adopting certain simple measures the mortality rate could be reduced considerably. The Council would stultify itself by letting such a report as this go forward without some effective recommendations. By organized midwifery, involving co-operation between qualified midwives, doctors, and local authorities, it was possible to reduce markedly the mortality rate; and why should the Association wait until this fact was grasped by the Ministry of Health? He had had the opportunity of talking over the matter with the professor of midwifery at Birmingham University (Professor Beekwith Whitehouse), who was satisfied that if provision were made for one ante-natal medical examination, and for the fulfilment of certain other simple conditions, including the provision of sterilized towels and gloves, the question was within measurable distance of being settled. In this system, following the ante-natal examination, the doctor would place every patient in one of three categories: (1) the healthy and normal, including the great number of multiparae and a certain number of primiparae; (2) those with certain complications who were not to be safely confined without a doctor present; (3) those of whom it could be said at once that they were cases for institutional treatment. The women in the first of these classes were handed over to the midwife, with the instruction, of course, that she would call in the doctor if any unforeseen event occurred; the women in the second class were seen by the doctor again, and as often as necessary; and for the women in the third class arrangements were made for their admission to institutions. This meant that doctors would get into touch with a number of cases which were on the borderline, and would know beforehand whether there were definite risks or not. With regard to cost, in many areas the patient was invited to pay 5s., and it did not seem as though it would require any very large increase on that sum to provide for the necessary ante-natal treatment. It was mainly a question of the organization of a sound working scheme. If such a scheme were forthcoming he thought that objection by the patient to ante-natal examination would be very slight. He hoped that before this report went forward to the Representative Body it would carry with it some such recommendations as these.

Sir Ewen Maclean said that what Dr. Dain had put forward was practically gathered up in the report itself, but on the question of making detailed recommendations as to the method of conducting a confinement there had been serious consideration by the committee, which had decided not to make such recommendations.

Dr. Dain desired that a committee of the Association might be set up to formulate a scheme which would make available for all parturient women the advantages now obtained in the external departments of the midwifery schools, and he hoped that the publication of this report would be delayed until such scheme had been submitted to the Council.

Dr. Bone pointed out that there were different schemes in different midwifery schools, and asked also what Dr. Dain proposed for the cases remote from the area which any such organization could cover.

Dr. Dain said he quite appreciated that there were areas out of reach of such organized effort, but in those areas the number of confinements also was small. The first thing was to provide for the needs of the big urban populations. He added that if he had reserved until the Representative Meeting the speech he had just made, he might have been regarded as

throwing some discredit on the committee. He hoped that some such suggestions as he had made might be incorporated in the report before it was given to the profession and the public. Above all things, this question could not be left in the air. The report should be taken back and brought up again at the June meeting of Council, when it might be made to embody some such scheme as he had outlined.

In reply to Mr. Bishop Harman, who asked whether the adoption of such a scheme would mean the promulgation of an orthodox ritual of childbirth treatment, Dr. Dain said that he was not himself an expert in this matter. What he had said had been gathered mainly from conversations with the professor of midwifery at Birmingham University. His whole idea was that something practical should be offered to the profession and the public. The crux of the whole matter was organized midwifery and effective ante-natal examination.

Dr. Bone said that Professor Beckwith Whitehouse was not the only man in this country who had a scheme. He thought it would be a difficult problem to formulate a scheme which would command general approval and be applicable everywhere.

Dr. Christine Murrell agreed with Dr. Bone. There were other schemes than that put forward by Professor Beckwith Whitehouse, and other points of view, and it would be unwise at the present moment to lay down the matter as definitely as Dr. Dain proposed.

Sir Jenner Verrall said that in his view the committee had not left this matter in the air. Its recommendations were, briefly, that there should be research, that there should be vigilance in view of the possibility of new discoveries and opportunities, and that the subject presented so many varied conditions that the opinion of the profession at large should be elicited, and experience and results from different parts of the country compared. He thought this was not the stage at which the views of the Council should be crystallized with regard to a detailed scheme.

Sir Robert Bolam said that one of the great points in Dr. Dain's argument was that there should be initiated amongst all women a system of ante-natal examination and classification. Would it not be advisable to introduce into the recommendations something which would suggest a campaign to educate the public in the need for ante-natal examination?

Dr. Dain's amendment for the referring back of the report to the committee, with a view to incorporating in it and presenting to the next meeting of Council a scheme which would make available for as many parturient women as possible the advantages now obtained in the external departments of the midwifery schools, was not carried. In place of the recommendation that a standing committee of the Association be set up to watch the course of events and to keep in touch with research work, and of a further recommendation that the Divisions and Branches should arrange a series of meetings to be addressed by consultants and specialists, it was agreed to send the report first to the Representative Body, and that, if approved, a further resolution should be put to the Representative Body that a committee be set up to formulate measures designed to bring about a reduction of maternal morbidity and mortality, to keep in touch with research, and to assist Divisions and Branches in arranging for education and propaganda as to the value of ante-natal services, methods of dealing with confinements, and the care of the mother and infant.

It was also agreed that the allocation of additional grants of money by the Association to promote research in this subject should be considered, and the report was approved for recommendation to the Representative Body.

Dr. Bone brought forward, on the Medico-Political Committee's report, the question of the forthcoming issue by the Minister of Health of a circular to local authorities in connexion with the investigation into maternal deaths. It was understood that the Minister proposed to insert a clause to the following effect: "The British Medical Association has already been consulted and has expressed general approval of the objects of the proposed investigation, understanding that it is intended to use the results exclusively for scientific and public health purposes." This was almost precisely the wording of the letter sent to the Ministry from the Council in April, 1926.

The Chairman said that the Council could not object to—indeed, could only welcome—the insertion of such a statement.

#### *Contract Rate for Juvenile Oddfellows.*

Dr. Bone again brought forward, on behalf of the Medico-Political Committee, a recommendation for approval by the Representative Body of a standard rate of 8s. 8d. per head per year, including drugs, for the remuneration of medical practitioners for medical attendance and medicine for juvenile members of the Manchester Unity of the Independent Order of Oddfellows. The recommendation added that the Council be authorized to approve a slightly lower rate than 8s. 8d. per head per year, for a time to be definitely stated, for application in any area in which it is satisfied that, owing to economic conditions, the standard rate is not feasible; and that it be an essential part of this arrangement that there must be free choice of doctor by patient and of patient by doctor. This recommendation had been before the Insurance Acts Committee, which had approved it.

Dr. Johnson, who entered a strong protest when this matter was previously before the Council, repeated his objections. Practitioners in Lancashire to whom he had spoken were unanimously against the proposal. They had accepted insurance practice because they felt that it included a class of case which hitherto perhaps had not had proper care and treatment; it was not altogether a financial arrangement. But this was purely a financial matter, and the element of sympathy did not come in. These people were of the better-off artisan class, and a fee of 6s. 6d. (after deducting the proportion for medicine) was wholly inadequate.

Dr. Walker thought it would be a fatal error to pass this recommendation. He was surprised to hear that two committees of the Association approved it. There was no demand whatever from the medical profession. The request came from the Manchester Unity, which was naturally anxious to conclude a good bargain. If this were passed it would spread like wildfire to other societies. When the question of dependants under the Insurance Act came up, or when the Insurance capitation fee was to be readjusted, how would the profession stand after accepting a capitation fee of 6s. 6d. in this instance, for attendance on persons, including young children, who required more attention than the average insurance patient?

Dr. Douglas supported the protest, and considered the figure ridiculous in comparison with that paid by the Post Office (8s. 6d.), remembering that this latter was for attendance on a favoured population who had passed an entrance medical examination. Dr. Manknell said that the Association had put the clock back for fifty years. Other societies would soon be demanding the same privilege. Dr. Wallace Henry said that in the vast majority of lodges the proposed fee of 8s. 8d. would mean an increase—in many a considerable increase—on the fee hitherto obtaining. It had always been made clear that the profession was seeing these dependants at a lower rate because they were not receiving State aid. The vast majority of the members of the profession who were doing this work would be advantaged by what was now proposed. Dr. Stevens joined in opposition to the proposal. It was an extension of contract practice against which the Association should set its face.

Dr. Dain said that the Insurance Acts Committee decided in favour of this with only four dissentients. It had to be borne in mind that a great deal of minor ailment work among children was now covered by the school clinics. Among this class of persons there was not—as there was in insurance practice—an increasing number of disabled persons drawing certificates for years. There were no certification rules, and there was no disciplinary procedure. His committee had felt that it would not be difficult to combat any suggestion that this fee was in any respect a standard for the fee to be paid in national health insurance.

Dr. Bone said that this fee was in the interests of the doctors primarily affected. It had been argued that acceptance might prejudice negotiations with the Ministry of Health in respect to the insurance capitation fee, but he felt that he would have no difficulty in arguing that the fee compared favourably with the 9s. fee, having regard to the fact that the Oddfellows fee was for a restricted service, there were no certificates, no questions of discipline, no records, and that these juveniles between the age of 6 and 16 did not require an attendance equal to the average required by the population at all ages.

Among this class of persons the incidence of sickness was less, not greater. The recommendation was approved.

#### *Radiation and Electrical Treatment by Untrained and Unqualified Persons.*

The Science Committee brought forward a communication from Dr. C. B. Heald urging the need for consideration by the medical profession of treatment by radiant energy and electricity.

Dr. Hawthorne, who acted in the absence of Mr. Souttar, chairman of the committee, said that the report on this subject bore both on the need for giving medical students instruction in these methods and on the risks involved to the public when such methods were employed by untrained and unqualified persons.

On the first of the committee's recommendations, that a communication be addressed to the General Medical Council pointing out the need for giving medical students some such instruction, Sir Robert Bolam thought this an unnecessary recommendation, as the General Medical Council had been insisting for two years on the necessity of this particular thing in this particular way. Mr. McAdam Eccles said that in most of the London schools lectures were given on these methods. Dr. Hawthorne, in view of what had been said, withdrew the recommendation.

Another recommendation, after some slight revision, was carried, asking the Representative Body to express the opinion that in view of the risks to the public involved in the use of electricity and radiation as methods of treatment by untrained and unqualified persons it was desirable that suitable courses of training should be organized under medical direction for persons who wished to administer this form of treatment, that persons who had satisfactorily followed such a course should be entitled to have their names entered on an approved roll, that one of the conditions attached to admission to and maintenance on the roll should be abstention from the treatment of any patient except on the responsibility and under the general supervision of a registered medical practitioner, that the treatment in every case should be under such supervision, and that patients requiring such treatment should be referred only to persons whose names are on the approved roll.

#### *Remuneration in Certain Academic Posts.*

The Council considered a report of the recent conference with representatives of medical schools on the question of the remuneration of non-professorial medical teachers and laboratory and research workers (*Supplement*, February 18th, p. 45). Dr. Hawthorne said that the Science Committee saw the force of the argument presented at the conference that the universities were not in a position to pay salaries on the lines suggested in the British Medical Association's scale, and that there were other considerations than that of remuneration, which did not apply to similar posts under public health authorities. It was also recognized that the academic bodies were paying juniors more than formerly.

It was proposed by the Science Committee:

That it be recommended to the Representative Body that the scale of salaries relative to non-professorial medical teachers, laboratory, and research workers should not apply to academic appointments in universities and medical schools where these appointments are of a temporary character and where the duties attached to the posts are in direct connexion with the advancement of the practitioner's knowledge and experience in the particular branch of work in which he proposes to cultivate.

Sir Robert Bolam hoped for an assurance that there would be a liberal interpretation of the word "temporarily" in the policy of the Association relating to what were known as Grade III workers, "comprising those who are junior workers temporarily employed on probation." He also discussed other points, which, however, Dr. Hawthorne said, were not raised at the conference. What the conference had to answer, said Dr. Hawthorne, was simply: What are the conditions which must be fulfilled before the Association will accept advertisements for academic posts? The committee had endeavored to answer that question, but he hoped that Sir Robert Bolam would furnish a memorandum relating to the other matters which he had advanced. The recommendation was agreed to.

#### *The Co-ordination of Hospital Provision.*

Mr. McAdam Eccles, chairman of the Hospitals Committee, presented to the Council a memorandum [to be printed in the Annual Report of Council in the next *Supplement*] setting forth a scheme for the co-ordination of hospital provision. He said that the scheme was for the co-operation of voluntary hospitals with municipal hospitals, and he desired that the Council should acknowledge the great amount of work that Sir Richard Luce had put into this report. The Hospitals Committee had set out certain definite resolutions which it hoped might be for the guidance of the Government, but at that late hour in the Council's proceedings he would not do more than ask the members to study the report for themselves. There was one small point—a matter of nomenclature—about which he was not quite happy—namely, the term "central or base hospital" to describe the institution around which other hospitals were grouped. The Council had in a previous discussion expressed a preference for this term rather than "parent or primary," but the word "central" was considered still not very suitable, while "base" had a suggestion of the great war.

It was agreed by the Council that the scheme be adopted and submitted to the Minister of Health, together with the resolutions of the Council at its previous meeting (*Supplement*, February 25th, p. 61) in connexion with any legislation that the Minister might propose to introduce on the matter.

#### *The Charities Trust Fund.*

Dr. J. F. Walker, for the Charities Committee, brought forward a recommendation, among others, that the sum of £300 be forwarded to the Council of Epsom College with a request that £200 be utilized for the purpose of contributing towards the education of the son of a medical woman, understanding that this would secure the admission of the son of a medical man as an exhibition scholar. The circumstances of the case have already been set out (*Supplement*, March 17th, p. 87). A medical woman, whose husband (a layman) had had to retire from business on account of ill health, was unable to obtain admission for her son as an exhibitor at Epsom because the Act of Parliament governing the constitution of the college does not provide for the admission as an exhibitor of the son of a medical woman by a lay husband. There was the greatest goodwill on the part of Epsom College, which, Dr. Walker had every reason to believe, would agree with the conditions on which this sum was voted, but in awarding its ordinary exhibition scholarships it was bound by the terms of the statute.

Dr. Lyndon said that Epsom College could only alter the position by a new Act of Parliament, which would be a very serious matter. There were complications which arose out of this question—for example, whether the widow of a medical woman could put in a claim for a grant or pension.

The recommendation was agreed to, and further amounts were allocated to other charities. Dr. Walker remarked that the relations between the British Medical Association and the governing bodies of the various medical charities were now most friendly, and any feeling that the Association was encroaching on their preserves was passing away.

#### *Other Business.*

Reports were made by the Ethical, Naval and Military, and Office Staff Superannuation Committees which gave rise to no discussion. An important report of the conference with the Society of Medical Officers of Health, which involved the question of the modification of the scale of salaries, was postponed until the next meeting of the Council, because the two members of Council elected by the public health service members were not then in their places. The chairman of the Science Committee (Mr. Souttar) and Dr. Wallace Henry were appointed, at the invitation of the Standing Committee (General Merchandise) of the Board of Trade, to confer with that body on the question as to whether imported surgical instruments and dental supplies ought to hear an indication of origin under the Merchandise Marks Act.

It was left to the Chairman of Council and the Medical Secretary to adjust the draft Annual Report of Council in accordance with the decisions of the day's meeting, and the Council rose at 7.30 p.m., after a sitting which, with two short intervals, had lasted from 10 a.m.

## British Medical Association.

## CURRENT NOTES.

## Sir Dawson Williams.

SYMPATHETIC reference to the death of our late Editor appears in the *Journal of the American Medical Association* for March 31st. After briefly recalling Sir Dawson Williams's long connexion with the editorial work of the *British Medical Journal*, our contemporary says:

"Sir Dawson had done much to develop the periodical to the high place that it held in medical journalism. In medicine he was recognized as omniscient, and his ability to develop the writings of others was the subject of universal comment. In a recent number of the *British Medical Journal* leading medical men from all over the world pay him the tribute that was his due for his contribution to the promotion of medical knowledge. To these tributes the *Journal of the American Medical Association* wishes to add its recognition of his notable work. His constant willingness to be of assistance in campaigns against fraud and folly and in promoting the friendly relationships which should and do exist among intelligent scientists on both sides of the Atlantic was an inspiration."

## Conference of Medical Staffs of Voluntary Hospitals.

The recent rapid growth in the number of contributory schemes for hospital benefit all over the country is giving much concern to the Council of the Association. Hardly a day passes but some new scheme is reported or some new and unexpected development is complained of. It is clear that the direct and indirect effects of these schemes on the hospitals, on the public, and on the whole medical profession are far from being appreciated as they should be. The Council has therefore deemed it advisable to call a conference of the medical staffs of voluntary hospitals in order that various principles, dangers, and difficulties involved may be discussed by those of the profession who are most intimately concerned. Voluntary hospitals (including cottage hospitals) are being asked to send representatives to the conference in the following proportion: Up to 100 beds, 1 representative; 100 to 200 beds, 2 representatives; 200 to 300 beds, 3 representatives; 300 beds and over, 4 representatives. The conference will be held in the Association's House, Tavistock Square, London, W.C.1, on Wednesday, June 6th, at 2 p.m.

## Middlemore Prize, 1929.

The Middlemore Prize consists of a cheque for £50 and an illuminated certificate, and was founded by the late Richard Middlemore, F.R.C.S., of Birmingham, to be awarded for the best essay or work on any subject which the Council of the British Medical Association may from time to time select in any department of ophthalmic medicine or surgery. The Council is prepared to consider an award of the prize in the year 1929 to the author of the best essay on the following subject: "The clinical study of the vitreous body, its swellings, contractions, opacities, and reactions to toxic invasion; with special reference to glaucoma and detached retina." Essays submitted in competition must reach the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, by December 31st, 1928. Each essay must be signed with a motto and accompanied by a sealed envelope, marked on the outside with the motto, and containing the name and address of the author. In the event of no essay being of sufficient merit, the prize will not be awarded in 1929.

## Election of Central Council.

The attention of Division and Branch secretaries and members generally is drawn to the announcement in the Table of Dates under "Association Notices" (*Supplement*, p. 133) that nomination papers for election of the twenty-four members of Council by the grouped Branches in the British Isles are now available on application to the Medical Secretary.

## Thank-offering to B.M.A. Charities Fund.

A member of the British Medical Association who desires to be anonymous has sent a cheque for £50 to the Sir Charles Hastings Fund, as a thank-offering for twenty-five years of health, happiness, and reasonable success in practice.

## Association Notices.

## ELECTION OF REPRESENTATIVE BODY.

THE Council has formed the Divisions into the constituencies for election of the Representative Body, 1928-29, shown below.

It is a matter for the Executive Committee of the Division (or, where the Constituency comprises more than one Division, for a joint meeting of the Executives of the Divisions) to decide whether the Representative(s) and Deputy-Representative(s) shall be elected by a *General Meeting* of the Constituency or by *Postal Vote*. The meeting must be called (or, where the election is by voting papers, these must be issued) by the Secretary of the Division (or, in the case of Constituencies comprising more Divisions than one, by the Secretary of the Division containing the largest number of members).

The Representatives and Deputy-Representatives must be elected not later than Saturday, May 19th, and their names forwarded to the Head Office not later than Thursday June 7th.

## CONSTITUENCIES FOR ELECTION OF REPRESENTATIVE BODY, 1928-29.

## (I) CONSTITUENCIES IN THE BRITISH ISLES.

Council by grouped Branches in British Isles; and  
(ii) 2 Public Health Service Members of Council, and  
4 Representatives of Public Health Service in Representative Body.

PUBLICATION IN BRITISH MEDICAL JOURNAL SUPPLEMENT of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.

June 2, Sat. Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members.

Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).

June 7, Thurs. Names of Representatives and Deputy Representatives must be received at Head Office by this date.

June 13, Wed. Council.

June 21, Thurs. Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.

June 30, Sat. Supplementary Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.

July 4, Wed. Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.

July 20, Fri. Annual Representative Meeting, Cardiff, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.

July 21, Sat. Annual Representative Meeting, Cardiff.

July 23, Mon. Council, Cardiff.

Annual Representative Meeting, Cardiff.

July 24, Tues. Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.

July 25, Wed. Council, Cardiff. Conference of Honorary Secretaries, Cardiff.

Meetings of Sections, etc., Cardiff.

July 26, Thurs. Meetings of Sections, etc., Cardiff.

July 27, Fri. Meetings of Sections, etc., Cardiff.

ALFRED COX, *Medical Secretary.*

DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.—A social meeting of the West Dorset Division will be held on Thursday, April 26th, at Corfe Castle, at 3 p.m., when Dr. G. Dru Drury will briefly describe the history and architecture of the castle. Visits will be paid also to the parish church of St. Edward the Martyr and to Church Knowle and Bnrnstone Manor House.

GLASGOW AND WEST OF SCOTLAND BRANCH: Ayrshire Division.—The annual meeting of the Ayrshire Division will be held in the Infirmary, Kilmarlock, on Monday, April 23rd, at 3.30 p.m. Agenda: (1) Election of office-bearers; (2) appointment of representatives to (a) Branch Council, (b) the Representative Body, (c) County Maternity and Child Welfare Committee; (3) annual report; (4) Messrs. Kodak, Ltd., will show five medical cinematograph films nt 4 p.m.

**METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.**—A meeting of the Camberwell Division will be held at St. Giles's Hospital, Camberwell, on Tuesday, April 24th, at 9 p.m. Dr. Guy Boussfield (St. Giles's Hospital) will read a paper on modern methods of combating diphtheria.

**METROPOLITAN COUNTIES BRANCH: CHELSEA DIVISION.**—A meeting of the Chelsea Division will be held on Wednesday, April 25th, at 4.15 p.m., in the Fulham Town Hall, when Dr. Carey Coombs, physician to the Bristol General Hospital, will give an address on heart attacks. Ten at 4 o'clock.

**METROPOLITAN COUNTIES BRANCH:** HENDON DIVISION.—The annual meeting of the Hendon Division takes place on Friday, April 27th, at 8.30 p.m., at Hendon Cottage Hospital.

**METROPOLITAN COUNTIES BRANCH: KENSINGTON DIVISION.—A**  
clinical meeting will be held by the Kensington Division on  
at 8.15 p.m., at St. Mary Abbott's  
firmly), Marloes Road, W 8, (three  
High Street Station). Agenda: (1)

Minutes; (2) election of representatives in Representative Body and on Branch Council, and nomination for Central Council; (3) cases will be shown and demonstrated by the visiting staff, Dr. Remington Hobbs, and the assistant staff.

**NORTH WALES BRANCH.**—The spring meeting of the North Wales Branch will be held at Llandudno on Tuesday, May 1st.

**OXFORD AND READING BRANCH: WINDSOR DIVISION.**—A public address entitled "Some facts, fads, and faneicns concerning food: what should we eat?" will be given by Dr. S. H. Daukes at the Guildhall, Maidenhead, to-day (Friday, April 20th), at 8 p.m.

**SOUTH-WESTERN BRANCH.**—An intermediate meeting of the South-Western Branch will be held at the Royal Cornwall Infirmary on Thursday, May 21th. Will members kindly inform the honorary secretary as soon as possible of any cases, notes, papers, specimens, or notices of motion they may wish to bring forward in order that they may be placed on the agenda paper? It is advisable that papers should be as short as possible.

**SUSSEX BRANCH: BRIGHTON DIVISION.**—A conjoint meeting of the Brighton Division with the Sussex Law Society will be held at the Queen's Road Dispensary on Thursday, April 26th, at 8.15 p.m., when the honorary secretary of the Brighton Division, Dr. L. A. Parry, will read a paper on criminal abortion, with special reference to the case of Dr. Collins. It is hoped that the subsequent discussion will elicit the views of both professions.

**SUSSEX BRANCH: HASTINGS DIVISION.**—The annual dinner of the Hastings Division will take place at the Royal Victoria Hotel to-day (Friday, April 20th), at 7.15 for 7.30 p.m. Tickets 10s. 6d.

The Council has made each Division and Division-Branch outside the British Isles an independent Constituency, entitled to elect one Representative and one or more Deputy-Representatives.

**TABLE OF DATES.**

**April 28, Sat.** Annual Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.  
Last day for receipt at Head Office of nominations: (i) by a Division or not less than 3 members for election of 24 members of Council by grouped Branches in British Isles; and (ii) for election of 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.

**May 12, Sat.** Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.  
Voting papers posted from Head Office, where there are contests in division elections.

**May 15, Tues.** Motions by Divisions and Branches for A.R.M. agenda matters of which two months' notice must be given must be received at Head Office by this date.

**May 19, Sat.** Last day for receipt at Head Office of voting papers for election, where there are contests, of (i) 24 members of

## Meetings of Branches and Divisions.

## GLOUCESTERSHIRE BRANCH.

A MEETING of the Gloucestershire Branch was held at the General Hospital, Cheltenham, on March 8th, when the president, Mr. C. L. Coone, occupied the chair.

Dr. ALLMAN POWELL showed the following cases. (1) An unusual case of glycosuria in a man who had undergone a cataract operation, who had been reduced to 600 calories per day, and was receiving 180 units of insulin in twenty-four hours. On the fourth day he became unconscious, but quickly came round on glucose and adrenaline. He was apparently the pituitary type of case, and could now take 2,000 calories per day with 80 units insulin, and remain sugar-free. (2) A girl, aged 23, with combination of psoriasis and arthritis. The nail beds were much affected with psoriasis, pushing the nails off. When the psoriasis was cured the arthropathy disappeared. The Wassermann reaction was negative. The main treatment had been chrysarobin and ultra-violet light. (3) A woman, aged 31, with profound secondary anaemia. An opaque meal showed nothing, but gastric analysis revealed complete achlorhydria. The Wassermann reaction was negative.

Mr. J. S. ROBINSON showed the following cases. (1) A girl after open operation for fracture of the trochlear process of the lower end of the humerus. The fragment had been attached simply by a tag of periosteum. The result had been very good. (2) A case of one variety of "tennis elbow," where the orbicular ligament had been nipped and adhesions formed. This case was speedily cured by manipulation. (3) Two cases of Pott's caries. The first patient, thirteen months after a spine-grafting operation, was able to walk four miles without support. The second showed the type of support required four months after a spine-grafting operation. (4) A man after intrapelvic rupture of urethra, caused nine weeks previously by being crushed against a wall by a motor car. An operation was performed within five hours, and no trouble was now experienced by the patient in passing urine. (5) A man after open operation for bad fracture of patella, which had been stitched with catgut. The great increase in size of the patella after operation was very noticeable. (6) A man after operation for recurrent dislocation of the shoulder-joint. The dislocation was so easily and frequently produced as to be a serious disability. Clarendon's operation had been performed with complete success.

In the discussion which followed the PRESIDENT mentioned a recent case he had seen of dislocation of the sacro-iliac joint and symphysis pubis after accident, one half of the pelvis being three-quarters of an inch above the other. No treatment had been attempted.

Mr. J. S. ROBINSON then read a paper on three acute abdominal conditions of childhood—namely, acute intussusception, pneumo-coecal peritonitis, and acute appendicitis. Many points in differential diagnosis were brought out, and the treatment and prognosis were discussed.

## HYDERABAD BRANCH.

At the annual general meeting of the Hyderabad Branch on March 9th, at the Residency Hospital, Hyderabad, the annual report and the accounts for 1927 were adopted, on the proposition of Dr. COOLAWALA, seconded by Dr. WAGHARAY.

The following members were elected as officers for 1928:

President, Professor M. G. Naidu. Honorary Secretary and Treasurer, Lieut.-Colonel W. M. Anderson, C.I.E., I.M.S.

An interim report on the proposal to construct a tuberculosis sanatorium was read, and as it was shown that the Addigamet site would not be available, the Council was asked to search for another suitable site.

On the proposition of Dr. LATEEF SAYEED, seconded by Dr. TAYLOR, Dr. E. H. Hunt was appointed as a representative of the Branch to attend the Annual General Meeting of the Association at Cardiff in 1928.

## LANCASHIRE AND CHESHIRE BRANCH: BLACKBURN DIVISION.

At a meeting of the Blackburn Division Dr. REMINGTON HOBBS gave a lecture on puerperal sepsis and its treatment. There was a good attendance, and the lecture was appreciated by all present. The vote of thanks was proposed by Dr. JEFFREY RAMSAY and seconded by Dr. AITKEN.

## METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.

At a meeting of the South-West Essex Division on April 3rd a letter was read from the secretary of the London Public Medical Service concerning an offer made through the Medico-Political Committee of the British Medical Association by the directors of the Independent Order of Oddfellows of 8s. 8d. per head per annum for medical attention and medicine supplied to juvenile members of the Order. In the view of the London Medical Service this was inadequate.

Dr. PANTING explained the reason which induced the British Medical Association committees to agree to the scale, and it was decided to take no action in the matter.

A letter was read from Dr. Ambrose, H.M. coroner, regarding the payment for reports by medical practitioners at the request of coroners. As such reports are very seldom called for in the area, it was decided not to approach the Essex County Council on the matter at present.

Dr. R. M. BRONTE then gave a most interesting and humorous address. He discussed cut throat, and emphasized the impossibility of distinguishing whether the wound was homicidal or suicidal. Some remarkable photographs of cases were shown. In one the wound—proved beyond doubt from collateral evidence to be self-

inflicted—was circular, penetrating between the skull and atlas, and causing a haemorrhage between the cerebellum (which was partly exposed) and the spinal cord. No wound in the throat was too severe to be suicidal or too trivial to be homicidal. He discussed criminal abortion, pointing out that it was quite possible for a woman herself to introduce an instrument into her uterus. He told of a case where, on examining a woman very shortly after her death in a bath, he had opened the abdomen and found the end of a gum-elastic catheter projecting through the uterine wall. The importance of always opening the stomach when making a *post-mortem* examination was emphasized.

After a general discussion a warm vote of thanks was accorded Dr. BRONTE.

## OXFORD AND READING BRANCH: OXFORD DIVISION.

The second meeting of the year of the Oxford Division was held in the Radcliffe Infirmary on March 28th. Dr. MONTGOMERY was in the chair, and forty-two members were present.

Dr. COLLIER, sen., related an incident in the life of the late Dr. C. H. Bloxsome of Fairford, as far back as 1887, concerning the diagnosis of anthrax on the forearm of a journeyman butcher, and the controversy that raged in the neighbourhood over the diagnosis, which was subsequently confirmed by independent examinations (see *British Medical Journal*, March 17th, p. 476).

Dr. STOBIE showed a woman, aged 26 years, on whom, following three and a half years of illness, two of which had been spent in bed, thoracoplasty in two stages had been performed by Mr. J. E. H. Roberts at the Brompton Hospital five months previously with, to date, satisfactory results. The sputum was much diminished in amount since the operation, and no longer yielded tubercle bacilli on examination. The patient was able to be up five to six hours daily and to walk about half a mile at a time.

## Recent Aspects of Biological Therapy.

Dr. STANLEY WHITE gave an address on some recent respects of biological therapy. Following the exhibition of a cinematograph film depicting in a graphic way the manufacture of diphtheria and other antitoxins, the preparation of vaccines, and the manufacture of calf lymph, he elaborated certain points in connexion with recent advances in biological therapy. He explained the method utilized in the concentration of antitoxin, and proceeded to discuss at some length the Schick and Dick tests. He pointed out that the work of the Dicks in showing for the first time that the streptococcus can be made to give up its toxin was perhaps the greatest advance since the principles of blood serum therapy were first put forward by Behring in 1891. Dr. White discussed the recently introduced scarlet fever antitoxin, and having explained that these streptococcal toxins were very difficult to differentiate, stated that it had been possible to prepare not only a specific crysipelas antitoxin, but also a specific puerperal streptococcal antitoxin. Having briefly referred to measles and to the recent work of Ferry, he went on to speak of vaccine therapy, particularly in regard to the treatment of rheumatic conditions, and also of respiratory affections. He referred to the work being done in several large public schools in regard to active immunization against influenza and its sequelae, and also touched upon the question of non-specific therapy. In this connexion he was of the opinion that T.A.B. vaccine offered perhaps the best means of introducing a definite amount of foreign protein into the blood stream, because the dose and the reaction could be carefully controlled.

The lecturer then referred to the work of Horder and Ferry in their attempt to prepare an ideal antigen. These products, which had been designated immunogens, differed from vaccines in that they contained practically no protein or toxin, and were free from bacterial cells. Their antigenic value, however, was very high, as demonstrated by the complement fixation and agglutination tests. Clinically, also, the product had been shown to be very useful, notably in acute conditions. This was no doubt due to the fact that they were rapidly absorbed, and, if necessary, a second dose could be given in twelve hours.

Dr. White next made a reference to tuberculosis, notably with regard to the diagnosis of the disease, and at the same time briefly referred to sanocrysin as an interesting example of chemotherapy; at least, this was what Moellgaard had in mind when he originally introduced this gold salt. Recent experience, however, suggested that sanocrysin was probably not a direct bactericide, and may produce its results by a tuberculin reaction. He referred to the work of Dr. Stobie at the Osler Pavilion, and agreed with him that in certain forms of pulmonary tuberculosis, notably the exudative type, sanocrysin did appear to be of considerable service. Dr. White devoted the remainder of his lecture to a brief description of the so-called "toxic idiopathies." He discussed various forms of allergic diseases, and explained how it was possible to immunize against such conditions as horse asthma, hay fever, etc. The lecture was profusely illustrated by lantern slides, which added considerably to the interest of the occasion.

In the discussion which followed Dr. White's paper, Dr. COLLIER, Dr. ISABELLA LITTLE, and Professor GUNN took part, and on the motion of Professor GUNN, seconded by Mr. COUNSELL, a unanimous vote of thanks was accorded to the lecturer.

## SOUTHERN BRANCH: PORTSMOUTH DIVISION.

A MEETING of the Portsmouth Division was held at the Queen's Hotel, Southsea, on April 12th, when the final address of the winter session was given by Dr. J. STANLEY WHITE on recent aspects of biological therapy; it was illustrated by lantern and cinematograph. The discussion turned largely on difficulties arising out of some of the new methods of treatment. On the proposition of Colonel Brook, seconded by Mr. MARNY, a vote of

thanks was accorded to the speaker. The meeting was very interesting, and the discussion had eventually to be closed owing to the late hour. Forty-seven members attended, of whom twenty-seven sat down to supper.

#### ULSTER BRANCH: BELFAST DIVISION.

At the close of the graduation ceremony at Queen's University, Belfast, on April 3rd, the medical graduates assembled in the large hall of the College, on the invitation of the chairman of the Division, Mr. T. S. Lewis, in order that he might welcome them on entering the profession. He took the opportunity to invite them to join the British Medical Association, his plea being supplemented by a cogent and practical speech by Dr. Leslie. Each of the twenty medical graduates was presented with a copy of the *Handbook for Recently Qualified Medical Practitioners*.

The Division was honoured by the presence of the Vice-Chancellor of the University and the Dean of the Medical Faculty, Professor Symmers.

#### BOOKS ADDED TO THE LIBRARY.

The following books were received by the Library of the Association during February and March, 1928:

- Altrock, K.: *Kleine Sport-Kunde*. 1928.  
Aveling, E.: *Directing Mental Surgery*. 1927.  
Behrood, M.: *Surgical Diseases of the Gall-bladder, Liver, and Pancreas*. 1927.  
Beuchers, E.: *Allgemeine u. Spezielle Chirurgie des Kopfes*. 1926.  
Bousfield, P. and W. R.: *The Mind and its Mechanisms*. 1927.  
Brown, A. R. L.: *Medical Electricity for Students*. Second edition. 1927.  
Burn, J. H.: *Methods of Biological Assay*. 1928.  
Burt, C.: *The Measurement of Mental Capacities*. 1927.  
Cabot, R. C.: *Physical Diagnosis*. Ninth edition. 1927.  
Chesney, A. M.: *Immunity in Syphilis*. 1927.  
Chiray-Lebon: *Les Insuffisances pancréatiques*. 1926.  
Chiray-Pareil: *La Vésicule Biliaire*. 1927.  
Cokinis, A. J.: *Mesenteric Vascular Occlusion*. 1926.  
Cope, Z.: *Clinical Researches in Acute Abdominal Diseases*. Second edition. 1927.  
Idem: *Early Diagnosis of the Acute Abdomen*. Fourth edition. 1927.  
Idem: *Treatment of the Acute Abdomen*. 1927.  
Owre, H. W.: *Rheumatology and Surgery of Chronic Arthritis and Rheumatism*. 1927.  
Crawther, J. A.: *Molecular Physics*. Fourth edition. 1927.  
Cumberbatch, E. P.: *Diatheisy*. Second edition. 1927.  
Deutscher, F. and Raul, E.: *Peat and Athletics*. 1927.  
Drouin, H.: *Solubles on Insolubles—le Benzol Bismuth*. 1926.  
Daval, R.-Roux-Bélère: *Radiologie Clinique du Tube Digestif*. I and II. 1927.  
Education of Boys in the Subject of Sex. 1927.  
Einhorn, M.: *The Duodenal Tube*. Second edition. 1926.  
Idem: *La Tube Duodénal (traduit G. Monod)*. 1927.  
Elder, W.: *Studies in Psychology*. 1927.  
Fisher, R.: *Treatment by Manipulation*. Second edition. 1928.  
Ford-Crothers-Pulnam: *Birth Injuries of the Central Nervous System*. 1927.  
French-Nuttall: *Medical Laboratory Tests*. 1926.  
Funkhouser: *Respiratory System*. 1927.  
Ghosh, B. N.: *Hygiene and Public Health*. Sixth edition. 1927.  
Goobey, Sir K.: *Diseases of the Gums and Oral Mucous Membrane*. Third edition. 1928.  
Goldschmidt, R.: *Physiologische Theorie des Verzehung*. 1927.  
Goodall and Washbourn: *A Textbook of Infectious Diseases*. Third edition. 1928.  
Green, G. H.: *The Terror Dream*. 1927.  
Guy's Hospital Reports. Vol. 78, I. January, 1928.  
Haire, N.: *Hymen: or the Future of Marriage*. 1927.  
Hall, Sir John: *Trial of Adelaide Bartlett*. 1927.  
Hartman, N. Bishop: *Aids to Ophthalmology*. Seventh edition. 1928.  
Hershelmer, J. and Haggard, H. W.: *Noxious Gases*. 1927.  
Hogben, L. T.: *Comparative Physiology of Internal Secretion*. 1927.  
Hopewell-Ash: *On Middle Age and Keeping Young*. 1928.  
Horsley, J. S.: *Surgery of the Stomach and Small Intestine*. 1926.

#### Naval and Military Appointments.

##### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Captain C. T. Baxler to the *President* for special duty outside Admiralty, temporarily.

Surgeon Commanders A. G. McKee to the *Constance*; H. H. Omsby to the *Kennock*; A. G. V. French to the *President* for three months' post-graduate course; J. R. A. Clark-Hall to the *Victor* for Devonport Dockyard; A. B. Cox to the *Corryvreckan*.

Surgeon Lieutenant Commander A. B. Grant to the *St. Fiocent*. Surgeon Lieutenants T. J. Prendergast to the *Penbrooke* for R.M. Infirmary, Chatham; S. L. Lord to the *Furione*; J. Hamilton to the *Keut* on commissioning for trials; E. O'Reilly to the *Victory* for R.M. Infirmary, Portsmouth; E. S. Bolton to the *Constance*.

Dr. G. H. Egan has entered as Surgeon Lieutenant for short service and appointed to the *Victory* additional for Haslar Hospital for course of instruction.

##### ROYAL AUSTRALIAN NAVY.

Surgeon Commander A. S. MacKenzie to H.M.A.S. *Australia* for continuation of trial.

Surgeon Lieutenant C. A. Downward to the *Victory* for R.N. Hospital, Haslar.

##### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Sublieutenant T. T. Dolman to the *Champion* for fourteen days' training.

##### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel A. E. B. Wood, R.A.M.C., Regular Army Reserve of Officers, to be Major whilst re-employed under Article 507 (b) Royal Warrant for Pay and Promotion, 1926, and relinquishes the rank of Lieutenant-Colonel.

Major E. C. Stoney is re-employed under Article 507 (b) Royal Warrant for Pay and Promotion, 1926.

Temporary Lieutenant F. R. How relinquishes his commission.

##### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenants H. B. Trapp to Aeroplane and Armament Experimental Establishment, Martlesham Heath; R. W. White to R.A.F. Officers' Hospital, Exbridge.

The following Flying Officers to be Flight Lieutenants: R. J. I. Bell and R. G. Freeman.

Flying Officer P. B. L. Potter to Special Duty List on appointment to a short-service commission.

Flying Officer P. H. Perkins is granted a permanent commission in this rank.

##### INDIAN MEDICAL SERVICE.

Major R. M. Kharegal, an officiating Agency Surgeon, is posted as Medical Officer and ex-officio Vice-Consul, Sistan.

Consequent on the grant of leave to Colonel J. D. Graham, C.I.E., Lieut.-Colonel F. P. Mackie, O.B.E., Director, Haffkine Institute, Bombay, is appointed to officiate as Public Health Commissioner with the Government of India.

The undermentioned officers are permitted to retire from the service, subject to His Majesty's approval: Colonel C. R. Bakht, K.H.P., and Colonel K. V. Kulkar, C.I.E.

##### TERRITORIAL FORCE.

##### ROYAL ARMY MEDICAL CORPS.

Captain J. P. Clarke to be Major, with precedence as from November 20th, 1927.

Lieutenants to be Captains: W. B. A. Lewis; D. L. Kerr; J. C. Adam, with precedence as from November 17th, 1927; W. A. Ramsay, with precedence as from December 20th, 1927.

##### COLONIAL MEDICAL SERVICES.

Dr. T. Clunie to be Assistant Medical Superintendent, Colonial War Memorial Hospital, Fiji. Dr. H. U. Leembruggen, Provincial Surgeon, Ceylon, appointed Medical Superintendent of the General Hospital, Colombo. Dr. G. B. Walker promoted Senior Sanitation Officer, Nigeria. Dr. A. G. H. Smart appointed Senior Health Officer, Penang, Straits Settlements. Dr. P. R. Sayers, Senior Health Officer, Penang, Straits Settlements. Dr. J. W. Murdoch appointed Second Assistant Medical Superintendent, Central Mental Hospital, Federated Malay States. Dr. R. A. Palfister, Health Officer, Malayan Medical Service, appointed Medical Officer, Malayan Medical Service.

The following appointments have been made by the Secretary of State for the Colonies during the month of March, 1928: Dr. T. F. Anderson, Medical Officer, Kenya; Dr. R. V. Bowles, Medical Officer, Uganda; Dr. V. V. H. Hookai, Assistant Government Medical Officer, British Guiana; Dr. C. J. Austen, Medical Officer, Fiji; Dr. H. M. Boston, Medical Officer, West African Medical Staff, Gold Coast (Achimota College); Captain G. Winter, Medical Officer, West African Medical Staff.

Printed and published by the British Medical Association, at their Office, Tavistock Square, in the Parish of St. Paneras, in the County of London.

# SUPPLEMENT TO THE BRITISH MEDICAL JOURNAL.

LONDON, SATURDAY, APRIL 28TH, 1928.

#### Preliminary.

##### ANNUAL MEETING, CARDIFF, 1928.

1. The Annual Meeting, 1928, commences at Cardiff, Friday, July 20th, under the Presidency of Sir Ewen Maclean, M.D., F.R.C.P., F.R.S.E. This will be the first occasion on which the Presidency of the Association has been held by one who has previously been Chairman of the Representative Body.

##### ANNUAL MEETING, EDINBURGH, 1927.

2. The Council has expressed to the President, Sir Robert Philip, the Hon. Local Secretary, Dr. Fergus Hewat, the Hon. Local Treasurer, Mr. Alexander Miles, their medical colleagues and the many lay persons and authorities who co-operated with them, the thanks of the Association for their efforts in making the 1927 Annual Meeting of the Association a success.

##### THE KING AND QUEEN AND THE EDINBURGH MEETING.

3. The following acknowledgment was received from the Rt. Hon. Lord Stamfordham, Private Secretary to His Majesty The King, to the letter forwarding the resolution passed by the Representative Body meeting in Edinburgh at the time His Majesty The King was in residence in Edinburgh, presenting its humble and loyal duty to the Patron of the Association, and to Her Majesty The Queen:—

"I have submitted to the King and Queen the resolution passed at the Annual Meeting of the British Medical

Association, in Edinburgh, for which I am commanded to express Their Majesties' thanks."

##### NOMINATION OF SIR ROBERT BOLAM AND MR. R. G. HOGARTH, AS VICE-PRESIDENTS OF THE ASSOCIATION.

##### 4. The Council recommends:—

**Recommendation:** That Sir Robert Bolam, F.R.C.P., LL.D., be elected a Vice-President of the Association under Article 40 and By-law 73 in recognition of his services as Chairman of Council of the Association, 1920-27.

##### The Council recommends:—

**Recommendation:** That Mr. R. G. Hogarth, C.B.E., LL.D., F.R.C.S., be elected a Vice-President of the Association under Article 40 and By-law 73 as a recognition of his services as President of the Association for the year 1926-27.

##### ANNUAL MEETING, 1929.

5. In connection with the Annual Meeting at Manchester, 1929, the Manchester Division has nominated Mr. A. H. Burgess as President for 1929-30.

##### The Council recommends:—

**Recommendation:** That Mr. A. H. Burgess, F.R.C.S., M.Sc., Professor of Clinical Surgery, Victoria University, Manchester, Honorary Surgeon, Manchester Royal Infirmary, be elected President of the Association, 1929-30.

## ANNUAL MEETING, 1931.

6. At its July, 1927, meeting the Council considered an invitation from the Eastbourne Division for the Annual Meeting, 1931, to be held at Eastbourne and was also informed by Sir William de Courcy Wheeler that he had been authorised by the Leinster Branch to state that it had in contemplation the issuing of an invitation to the Association to hold its Annual Meeting at Dublin in 1931. The Eastbourne Division and the Leinster Branch were thanked for their invitations and informed of the Council's custom not to tie the hands of its successors too far ahead as regards Annual Meetings, but that both invitations if they still held good would be considered by the new Council in July, 1928.

## HONOURS.

7. The Council has pleasure in announcing that during the present Session honours have been conferred upon the following members, to whom the congratulations of the Association have been sent:—

## Knighthood.

Percy Sargent, C.M.G., D.S.O., F.R.C.S., London.  
Frederic G. Hallett, O.B.E. (Honorary Member).

## RESIGNATION AND DEATH OF SIR DAWSON WILLIAMS.

8. The Council has to record with sorrow the death of Sir Dawson Williams, C.B.E., M.D., which took place suddenly on February 27th, 1928, less than six weeks after his retirement from the Editorship of the *British Medical Journal*, on completing 30 years in that position and a total period of 47 years' connection with the Editorial Department. At its meeting on February 8th the Council expressed profound appreciation of the great services rendered to the Association and the profession by Sir Dawson Williams during his long and distinguished Editorship of the *Journal*, and unanimously resolved to recommend to the Representative Body that in recognition of this work he be elected a Vice-President of the Association. The Representative Body and every member of the Association will join in the regret the Council feels that it is not now possible to demonstrate in this way the affection and gratitude which the Association had for one who served it so long and so well.

## OBITUARY.

9. The Association has to deplore the loss of the following members:—

Name.	Offices held in the Association.
Dr. Julio Valentine Abrines	A Secretary of the Gibraltar Branch.
Dr. Arthur Percy Allan ...	Vice-President of the Surrey Branch.
Dr. Wordsworth Leach	Member of the Yorkshire Branch Council.
Dr. Daniel Elie Anderson ...	Vice-President of Section of Tropical Medicine, 1914.
Dr. Alexander Hugh Freeland Barbour.	Secretary of Section of Obstetric Medicine, 1895; Vice-President of Section of Obstetrics and Diseases of Women, 1898, and President of Section of Obstetrics and Gynaecology, 1906.
Surg.-Rear-Admiral Sir Percy Wm. Bassett-Smith, K.C.B., C.M.G., R.N. (ret.).	Member of Council and of the Naval and Military Committee; Vice-President, 1903 and 1912 of Section of Tropical Diseases, and Vice-President of Navy, Army, and Ambulance Section, 1910.
Dr. Francis Dillon Bennett	A Secretary of the Westminster and Holborn Division.
Dr. Alexander Blackhall-Morrison.	A Chairman and Representative of the Marylebone Division, and a Member of the Non-Panel Committee.
Dr. James Booth-Clarkson ...	A Representative of the Natal Branch.
Dr. Ernest Augustus Boxer, C.M.G.	A Chairman of the Hawkes Bay Division.
Dr. Charles Samuel Brewer, O.B.E.	A Representative of the Birkenhead Division.
Dr. Henry Wm. Langley Browne, O.B.E.	Member of Council, 1899 to 1907, Chairman, 1905-1907; a President of the Birmingham Branch. President of Section of Industrial Hygiene and Diseases of Occupation, 1905.

Dr. Wm. John Franklin Churehouse	A Chairman of the Northamptonshire Division.
Dr. Henry Maercedy. Chute	A Chairman of the King Williamstown Division.
Dr. Robert Corfo ... ..	A Member of the Executive Committee of the Greenwich and Deptford Division.
Dr. Joseph George Garibaldi Corkhill.	A Chairman of the Southport Division.
Dr. Frederic John Wm. Cox	A Chairman of the Altrincham Division; Vice-President of Section of Otolaryngology, 1902.
Dr. John Singleton Darling	Member of Council, 1914-1927, and of the Irish Committee; a Member of the Insurance Acts Committee; Honorary Secretary of the Portadown and West Down Division and a President of the North of Ireland Branch. Vice-President of Section of Obstetrics and Gynaecology, 1909.
Dr. James Davison ... ..	Member of Council, 1909-1910. A President and Secretary of the Dorset and West Hants Branch. Vice-President of Section of Diseases of Children, 1892.
Dr. James Walker Dawson ...	Vice-President of Section of Pathology and Bacteriology, 1927.
Dr. John Hardman Dow ...	A Chairman of the St. Helens Division.
Dr. Albert Davies Edwards	A Chairman of the Bournemouth Division.
Dr. Octavius Robert Ennion	A President of the Cambridge and Huntingdon Branch.
Dr. Septimus Farmer ...	A Representative and Chairman of Bishop Auckland Division.
Sir David Ferrier, F.R.S. ...	A Member of the Metropolitan Counties Branch Council. President of Section of Physiology, 1895.
Dr. Charles Arthur Fraucis	A Member of the South African Committee.
Dr. Herbert Jennings Gibbs	A Secretary of the Malaya Branch.
Dr. Charles Ernest Gooding	Member of the Barbados Branch Council.
Dr. James Edward Gordon	Member of Wiltshire Branch Council, and Deputy Representative of the Salisbury Division; a President of the Branch.
Dr. Thomas Porter Greenwood.	A President of the Midland Branch, and a Chairman of the Kesteven Division.
Mr. Wm. Jones Greer ...	Deputy-Chairman of the R.B., 1919. Member of Council, 1914-1915; a Member of Parliamentary Elections Committee and Contract Practice Sub-Committee; for long Secretary of the Monmouthshire Division. Secretary of Electrical Section, 1908, and Secretary, 1910, and Vice-President, 1921, of Section of Surgery. Chairman, Special Committee on Operative Treatment of Fractures.
Dr. Thomas Clement Guthrie	A Chairman of the Tunbridge Wells Division.
Dr. George Robert Harlaud	A Representative of the South Shields Division.
Dr. Alexander Hodgkinson	President of Section of Laryngology, 1902.
Dr. Arthur Edward Jerman	Member of the Executive Committee of the Dartford Division.
Dr. John Carlyle Johnstone	A Member of the Edinburgh Branch Council.
Dr. John Wm. Keighley, J.P.	A Chairman and Representative of the Blackburn Division.
Dr. Henry Goff Kilner ...	A Member of the Suffolk Branch Council, and a Representative of the West Suffolk Division.
Dr. Henry Ernest Knight ...	A Chairman of the Rotherham Division.

- Dr. Henry Lawrence McKisack. Member of Council, 1908-1909. Honorary Local Secretary, Annual Meeting, Belfast, 1909. A Chairman of the Belfast Division. Vice-President of Section of Medicine, 1910.
- Dr. Digby Mackenzie Macphail, O.B.E. President of the St. Lucia Branch.
- Major-Gen. Sir Wm. Grant Macpherson, K.C.M.G., C.B., LL.D. Member of Council, 1920-1926; Member of Naval and Military Committee, and Chairman of Special Committee on Tests for Drunkenness.
- Dr. Wm. Herbert Lister Marriner. A Vice-President of the Dorset and West Hants Branch, and a Chairman of the Bournemouth Division.
- Dr. Thomas Melbourne Martin. A Chairman of the South Shields Division.
- Dr. James Melvin ... For many years Secretary and Representative of the Rochdale Division; a Vice-President of the Lancashire and Cheshire Branch.
- Dr. Alexander Cameron Miller. A Member of the Scottish Committee.
- Dr. Robert Arthur Milligan. A President and Treasurer of the South Midland Branch.
- Dr. Richard Wilson Mullock. A Chairman of the North Suffolk Division.
- Dr. Albert Edward Norburn. A President of the Bath and Bristol Branch.
- Dr. Alexander Wellesley Finch Noyes. Honorary Librarian of the Victorian Branch, 1909-1915.
- Dr. Edward Albert Officer. A President of the Western Australian Branch.
- Dr. Walter Charles Oram ... Secretary of Section of Electro-Therapeutics, 1912.
- Dr. Laudel Rose Oswald ... President of Section of Neurology and Psychological Medicine, 1912.
- Dr. Francis Barclay Wilmer Phillips. A Member of the South Midland Branch Council.
- Dr. Wm. Smith Porter ... Vice-President of Section of Medicine, 1908.
- Dr. Reginald Wickham Prentice. Member of Dorset and West Hants Branch Council.
- Dr. John Prior Purvis ... A Chairman of the Greenwich and Deptford Division.
- Dr. Frederick Augustus Routh. Member of the Executive Committee of the Tynbridge Wells Division.
- Dr. Wm. Scott, J.P. ... Member of the Border Counties Branch Council; a Chairman of the Dumfries and Gallovay Division.
- Dr. Edward Colby Sharpin. A Member of the South Midland Branch Council.
- Dr. Gerald Theodore Sylvester Sichel. A Representative of the Guildford Division.
- Dr. James Silver ... Member of the Executive Committee of the Portsmouth Division.
- Dr. Charles Lawson Smith. A Chairman of the East Hertfordshire Division.
- Dr. David Turnbull Smith ... A Member of the Lancashire and Cheshire Branch Council.
- Mr. Sidney Maynard Smith, C.B. A Member of the Metropolitan Counties Branch Council. General Secretary of Special Clinical Meeting, London, 1919. Secretary of Section of Diseases of Children, 1908.
- Dr. William Muir Smith, J.P. For 21 years Secretary of Eastbourne Division, and Representative for many years of the Division. A Vice-President of the Sussex Branch.
- Dr. Andrew Stewart ... A Representative of the Queensland Branch.
- Lt.-Col. John Raglan Thomas. Vice-President of Naval and Military Section, 1907.
- Dr. Richard Francis Thomas. A Chairman of the North Glamorgan and Brecknock Division.
- Prof. Wm. Thelwall Thomas. Local Secretary, Liverpool Meeting, 1912; Secretary, 1909, and President, 1913, of Section of Surgery.
- Dr. Wm. Tibbles ... A Member of the Midland Branch Council.
- Dr. Alfred Gladstone Tribe. A Member of the Executive Committee of the North Glamorgan and Brecknock Division.
- Dr. Wm. Joseph Tyson ... Member of Council, 1897-1908 and 1912-1913. Secretary of Section of Public Medicine, 1898, and Vice-President of Section of Medicine, 1907.
- Prof. Francis Wm. Underhill. Member of Oxford and Reading Branch Council.
- Dr. James Wheatley ... A Member of the Public Health Committee and a President of the Shropshire and Mid-Wales Branch.
- Mr. Richard Henry Anglia Whitelocke. A President of the Oxford and Reading Branch; Vice-President of Section of Surgery, 1901, and Vice-President of Section of Diseases of Children, 1922.
- Dr. Samuel Williams ... A Member of the South Wales and Monmouthshire Branch Council and a Chairman of the South-West Wales Division.
- Lt.-Col. Thomas Samuel Beauchamp Williams, I.M.S. (ret.). A Member of the Metropolitan Counties Branch Council and of the Executive Committee of the Westminster and Holborn Division.
- Dr. Wm. David Adams, Dr. Joseph Bartlett Addison, Dr. John Aitken, Dr. Charles McArthur Allan, Dr. John Allan, Dr. Wm. Armstrong, Dr. Hugh Lowrie Askham, Dr. Thomas Edward Atkins, Dr. John Barclay, Dr. James Samuel Frederick Barnett, Dr. Francis Barton, Dr. James Clement Baxter, Dr. George Albert Berkeley-Cole, Dr. Thomas Hill Bishop, Dr. Wm. Hodgson Boazman, Dr. Robert Bowe, Dr. James Cairn Carson Hoyle, Dr. Andrew John Brady, Dr. Edgar Brandon, Dr. Hewlett Breton, Major Charles Hildred Brodribb, I.M.S., Ret., Dr. Henry Gray Brown, Dr. Robert Andrew Brown, Lt.-Col. Robert Tilbury Brown, R.A.M.C., Ret., Dr. Thomas Tomblason Brunyale, Dr. Lewis Thomas Fraser Bryett, Dr. Edmund Patrick Burke, Dr. Thomas Burrow, Dr. David John Stewart Burt, Dr. John Miller Hopkins Caldwell, Surg. Lt.-Col. Lewis Cameron, I.M.S., Ret., Dr. Peter Campbell, Dr. Oliver St. Ledger Campion, Dr. Samuel Burns Carlisle, Sen., Dr. John Wm. Stirling Christie, Dr. Thomas Wm. Clay, Dr. Denis Joseph Coleman, Dr. John Cotton, Dr. Henry Lovett Cumming, Dr. Wm. James Davies, Dr. Doris Louise Delittle, Dr. Joseph Dewar, Dr. Joseph Henry Dickson, Dr. John Donald, Mr. Albert Doran, Dr. Robert Oliver Douglas, Dr. Norman Dowling, Dr. Patrick Joseph Duffy, Dr. Wm. John Robertson Dunn, Dr. Arthur Stayt Dutton, Dr. Frederick Dymoke, Dr. Leslie Meredith Earle, Dr. Lionel Knipe Edmeades, Dr. Charles Guy Etches, Dr. Henry Wm. Evans, M.C., Dr. Wm. Thomas Evans, Dr. Eustace Wm. Ferguson, Capt. Wm. Haig Ferguson, R.A.M.C., Dr. Francis Edwin Field, Mr. Lionel Richard Fifield, Lt. Anthony Keppel Jackson Finch, R.A.M.C., Dr. Gerald Fitzgerald, Dr. Cavendish Fletcher, Dr. Wm. Forrest, Lt.-Col. Robert Basil Boothby Foster, I.M.S., Dr. Andrew Fowler, Dr. Eric George Alexander Wemyes Fulton, Dr. Naham Gallant, Dr. Cuthbert Chapman Gibbes, Dr. Thomas Caspar Gilchrist, Dr. Arthur Carman Gordon, Dr. Henry Bushell Gore, Dr. John Lewis Maitland Govan, Dr. James MacLaren Gray, Dr. Alfred John Gregory, O.B.E., Dr. Charles Cormack Greig, Dr. Montague Shirley Wyatt Gunning, Insp.-Gen. Henry Hadlow, R.N., Ret., Dr. Wm. Hall, Dr. John Hamilton, Lt.-Col. Edward Temple Harris, I.M.S., Mr. John Percy Ingham Harty, Dr. Wm. Alfred Hatton, Dr. Francis Brunel Hawes, Dr. Abraham Haynes, Dr. Wm. Henry, Dr. John Henry Clemens Hicks, Dr. Charles Gaskell Higginson, Dr. Charles Herbert Hill, Dr. Albert Hodge, Dr. Gustav Hoxter, Major Victor Cyril Honeybourne, R.A.M.C., Ret., Dr. George Hownc, Dr. Wm. Horsby, Dr. John Patrick Howe, Dr. Trevor Howell, M.C., Dr. George James Imrie, Dr. Robert Edward Inman, Dr. Wm. Robert Jack, Dr. Marshall Jackson, Dr. Wm. M. James, Dr. Joseph Arthur Jenkinson, Dr. Charles Wynham Jones, Dr. Wm. David Jones, Dr. Yarry Meyrick Jones-Humphreys, Dr. Hugh Percival Joseph, Dr. Walter Russell Judd, Dr. George Kennedy, Dr. Thomas Dick Kirk, Dr. Robert Patrick Archibald Kirkland, Dr. Frederick John Kirkness, Dr. Miles Gordon Kite, Dr. Thomas Knowles, Dr. Allan Ramsay Lacey, Surg. Capt. Michael Joseph Laffan, R.N.,

Ret., Dr. James Laing, Mr. Basil Lang, Dr. Ralph Albert Rogers Lankester, Dr. Henry Dillon Lawson, Dr. John Leach, Dr. Walter Lawrence Liston, Dr. Wm. Cameron Macaulay, Dr. Robert Ernest McConnell, Dr. Colin McDonald, Dr. Edward Patrick McDonnell, Dr. Joseph McGrath, Dr. Douglas Bower McIntosh, Dr. Ewen MacKenzie, Mr. George Welland Mackenzie, Dr. John Morham McLachlan, Col. Fitzroy Beresford Maclean, Dr. Shon Walker Maclean, Dr. John MacMillan, Dr. George McIntyre Maggs, Dr. Vincent John Magrane, Dr. Michael Joseph Mahony, Dr. Angus McPhee Marshall, Dr. George Balfour Marshall, Dr. Thomas Milbourne Martin, Dr. Samuel James Mathewson, Dr. Max Mehliß, Dr. Kenneth Wm. Miller, Dr. Henry Wm. Mills, Dr. James Mitchell, Dr. Robert Duke Monson, Dr. Cyrus Murray Moody, Dr. Wm. Moore, Dr. James Morrison, Dr. George Jackson Muller, Dr. Henry Chester Nance, Dr. Wm. Henry Nash, Dr. Arthur Richard Neckles, Dr. Edith Neild, Dr. Albert Henry Lowman Newstead, Dr. Cyril James Stanley Nicholas, Dr. Malcolm Nicolson Nicholson, Dr. Horace Chnlow Nixon, Sir John O'Connor, K.B.E., Dr. Aelan Anderson O'Hara, Dr. Leo Norton Knight O'Neill, Dr. David Whiteford Orr, Dr. Henry Edmunds Owen, Dr. Alfred Charles Augustus Packman, Dr. Alfred James Meyrick Paget, Surg. Lt. Wm. Edward John Paradise, R.A.N., Dr. Madeline Phyllis Parker, Dr. Robert Henrik Pettersson, Dr. Wm. James Pickup, Dr. Alfred George Clarke Pocock, Dr. Hugh Pugh Jones Price, Dr. Richard Erie Hay Pulipaka, Dr. Charles Wm. Reid, Dr. Brownlow Riddell, Dr. Wm. Henry Roache, Dr. James Robinson, C.B.E., Dr. Thalia Ellsley Roche, Dr. Christopher Rogers, Dr. Thomas Andrew Rothwell, Dr. Amand Jules McConnell Routh, Dr. Beth Russell, Dr. Walter Henry Ryan, Dr. Claude Wm. Scott Saberton, Dr. David Wolesey Scott, Dr. Edward Sharpe, Dr. Noel Francis Shaw, Dr. Wm. Shortt, Dr. David Turnbull Smith, Dr. Colvin Burslem Milson Smith, Col. John Smyth, I.M.S., Ret., Dr. John Somerville, Dr. James Russell Stanley, Dr. Arthur Campbell Stark, Dr. Alexander Stuart, Dr. Percy Carter Boddington Swanseger, Dr. James Taylor, Hon. Wm. Frederick Taylor, Dr. Gertrude Mary Terrell, Dr. John Allan Thom, Dr. Frederick George Thompson, Dr. John Tarratt Titterton, Dr. Percy Langford Townly, Dr. Antonio Joseph James Triado, Dr. Horace Ebbago Utting, Dr. Emile Edouard Charles Vollet, Dr. Fred Newton Walsh, Dr. Thomas Walsh, Dr. Devis Byrne Walshe, Dr. Wm. Henry Warwick, Dr. Hubert Oscar Washbourn, Dr. Eleanor Isobel Wheeler, Dr. Maurice Andrew White, Dr. Robert Nicol White, Dr. George Chisholm Waldemar Williams, Dr. John Pryce Williams, Dr. Alexander David Wilson, Dr. Murray Richard Osmond Wilson, Dr. Sidney Rawson Wilson, Dr. Alfred Thomas Tucker Wise, Col. Frederick Wm. Wright, D.S.O., I.M.S., Ret., Dr. Henry Trouneer Wright, Dr. Alexander Young, Lt.-Col. Andrew Watson Cook Young, I.M.S., Dr. James Murray Young.

## ATTENDANCES.

10. The Council submits a list of attendances at meetings of the Council from the A.R.M., 1927, to April, 1928. (See Appendix I.)

## CHAIRMAN OF COUNCIL.

11. The Council at its first meeting in July, 1927, elected Dr. H. B. Brackenbury Chairman of Council for the three years 1927-30. The thanks of the Council were conveyed to the late Chairman, Sir Robert Bolam, for his brilliant and highly appreciated work as Chairman during his seven years of office, a period which included the acquisition and Royal opening of the present House of the Association.

## EDITOR OF THE "BRITISH MEDICAL JOURNAL."

12. The Council has appointed Norman Gerald Horner, M.A., M.D.Camb., as Editor of the *British Medical Journal*. Dr. Horner has been Assistant Editor since 1916.

## HISTORY OF THE ASSOCIATION.

13. At various times suggestions have been considered to the effect that a History of the Association should be prepared in readiness for its Centenary in 1932. The Council is of opinion that this is very desirable and it hoped to have had the guidance of the late Sir Dawson Williams, than whom no one would have been more competent to edit such a book. The subject is again under consideration and the Council hopes shortly to be able to report that the preparation of the History has been taken in hand.

## B.M.A. HOUSE ARRANGEMENTS.

14. Certain changes in the arrangements for the accommodation of members at the B.M.A. House have been made. The Members' Lounge is now called the Members' Common Room, as being more in accordance with its real usage; steps have been taken to prevent its use by unauthorised persons; and some additional periodicals have been provided. The facilities

for reading, luncheon and tea are being taken advantage of by a steadily increasing number of members.

The Association has established a collection of portraits which has been catalogued by Mr. Muirhead Little, F.R.C.S., and has now been labelled; it also has a collection of autographs, due very largely to the personal efforts of Mr. Muirhead Little, and it is hoped to add to it from time to time autographs of those persons, both medical and lay, who have been associated in some prominent way either with the Association or with the medical profession.

## SOUTH AFRICAN MEDICAL CONGRESS, 1928.

15. In response to the cordial invitation of the Executive Council of the South African Medical Congress, 1928, the first to be held in South Africa under the aegis of the Medical Association of South Africa (British Medical Association), that the Council should appoint delegates to attend the Congress, the Chairman of Council (Dr. H. B. Brackenbury) was appointed official delegate to the Congress along with Sir Frank Colyer (London), Dr. H. B. Densham (Stockton-on-Tees) and Dr. C. D. Hatriek (New Barnet).

## 1928 ANNUAL CONFERENCE OF THE NEW ZEALAND BRANCH.

16. In response to the invitation of the New Zealand Branch the Council had much pleasure in appointing Mr. Victor Bonney its official representative to the Annual Conference of the New Zealand Branch held at Hamilton, North Island, February, 1928.

## CENTENARY OF GRANTING OF CHARTER OF UNIVERSITY OF TORONTO.

17. The Council appointed Sir John Bland-Sutton, Bt., to act as the official delegate of the Association to the Centenary Celebrations of the Granting of the Charter of the University of Toronto, held in that city in October, 1927, when Sir John Bland-Sutton presented an Address from the Association to the University of Toronto.

## ARTIST'S ORIGINAL MODEL OF THE HASTINGS PRIZE.

18. The Rev. Bishop Williams, son of Mr. Watkin Williams (who in addition to having been General Secretary of the Association (1863-72) was a close personal friend of Sir Charles Hastings the founder of the Association), kindly offered to the Association the artist's original model of the "Hastings Prize" of the Association which was presented by the artist to Mr. Watkin Williams. The Council accepted the offer and expressed the thanks of the Association to Bishop Williams. The Hastings Prize referred to was, apparently, founded in 1860, the intention being to give annually one or two gold medals as prizes for essays or papers, the first such prize being given in 1864. Further awards of the medal were made in '65, '66, '70 and '73 when the award of the Prize apparently fell into abeyance.

## MEDICAL REPRESENTATIVES ON GENERAL NURSING COUNCIL.

19. In response to an enquiry from the Minister of Health as to whether the Association desired to recommend any persons for the Minister's consideration in connection with the appointment by the Minister of Health of five members to the "General Nursing Council for England and Wales," the following names were submitted: Lady Barrett, Dr. A. H. G. Burton, Sir Ewen Maclean, Dr. Christine Murrell and Mr. A. M. Webber. Lady Barrett has been appointed by the Minister.

## HARVEY TERCENTENARY, LONDON, 1928.

20. In response to an invitation from the Royal College of Physicians of London asking the Association to nominate some person to represent it at the Tercentenary of the publication of Harvey's epoch making book, "De Motu Cordis" to be celebrated in London in May, 1928, the President, Sir Robert Philip, was appointed to represent the Association.

## INTERNATIONAL UNION OF MEDICAL ORGANISATIONS.

21. In the Supplementary Report of 1926 and in the Annual Report of 1927 the Council reported the formation of the Association Professionnelle Internationale des Médecins, the object of which is to establish an international union and bureau for the interchange of information and ideas concerning the social and political aspects of medical practice. After consideration the Council decided not to adhere formally to this body, but to send the Medical Secretary as an observer to the first Annual Conference, which took place in Paris in September last. The Council has given very careful attention to the detailed report which the Medical Secretary placed before it with regard both to the work of the A.P.I.M. during the past year and to the proceedings at the Annual Conference, and has decided not to join the organisation, it being of the opinion that there is no sufficient gain to the Association

from membership of this international body which could be set off against the expenses of annual membership (£125), combined with the demands made on the time of the Medical Secretary and other members of the staff. The Council has informed the Secretary of the A.P.M. that it is willing at all times to furnish other medical associations, either national or international, with any information which may be at its disposal by reason of its experience in social legislation in relation to medicine.

#### ANNUAL MEETING OF CANADIAN MEDICAL ASSOCIATION, 1928.

#### ANNUAL SESSION OF AMERICAN MEDICAL ASSOCIATION, 1928.

22. The Council has been invited to send a representative or representatives to the Annual Conferences of the Canadian Medical Association and the American Medical Association which are to be held in June next in Charlottetown, Prince Edward Island, and Minneapolis respectively, and is glad to be able to report that Sir Lenthal Cheate, F.R.C.S., has consented to attend both conferences as the delegate of the Association and to present to both bodies the good wishes of the Association.

#### CENTENARY CELEBRATIONS OF FACULTY OF MEDICINE, CAIRO.

23. In response to an invitation from the Egyptian Government, through the Minister of Education, for the Association to send a delegate to take part in the Centenary Celebrations of the Faculty of Medicine, Cairo, and the International Congress of Tropical Medicine and Hygiene, extending from 15th-28th December, 1928, and under the patronage of His Majesty King Fouad I, the President, Sir Robert Philip, was appointed official delegate of the Association.

#### APPOINTMENT DURING YEAR OF REPRESENTATIVES OF ASSOCIATION ON OUTSIDE BODIES.

24. The following appointments have been made by the Council during the year:—Board of Governors, University College, Hull, Dr. Matheson Mackay; Central Council for the Care of Cripples, Mr. W. McAdam Eccles and Mr. P. Jenner Verrall; Child Guidance Council, Dr. R. Langdon-Down; Council of Faculty of Insurance, Dr. H. B. Brackenbury; Council of the Smoke Abatement League, Mr. N. Bishop Harman; Council of Society of Medical Officers of Health, Dr. H. B. Brackenbury and Dr. W. Paterson; Howard League for Penal Reform; Conference on Young Offenders Report, Drs. G. F. Buchan, R. G. Gordon, R. Langdon-Down and W. A. Potts; Joint Tuberculosis Council, Drs. A. Lyndon and C. O. Hawthorne; Council of Lister Institute, Professor W. E. Dixon; Professional Classes Aid Council, Mr. N. Bishop Harman; Royal Sanitary Institute Congress, 1928, Drs. G. F. Buchan and I. W. Johnson; Seventh International Congress of Photography, London, 1928, Dr. Gilbert Smith.

#### SOLICITOR OF ASSOCIATION.

25. Following the retirement of Mr. W. E. Hampson which was foreshadowed in the last Annual Report of the Council, the firm of Hampsons, London, has been appointed Solicitors to the Association.

The Council has expressed to Mr. W. E. Hampson its gratitude for the many services rendered by him to the Association during his years of office and has wished him in the name of the whole Association many years of happy retirement from the cares of office.

### Finance.

26. As will be seen from the Financial Statement for the year ended 31st December, 1927, which is set out in detail in Appendix II (see B.M.J. Supplement, May 5th, 1928), the year 1927 has proved more favourable to the Association, financially, than was hoped. Although many of the items in the forecast presented last year were exceeded, the result is not one calling for regret. The Advertisement revenue for the *Journal* exceeded all records, and not only paid for the additional cost of the *Journal*, including a heavy increase in postage, but added no less a sum than £1,960 to the estimated surplus. The subscription account also showed a greater increase than was estimated.

27. Generally, a survey of the year's accounts gives cause for satisfaction, and the financial strength displayed augurs well for the future, and particularly for those years in the immediate future when the extension of the Association's House will involve the British Medical Association in considerable capital expenditure.

28. During the year 1926 it was decided to commence a sinking fund for the redemption of the leasehold property of the Association, and for this purpose a sum of £1,000 was set aside. This has now been utilized to take out a Sinking Fund Policy, which will realize £100,000 at the end of forty years.

The amount required for this purpose during 1927 was £1,094 19s. 2d. net, future premiums being £1,141 13s. 4d. per annum.

29. Under the terms of the Lease of the Tavistock Square property it is necessary to carry out periodical redecoration, and the sum of £1,500 has been set aside to meet this liability.

30. The Reserve Fund for the extension of the work and premises of the Association has been increased by £5,000, and now stands in the books at £31,612 10s.

31. The balance of Income over Expenditure carried to Surplus Account for the year 1927 amounts to £1,935 18s. 10d., the total at which this account now stands being £190,110 5s. 10d.

32. The membership increased during the year by 1,275, the total at 31st December, 1927, being 33,425.

33. The Income for the past three years has been as follows:

	£	s.	d.
1925	131,787	4	5
1926	136,357	14	4
1927	143,293	18	7

The Expenditure for the same three years was:

	£	s.	d.
1925	131,003	18	1
1926	134,484	13	2
1927	141,357	19	9

#### BALANCE SHEET.

##### Liabilities.

34. The Sundry Creditors show an increase of nearly £2,000, mainly in connexion with paper and postage for the *Journal*, and advertisements paid for in advance.

The Reserve Account has been increased as set out above. The market value of the stocks taken in the Balance Sheet at £23,612 10s. was, on the 31st December, £25,494.

The temporary overdraft of £29,146 from the Westminster Bank was repaid in the early part of the year, but towards the end of 1927 it was found advisable again to have recourse to a temporary overdraft of £19,522. This had been completely repaid by the end of February, 1928, when a sum of £3,000 was placed upon deposit with the Bank.

##### Assets.

35. Leasehold Premises.—The depreciation rate was maintained at £2,000 for the year.

Scottish House.—The adjoining house, No. 7, Drumshugh Gardens, held also upon ten charter, has been purchased by the Association, and is now being converted for the use of members. Depreciation has been increased from £200 to £416 7s. for the year 1927.

Investments.—The investments of the Association remain at the figure in the Balance Sheet at 31st December, 1926, and have not been written up.

Paper Stock.—The stock of paper for the *British Medical Journal* had been increased at the end of 1927.

Subscriptions in Arrear.—The subscriptions carried forward as in arrear have increased slightly in value, the number being 1,652 at 31st December, 1927, as against 1,564 at the end of 1926.

The item of £2,595 is represented largely by subscriptions of overseas members which may have been paid to the Branch Secretaries abroad, but had not reached the Head Office before the end of the year. (See also note re subscriptions in Income and Expenditure Account.)

Sundry Debtors for Advertisements.—The Reserve for Bad Debts and Discounts is considered ample.

#### INCOME AND EXPENDITURE ACCOUNT.

36. Subscriptions.—The subscriptions due for the current year show an increase of £3,060 1s. 11d., due to the increase in membership during 1927 and to variations in the classes to which members belong.

The subscriptions due for previous years and recovered in the year under review have again been shown separately, in order to demonstrate that the amounts shown in the Income and Expenditure Account as "Subscriptions written off" are by no means lost. Of the sum of £2,262 7s. 3d. carried forward in the Balance Sheet of 31st December, 1925, as "Subscriptions in arrear," no less a sum than £1,976 7s. 6d. was recovered during 1926. The balance of £285 19s. 9d. was included in the amount of £3,122 8s. 4d. written off in the Income and Expenditure Account at 31st December, 1926. A further sum of £157 10s. was received during 1927, which, together with the £1,710 7s. 7d. collected by the Head Office in respect of 1926 subscriptions written off, and £218 0s. 5d. recovered in respect of previous years' subscriptions, makes a total recovery of 783 subscriptions, representing £2,085 18s.

Rents.—The rents of 429, Strand, are now the property of the New Zealand Government, which, however, pays interest on the balance of the purchase price outstanding.

## ABSTRACT A.

37. *Representative Meeting.*—The attendances at the Edinburgh Meeting were considerably larger than usual, and the distances travelled were also greater. The attendances at the Annual Meeting for which fares were paid were:

1925, Bath ... ..	191
1926, Nottingham ... ..	165
1927, Edinburgh ... ..	207

*Annual Meeting.*—There was a considerable increase in the number of Sections—from 13 at Nottingham to 21 at Edinburgh. Many Sections held preliminary meetings of officers in London, and thus the railway fares charged against the Association exceeded expectations.

The Handbook of the Meeting increased in cost from £106 10s. to £193 15s., mainly owing to the larger number of copies required and to the extra 14 pages in each copy.

*Council.*—The attendances at Council meetings:

In 1925 incurred 194 railway fares
In 1926 incurred 203 railway fares
In 1927 incurred 205 railway fares

but it must be remembered that the amount spent in railway fares depends upon the distances travelled.

*Secretaries' Conference.*—The railway fares, paid to Secretaries who were not members of Council or Representatives numbered:

In 1925, Bath ... ..	33
In 1926, Nottingham ... ..	48
In 1927, Edinburgh ... ..	54

*Committees.*—The various increases and decreases are shown in detail in the Abstract.

*Insurance Acts Committee.*—The National Insurance Defence Trust repaid to the Association during 1927 the following sums:

	£	s.	d.
Railway Fares ... ..	179	10	3
Printings ... ..	119	18	0
Sundries ... ..	24	9	1

## ABSTRACT B.

38. *Charges on Bank Loan.*—The interest on the Bank overdraft is this year charged against the interest paid to the Association by the New Zealand Government, the retention by them of part of the purchase price of 429, Strand, causing the overdraft to be necessary.

*Legal Charges.*—The figure for 1927 includes the law costs of the libel action against the *Star* and actions to prevent the exploitation of the name of the British Medical Association and its copyright book *Secret Remedies*.

*Grant to Federal Council of M.A.S.A.*—Special grants for the years 1927 and 1928 were made by the Council in order to consolidate the position in South Africa.

## ABSTRACT C.

39. The figures for 1927 show variations in the cost of lighting and heating, and also in the general running repairs of the building.

## ABSTRACT D.

40. The increase in the Travelling and Subsistence Expenses is mainly due to the distance from London to Edinburgh and the number of the staff attending the larger meeting.

## ABSTRACT E.

41. The increase in postage is due partly to the larger number of books borrowed through the post, and partly to the new method of borrowing.

## ABSTRACT G.

42. The following are the comparative figures for the *British Medical Journal* in 1927:

	1926.	1927.
Literary pages and Epitome ...	2,574	2,646
Supplement ... ..	516	532
Advertisements ... ..	2,786	2,822
	5,876	6,060

The amount required from the Subscription Account for 1927 to cover the cost of production and issue of the *Journal* was £15,718, or 8s. 2d. per member. The amount required for 1925 and for 1926 was in each year 8s. 4d. per member.

The increasing cost of the preparation and dispatch of much larger numbers of the *Journal* is being met almost entirely by

the advertisement revenue. Reprints, being considered good propaganda for the *Journal*, are supplied as nearly as possible at cost.

*Composing, Machining, etc.*—The number of pages increased from 5,876 in 1926 to 6,060 in 1927, and the number of *Journals* printed increased from 1,805,862 in 1926 to 1,907,805 in 1927.

*Paper, Postage.*—The additional cost has been occasioned by the larger number of *Journals* issued.

## ABSTRACTS H AND I.

43. Full details of the Income and Expenditure of the special journals published by the Association are here set out.

## TRUST FUNDS.

44. *Office Staff Superannuation Fund.*—The market value of the stocks owned by this Fund on 31st December, 1927, was £21,401 16s. 3d.

## APPORTIONMENT OF MEMBERS' SUBSCRIPTIONS.

45. The membership of the Association at the end of 1927 was 33,625. It must be remembered, however, that all members do not pay the same rate of subscription; therefore the average amount of revenue per member is less than the standard subscription of £3 3s.

The total revenue from subscriptions (excluding arrears) was £79,592 14s. for the year 1927, or roughly £2 7s. 4d. per member.

The following table has been calculated on this basis to show how the subscription of a member was apportionable towards defraying the expenses of the Association for the year ending 31st December, 1927.

	£	1927. £ s. d.	1926. £ s. d.
Central Meeting Expenses ...	8,443	5 0	4 5

## OUT-OF-POCKET EXPENSES OF MEMBERS ATTENDING MEETINGS.

46. The Council having referred the following Minute 33 of the A.R.M. 1927, to the Organisation and Finance Committees:—

Minute 33.—Resolved: That the Council be instructed to consider the taking of such steps as are necessary to secure that members attending meetings of Council and Central Committees be paid reasonable out-of-pocket expenses in addition to railway fares.

and having received the reports of these Committees thereon, does not consider it desirable that the expense likely to be incurred in carrying out the suggestion in the Minute should be undertaken by the Association.

## Organisation.

## MEMBERSHIP FIGURES.

47. In 1927 there was a net increase in the membership of the Association of over 1,200, and during the five years, 1923-7, the net increase has been over 9,000. The Council welcomes this recognition by the profession of the value of the work of the Association. The most fruitful sources of recruitment in the year were:—central activities, 1,538; by overseas Branches, 630; by Home Divisions and Branches, 395.

The following is a summary of the changes in the membership during 1927 (the figures for 1926 are shown for comparison):—

(1926.	1927.
New members ... 2,472	New members ... 2,578
Paid arrears ... 814	Paid arrears ... 1,067
Resignations withdrawn ... 30	Resignations withdrawn ... 33
Resignations ... 3,725	Resignations ... 3,678
Deaths ... 467	Deaths ... 506
Arrears ... 296	Arrears ... 351
Erased under Article 9 (c) (1) ... 1,134	Expelled ... 1,485
— 2	— 1
— 1,890	— 2,403
Increase ... 1,826	Increase ... 1,275

Membership, December 31st, 1926 ... 32,350

Membership, December 31st, 1927 ... 33,625

The numbers of new registrations (British Isles) in 1926 and 1927 were 1,942 and 1,700 respectively.

## WORK DONE BY THE DIVISIONS, BRANCHES, AND FEDERAL COMMITTEES.

48. The great majority of the Divisions and Branches in the British Isles have sent in their reports for 1927, and these reports, and the reports of proceedings published in the B.M.J. Supplement, show gratifying activity on the part of most of the local units of the Association.

On behalf of the Association, the Council desires to thank the Chairmen, Presidents, Secretaries, Treasurers and Executives of the Divisions, Branches and Federal Committees for the highly creditable work being done.

## FINAL-YEAR STUDENTS AND NEWLY QUALIFIED PRACTITIONERS.

49. Practically all those Divisions and Branches whose areas contain medical schools have taken very successful action in connection with the scheme inaugurated by the Council for interesting final-year medical students and newly qualified practitioners in the work of the Association. One result of these gratifying activities is seen in the increased membership of the Association among the newly qualified.

For the purposes of the Prize Essay Competition by final-year students the Council has re-grouped the medical schools in larger groups and made the prizes of greater value. Thus, there will now be 2 groups for London, and 1 each for the Provinces and Wales, Scotland, Ireland, and Overseas. A prize of £25 will be open for award in each group. The subject for the essays for 1928-9 is "The Symptoms and Sequelæ of Encephalitis Lethargica, with their appropriate Treatment," and the essays require to be received by January 12th, 1929.

## HANDBOOK FOR RECENTLY QUALIFIED MEDICAL PRACTITIONERS.

50. The Association's "Handbook for Recently Qualified Medical Practitioners" continues to meet a real need. There

has been a steadily increasing demand for the book on the part of the newly qualified, and its section as to post-graduation study and special diplomas has been found of great help by post-graduates visiting this country.

## ELECTION OF REPRESENTATIVE BODY, 1928-9.

## Divisions in British Isles.

51. The Council has, subject to one or two adjustments, repeated the 1927-8 grouping of the Divisions in the British Isles for election of the Representative Body, 1928-9. The complete list of Constituencies will be found in the B.M.J. Supplement of April 21st, 1928.

## Divisions outside British Isles.

Each Division and Division-Branch outside the British Isles has been made an independent constituency.

## ELECTION OF COUNCIL, 1928-9.

## Bodies in British Isles.

52. Pursuant to the standing authority conferred on it by the Representative Body, the Council has grouped the Branches and constituencies in the British Isles for election of the "21" and "12" members of the Council for 1928-9 in the same way as for 1927-8 (see Annual Handbook, 1927-8, page 48).

## Bodies outside British Isles.

The Branches outside the British Isles have been grouped for election of the "7" members of Council, 1928-9, in the same way as for 1927-8 (see Annual Handbook, 1927-8, page 49).

## REVISION OF ARTICLES AND BY-LAWS.

53. Various questions of adjustment of the Articles and By-laws of the Association have lately arisen. The existing Articles and By-laws proposed by the Council to be revised will be found in Appendix III to this Report (see B.M.J. Supplement of May 5th, 1928). References in the Recommendations to lineage of Articles and By-laws, are to that of the printed booklet of the Memorandum, Articles and By-laws.

## Title of Dominions Committee.

54. As much of the work of the Dominions Committee is concerned with matters affecting the medical services, etc., in the Colonies, the Dependencies, and in India, the Council is of opinion that the title of the Committee should be brought into line with this position by naming it the "Dominions, India, Colonies and Dependencies Committee."

Recommendation: That By-law 78 be amended by inserting, in the 2nd line, after the word "Dominions," the words "India, Colonies, and Dependencies"; and that the Schedule to the By-laws as to the Dominions Committee be amended by inserting, in the 1st column, after "Dominions":—"India, Colonies and Dependencies."

## Constitution of Insurance Acts Committee.

55. The Council submits the formal proposal for amendment of the Schedule to the By-laws as to the composition of the Insurance Acts Committee, which is dealt with in greater detail in para. 122 under National Health Insurance.

Recommendation: That the Schedule to the By-laws relating to the Insurance Acts Committee be amended by substituting, in line 14 of column 5, "29" for "27"; and, in line 17 of the same column, "25" for "23."

## Constitution of Charities Committee.

56. The A.R.M., 1926, expressed the opinion that the personnel of the Charities Committee should be enlarged and should secure territorial representation. The Council accordingly suggested in its Supplementary Report, June, 1927, that 4 members should be appointed by the Representative Body, viz., 2 by the English Representatives, 1 by the Scottish Representatives, and 1 by the Irish Representatives. The Association's representative at the College and on the Committee of Management of the Royal Medical Benevolent Fund should be members of the Committee ex-officio. This proposal was approved by the A.R.M., 1927, and the Council now submits the necessary amendment of the By-laws.

**Recommendation :** That the 2nd, 3rd, 4th, and 5th columns of the Schedule to the By-laws, as to the Charities Committee, be amended to read as follows:—

Additional Members <i>ex-officio</i> .	Appointed Members.		
	By R.B.	By Council	Otherwise appointed.
The representative or representatives of the Association on each of the following bodies, viz.:— The Council of Epsom College and the Committee of Management of the Royal Medical Benevolent Fund.	—	2	2 appointed by the Representatives of Constituencies in England (excluding Monmouthshire); 1 appointed by the Representatives of Constituencies in Scotland; 1 appointed by the Representatives of Constituencies in Wales (including Monmouthshire).

**Term "United Kingdom" in Articles and By-laws.**

57. The Council has considered the question whether the Articles and By-laws of the Association should be adjusted as regards Ireland, in connection with the term "United Kingdom." So far as the Articles and By-laws of the Association are concerned, that term includes the Irish Free State. The Royal and Parliamentary Titles Act, 1927, provides that the title of His Majesty the King be:—

"George V. by the Grace of God, of Great Britain, Ireland, and the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India."

(instead of—

"George V. by the Grace of God, of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India.")

As matters stand, the Articles and By-laws are in this respect in conflict with the B.M.A. Handbooks, the forms of application for membership, the requests for subscriptions, etc. The Council considers that the Articles and By-laws should be adjusted so as to bring them into line with the actual new position in respect of the Irish Free State. It should be understood that the merely verbal alteration will in no way affect the position of or the subscription payable by members resident in Ireland.

The Council submits adjustments of Articles and By-laws accordingly.

**Recommendation :** That the Articles and By-laws be amended so as to bring them into line with the position created by the formation of the Irish Free State, and, as so amended, be approved and adopted, and that the Council be instructed to submit the Articles to Extraordinary General Meetings of the Association, as follows:—

**Article 3 (Eligibility):** In 1st, 2nd, and 8th lines, for "the United Kingdom," read:—"Great Britain or Ireland."

**Article 10 (Expulsion):** In 14th and 15th lines of para. (a), for "the United Kingdom," read:—"Great Britain and Ireland."

In 2nd and 3rd lines of para. (b), for "the United Kingdom," read:—"Great Britain and Ireland."

In 1st and 2nd lines of para. (c), for "the United Kingdom," read:—"Great Britain or Ireland."

**Article 12 (1) (Incorporation):** In title, and in 2nd and 3rd lines, for "the United Kingdom," read:—"Great Britain or Ireland."

**Article 13 (Formation, etc., of Divisions):** In 2nd line, for "the United Kingdom," read:—"Great Britain or Ireland."

**Article 16 (Federal Councils):** In 2nd line, for "the United Kingdom," read:—"Great Britain and Ireland."

**Article 23 (Annual Scientific Meetings):** In 8th, 9th, and 10th lines, for the words "the United Kingdom or abroad. When held in the United Kingdom . . . ." read:—"Great Britain or in Ireland or elsewhere. When held in Great Britain or Ireland . . . ."

**Article 37 (Affiliation):** In 3rd line, for "the United Kingdom," read:—"Great Britain and Ireland."

**Article 42 (1) (Expenses):** In 2nd and 11th lines, for "the United Kingdom," read:—"Great Britain and Ireland."

**By-law 1 (3) (Interpretation):** In last line, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 5 (Election by Branches):** In 1st line of para. (1) and 1st line of para. (2), for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 11 (1) (Amount of Subscriptions):** In 2nd line of Section B, for "the United Kingdom," read:—"Great Britain or Ireland."

In 1st and 2nd lines of Section C, for "the United Kingdom," read:—"Great Britain and Ireland."

**By-law 14 (Special Subscriptions to Divisions and Branches):** In 8th line, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 15 (1) (Subscriptions to Branches not in United Kingdom):** In title and 4th line, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 16 (Incorporation of Branches not in the United Kingdom):** In title, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 18 (1) (Local Management: Branches):** In para. (a), 1st line, for "the United Kingdom," read:—"Great Britain or Ireland."

In para. (c), 1st line, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 22 (1) (Branches not in United Kingdom: Special Powers):** In title and 1st line, for "the United Kingdom," read:—"Great Britain or Ireland."

22 (2): In 1st line, for "the United Kingdom," read:—"Great Britain or Ireland."

In 1st and 2nd lines of para. (v), and in 3rd line of para. (vii), for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 23 (1) (Federal Councils):** In 1st and 2nd lines, for "the United Kingdom," read:—"Great Britain and Ireland."

**By-law 27 (Divisions not in the United Kingdom: Special Powers):** In title, in 1st line, and in last line but one, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 40 (Number of Representatives):** In 1st line of para. (2), for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 53 (Composition of Council):** In 5th and 6th lines of para. (a), 2nd line of para. (b), and 5th and 6th lines of para. (c), for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 55 (Mode of Election by Groups in United Kingdom):** In title, and 3rd line of para. (1), for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 56 (Mode of Election by Groups not in United Kingdom):** In title, and in 2nd line, for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 59 (Qualification for Election as Member of Council):** In 3rd line, for "the United Kingdom," read "Great Britain or Ireland."

**By-law 60 (Terms of Office of Members of Council):** In 2nd and 3rd lines of para. (1), and 2nd line of para. (2), for "the United Kingdom," read:—"Great Britain or Ireland."

**By-law 85 (Expenses):** In 4th line, for "the United Kingdom," read:—"Great Britain and Ireland."

**Schedule to By-laws (Duties, Powers, etc., of Central Ethical Committee):** In 2nd para., 8th and 9th lines, for "the United Kingdom," read:—"Great Britain or Ireland and."

**Schedule (Dominions Committee):** Under "Additional Members *ex-officio*," and "Duties, Powers, etc.," for "the United Kingdom," read:—"Great Britain or Ireland."

**Subscription of Members Engaged Whole-time in Medical Instruction or Medical Research.**

58. By-law 11 (1) n (iii) provides for a reduced subscription of two guineas in the case of—

"(iii) Any member who is engaged on a whole-time basis in the work of medical instruction or medical research and is not engaged in the practice of the medical profession either as consultant or otherwise."

This clause, introduced into By-law 11 in 1922, has been giving rise to considerable difficulty, many members having paid, or applied to pay at the reduced rate in respect of whom it was doubtful whether they came within the clause.

The clause as it stands was the outcome of a proposal that some concession as regards subscription should be made in the case of members of the profession "engaged in teaching

or research but not in practice." On consideration of that proposal in 1922, the Council came to the conclusion that there should be a reduction of subscription in the case of those members of the profession who were engaged at the universities or medical schools in teaching or scientific research, but who were not engaged in consulting practice, basing its decision on the facts (a) that the interest of such persons in the general work of the Association differed from that of other members of the profession; (b) that their remuneration was often inadequate, and (c) that it was desirable that the Association should include within its ranks as many of them as possible. Counsel, instructed accordingly, drafted Clause (iii) in question, quoted above, which was adopted by the A.R.M., 1922.

The clause deals with members engaged in whole-time medical instruction, and with members engaged in whole-time medical research. Difficulties have arisen in respect of both categories. As regards the former, there have been doubt and difficulty in applying the clause because of the vagueness of the term "medical instruction." Much more serious difficulty has arisen in respect of "whole-time medical research." The term is wide and vague, and it became apparent that in some cases there were B.M.A. members in one and the same department of one and the same institution or service, some of whom paid the ordinary 3-guinea and some the 2-guinea rate. As a result of the difficulties and anomalies which have thus arisen, there have naturally been complaints of unfair discrimination as between one member and another as regards the amount of subscription payable.

The Council regards the position as difficult, if not impossible, to straighten out if clause (iii) is left as it at present stands, and therefore proposes that By-law 11 be made more explicit as regards the definitions of "whole-time medical instruction" and "whole-time medical research." The Council considered the question of abolishing the reduced rate of subscription in respect of such work, a course for which there is a good deal to be said, but came to the conclusion that the arguments in this connection which weighed with the Council and R.B. in 1922 still hold good.

**Recommendation:** That By-law 11 (1) a (iii), as to the subscription of members engaged whole-time in medical instruction or medical research, be deleted, and the following substituted therefor:—

"(iii) Any member who is not engaged in medical practice whether as consultant or otherwise and is a whole-time member of the teaching staff of a university or medical school and has signed and transmitted to the Treasurer a declaration to the foregoing effect in relation to the year for which the subscription is due ... 2 guineas.

(iv) Any member who is not engaged in medical practice whether as consultant or otherwise and whose whole time is occupied in the investigation of scientific problems as distinguished from routine laboratory work and has signed and transmitted to the Treasurer a declaration to the foregoing effect in relation to the year for which the subscription is due ... 2 guineas."

existing paras. (iv) and (v) of the By-law being re-numbered, consequentially, "(v)" and "(vi)."

**Powers of Branches not in the British Isles.**

59. In 1920, By-law 15 was amended to provide that local Branch rules, imposing upon the members of Branches not in the British Isles an additional, i.e., local subscription, do not, to become effective, need the approval of the Council. At the time when that By-law was so adjusted, it escaped notice that By-law 22 (Special Powers of Branches not in Great Britain or Ireland) required consequential adjustment. This omission should be rectified.

**Recommendation:** That By-law 22 (2) be amended as follows:—

Insert, in 4th line, after "Council":— "(but subject in the case of a Rule made under By-law 15 to such approval as therein mentioned)"; and insert a new para. (ii) as follows:—

"(ii) The payment by members of the Branch of any additional subscription under By-law 15," subsequent paras. being re-numbered consequentially.

**Resolutions of R.B., Formulating "Policy of Association."**

60. Article 33 (1) provides:—

"33. (1) Subject as provided by the Regulations, a resolution of the Representative Body (not being a resolution inconsistent with the provision of any Statute or of the Memorandum of Association), which affects the funds of the Association, or relates to the Regulations

or By-laws, or to the policy of the Association in matters affecting the honour or interests of the medical profession and is carried by a majority of not less than two-thirds of the votes given thereon in the manner prescribed by the By-laws, or which relates to any other business within the powers of the Representative Body, and is carried by a simple majority, shall be deemed to be a decision of the Association."

By-law 47 provides:—

"47. The business of the Annual Representative Meeting shall be . . . to make new By-laws, and alter and repeal By-laws, and to consider any resolution relating to the promotion of the medical or allied sciences, or the maintenance of the honour or interests of the medical profession or of the Association which shall have been adopted by any Division or Branch; provided that any such resolution proposing material alteration of the constitution or policy of the Association shall have been published in the Journal for the consideration of all the Divisions not less than two months previously."

Any proposal for enunciation of policy upon which the Representative Body has not previously expressed an opinion must be considered to come under the category of "material alteration of the policy of the Association," and as such, to require 2 months' notice (By-law 47) before it can be adopted by an Annual Representative Meeting as valid policy of the Association. The question having been raised, the Council considers that Article 33 (1) and By-law 47 should be amended so as to make this position clear and plain.

**Recommendation:** (i) That Article 33 (1) be amended by inserting, in 1st line, after "Regulations," the words:—"or the By-laws"; and that By-law 47 be amended by inserting the words "or addition to," shown in italics below:—

" . . . to make new By-laws, and alter and repeal By-laws, and to consider any resolution relating to the promotion of the medical or allied sciences or the maintenance of the honour or interests of the medical profession or of the Association which shall have been adopted by any Division or Branch; provided that any such resolution proposing material alteration of or addition to the constitution or policy of the Association shall have been published in the Journal for the consideration of all the Divisions not less than two months previously."

and (ii) that the Council be instructed to submit the foregoing amendment of Article 33 (1) for completion by Extraordinary General Meetings of the Association.

**Possible Formation of Groups within the Association.**

61. The Council has considered the following Min. 30 of the A.R.M., 1927:—

"Minute 30.—Resolved: That, as amended by Mins. 27 and 28, the Representative Body approves the scheme for formation of Groups in the Association (*B.M.J. Supplement*, April 23rd, 1927, page 158), and instructs the Council to prepare the necessary amendments to the Articles and By-laws for submission to the A.R.M., 1928, it being agreed that the Council, should the need arise, may give immediate provisional effect to the scheme."

Pursuant to the authority thus given, the Council has formed 2 Groups, namely, a Spa Practitioners Group, the members of which are those members of the Association who regularly prescribe the mineral waters or baths of the spas in which they reside or who are on the staff of a hospital or clinic where the use of the local mineral waters is part of the routine treatment; and a Consulting Pathologists Group, composed of members of the Association (not being members of the public health service) who are working in an institutional or private pathological laboratory engaged in examining and reporting on specimens for clinical purposes. Both Groups are now in active being.

In the opinion of the Council, shared by Counsel, (a) the amendment of the Articles and By-laws should simply take the form of giving general power to the Council to form such special Groups under such rules as the Council may from time to time determine; and (b) the Council should adopt rules, and/or standing orders accordingly, to come into force *ipso facto* with the new provisions on the subject in the Articles and By-laws. The Council proposes accordingly (a) a new Article "19x"; (b) that Articles 34, 42, and 45 be adjusted; and (c) a new By-law "32a" (see recommendation below).

The "Rules" which the Council has already provisionally adopted on the subject are practically identical with the draft scheme approved by the A.R.M., 1927, but, in

## Report of Council:

conformity with Min. 27 of the A.R.M., they embody a provision to the effect that the Council shall define the class or classes of members who shall be included in a proposed Group, and that questions of the eligibility of individual persons for membership of the Group shall be determined by the Council after consultation with the Committee of the Group. The Rules thus provisionally adopted by the Council include also explicit provision to the effect that every member of the Association coming within the Council's definition of the class or classes of members who shall constitute the Group shall be *ipso facto* a member of the Group.

**Recommendation:** That the following new Article 19x, adjustment of Articles 34 (Referendum), 42 (Expenses) and 45 (By-laws), and new By-law 32A, namely:—

(New Article 19x:—)

### III.A.—SPECIAL GROUPS OF MEMBERS.

Article 19x.—Special Groups of members having distinctive professional interests may from time to time be formed and dissolved in such circumstances and manner and shall have such status and privileges as may be prescribed or determined by or in accordance with the By-laws.

Article 34 (Referendum): In the 8th line, after "Regulations," insert "or the By-laws."

Article 42 (1) (Expenses): Last sentence to be numbered "(2)," and to read:—

"(2) The expenses, defined as aforesaid, within Great Britain and Ireland of all members attending Meetings of Council or of Committees (including the Committees of Special Groups of members) and of all members authorised by the Representative Body or by the Council to attend, and attending any Conference shall be defrayed in like manner."

existing para. (2) to be re-numbered "(3)" consequentially.

Article 45 (By-laws): Read, in 4th line:—

"and separate body or Special Group of members thereof . . ."

and read, in 8th and 9th lines:—

"prescribed or determined by . . ."

(New By-law 32A:—)

### IV.A.—SPECIAL GROUPS OF MEMBERS.

32A. (1) Special Groups may be formed of members having distinctive professional interests and being by reason either of their paucity of numbers or of their local distribution unable to obtain adequate representation of those interests through the Divisions and Branches.

(2) The formation of such Special Groups shall rest with the Council, subject to an appeal to the Representative Body, whose decision shall be final and shall not be required to be approved under the 34th Article of Association.

(3) The mode of application for the formation of any such Special Group and the means of ascertaining the views of the members thereof on matters affecting their said interests shall be such as the Council may from time to time determine, and the Council may provide for meetings of any such Special Group and for Committees thereof at meetings the attendance of representatives thereof at meetings of the Council or of the Representative Body for the purpose of explaining such views.

(4) The Council may at any time dissolve any Special Group which may appear to the Council to be no longer required;

being provision in respect of possible formation of Special Groups of members within the Association, be approved and adopted; that the Council be instructed to submit those Articles to Extraordinary General Meetings of the Association; and that the subsequent existing Articles and By-laws be re-numbered consequentially.

### Extraordinary General Meetings.

62. In his revision of the Articles and By-laws, Counsel has suggested that Articles 22 and 23 require adjustment. The Council concurs.

**Recommendation:** That Articles 22 and 23 be amended as follows:—

Article 22: Substitute, in 6th line, for "appointed," "required."

Article 23: Read:—"23. Any such requisition shall state the object of the Meeting proposed to be called, and shall be left at the registered office of the Association"; and that the Council be instructed to submit them for completion accordingly by Extraordinary General Meetings of the Association.

### "British Medical Journal."

Sir DAWSON WILLIAMS, EDITOR, 1898-1928.

63. The loss sustained by the Association through the death of Sir Dawson Williams, soon after relinquishing the Editorship of the *British Medical Journal*, is referred to in earlier section of this Report. Sir Dawson Williams began his long connection with the Journal in 1881. He appointed hospital reporter in 1884, principal Sub-Editor in 1886, and Assistant Editor in 1895. On the death of Mr. Ernest Hart in January, 1898, he was appointed Editor, having previously on many occasions undertaken the duties of Acting Editor during Mr. Hart's absences abroad. Early in 1921, on the occasion of his knighthood, Sir Dawson Williams was entertained at a complimentary luncheon by the Council, and later in the same year received the Association's Gold Medal of Merit. At the meeting of Council on December 14th, 1927, he tendered his resignation, to take effect on January 19th, 1928, on his completing 39 years' service as Editor. Sir Dawson Williams' retirement was made the occasion of a leading article in the Journal of January 21st, acknowledging his inestimable work for the Association and for the science and practice of medicine during the 47 years of his connection with the Editorial Department. On February 8th, the Council recorded its grateful appreciation of his devoted services in raising the Journal to its present high position. The Council at the same meeting resolved to recommend to the Representative Body that he be elected a Vice-President of the Association, and that the title of Emeritus Editor be offered to him; but these proposals were cut short by the sad news of his death on February 27th. A largely attended Memorial Service, arranged by the Officers of the Association, was held in St. Pancras Church, near the Headquarters in Tavistock Square, and a full obituary notice, with many signed tributes from leading members of the Association and of the profession generally, was published in the Journal of March 10th.

### CIRCULATION AND ADVERTISEMENT REVENUE.

64. In the year under review the circulation and revenue of the *British Medical Journal* again surpassed all previous records. The increase of circulation is shown by the following figures, which give the average number of copies printed weekly during the nine years since the armistice: 24,520 in 1919; 26,195 in 1920; 27,247 in 1921; 27,600 in 1922; 29,026 in 1923; 31,339 in 1924; 33,520 in 1925; 35,923 in 1926; and 36,634 in 1927. This uninterrupted growth in circulation is reflected in the revenue from advertisements, which testifies to the increasing value set upon the *British Medical Journal* as an advertising medium. The income from advertisements last year was £47,746, as compared with £46,309 in 1926; £43,450 in 1925; £39,437 in 1924; and £35,318 in 1923. The revenue-producing value of the Journal to-day may be judged from the fact that the receipts from advertisements last year were more than twice those for 1914.

### SIZE OF JOURNAL.

65. The weekly average number of pages of the *British Medical Journal* in 1927 was 116.5 distributed as follows:—Medical, Epitome, and Supplement, 61.1; advertisements, 55.4. This figure, 116.5, is higher than that for 1926, and considerably higher than the average for any year since the beginning of the war. In 1927 the total pages of text and of advertisements was 6,060, as compared with 5,876 in 1926; these figures do not include the half-yearly indexes nor special plates printed on art paper. The growth in size of the Journal during the past eleven years, due to increasing calls on its space, many of them arising from new activities of the Association, is shown by the following figures: in 1917 the total number of pages of text, including Supplement, but excluding advertisements, was 2,100; in 1927 the total was 3,175, an increase of 50 per cent.

### PUBLICATION OF REPORTS.

66. Publication of the proceedings at the Annual Meeting in Edinburgh, including full reports of the twenty-one scientific Sections, occupied 292 pages; the reports of the

Presidential Address, proceedings in the Annual Representative Meeting, the statutory Annual General Meeting, and the various conferences held at Edinburgh, occupied 91 pages; this making in all 383 pages. Notwithstanding the very large number of Sections in 1927, publication of the full reports of the scientific proceedings was once again completed by the last issue of December. Apart from the two Annual Meeting issues of the Supplement, those which contained the Annual and Supplementary Reports on Council, the Annual Report of the Insurance Acts Committee, and the report of the Annual Panel Conference, were exceptionally large. A considerable amount of space in the body of the Journal was again devoted to British Medical Association lectures and papers of scientific and practical interest read to the Divisions and Branches of the Association. On several occasions the *Epitome of Current Medical Literature* was enlarged to six pages, when other demands upon space made this practicable. In accordance with custom no *Epitome* or Supplement appeared in the Educational Number published on September 3rd.

#### ILLUSTRATIONS.

67. During the year twenty-five special plates were devoted to the reproduction of illustrations which would not have given good results if printed in the text on the ordinary paper by rotary machines. One of these art-paper plates (a portrait of Lord Lister, published in connection with the Lister Centenary celebrations), was in colours. The cost of a special two-page plate on art paper, apart from the cost of engraving blocks, is for an issue of 37,000 copies about £60 (paper £20, machining, binding, etc., £40). A large number of figures, executed in line or half-tone, were printed in the text, and efforts to improve the general standard of reproduction of these blocks have been maintained. Altogether, 439 illustrative blocks were engraved in 1927. A Current Note, pointing out the difficulties in the way of reproducing photographs, and giving hints to contributors on the preparation of pictures for engraving, appeared in the Supplement of October 15th, 1927.

#### MSS. AND BOOKS.

68. As the number of original contributions received in the Editorial Department is very large and the space available limited, the question to be considered in each case is not so much whether the paper contains material which would justify its publication, but whether its merits and its general interest are so great that it should be chosen in preference to others. In many cases some delay in reaching a decision is consequently inevitable. During the twelve months under review more than 800 original articles and addresses, Annual Meeting papers, and medical, surgical and obstetrical memoranda were submitted to the Editor for publication in the *Journal*. Of these MSS. space was found for the insertion of 560—260 original articles, 108 Annual Meeting papers, and 192 clinical memoranda. The number of books received from publishers for review was 995, and notices of 477 books appeared.

#### COST OF PRODUCTION AND DISTRIBUTION.

69. The *Journal Account* published in the Annual Financial Statement shows that the gross cost of production and distribution of the *British Medical Journal*, including all editorial and a proportion of the managerial expenses, was £69,412 in 1927. Receipts from advertisements, sales to non-members, etc., amounted to £55,694, so that the net cost of the *Journal* to members of the Association was £13,718, or 8s. 2d. a head for the whole year, including postage. Thus, while the gross cost of producing a single copy of the *Journal* and supplying it to a member was practically 8½ pence, the net cost to him was approximately 1½ pence; to a non-member in Great Britain or Ireland the price of a single copy, including postage was 1s. 4½d. Sales of *Journals* yielded £6,419. This must be considered highly satisfactory in view of the steadily increasing membership of the Association, which necessarily restricts the field for circulation of the *Journal* among non-members. The charge for postage of the *Journal* forms a very heavy item of the total expenditure on the *Journal*. It amounted to £13,547 in 1927 as compared with £12,049 in 1926; £11,836 in 1925; £10,635 in 1924; £9,724 in 1923; £8,904 in 1922; and £7,261 in 1921. The increase in postage costs is due mainly to the continued growth in membership, and partly to some increase in the size and weight of the *Journals* posted.

#### CENSORSHIP OF ADVERTISEMENTS.

70. The censorship referred to in previous reports has been maintained over every advertisement tendered for publication, and it was found necessary to refuse or hold up many which did not conform to the policy and requirements of the Association. This strict supervision entails a considerable loss of revenue to the *Journal*. The immediate loss is known, but

the consequential loss, due to withdrawal of further advertising matter from the same quarters, cannot be calculated. Nevertheless, this policy of excluding undesirable advertisements from its official organ is a duty the Association owes to its members and through them to the public, and the better class of advertisers welcome it, recognising its advantages to themselves. While the acceptance of an advertisement for publication in the *Journal* is not to be understood as recommending or guaranteeing the article advertised, yet the appearance of an advertisement indicates that no objection of principle has been taken to it. All new advertisements submitted for publication are scrutinised in the Finance and Medical Departments of the Association, and those considered *prima facie* to be misleading or otherwise objectionable are referred for further inquiry and consultation. The Council has from time to time laid down general rules governing the acceptance and refusal of advertisements but the application of these rules in particular cases tends to become more difficult. Details of advertisements suspended or refused, and of the grounds for the action taken, are periodically laid before the *Journal* Committee, when the circumstances of each case are reviewed. The Committee reappointed the Foods and Drugs (Advertisements) Sub-Committee to advise its Chairman in regard to doubtful advertisements of pharmaceutical and dietetic preparations. The claims made for particular substances have been reported on by pharmacological and analytical experts.

#### "ARCHIVES OF DISEASE IN CHILDHOOD."

71. In 1926 the Council decided, in response to representations made by many members interested in diseases of children, to issue a periodical which would worthily represent the British school by recording the investigations and conclusions, clinical and pathological, of all its workers. For the carrying out of this purpose the Council appointed a General Committee, representative of all parts of Great Britain, with Dr. Hugh Thursfield and Dr. Reginald Miller as Editors. They are assisted by a small Editorial Committee of practitioners particularly interested in the subject and resident in London, Edinburgh, Glasgow and Liverpool. The first number of the *Archives of Disease in Childhood* was issued in February, 1926, and the second volume was completed with the twelfth number, dated December, 1927. In the papers published the Editors have maintained a very high standard and many excellent illustrations have accompanied them. The appeal of the *Archives* is world-wide, for it is addressed to all those at home and abroad, in every sphere of work, who realise the importance of this rapidly growing department of medical science and practice. The *Archives* appear six times a year, and the subscription (post free) is 25s., payable to the Financial Secretary, British Medical Association, Tavistock Square, W.C. 1. The subscription for Canada and the United States is six dollars (post free). The price of a single number is 4s. 6d.

#### "JOURNAL OF NEUROLOGY AND PSYCHOPATHOLOGY."

72. As stated in the last Report of Council an application was received early in 1926 by the British Medical Association to take over the publication of the *Journal of Neurology and Psychopathology*, then in its sixth volume. From the first number of the seventh volume (July, 1926) it has been issued by the British Medical Association. The aim of this periodical is to supply up-to-date information on the subjects named in its title. This is fulfilled by publishing short original communications and editorial articles, together with abstracts and critical reviews; and the scope and arrangement of the *Journal of Neurology* are such that it fills a place which no other periodical published in English exactly occupies. It is edited by Dr. S. A. Kinnier Wilson, with the assistance of an Editorial Committee, all of whom are members of the British Medical Association. It is published quarterly, and the subscription is 30s. a year, payable to the Financial Secretary. The price of a single number is 8s. 6d. (post free).

#### Science.

##### SCIENTIFIC WORK OF ANNUAL MEETING, 1928.

73. The Council has arranged the following Sections for the forthcoming Annual Meeting at Cardiff. *Three-day Sections:* Medicine, Surgery, Obstetrics and Gynaecology, Mental Diseases and Neurology. *Two-day Sections:* Pathology and Bacteriology, Orthopaedics, Diseases of Children, Ophthalmology, Laryngology and Otology, Tuberculosis, Radiology and Physio-Therapeutics. *Single-day Sections:* Preventive Medicine, Public Health, History of Medicine, Therapeutics and Pharmacology, Dermatology, Tropical Medicine, Medical Sociology.

## THE ASSOCIATION'S SCHOLARS AND GRANTEES.

74. The sum granted by the Council for the direct encouragement of original investigation and research exceeded £1,103 during the past year. The following awards were made:—

*Ernest Hart Memorial Scholarship.*

Claude H. Whittle The Pathology and Epidemiology of  
(Cambridge) Pneumonia and Pneumococcal In-  
(2nd year) fections.

*Ordinary Research Scholarships.*

Gordon R. Cameron Research into the morbid anatomy,  
(Melbourne) histology and etiology of Pan-  
creatic Disease.

William C. Wilson Injury and Disease of the Thoracic  
(Edinburgh) organs, in order to elucidate the  
(2nd year) mechanical and pathological fac-  
tors involved, and to assess the  
value of treatment by surgical  
measures.

Dugald Baird Investigation of the bacteriology of  
(Glasgow) infections of the urinary tract in  
pregnancy, with possible applica-  
tion to treatment.

*Research Grants.*

W. A. Burnett (Glasgow), £40; W. S. C. Copeman  
(Carshalton), £25; G. P. Crowden (London), £35; W. S. Duke-  
Elder (London), £70; H. H. Gleave (Sheffield), £20; E. G.  
Holmes (Cambridge), £50; J. C. Hoyle (Cambridge), £15;  
R. L. Mackay (Wolverhampton), £20; R. C. Shaw (Man-  
chester), £70; Isabel G. Wilson (London), £5.

The Council also made a grant of £100 to aid the  
prosecution of a scheme of investigation into rheumatism in  
children which is being carried out at the Paddington Green  
Children's Hospital Rheumatism Supervisory Centre.

*Work of the Scholars and Grantees.*

Satisfactory work was done by the scholars and  
grantees for 1926-27, the results in several cases being com-  
municated to various scientific societies.

## SIR CHARLES HASTINGS CLINICAL PRIZE.

75. The Sir Charles Hastings Clinical Prize consisting of  
an Illuminated Certificate and a cheque for 50 guineas, which  
was established by the Council for the promotion of systematic  
observation, research and record in general practice, has been  
awarded in respect of the year 1928 to Dr. Ambrose Wilfred  
Owen, Aberdare, for his clinical study entitled "Some renal  
conditions met with in general practice."

The eight clinical studies submitted for the Prize  
showed much careful work and observation. They were  
examined by Prof. W. E. Dixon and Sir Humphry Rolleston  
to whom the Council is much indebted for this service.

The Council proposes to offer the Prize for competition  
in 1929 under the existing Regulations.

## THE KATHERINE BISHOP HARMAN PRIZE.

76. The Council has decided to award the Katherine Bishop  
Harman Prize to Dr. Ronald Hare, Inoculation Department,  
St. Mary's Hospital, London, for his essay on "Researches  
on Septicæmia with special reference to Puerperal  
Septicæmia," and the presentation will be made at the forth-  
coming meeting of the Association at Cardiff.

This Prize was established in April, 1926, as the result  
of the generosity of Mrs. Katherine Bishop Harman, M.B.,  
B.S. (wife of the Treasurer of the Association) to encourage  
study and research directed to the diminution and avoidance  
of the risks to life and health that are apt to arise in  
pregnancy and child-bearing.

The essays were examined by Lady Barrett and Mr.  
Comyns Berkeley who, in their report, indicate that three  
essays could really be regarded as original contributions to  
the subject, and after finally awarding the prize, as stated  
above, the examiners made special mention of the essay by  
Dr. Peter L. McKinley as an exceptionally able statistical  
examination of Deaths in Childbearing of Women in England  
and Wales.

The Council has expressed its thanks to the examiners  
Lady Barrett and Mr. Comyns Berkeley for their services,  
and also to the President-Elect, Sir Ewen Maclean, who  
assisted the examiners in their final choice.

## THE HEMPSON PRIZE.

77. Mr. W. E. Hempson placed at the disposal of the  
Council upon the occasion of his retirement from the position  
of Solicitor to the Association, held by him for a period of

thirty years, and as a mark of his esteem for the Association  
and appreciation of his happy relations therewith, the sum of  
25 guineas as a prize to be awarded for the best essay or  
treatise on some phase or branch of public health work. The  
Council has decided upon the following subject for the prize  
"A Study of personal experiences in the inspection and treat-  
ment of School Children under the auspices of any Elementary  
Education Authority." The prize will be awarded at the  
Annual Meeting of the Association in Manchester, 1929.

## MIDDLEMORE PRIZE.

78. The Middlemore Prize which was established for the  
encouragement of research in ophthalmic medicine or surgery  
and includes a money award of the value of £50 and an  
Illuminated Certificate, will next be awarded at the Annual  
Meeting of the Association at Manchester in 1929. The fol-  
lowing subject has been selected for the Prize—"The Clinical  
Study of the Vitreous body, its swellings, contractions,  
opacities, and reactions to Toxic invasion; with special refer-  
ence to Glaucoma and Detached Retina." Essays must be  
submitted to reach the Medical Secretary of the Association  
not later than December 31st, 1928.

## B.M.A. LECTURES.

79. The system of B.M.A. Lectures to Divisions and  
Branches continues to be appreciated, and the Council has  
set apart £500 to meet the demand for these Lectures in 1928.

The following have given Lectures during the past  
year:—Dr. G. A. Allan, Dr. L. W. Batten, Prof. E. Bramwell,  
Dr. H. C. Cameron, Dr. R. G. Canti, Dr. S. Monckton Cop-  
man, Dr. E. P. Cumberbatch, Prof. W. E. Dixon (2), Mr.  
A. Fleming, Prof. John Fraser, Dr. Herbert French, Prof.  
G. Lovell Gulland, Mr. W. Sampson Handley, Sir Thomas  
Horder, Prof. D. Murray Lyon, Prof. A. Louise McIlroy (2),  
Prof. Hugh Maclean (2), Dr. H. Crichton Miller, Dr.  
John Parkinson, Dr. F. W. Price, Dr. Eric Pritchard,  
Sir Humphry Rolleston, Dr. R. J. Rowlette, Mr. H. S.  
Souttar, Dr. E. I. Spriggs, Mr. P. Jenner Verrall, Mr.  
H. Beckwith Whitehouse, Prof. D. P. D. Wilkie, Dr. S. A.  
Kinnier Wilson.

REMUNERATION OF NON-PROFESSORIAL MEDICAL TEACHERS,  
LABORATORY AND RESEARCH WORKERS.

80. The question of the remuneration of non-professional  
medical teachers, laboratory and research workers has been  
a subject of consideration at various intervals since 1919.  
A policy was adopted by the A.R.M. in 1920, and was extended  
and amended in 1922. A further discussion took place in 1926  
when the Representative Body, taking into consideration the  
new scale of minimum commencing salaries for whole-time  
public health medical officers, was of opinion that an attempt  
should be made to bring the remuneration of pathologists,  
research and laboratory workers into line with that scale. As  
a result, the following scale was adopted:—

(a) That whole-time (1) non-professional medical  
teachers, and (2) medically qualified laboratory or  
research workers should be grouped into three grades as  
defined below, and with the salaries as stated:—

Grade III.—Comprising those who are junior  
workers temporarily employed on probation; no person  
shall remain in Grade III for more than three years.

That the minimum salaries for Grade III shall be as  
follows:—

1st year ... ..	£300
2nd year ... ..	£350
3rd year ... ..	£500

Grade II.—Comprising laboratory or research  
workers or teachers who have had three years' experi-  
ence in Grade III or in work of a similar character,  
and who are permanently and exclusively employed as  
such.

That the minimum commencing salary for Grade II  
shall be £600 per annum.

Grade I.—Comprising those of Grade II whose  
qualifications or duties justify a position of seniority  
in status and a higher remuneration.

That the minimum salary for Grade I shall be £750  
per annum.

That after the probationary period (i.e., Grade III)  
has been completed, dismissal should be possible only  
on grounds of neglect of duty, improper conduct, or  
incapacity.

(b) That non-professional medical teachers and medi-  
cally qualified laboratory or research workers holding  
part-time appointments should receive remuneration for  
the time engaged, at the rate of not less than £600 per  
annum.

The operation of this scale has given rise to very considerable difficulty and it became clear to the Council that some modification was called for. In order to obtain the views of the medical schools on the subject, a conference of representatives of the schools with the Science Committee was convened by the Council in February last. Almost all the medical schools in Great Britain and Ireland were represented at the conference, in the majority of cases by their deans. The conference was strongly of opinion (i) that the universities were not in a position to pay salaries on the lines suggested in the above scale, and that the enforcing of the scale (assuming that the Association was in a position to enforce it) would mean the diminution of the number of posts, or the transfer of many of them to persons other than qualified medical practitioners; (ii) that the appointments were almost invariably not of a permanent character; (iii) that there were many considerations other than remuneration in the academic line of work which did not apply to appointments under public health authorities, and that a junior appointment in the academic field when it did not lead to a senior or professorial post was often a stepping stone to remunerative employment in other walks of life.

The Council has given careful consideration to these views and recommends:—

**Recommendation:** That the scale of salaries relative to non-professional medical teachers, laboratory and research workers, should not apply to academic appointments in universities and medical schools where these appointments are of a temporary character and where the duties attached to the posts are in direct connection with the advancement of the practitioner's knowledge and experience in the particular branch of work which he proposes to cultivate.

#### TREATMENT BY RADIATION AND ELECTRICITY.

81. The attention of the Council has been drawn to the risks to the public involved in the use of ultra-violet light apparatus by untrained persons and the matter was considered by the Science Committee after report from a special Sub-Committee.

The Council endorses the following findings of the Science Committee:—

(a) Treatment by electro-therapeutic and radiation methods has much increased in recent years and it is probable that some members of the profession have not kept themselves abreast of the more modern procedure and forms of apparatus. Hence treatment of this kind is sometimes prescribed in general terms rather than with specific directions.

(b) On the other hand these methods of treatment are being cultivated largely by persons who have had no medical education and no adequate practical training, and there is thus risk to the public.

(c) The law puts no restriction on the use by any person of such powerful agencies as electricity, radium, X-rays, diathermy and ultra-violet light.

(d) With all of these there is the risk of serious mischief and here in particular must be noted that the recent development of ultra-violet light apparatus and its sale for amateur and domestic use is not without its dangers. While allowing that these dangers have been overstated in some quarters, they undoubtedly exist, and it is admitted that the apparatus in individual cases has made active a quiescent phthisis pulmonalis and has caused serious damage to the eyesight. Other risks apart, here is good reason why this form of treatment should be confined to properly trained persons.

(e) Similarly diathermy from faulty application may produce burns which are very slow to heal, and applied in the region of the brain may cause giddiness and inco-ordination.

(f) Electricity therefore in its various forms and the several methods of radiation are, in unskilful hands, agencies which may adversely affect existing diseased conditions, may make active quiescent disease and may inflict positive damage on various organs; even cases of death have been traced to these methods.

(g) Immediate steps should be taken to confine the use of these therapeutic activities to persons who have been adequately trained under medical direction.

(h) Opportunities for technical instruction already exist at least in part, but it is necessary to establish a public

opinion, both professional and lay, against the use of powerful remedial agencies by ignorant and untrained persons.

(i) The medical schools are not unaware of the therapeutic values here considered and are arranging corresponding courses of instruction for medical students.

The Council recommends:—

**Recommendation:** That the Representative Body express the following opinion, namely, that in view of the risks to the public involved in the use of electricity and radiation as methods of treatment by untrained and unqualified persons it is to be desired (1) that suitable courses of training should be organised under medical direction for persons who wish to administer this form of treatment; (2) that persons who have satisfactorily followed such a course should be entitled to have their names entered on an approved Roll; (3) that one of the conditions attached to admission to, and maintenance on, the approved Roll should be abstention from the treatment of any patient except on the responsibility and under the general supervision of a registered medical practitioner; and (4) that patients who require electrical or radiation treatment should be referred only to those persons whose names are on the approved Roll.

#### THE LIBRARY.

82. Increasing use continues to be made by members of the facilities provided by the Association's Library. The number of books borrowed during the years 1923-27 has been respectively as follows:—

1923	...	4,800
1924	...	7,200
1925	...	7,300 (Library closed for several weeks.)
1926	...	9,810
1927	...	11,617

In order to meet these increasing demands, the Council has made further provision for the expansion of the lending library facilities.

The Council desires again to acknowledge the valued services of the Honorary Librarian, Mr. W. G. Spencer.

#### INQUIRIES INTO THE AFTER-HISTORY OF GASTRO-ENTEROSTOMY AND TREATMENT OF VARICOSE ULCERATION.

83. The A.R.M., 1927, approved of collective investigations being conducted by the Council into the After-History of Gastro-Enterostomy and the Treatment of Varicose Ulceration. The interest taken by the Ministry of Health in the suggested method of research is indicated in the following letter which was addressed to the President of the Association:—

"Ministry of Health,  
Whitehall, S.W. 1.  
November 7th, 1927.

Dear Sir Robert Philip,

I learn with much interest that the British Medical Association, after consultation with officers of my Department, is about to institute a collective investigation into certain highly important problems of disease. The intention, as I understand it, is to secure the co-operation of a large number of medical practitioners up and down the country in a scheme of team-work on an extensive scale, and so bring together the results of many varying kinds of experience. I need hardly say that this endeavour, which promises to throw light on some problems of disease that press urgently for solution, has my warmest sympathy, and I hope it will be brought to a successful issue.

Yours sincerely,

(Sgd.) N. Chamberlain."

Many surgeons have cordially welcomed the Gastro-Enterostomy inquiry and have expressed willingness to take part in the investigations. As regards the inquiry into the treatment of Varicose Ulceration, the names of a considerable number of members have been received from Divisions throughout the country. The Council attaches great importance to this inquiry and it hopes that those Divisions which have not yet indicated their willingness to participate in the scheme of investigation, will do so at an early date.

Dr. A. P. Luff has kindly consented to undertake the work of co-ordinating the replies to these enquiries.

## Medical Ethics.

### INSTRUCTION OF NEWLY QUALIFIED PRACTITIONERS IN MEDICAL ETHICS.

84. The Council has considered the following Minute 46 of the A.R.M., 1927:—

Resolved: That the Council be instructed to consider any further steps which may be thought necessary for the instruction of senior students or newly qualified practitioners in medical ethics.

As the question at issue is clearly one which concerns the General Medical Council, the Council has asked the direct representatives of the profession on the G.M.C. to raise the question in that body. In point of fact, some years ago a report was presented to the G.M.C. by its Education Committee as to the instruction which was being given to medical students on the duties which devolve upon practitioners in their relationship to the State and on the generally recognised rules of medical ethics. The report showed that while satisfactory action appeared to be taken by a considerable number of the medical schools, the situation as regards other schools was either doubtful or unsatisfactory.

The Council has suggested that a further enquiry on this subject should be addressed by the G.M.C. to the medical schools and that the lectures on medical ethics should be given by practitioners who have had experience of private practice.

### THE ETHICAL WORK OF THE ASSOCIATION.

85. A great amount of the work of the Central Ethical Committee and of the Standing Sub-Committee concerns matters which cannot very well be made the subject of report. Advice is frequently sought on matters of ethics and disputes between members of the profession. The Central Ethical Committee, acting for the Council, has adjudicated in several disputes between members where a satisfactory settlement has not been possible without bringing the parties together at a hearing. It is evident from increasing correspondence that the advice on ethical matters which the Association is able to give through its central office and by the Ethical Committees, both local and central, is much appreciated by members.

### ETHICAL RULES.

86. In pursuance of the standing instruction of the Representative Body the Council reports that the following bodies in Great Britain have not yet adopted the Ethical Rules:—*Divisions*: Argyllshire, Chester, Dumbartonshire, Durham, Edinburgh and Leith, Halifax, Salford. *Branch*: Edinburgh.

## Medico-Political.

### CONSULTATIONS UNDER PUERPERAL PYREXIA REGULATIONS.

87. Arising out of paragraphs 113 and 149 of the Annual Report of Council, 1926-27, the A.R.M. 1927 passed the following resolution:—

Minute 148.—Resolved: That it is desirable, owing to the fact that puerperal pyrexia may be due to causes other than obstetric, that a panel of consultants which may be instituted under the Regulations should include competent physicians, surgeons, and pathologists, in addition to consulting obstetricians; further, that some standard of competence should be adopted, such as membership of the staff of a local general or obstetric hospital, or the possession of special qualifications or experience by private practitioners.

This resolution was brought to the notice of the Ministry of Health which stated that some local authorities had already made arrangements for the establishment of a panel of consultants, and the Minister would have regard to the view expressed by the Representative Body in the event of further proposals for the constitution of such panels being submitted for his approval. The Council regards the position as satisfactory.

### MEDICAL OFFICERS OF PUBLIC SCHOOLS.

88. Minutes 106 to 140 of the A.R.M. 1927, dealing with the remuneration and conditions of service of medical officers of public schools, have been discussed with representatives of the Incorporated Association of Headmasters and the Association of Headmistresses, but as a result of a communication from the Medical Officers of Schools Association (on whose representations this matter was first taken up by the Association), further action in this matter is delayed.

### REPORTS BY MEDICAL PRACTITIONERS AT REQUEST OF CORONERS.

89. The A.R.M. 1927, in the following resolution, restated what was already the policy of the Association:—

Minute 153.—Resolved: That there should be a fee where a report has been requested by a coroner from a practitioner who has not performed a post-mortem examination and who is not called to give evidence.

In connection with the Coroners (Amendment) Act, 1926, when the Association attempted to obtain legislation to provide for such a fee, a deputation from the Association was informed by a representative of the Home Office that it was legal for local authorities to pass resolutions authorising the payment of a fee to medical practitioners who, at the request of coroners, provide reports but are not subsequently asked to perform the post-mortem examination or to give evidence at the inquest. The Council has urged the Divisions and Branches to endeavour to obtain the support of their local coroners to this proposal, and then to urge County and County Borough Councils to adopt the necessary resolutions.

### DEATH CERTIFICATION.

90. Representations were made to the Registrar-General pointing out that the delay necessitated by medical practitioners forwarding, in accordance with the Act, certificates of the cause of death by post to Registrars, some of whom only attend their offices on certain days, causes considerable inconvenience to the relatives.

The reply of the Registrar-General is contained in the B.M.J. Supplement of 21st January, 1928 (p. 22), and is, briefly, to the effect that in certain cases a practitioner may hand the certificate to a messenger for personal delivery to the Registrar, although in so doing the practitioner does not divest himself of responsibility for the loss of the certificate.

### ALLEGED ENCRoACHMENTS ON THE DOMAIN OF PRIVATE PRACTICE.

91. The Council, arising out of Minutes 101, 163, 166 and 220 of the Annual Representative Meeting, 1927, has set up a special Committee to consider the question of the alleged encroachments on the domain of private practice resulting from medical services rendered by the State, local health and education authorities, voluntary bodies and hospital contributory schemes.

With a view to obtaining exact information on the subject the Council, with the co-operation of the Society of Medical Officers of Health, has issued a questionnaire to all whole-time Medical Officers of Health in England, Scotland, Wales and Northern Ireland, enquiring as to the number of whole-time and part-time medical officers employed in those services and how far hospital services are made use of. The Medical Secretary is also making detailed personal investigations into the health services in certain areas which have been specially selected on account of the different methods of administration prevailing. A considerable amount of attention has been devoted to the question of the inroads into private practice occasioned by contributory schemes for hospital benefit. The Council does not propose to report on this very important subject until its enquiries are completed and an adequate report can be presented to the Representative Body.

### INTERNATIONAL MEDICAL SEA CODE.

92. The Council, being of opinion that there exists a *prima facie* case for the establishment of an International Medical Sea Code, has had before it reports on this matter. A considerable amount of work has already been done by other countries and organisations in the direction of improving the facilities for inter-communication between ships at sea and between ships and land stations, for medical purposes, inasmuch as the League of Red Cross Societies has the matter in hand and the Belgian Government has carried out a series of experiments to test the Medical Intelligence Service organized for seamen in Denmark, Norway and Sweden. The expressed opinion of many of those who have made comparative tests on the merits of transmission of messages by code or in the ordinary manner is that the latter is the more advantageous.

The object of the Council is, if possible, to help to bring about a state of affairs which will facilitate matters from the surgeon's point of view when he is asked by the master of a ship other than his own for advice as to the treatment of a patient, and the Council is of opinion that any system which is to be of international value must be based on a code. It has, therefore, been decided to make an effort to draw up a simple questionnaire on the signs and symptoms of disease for the use of Master Mariners when seeking medical advice by wireless from a surgeon on another ship or on shore, and it is proposed at a later date to approach the Board of Trade with a view to the questionnaire being translated into code for incorporation in the International Code of Signals.

## ASSISTANT MEDICAL OFFICERS TO MENTAL HOSPITALS.

93. The policy of the Association as regards the salaries and emoluments of Assistant Medical Officers to Mental Hospitals was adopted in 1915 and therefore has no relation to the present cost of living. In co-operation with the Assistant Asylum Medical Officers Association the Council has considered the present position and proposes that the 1915 policy should be superseded. The Council recommends:—

**Recommendation A:** That the following Minute 108 of the A.R.M. 1915, be rescinded:—

Minute 108.—Resolved: That the following recommendations contained in the Report of the Conditions of Employment and Remuneration of Assistant Asylum Medical Officers be approved.

(a) That the minimum commencing salary of Assistant Asylum Medical Officers be £220, rising after one year of probation to £250, and then by £25 per annum to £300 per annum irrespective of promotion, and that the salaries of officers who are not promoted should then rise automatically by £10 per annum for ten years.

(b) That in addition to the operation of the above scale, an officer on being promoted to second assistant should receive an additional £50 per annum, and on being promoted to senior assistant an additional £50 per annum.

(c) That Assistant Asylum Medical Officers who have received promotion should also participate in the automatic increase of £10 per annum for ten years, which commences after five years' service.

(d) That emoluments should be valued at least at £100 per annum, and made commutable for full value at the end of five years.

(e) That every asylum should contain a separate house suitable for a married assistant officer, and that where an asylum contains four or more assistants, two such houses for assistant officers should be provided.

**Recommendation B:** That the minimum commencing salary of an Assistant Medical Officer to a Mental Hospital be £350 per annum rising by annual increments of £25 to £450 per annum with emoluments valued at £150 per annum which should include board, lodging, laundry and attendance.

**Recommendation C:** That these Assistant Medical Officers to Mental Hospitals who possess a Diploma in Psychological Medicine should receive an additional £50 per annum.

**Recommendation D:** That temporary medical officers should not be employed on the staffs of mental hospitals for more than three months, except as relief during holiday periods or when a member of the permanent medical staff is incapacitated through illness or has been seconded for any purpose.

**Recommendation E:** That every asylum should contain a separate house suitable for a married assistant officer and that where a mental hospital contains four or more assistants two such houses for assistant officers should be provided.

The Council has asked the County Council's Association and the Association of Municipal Corporations and other appropriate bodies for their comments on the foregoing recommendations in order that the Council may be in a position to advise the Representative Body as to the attitude of these bodies towards the proposals made. Copies have also been sent to the English and Scottish Boards of Control for their information. Any replies received in time will be dealt with in the Supplementary Report of Council.

Subsequent to adoption by the Representative Body of these recommendations, after consideration of any representations received from the bodies referred to, the Council proposes to circulate the decisions of the Representative Body on this matter to all County and County Borough Councils and other appropriate bodies in England, Scotland, Wales and Northern Ireland, accompanied by an explanatory memorandum which will include the following opinions of the Council:—

(i) That all Assistant Medical Officers to Mental Hospitals should be able to look forward to a salary which with emoluments would amount to at least £300 per annum after some five years' service;

(ii) that Assistant Medical Officers to Mental Hospitals should be encouraged to take a Diploma in Psychological Medicine;

(iii) that (having in mind the view expressed by the Royal Commission on Lunacy that in a large number of institutions the medical staff should be enlarged) a whole-time medical officer of a mental hospital should not take charge of more than (a) 50 acute cases together with 50 convalescent patients, or (b) 400 chronic cases, as understaffing of hospitals means that the patients therein receive insufficient treatment and this entails a corresponding low recovery rate;

(iv) that practitioners who are netting as clinical assistants in mental hospitals should not be required to undertake the duties of junior assistant medical officers;

(v) that practitioners engaged in the trying work of continuous attendance on mental patients in mental hospitals should have at least four weeks' leave each year and that they should not be obliged to take more than two weeks of this consecutively.

**Recommendation F:** That the foregoing four recommendations be circulated to all County and County Borough Councils and other appropriate bodies in England, Scotland, Wales and Northern Ireland, along with the recommendations regarding remuneration.

## TREATMENT OF PERSONNEL OF ORDNANCE SURVEY DEPARTMENT.

94. The Representative Body in 1927 passed the following resolution:—

Minute 174.—Resolved: That the Council be instructed to approach the authorities concerned with a view to obtaining an increase in the fees paid to doctors for casual cases among the Post Office Telegraphic Survey Department.

It was subsequently ascertained that the persons referred to in that resolution were employed by the Ordnance Survey Department and not by the Post Office. Had this fact been known at the Representative Meeting the Chairman of the Medico-Political Committee would have been able to give a reply which might have satisfied the proposer of the resolution and have resulted in the withdrawal of it. The position is that the fees paid to medical practitioners for treatment of the personnel of the Ordnance Survey Department were under consideration during last session. The Council then decided to take no action to obtain an increase in these fees as they compare favourably with those paid by several other Government Departments for similar services, and as these are generally accepted by the profession it would be inconsistent to take special action with regard to this comparatively small section.

## PAYING CENTRES FOR INFANT HYGIENE.

95. In 1917 the Council, with reference to a proposal by the Mothers' Union to establish infant consultation centres for better class families, stated that while fully appreciating the value of the work proposed to be done at such centres in giving lectures on infant management, it did not approve of these centres providing consultations and advice in respect of mothers and young children belonging to classes of the community which were quite able to consult their own family doctor.

Recently, further representations on this subject were made by the Association of Infant Welfare and Maternity Centres and the Babies' Club at Chelsea. A deputation from these bodies stated that there was a strong feeling that the mothers of the middle class public should be able to get that guidance and instruction which is provided by the municipal maternity and child welfare clinics for poorer mothers, and which is so useful in enabling them to keep their babies well. The promoters of these new schemes realise that the municipal centres are open to all classes but they are netting for mothers of the middle classes who are not only anxious to have this instruction but are willing to pay for it. The deputation stated that many private practitioners were unable or unwilling to give the kind of instruction required, and that there were considerable advantages to be gained by having the instruction given at a centre by a doctor who had given special attention to this branch of medical work, assisted by a fully trained nurse. The promoters of the centres stated emphatically that it was not proposed, in any circumstances, to give medical treatment at these centres.

The Council has come to the conclusion that, although in its opinion the ideal is that mothers should be able to look with confidence to their family doctor for the guidance required, there is some truth in the assertion that many doctors do not cater for the service required. One object which the Council hopes might be gained by the establishment of such clinics is the stimulation of the private practitioner to provide the services required himself, just as the setting

up of the maternity and child welfare clinics has undoubtedly aroused a much greater interest in pre-natal and child welfare work.

The Council recommends:—

**Recommendation A:** (i) That the education of all mothers in preventive medicine, as applied to the care of the infant and the conditions of the home, is desirable; (ii) that it is considered that there already exist means by which both of these objects may be partially attained; (iii) that any further establishment of special paying centres should be for the purpose of education and health propaganda and not for the purpose of treatment; and (iv) that should mothers prefer to avail themselves of paying centres it is desirable that attendance at such centres should be with the knowledge of the family medical attendant.

**Recommendation B:** That with reference to paragraph (ii) of the foregoing recommendation, in view of the recognised importance of preventive medicine at the present time, it is felt that the private practitioner with his knowledge of the family and home conditions is the best person to give such advice and should be strongly urged to undertake this important duty.

**Recommendation C:** That any body of persons considering the formation of a Paying Centre for Infant Hygiene should communicate with the local profession, preferably through the local Division of the British Medical Association, with a view to obtaining their co-operation.

**Recommendation D:** That the local medical profession should be represented on the Committee of Management of all Paying Centres for Infant Hygiene.

**Recommendation E:** That it is for the Committee of a Paying Centre for Infant Hygiene, on the recommendation of the local medical profession, to decide whether the medical staff of a Paying Centre shall be selected from among specialists or general practitioners, whether from those practising in the area in which the Paying Centre is located or from those who are practising outside that area.

**Recommendation F:** That the remuneration of the medical staff of Paying Centres for Infant Hygiene must be a matter of arrangement between the Committee of Management of the Centre and the local medical profession, preferably through the local Division of the British Medical Association.

**Recommendation G:** That the following be suggested as Model Rules for Paying Centres for Infant Hygiene:—

(i) That the object of the Paying Centre for Infant Hygiene is to give education and advice to subscribers on the general welfare of children up to 5 years of age;

(ii) that it is desirable that any mother wishing to attend a Paying Centre for Infant Hygiene should inform her family medical attendant of her intention and obtain his co-operation;

(iii) that should any case of illness be discovered at a Paying Centre for Infant Hygiene, the subscriber shall be referred to the family medical attendant;

(iv) that the medical officer of a Paying Centre for Infant Hygiene shall not be at liberty to attend the children of subscribers in case of illness, except in consultation with the private medical attendant of the family;

(v) that in no case shall medical advice be given by correspondence, or on the telephone, either by the medical officer or the nurse-superintendent; and

(vi) that subscribers must not bring to the Centre children who have been in contact with infectious disease or children who are actually ill.

#### PROTECTION OF UNBORN CHILDREN.

96. The Council reports that the Public Health Section of the Annual Meeting, 1926, passed the following resolution:—

Resolved: That the Council be requested to approach the Government with a view to securing legislation to protect the unborn child against intentional violence until all parts of it are completely born, i.e., during its passage from the mother's body.

In the discussion in the Section, it was stated (i) that there was no statutory definition of live birth in English law, only a formula accepted by what is known as "common law," and (ii) that the rulings laid down by Judges, and now generally accepted, were to the effect that in order to be born

alive a child must show some signs of independent existence after every portion of its body was free from the mother's parts, and that therefore the killing of a child during the process of birth, and before it was fully born, was not an offence under the present law, as, in order that murder could be perpetrated, the victim must have had a separate existence.

In view of the fact that the Births and Deaths Registration Act, 1926, which came into operation on 1st July, 1927, perpetuates this legal position the Council is of opinion that no useful purpose would be served by an attempt, at any rate at the present time, to take action on the lines suggested in the above-quoted resolution of the Public Health Section, 1926, and which would require fresh legislation.

#### WORKMEN'S COMPENSATION.

97. The Council has considered the following motion by Chesterfield which the Annual Representative Meeting 1927 (Minute 150) referred to it:—

That the Association is strongly opposed to the practice of some inspectors, not being medical men, acting on behalf of Employers' Liability Insurance Companies, of requesting or suggesting the removal of properly applied dressings, when visiting injured workpeople, in order that they may see the injury, and instructs the Council to enter a vigorous protest with representatives of the Compensation Insurance Companies.

The Division, in submitting this motion to the Representative Body, had in mind the fact that one of its members had found that the dressings he had applied to a patient had been tampered with by a lay inspector of a Compensation Society. Enquiries were made of the society and it was ascertained that it was the practice of their inspectors to ask to see the injuries in order to satisfy themselves that there was a cause for incapacity, but that the inspectors did not interfere with dressings applied by doctors or nurses or insist on seeing the injury if the workman objected.

As there is no body of evidence that Compensation Insurance Companies' Agents remove dressings which have been applied by doctors, only one such instance having been reported, the Council is of opinion that there is no case for action on the lines suggested in Minute 150 of the A.R.M. 1927.

#### REGISTRATION OF NURSING HOMES.

98. Under the Nursing Homes Registration Act, 1927, which will come into operation on 1st July, 1928 (and which does not apply to Scotland or Ireland), the main points which affect the medical profession are (i) that nursing and maternity homes are required to be registered, the only exceptions being (a) any hospital or institution not carried on for profit; and (b) any nursing home carried on in accordance with the practice and principles of the body known as the Church of Christ Scientist—a condition for the exemption of the latter being that such home shall adopt and use the name of Christinn Science House; (ii) that the local supervising authorities shall be (a) for the County of London, the London County Council; and for the City of London, the Common Council, the London County Council being empowered to delegate any of its powers under the Act to metropolitan boroughs; and (b) for the remainder of the country, the County and County Borough Councils, the former being empowered to delegate any of their powers or duties under the act to District Councils; (iii) that the certificate of registration shall be kept affixed in a conspicuous place in the nursing home; (iv) that the local supervising authority may make By-laws:—

(a) prescribing the records to be kept of the patients received into a nursing home, and in the case of a maternity home, of any miscarriages occurring in the home, and of the children born therein and of the children so born who are removed from the home otherwise than to the custody or care of any parent, guardian, or relative;

(b) requiring notification to be given of any death occurring in a nursing home;

(v) that the M.O.H., a qualified nurse or other officer authorised by the authority may at all reasonable times enter and inspect any premises used, or believed to be used, as a nursing home and to inspect records, other than medical, required to be kept; and (vi) that the Act contains the following definitions:—

"Nursing Home" means any premises used or intended to be used for the reception of and the providing of nursing for persons suffering from any sickness, injury or infirmity, and includes a maternity home, but does not include—

(a) any hospital or other premises maintained or controlled by a Government department or local

authority or by any other body of persons constituted by special Act of Parliament or incorporated by Royal Charter;

(b) any institution for lunatics within the meaning of the Lunacy Act, 1890;

(c) any certified institution, certified house or approved home within the meaning of the Mental Deficiency Act, 1913.

"Maternity Home" means any premises used or intended to be used for the reception of pregnant women or of women immediately after childbirth.

"Qualified nurse" means a person registered in the general part of the register of nurses required to be kept under the Nurses Registration Act, 1919, or a person who had before the commencement of this Act completed a three years' course of training in a hospital which was during the period of her training, or subsequently became, a training school approved by the General Nursing Council for England and Wales, or the General Nursing Council for Scotland, or the General Nursing Council for Northern Ireland, for the purpose of admission to the general part of the said register.

The Council has considered the draft model by-laws which the Ministry of Health proposes to issue to local supervising authorities under the Act and has suggested certain amendments.

#### POSITION OF DOCTORS' HOUSES UNDER NURSING HOMES REGISTRATION ACT, 1927.

99. As questions will undoubtedly arise in the near future as to the position of doctors who take one or two patients into their private houses, the Council has made enquiries as to what their position will be under the Act. It is difficult to dogmatise but it appears that, generally speaking, the position will be governed by what the doctor undertakes to do for such persons as he receives into his house.

If he habitually takes in patients and provides nursing it seems likely that he will have to register, but the question is one which must be settled by the local authority, and any doctor who is in any doubt as to his position would be well advised to discuss the matter with the local Medical Officer of Health. It must not be forgotten that the Act lays down in its definition of a nursing home "any premises used or intended to be used for the reception of, and the providing of nursing for, persons suffering from any sickness, injury, or infirmity," and from this it would appear that the habitual provision of nursing is the guiding factor.

#### ANTE-NATAL RECORD FORM FOR USE BY MIDWIVES.

100. Under the 1927 Rules of the Central Midwives Board it is laid down that "a midwife must keep notes of her antenatal visits in the form approved by the Central Midwives Board." This form involves the use of the stethoscope and pelvimeter both of which instruments the Council considers midwives are not competent to use. The Council has pointed out its objection to the Ministry of Health and the Central Midwives Board.

#### EXAMINATION OF EMIGRANTS TO CANADA.

101. In 1922 the Oversea Settlement Office (now the Oversea Settlement Department of the Dominions Office) prepared a roster of medical practitioners for the medical examination of candidates for emigration to the Overseas Dominions, the fees to be paid by the candidates for such examinations having been agreed between the Association and the Migration Departments of the various Overseas Governments.

The Canadian Government has now appointed 25 Canadian doctors to examine all emigrants to Canada before they leave this country. These practitioners will be occupied on this work whole-time, will be civil servants and will be debarred from entering into private practice. The reason for these appointments is stated by the Canadian Government to be (i) that, whilst the examination of the would-be emigrants by the doctors on the roster had diminished the number of emigrants rejected on reaching their destination, such cases still occur; and (ii) that there are cases in which there is genuine difference of professional opinion, particularly in regard to what constitutes mental defectiveness, and there is a tendency sometimes to give the emigrant the benefit of the doubt, which exposes him to the risk of rejection on arrival.

For these reasons the Canadian Government has taken such steps as will in its opinion reduce the risk of rejection to a minimum and place the responsibility on the shoulders of doctors in the direct employment of the Canadian Government.

The Council is of opinion that the Association cannot raise any objection to the new arrangement.

#### EXAMINATION OF EMIGRANTS TO AUSTRALIA.

102. It has been ascertained that the Government of Australia has followed, so far as London is concerned, the example set by the Canadian Government and has appointed, for a trial period of 12 months, 3 whole-time Australian medical practitioners to work in and around London in examining emigrants for Australia. This means that London practitioners whose names are on the roster drawn up by the Dominion Governments for the examination of emigrants are losing the work. Meantime, practitioners on the roster are being asked to give a good deal more detailed information in their reports than they were asked for when the Association agreed to the fees for the examination, and the matter is being taken up with the Chief Medical Officer at Australian House.

#### TRADE DISPUTES AND TRADE UNIONS ACT, 1927.

103. The Ministry of Health has informed the Association that in the view of the Treasury there is nothing in the Civil Service (Approved Associations) Regulations, 1927—made by the Treasury in pursuance of the Trade Disputes and Trade Unions Act, 1927—to prevent an established civil servant belonging to the Association.

#### CONTRACT RATE FOR JUVENILE ODDFELLOWS.

104. The Manchester Unity of the Independent Order of Oddfellows suggested that the Association should consider the adoption of a standard fee for medical attendance on and the provision of medicine for juvenile members of the Society throughout the whole country, and the question has been discussed between representatives of the two bodies.

The policy of the Association as regards medical attendance on uninsured persons is as follows and was adopted by the Annual Representative Meeting, 1920:—

Minute 105.—That the Representative Body adopt the following principles as essential to the formation of any schemes for the provision of medical attendance and treatment of uninsured persons:—

(1) That, in general, in considering the necessity for obtaining the approval of the Council for schemes for the treatment of uninsured persons upon contract terms, the following principles and conditions must be adhered to:—

(a) Free choice of doctor by patient and of patient by doctor;

(b) Remuneration to be not less than that which is deemed by the Council to be equivalent to that paid in respect of insured persons;

(c) Persons with a total income from all sources of £250 per annum or upwards, or the dependants of any such person, not to be treated under contract terms at all.

(2) That the Representative Body realises that the conditions in certain areas will not allow of the above terms being obtained, and that in these circumstances the approval of the Council may be given provisionally to a scheme involving a less payment when the local profession can show that the economic conditions in the area demand it.

(3) That one of the conditions necessary for the approval of schemes containing lower rates of payment shall be the inclusion amongst the rules, in a prominent position, of a statement that approval by the Association has been given to the rates only because of special economic conditions.

As will be seen this policy makes no differentiation between juveniles and adults, but as a matter of actual practice it has been found that the fees obtained in respect of juveniles are almost universally lower than those obtained in respect of adults. The proposal which was eventually made at the conference referred to above was that a standard rate of 8s. 8d. per head per annum including the provision of drugs should be adopted as the remuneration of medical practitioners for medical attendance on and the supply of medicine for juvenile members of the Society. The age limits of the juveniles concerned vary, but in many branches of the Society the age is from birth to 16 years. The Directors of the Order are prepared (subject to confirmation at the Annual Conference of the Order to be held 28th May—2nd June, 1928) to advocate general acceptance by juvenile branches of the society of this rate, with a lower rate for exceptional areas, and is in favour of the principle of free choice of doctor.

The Council, whilst recognising that the offer of 8s. 8d. is considerably lower than the National Health

Insurance capitation rate, is of opinion that there are comparatively few areas in which contract attendance with medicine on juveniles is paid for at a higher rate. Moreover, the position of the juvenile differs very materially from that of the insured person inasmuch as the latter is subsidised as regards his medical attendance both by his employer and by the State, whereas the whole cost of medical attendance on the juvenile falls on the parent who is often in poor or comparatively poor circumstances. Again, the service provided for juveniles under the proposed new arrangement would differ materially from that given to insured persons—it would be subject to no regulations and the bugbear of certification would be almost eliminated. For these reasons amongst others the Council favours the adoption of the proposal of the Society, and recommends:—

**Recommendation:** That the Representative Body approve a standard rate of 8s. 8d. per head per year including drugs for the remuneration of medical practitioners for medical attendance and medicine for juvenile members of the Manchester Unity of the Independent Order of Oddfellows; that the Council be authorised to approve a slightly lower rate than 8s. 8d. per head per year, for a time to be definitely stated, for application in any area in which it is satisfied that owing to economic conditions the standard rate of payment is not feasible; and that it be an essential part of this arrangement that there must be free choice of doctor by patient and of patient by doctor.

#### CONTRIBUTORY SCHEMES FOR HOSPITAL BENEFIT IN RELATION TO EDUCATION AUTHORITIES.

105. It has been ascertained that some education authorities which have hitherto paid fees for medical attendance on school children are taking advantage of the existence of contributory schemes for hospital benefit by advising parents of children who need medical attention and who are contributors to one of these schemes to send their children to the hospital either direct, or after consultation with the family medical practitioner, thereby obviating the necessity of fees being paid for them either by the education authority or by the parent. In the opinion of the Council it was never contemplated that contributory schemes for hospital benefit should cover the provision of treatment for children found defective on school medical inspection, these services being already provided for by the education authorities in most areas. In any existing contributory schemes for hospital benefit where treatment for children referred by school medical inspectors is not excluded, the Council advises the Division to endeavour to get the scheme amended in this respect, and in those areas where contributory schemes for hospital benefit are contemplated, the Council advises the corresponding Division to urge that the scheme shall not include these children.

Further:—

(i) that medical practitioners should be warned that in their own interests they must take the necessary steps when hospital contributory schemes are being set up to see that the three fundamental principles enumerated in the Hospital Policy of the Association are enforced, namely:—

(a) that membership of a contributory scheme should be governed by an income limit;

(b) that except in emergency a contributor to a scheme should only be admitted to hospital on the recommendation of the attending practitioner;

(c) that financial recognition should be made of the services of the medical staff of the hospital attending members of a contributory scheme;

and that, with reference to the last paragraph, the Council wishes to make it clear that in regard to operations on school children (where such fail to be excluded from the scheme) the words "financial recognition" should be understood to mean either a percentage of all contributions made by the contributory scheme, or the fees which have been laid down by the Association for medical practitioners employed part-time in school medical work, which should be secured from the hospital authorities; and

(ii) that the medical staffs of the hospital should refuse to perform operations, without a fee, on any children for whom the education authority makes itself responsible.

#### BLIND PERSONS ACT.

106. Consideration has been given by the Council to the question of fees for the various certificates called for under the above Act. It appears that in connection with arrangements for the welfare of the blind in England and Wales medical certificates of blindness may be required for the following purposes:—

(a) to support a claim for a pension under the Blind Persons Act, 1920;

(b) to support an application in respect of a blind person by a local authority or voluntary agency for grant out of public funds under the Regulations made under the Act, for grant for the welfare of the blind, or under the Education Act;

(c) to obtain evidence of blindness before the registration of a blind person; and

(d) to support an application for assistance to a voluntary agency by a blind person in respect of whom no grant out of public funds is available.

If the Minister of Health in considering an appeal arising in class (a), either by the applicant or the Pensions Officer, deems the evidence of blindness submitted to be sufficient to establish a claim, a claim is allowed. If not, the case is referred by the Minister to the local Regional Medical Officer for examination. If the case appears to be one of special difficulty it may be referred, with or without previous reference to the Regional Medical Officer, to an ophthalmic surgeon for examination and report, and a fee of £3. 3s. 0d. is paid by the Exchequer for this service.

So far as cases coming under above category (d) are concerned the Council does not see fit to make any suggestions as to the charging of a fee.

So far as fees for the other cases are concerned the Council recommends:—

**Recommendation:** That except in cases of special difficulty which are referred by the Ministry to an ophthalmic surgeon and for which a fee of three guineas is paid, the Council is of opinion that the fee for medical certificates of blindness for any of the following purposes should be one guinea:—

(a) to support a claim for a pension under the Blind Persons Act, 1920; or

(b) to support an application in respect of a blind person by a local authority or voluntary agency for grant out of public funds under the regulations, for grant for the welfare of the blind, or under the Education Committee; or

(c) to obtain evidence of blindness before the registration of a blind person.

#### MEDICAL DEFENCE: X-RAY EXAMINATIONS.

107. Arising out of correspondence with the York Division, the Council has considered whether or not it is possible to define a group of injuries to bones or joints, the diagnosis and treatment of which can be said in advance not to require examination by X-rays.

The Council recommends that the R.B. should make the following pronouncement:—

**Recommendation:** That it is not possible to define a group of injuries to bones or joints the diagnosis and treatment of which can be said in advance not to require examination by X-rays, and that whether such an examination is or is not necessary in an individual case can be judged only by the practitioner concerned.

#### CLINIC FOR STATE TREATMENT OF RHEUMATISM IN LONDON.

108. The British Committee on Rheumatism of the International Society of Medical Hydrology, in conjunction with the British Red Cross Society, decided to build and equip in London a clinic for the physical treatment of rheumatic diseases, for which object a public appeal was issued in March, 1927, for the necessary funds and supported, amongst others, by Lord Dawson of Penn, Sir Thomas Horder, and Sir Humphry Rolleston. Although the Association was invited to support the appeal, time did not permit of the matter being submitted to the Council at its April meeting, with the result that the Association took no part in the appeal.

It would appear that the proposed clinic is the outcome of a visit to Germany, on the invitation of the German Minister of Health, of representatives of approved societies, industrial managers, and physicians, to inspect the various industrial clinics for the treatment of rheumatism in that country at which both in- and out-patients are treated. Some of these clinics are run by private companies, some by the State, and a large number by State insurance sick funds which, in Germany, are administered on a territorial basis. It has been ascertained that no patients will be treated at the proposed London clinic except on the recommendation of a duly qualified medical practitioner, and that both insured and non-insured persons, able and willing to pay a reasonable fee for treatment will be dealt with while at the same time continuing in their normal occupation. Eventually it is

hoped to make the clinic self-supporting. Certain information has been obtained unofficially as to the principles upon which the clinic will be run, and these seem satisfactory. In these circumstances the Council has thought it well, as a first step, to approach the Committee of the clinic with a request that the Association be represented on the Governing Body of the clinic.

#### CENTRAL EMERGENCY FUND.

109. This Fund was created in 1905 with the object of assisting members of the Association to maintain the interests of the profession against organised bodies, by grants which cannot be made out of the funds of the Association. The Fund is administered by the members of the Medico-Political Committee who act as trustees, and is entirely supported by voluntary contributions.

Grants are usually given if a doctor has suffered financial loss as a result of supporting the policy of the Association. Though recently no demands have been made on the Fund past experience shows that the Fund is a most useful weapon to have in reserve. The Council therefore recommends it to the support of members.

#### Causation of Puerperal Morbidity and Mortality.

110. The special Committee set up by the Council to report on the causation of puerperal morbidity and mortality and on the administrative action, if any, that should be taken in connection with the matter has continued its investigations, and the Council herewith presents (see Appendix IV) its report on this matter.

The B.M.J. Supplement of 4th February, 1928, pages 33-36, contains the report of a conference held on 11th January, 1928, between the Association's Puerperal Morbidity and Mortality Committee and representatives of the Ministry of Health, the Scottish Board of Health, the Medical Research Council, the Royal College of Physicians of London, the Royal College of Surgeons of England, the Section of Obstetrics and Gynaecology of the Royal Society of Medicine, the Central Midwives Board and the Society of Medical Officers of Health. At this conference the following papers were read:—

"Co-operation of midwife with general practitioner with a view to lessening puerperal morbidity," by Dr. J. S. Fairbairn.

"Some points in connection with prophylaxis and treatment of puerperal fever," by Dr. Leonard Colebrook.

"Midwifery and the general practitioner," by Dr. C. E. Douglas.

"The Role of the Medical Officer of Health in the elimination of maternal death," by Dr. Dunstan Brewer.

and the Council has included, in the appended report, several useful suggestions arising out of the conference.

Recommendation: That the Report on the Causation of Puerperal Morbidity and Mortality be adopted (see Appendix IV).

#### Lunacy and Mental Disorder.

111. A special Committee was appointed by the Council to consider the Report of the Royal Commission on Lunacy and Mental Disorder (as regards England and Wales).

This Committee has also considered the following resolutions of the Representative Body, 1927, which were referred to it:—

Minute 186.—Resolved: That the Representatives thank the Lunacy Law and Mental Disorder Committee for the Memorandum on the Report of the Royal Commission on Lunacy Law and Mental Disorder, refer it to the Council, and request the Council to re-appoint the Committee with instructions to take whatever steps are possible to secure what the Report of the Royal Commission declares to be "fair," namely, that the medical profession should not be asked "to perform their essential part under the menace of litigation which even if unsuccessful may spell financial or professional ruin."

Minute 187.—Resolved: (i) That it be referred to Council to consider the desirability of urging upon the Legislature that the judicial authority under the Lunacy Act of 1890 must assume full responsibility for the commitment of a person alleged to be of unsound mind; and (ii) that such judicial authority be either a County Court Judge or a Magistrate with special qualifications such as a medical barrister.

Minute 190.—Resolved: That it be referred to the Council to consider the need for the provision of "Observation Wards" to which patients can be compulsorily sent where conditions, whilst doubtfully justifying certification, are such as make them a nuisance or danger to themselves or others.

112. With reference to Minute 186 of the Annual Representative Meeting, 1927, the Memorandum of Evidence which was submitted by the Council on behalf of the Association to the Royal Commission on Lunacy and Mental Disorder on 14th January, 1928, claimed for practitioners who signed medical certificates under the Lunacy Acts the immunities granted to medical witnesses in courts of law, the paragraph of the evidence dealing with the matter reading as follows:—

58. While it is desired to guard against the elevation of the medical certificate to a position of authority which it does not possess, there is no wish to underestimate the great importance of the certificate as evidence.

Indeed, it is desired to insist upon its being given very definitely the status of evidence; and, therefore, that, the protection which witnesses in courts of law are entitled to receive shall be extended to the practitioner who signs a certificate under the Lunacy Acts.

The Royal Commission in paragraph 90 of its report stated:—

"The British Medical Association submitted proposals designed to secure that the doctor's certificate should be treated simply as evidence upon which the judicial authority makes the operative order, and that the doctor should enjoy in respect of the contents of that certificate the same immunity as a witness testifying in a court of law. This, of course, would provide the highest possible privilege, involving complete immunity even for a medical practitioner who gave a certificate negligently or in bad faith. The medical witnesses, however, have made it clear that they have no desire to protect a practitioner from the consequences of such conduct. In our view, the provision of absolute privilege could not be defended, but we consider that the certifying doctor should not be exposed to an action in respect of anything done under the Act, unless the plaintiff can first satisfy a Judge in Chambers that there is *prima facie* ground for an allegation of want of good faith or reasonable care."

and recommended that the law be amended so as to provide that medical practitioners and others in the *bona fide* discharge of their duties under the 1890 Act should not be liable to civil or criminal proceedings unless it could be shown that they had acted in bad faith or without reasonable care, the terms of the recommendation of the Royal Commission being as follows:—

"We recommend that for the more effective protection of medical men and others in the *bona fide* discharge of their duties under the Act (i.e., Lunacy Act, 1890), Section 330 should be so amended as to provide that any such person shall not be liable to civil or criminal proceedings unless he has acted in bad faith or without reasonable care; and that any proceedings taken against such a person shall be stayed upon a summary application to the High Court or a Judge in Chambers unless the Court or Judge is satisfied that there is substantial ground for alleging that such act was done in bad faith or without reasonable care."

113. A deputation from the Association, at the invitation of the Board of Control, discussed the subject-matter of the foregoing recommendation of the Royal Commission with representatives of the Board and was informed that the Government, being convinced of the need for the further protection of practitioners who signed certificates under the Lunacy Act, was considering the drafting of a short Parliamentary Bill dealing with voluntary boarders and incorporating this recommendation of the Royal Commission, other matters dealt with in the Report of the Royal Commission being left over until a later date. The Chairman of the Board said that if any Bill dealing with the protection of the practitioner were to have a chance of becoming law it must be non-contentious and stated that if the Association pressed for a provision that the Judge in Chambers or the High Court hearing a summary application or Court of Appeal should take the evidence of an independent expert medical practitioner appointed for the purpose by the Government, the Bill would become contentious and stand but little chance of being passed into law. He said that the Board could not include such a provision in its Bill but suggested that the Association might put down an amendment designed to secure what it wanted when the Bill came before the House.

The Council thereupon adopted the following resolution:—

That the following recommendation of the Royal Commission on Lunacy and Mental Disorder, namely:—

"We recommend that for the more effective protection of medical men and others in the *bonâ fide* discharge of their duties under the Act (i.e., Lunacy Act, 1899), Section 330 should be so amended as to provide that any such person shall not be liable to civil or criminal proceedings unless he has acted in bad faith or without reasonable care;

and that any proceedings taken against such a person shall be stayed upon a summary application to the High Court or a Judge in Chambers unless the Court or Judge is satisfied that there is a substantial ground for alleging that such act was done in bad faith or without reasonable care,"

affords adequate and reasonable protection to the certifying medical practitioner, provided that the Judge in Chambers, or the High Court hearing a summary application, or the Court of Appeal, shall have the assistance of an independent expert medical practitioner who shall be selected from a panel of practitioners appointed for the purpose by the Government, and that steps be taken to secure, by consent, that effect be given to the views expressed above in any legislation on the matter that may be introduced into Parliament.

114. With reference to Minute 188 of the A.R.M., 1927, the Council reports that it is not able to endorse the suggestions contained therein because, with regard to part (i) it has, as stated above, adopted the policy set out in relation to Minute 186 of the A.R.M., 1927, for securing the protection of medical practitioners and has based that action partly on the widely held opinion that for the more effective treatment of those suffering from mental disorders, it is desirable, if possible, to avoid the necessity of bringing in a judicial authority; and with regard to part (ii) of Minute 188 of the A.R.M., 1927, it is of opinion that it would be impossible in many areas to obtain in emergency the services of the persons specified in that resolution.

115. Minute 190 of the A.R.M., 1927, is dealt with, as are the other relevant resolutions of the A.R.M., 1927, in the appended Memorandum dealing with the Report of the Royal Commission (see Appendix V).

**Recommendation:** That the Memorandum (Appendix V) on the Report of the Royal Commission on Lunacy and Mental Disorder (as regards England and Wales) be adopted.

## Public Health and Poor Law.

### STATUS OF DISTRICT TUBERCULOSIS OFFICERS.

115A. The scale of minimum commencing salaries for whole-time public health appointments does not contain any definition of "District Tuberculosis Officers" and as there are several areas which now appoint officers with that designation the Council has considered what definition should be adopted by the Association in order to determine the application of the scale to such appointments. As the general application of the scale has the approval of the Ministry of Health the Ministry was consulted on this matter and has approved the substance of the recommendation set out below:—

**Recommendation:** That in order more closely to define the status of district tuberculosis officers under the scale of salaries, it be laid down that all tuberculosis officers whose clinical work in areas is not subject to detailed supervision by the chief tuberculosis officer be considered, for the purposes of the scale of minimum commencing salaries, to be officers in charge of departments, and thus entitled to the minimum commencing salary of £750 per annum.

### PUBLIC EDUCATION IN HEALTH.

116. The A.R.M., 1927 (Minute 198), approved a memorandum on the action which could be taken by Divisions and Branches in assisting in the education of the public in health matters and instructed the Council to take all necessary steps to put the proposals into operation. Copies of the memorandum were distributed to all Divisions and Branches of the Association in England, Scotland, Wales and Northern Ireland on 14th October, 1927, together with a covering letter urging that the units of the Association should lose no time or opportunity in getting their local authorities to take up the matter of the education of the public in health matters in

accordance with their powers so to do as contained in the following section 67 of the Public Health Act, 1925:—

67.—(1) Any local authority or county council may arrange for the publication within their area of information on questions relating to health or disease, and for the delivery of lectures and the display of pictures in which such questions are dealt with, and may defray the whole or a portion of expenses incurred for any of the purposes of this section.

(2) The Minister of Health may, for the purposes of this section, make rules prescribing restrictions or conditions subject to which the powers conferred by this section may be exercised.

Reports received show that many Divisions have taken action and are co-operating with their local authorities. The Council trusts that this important sphere of activity will be regarded as one of the regular activities of each Division.

The Council in its Supplementary Report for 1926-27 in dealing with this question stated its intention of assisting in this work by promoting lectures to the lay public on the lines of the Hastings Lecture, 1927. The Council, therefore, arranged for such a lecture (to be known as the Sir Charles Hastings Lecture) to be delivered in the Spring of 1928.

The Lecture entitled "The Foundations of National Health" was given on 21st March, 1928, by Sir George Newman, K.C.B., M.D., Hon. D.C.L., F.R.C.P., Chief Medical Officer of the Ministry of Health and the Board of Education, with the Rt. Hon. Lord Cozens-Hardy, D.L., in the Chair. The Lecture was published in the B.M.J. Supplement of 24th March, 1928. The Council has conveyed the thanks of the Association to Sir George Newman.

### PATHOLOGICAL REPORTS.

117. Consideration has been given to the following Minutes of the A.R.M., 1927:—

Minute 54.—Proposed by the Chairman of the Science Committee: That the following Recommendation of Council (Suppt., 23rd April, 1927, p. 145, para. 96, third recommendation) be adopted:—

That in the opinion of the Representative Body, public health authorities should neither provide for pathological examinations nor furnish pathological reports on individual cases, except (i) in cases which directly involve questions of public health, or (ii) where provision is made for such reports by statutory right, or (iii) when the patient is stated by the practitioner to be, in his opinion, unable to pay a fee.

Minute 55.—Whereupon an amendment by Brighton (L. A. Parry):—

That the third recommendation in paragraph 96 of the Annual Report of Council be amended by the deletion of paragraph (iii). The amendment was lost.

Minute 56.—Whereupon an amendment by H. S. Souttar (Council), seconded by W. McAdam Eccles (Council):—

That the words "wherever other pathological facilities are available" be inserted after the words "That in the opinion of the Representative Body." The amendment was carried.

Minute 57.—On being put as the substantive motion an amendment by R. A. Lyster, seconded by C. E. Douglas:—

That the matter be referred back to the Council.

The amendment was carried; also as the substantive motion.

The Council recommends:—

**Recommendation:** That the work of laboratories established by public health authorities should, in the opinion of the Representative Body, neither provide for pathological examinations nor furnish reports on individual cases, except (1) in cases which directly involve questions of public health, or (2) where provision is made for such reports by statutory right, or (3) when the patient is stated by the practitioner to be unable to pay a fee; provided that in parts of the country where facilities for pathological examinations and reports are not afforded either by private practitioners (pathologists) or by the service of the local hospital, the local public health laboratory may properly make examinations and furnish reports as these are required by practitioners for patients who are in a position to pay the usual professional fees.

## VACCINATION PROPAGANDA.

118. The Representative Body in July, 1927, on the motion of Southport, passed the following resolution:—

Minute 200.—Resolved: That the Council be asked to arrange with the Society of Medical Officers of Health that, in areas where cases of small-pox are known to exist, special propaganda work for vaccination should be organised.

It was also suggested to the Council that the Association's pamphlet "Facts about Small-pox and Vaccination" should be on sale at all bookstalls and stationers in districts affected, but the Council is of opinion that in order to ensure the efficient distribution of vaccination literature amongst the population it would be necessary for it to be issued free of charge, and this would entail the expenditure of a considerable sum of money. Local authorities might reasonably be expected to bear any expense incurred in their localities in this propaganda, but as a number of local authorities are not in favour of vaccination the necessary propaganda will probably not be carried out in the areas where it would be most needed. As vaccination is a protection which should always be in operation and not only when an epidemic of small-pox is raging, the Council is of opinion that a great responsibility rests on the family practitioner whose duty it is to advise his patients that efficient and systematic vaccination and revaccination is the best prophylactic for small-pox. As regards general propaganda the Council recommends:—

**Recommendation:** That in areas where cases of small-pox are known to exist, propaganda work in favour of vaccination should be carried out by the local authority; that where this is not done the local Division should endeavour to stimulate the authority to do the necessary propaganda work or itself do what it can to supply the deficiency.

## COMBINED APPOINTMENTS OF WHOLE-TIME MEDICAL OFFICER OF HEALTH, POOR LAW MEDICAL OFFICER AND PUBLIC VACCINATOR.

119. In November, 1927, an advertisement was issued: the Association for a combined whole-time appointment of Medical Officer of Health to a Rural District Council, Medical Officer to the Isolation Hospital and Institution, and Medical Officer to the Poor Law Union and Public Vaccinator. The Association had no policy with regard to the combination of such appointments, so the particular case in question had to be dealt with *de novo*. In considering the formulation of a general policy the Council had before it the following resolution of the A.R.M., 1911:—

Minute 143.—Resolved: That in the general interests of public health and of the medical profession, it is desirable (i) that Medical Officers of Health should, as a rule (and without prejudice to those at present holding part-time appointments), be required to devote their whole time to official duties; (ii) that all Medical Officers of Health should be adequately paid, districts being grouped where necessary to make this practicable; (iii) that all Medical Officers of Health should be admitted to participation in a Government Superannuation Scheme; and (iv) that all Medical Officers of Health should be protected, in the proper discharge of their duties, against capricious dismissal or reduction of salaries;

and the following extract from a memorandum, dated December, 1910, issued by the Local Government Board in support of the combination of appointments with a view to securing whole-time Medical Officers of Health:—

The Home Secretary appoints to the office of Certifying Factory Surgeon, and both he and the Board favour its combination with the office of Medical Officer of Health.

Other public offices which the Medical Officer of Health may be allowed to hold are those of Police Surgeon, Public Vaccinator, District Medical Officer, and Medical Officer of the Workhouse.

He may also be allowed, where qualified, to make analyses and bacteriological examination of water, and bacteriological examinations for the diagnosis of disease.

The Council is of opinion that in the interests of the public as well as of the medical profession it is undesirable that work of a domiciliary character should be thrown in to make up a salary for an appointment which is predominantly of a public health and administrative nature. It is unlikely that a practitioner will be secured who will be equally capable in the two lines of work, whereas in most areas it will be quite easy to get the domiciliary work done by a local practitioner, and at the same time by combination of areas or other suitable plan, to secure a salary, which will attract as Medical Officer of Health a practitioner whose interests and experience are of a public health nature.

The Council recommends:—

**Recommendation A:** (i) That domiciliary attendance should, in the best interests of the patients, be provided by private practitioners in the area concerned and not by a whole-time medical officer; (ii) that the adoption of the above resolution leaves unprejudiced the position of any medical officers at present holding whole-time appointments in which domiciliary attendance is one of the duties; (iii) that if there are in the area no practitioners willing to undertake the domiciliary work on suitable terms, the resolution (paragraph (i)) shall not apply.

120. Sub-paragraph (iii) of the foregoing Recommendation was inserted as the Council considered that circumstances might arise with regard to appointments in which the action of the Association could not be governed by a literal interpretation of sub-paragraph (i), as, for example, where no local practitioner was available, or where an obviously unsuitable practitioner was the only practitioner available, or where the only local practitioner available was taking advantage of that position to demand a salary obviously disproportionate to the duties of the post. In such circumstances the action of the Association would have to be guided by the opinion of the local Division.

**Recommendation B:** That there is no objection in principle to the combination in one and the same whole-time appointment of the duties of a Medical Officer of Health and of those of a Poor Law Institutional Medical Officer, but the application of this principle in any individual instance must be governed by local circumstances and by the opinion of the Division or Divisions concerned.

**Recommendation C:** That there is no objection in principle to the combination in one and the same whole-time appointment of the duties of a Medical Officer of Health or of a Poor Law Institutional Medical Officer and those of a Public Vaccinator, but the application of this principle in any individual instance must be governed by local circumstances and by the opinion of the Division or Divisions concerned.

## CO-OPERATION WITH SOCIETY OF MEDICAL OFFICERS OF HEALTH.

121. The Council of the Society of Medical Officers of Health has invited its Branches to keep the Association fully informed regarding practitioners who apply for or accept undesirable posts and has also asked its Branches to advise Medical Officers of Health to consult the Association in any case in which they are doubtful about the record of a candidate.

## National Health Insurance.

## CONSTITUTION OF INSURANCE ACTS COMMITTEE.

122. Members of the Representative Body are aware that a majority of the members of the Committee is composed of nominees selected by the members of Local Medical and Panel Committees. For this purpose the country has been divided into groups, each group selecting from one to three representatives, Scotland being a group by itself, while hitherto Wales has been combined with Cheshire. As a result of continued agitation against this position by both Wales and Cheshire, and particularly by the latter, which in practice is disfranchised by being grouped with Wales, the recent Panel Conference directed the Insurance Acts Committee to find some way out of the difficulty. It is felt that the time has come when Wales, like Scotland, should be a group by itself for this purpose. This will entail a re-arrangement of the remaining groups necessitating an additional representative for England and Wales. In comparison with the rest of the country, Scotland is under-represented. Taking these two considerations together, the Council is of opinion that the direct representatives on the Committee should be increased from the present 23 to 25. The Council therefore recommends the requisite alteration in the Schedule to the By-laws (see under Organization Section, para. 55).

## DISCIPLINARY MACHINERY AND REGULATIONS.

123. At the date of the A.R.M. 1927 the Insurance Acts Committee was completing negotiations with the Ministry of Health for the revision of the disciplinary machinery under the N.H.I. Acts. The suggested new provisions were presented to the Conference of Representatives of Local Medical and Panel Committees in October, 1927, and accepted almost without modification. The resolutions were published in the B.M.J. of October 29th, 1927, in the report of the Conference. Subsequently, the business of expressing these resolutions in the wording of regulation has been proceeding and is now

completed. It is expected that the new regulations will shortly come into operation, and the Committee is satisfied that under them the medical service for insured persons will run more smoothly and efficiently.

#### ALTERATION IN PROCEDURE FOR CHANGE OF DOCTOR.

124. One outcome of the discussions which took place in the early part of 1927 between the Ministry of Health and the Association as to the greatly increased sickness benefit claims experienced by approved societies during 1926 was the bringing into operation on October 1st, 1927, of a new regulation affecting the change of doctor by an insured person. Prior to that date an insured person was able to change his doctor at any time. Under the new arrangement an insured person is able to change immediately at any time where both practitioners concerned agree, or at any time after a fortnight by giving written notice to the Insurance Committee of his desire to change. By this means it is hoped that time will be given for a reconsideration of the position by those insured persons who, finding themselves in disagreement with the practitioner of their choice in the matter of their capacity for work, decide to transfer to another practitioner's list.

#### PRESCRIBING.

125. The continuous rise in the cost of providing medicines, etc., for insured persons has been receiving the attention of the Insurance Acts Committee, and in an effort to impress upon insurance practitioners the need for care and economy in prescribing, a memorandum has been issued to each of the 14,000 insurance practitioners which it is hoped will be found of assistance in understanding the Drug Tariff and in preventing waste.

#### SICKNESS BENEFIT CLAIMS.

126. Considerable anxiety has been felt by the Ministry of Health and approved societies with regard to the greatly increased sickness benefit claims experienced during 1926 and 1927. The Insurance Acts Committee, realising the responsibility placed upon insurance practitioners in the certification of incapacity, has accepted an invitation from the Ministry to consider with its representatives the causes of this increase. The results of these deliberations will be published later.

#### NATIONAL HEALTH INSURANCE BILL, 1928.

127. A Bill to amend the 1924 N.H.I. Act was introduced by the Government into the House of Commons on 5th March, 1928. The greater part of the provisions do not affect medical benefit but there are new provisions to introduce into insurance certain types of workers now excluded, and to modify considerably the administration relating to those kinds of additional benefits which may be described as treatment benefits. These proposals are being carefully scrutinised.

#### SCHEME OF THE SPA FEDERATION FOR SPA TREATMENT OF INSURED PERSONS.

128. The first Group Committee, namely, the Spa Practitioners' Group Committee, was inaugurated under the new group scheme of the Association in December, 1927. The first piece of work which the Committee found awaiting consideration was a request from the British Spa Federation for the views of the Association upon the medical aspects of its scheme for the provision of spa treatment for insured persons.

In order to assist in the consideration of this question, it may be well to refer to previous history. A conference was held at the B.M.A. House on March 4th, 1927, at which were present representatives of the various bodies interested in the provision of spa treatment for insured persons, including British spas, approved societies and the Association. From that discussion there appeared to be very little likelihood of definite action being taken in the matter in the immediate future, although a small Committee was elected to draft and submit to a further conference in the summer of 1927 a scheme under which steps should be taken to provide as soon as possible increased facilities for diagnosis and treatment of insured persons suffering from rheumatism. No further action, however, was taken in view of a statement by one of the approved societies' representatives present at the conference to the effect that the Joint Committee of Approved Societies intended to discuss the question with representatives of other associations of approved societies and of the British Spa Federation. Notwithstanding the intimation sent to the Association that in view of various circumstances societies were not likely to be able to embark upon general schemes for the treatment of rheumatic persons at the spas, the Joint Committee also appointed a small Sub-Committee to explore the possibilities of individual action by societies and report to a later meeting. Arising, apparently, out of the latter discussion, the British Spa Federation drafted a complete

and definite scheme whereby spa treatment for rheumatic diseases might be brought within the reach of the insured members of the societies taking part therein or of any other societies with available funds; and being anxious that its scheme should commend itself to the whole of the medical profession at the respective spas asked that the draft scheme should be considered by the Association and for any observations the Group Committee might desire to make thereon.

The Group Committee, after considering the proposed scheme and having arrived at various decisions as to its medical aspects, discussed the matter with representatives of the Federation who attended the meeting of the Committee. Various suggestions by the Committee for the amendment of the draft scheme were favourably received by the Federation representatives who undertook to give them careful consideration with a view to incorporation in their scheme. It was explained that the decisions of the Group Committee were only provisional pending adoption by the Association.

The proposed scheme does not take into account the question of the position of the spa hospitals as there appear to be difficulties in the way of those hospitals combining directly in the scheme, but it contemplates the treatment of cases either at private consulting rooms or at clinics established for the purpose. The question of the degree of association between the scheme and any spa hospital is left for local determination.

It is not thought desirable to refer to those details of the scheme which do not affect the medical profession. Briefly, the proposal is a skeleton scheme under which an approved society taking advantage of it may pay an agreed sum per week in respect of any of its members sent to the spa for treatment, such sum covering the cost of board, lodging, treatment and administration expenses, and to be reviewed if necessary after twelve months' working. The National Health Insurance Acts provide that an insurance practitioner shall advise any special treatment which he considers his patient requires. Any insured person advised that his condition requires treatment at a spa will presumably apply to his society for this special form of benefit, when the society, if it approves the application, will communicate with the authorities of the spa to which it is desired to send the insured person.

#### The Council recommends:—

**Recommendation:** That the Representative Body be recommended to approve the proposed scheme of the British Spa Federation for the provision of spa treatment for insured persons at the various British spas, subject to the incorporation therein of the following:—

#### Selection of Cases.

(a) That it be made clear that rheumatic cases which are considered suitable by the spa physician shall be treated either at private consulting rooms or at clinics established for the purpose.

(b) That prior to the insured person being accepted at the spa for treatment the spa physician be furnished by the patient's private practitioner with a brief résumé, as follows, of the medical history of any patient recommended by the approved society for spa treatment—

#### Form for a Practitioner to Report the Case of an Applicant for Spa Treatment of Chronic Rheumatism in Insured Patients.

NAME.	AGE. OCCUPATION.	MARRIED OR SINGLE. RESIDENCE.
-------	---------------------	----------------------------------

1. Disease.
2. Duration of Disease.
3. Present condition.
4. Is the patient crippled, if so, to what extent? Can the patient get up and down stairs unaided and can he wash and dress and feed himself?
5. Does the patient suffer from advanced cardiac, pulmonary, or renal disease? (Please answer as fully as possible because such cases of advanced disease may be unsuitable for treatment.)
6. Does the patient suffer from epilepsy, hysteria or any mental disorder?
7. Does the patient suffer from ulcers, suppuration, diseased bone, or contagious skin disease?
8. What is the condition of the teeth and throat?

9. Has the patient during the last six weeks been exposed to the influence of infectious or contagious disease?
10. Are there any other circumstances which should be stated?

Signature of Medical Practitioner,  
Address.

**N.B.**—It is essential that any obvious source of infection, such as septic teeth, or diseased tonsils, should receive attention before the patient is sent for treatment.

(c) That the spa authorities be urged to recognise the necessity that the proposed service for insured persons should not interfere with the facilities for the treatment of private patients.

#### Medical Records.

(d) That provision should be made under the scheme for each locality keeping medical records at the private consulting rooms and/or clinic.

(e) That the spa physician should furnish to the patient's private practitioner a report upon the case at the end of the course of treatment at the spa.

#### Control of Insured Persons.

(f) That the scheme should provide for some authority responsible for seeing that the spa physician's orders are carried out by the patient, due regard being paid to the fact that the spa physician would probably be the last person to hear of any disobedience to his orders on the part of a patient.

#### Local Control of Scheme.

(g) That the local control of the scheme be vested in a joint controlling body, the actual administrative details being of necessity carried out by the local authority owning the bathing establishment.

#### Finance.

(h) That the remuneration of the spa physician under the proposed scheme shall be a minimum of one guinea in respect of every patient for a period of three weeks, with a pro rata increase thereof for every subsequent week, such minimum fee being exclusive of any special services such as bacteriology, pathology, radiology or dentistry.

(i) That the payment for pathologists' services shall be independent of any other payments in respect of medical services and shall be based upon work done.

(j) That the expert opinion of a radiologist is required in connection with all X-ray photographs necessary under the scheme, payment therefor to be upon the basis of work done and independent of any other payment in respect of medical services.

#### Bed Cases: General Practitioner Treatment.

(k) That the spa physician be responsible only for specialist treatment at the private consulting rooms and/or clinic, a private medical practitioner being responsible for any necessary general practitioner treatment.

(l) That the proposed scheme shall provide for arrangements being made with local general and special hospitals, and the medical staff thereof, for the treatment of patients coming within the scope of the scheme who may be affected with some intercurrent malady or acute exacerbation of the rheumatic condition for which hospital treatment is necessary.

**NOTE.**—For any necessary general practitioner medical treatment during his stay at the spa an insured person will be able to take advantage of the existing temporary resident arrangements of the N.H.I. Acts.

#### N.H.I. Certificates.

(m) That the doctor in his private consulting rooms and/or the clinic be responsible for furnishing to insured persons during their treatment at the Spa Clinic, for production to their approved societies, any certificates as to incapacity for work necessary under the N.H.I. Acts.

#### Medicines.

(n) That inasmuch as the spa physician must be responsible for the prescribing, at the private consulting rooms and/or clinic, of any necessary medicines and/or appliances in connection with any specialist service so given the cost thereof not being chargeable to the Drug Fund of the N.H.I. Acts, must be defrayed by the scheme.

#### DEFINITION OF SPA TREATMENT.

129. It appears desirable that the Representative Body should adopt a definition as to what is meant by spa treatment and accordingly:—

The Council recommends:—

**Recommendation:** That the following definition of spa treatment be adopted by the Representative Body:—

"Spa treatment may be defined as treatment at a place possessing a supply of natural mineral waters of reputed therapeutic value with facilities for their application. This implies the existence of suitable buildings, apparatus and trained personnel for work in bathhouses and other physio-therapeutic departments."

#### Ophthalmic Benefit.

130. The Council in its Supplementary 1927 Annual Report (paras. 250-255) reported that the scheme (which had been in operation since 1924) for supplying the services of ophthalmic surgeons to insured persons at a reduced rate had failed to attract the great bulk of approved societies who were still employing sight-testing opticians. The Council went on to describe certain proposals which had been made to it for the setting up of clinics which would allow for the examination of a number of cases at a time at a fee which would be likely to induce societies to make greater use of ophthalmic surgeons. As a result the following resolution was passed by the A.R.M., 1927:—

**Minute 206.**—Resolved: That the Representative Body approves the suggestion of providing ophthalmic benefit through clinics in large centres in certain circumstances as an arrangement auxiliary to the existing scheme of attendance by ophthalmic surgeons privately, subject to the arrangements under which such clinics are established being approved by the Council.

The Association's policy still is that ophthalmic benefit, along with any other specialist benefits under the National Health Insurance Acts, should not be available except on the recommendation of a medical practitioner and should be administered along with medical benefit, not by approved societies but by and through Insurance Committees or any bodies which may later take their place, which view was adopted by the 1926 Royal Commission. But as there seems no possibility for the present of the adoption of this logical plan the Council felt that no opportunity should be lost to secure whatever improvement in the existing unsatisfactory state of affairs is possible.

To this end, therefore, and in view of the above decision of the Representative Body, discussion took place with the National Insurance Beneficent Society which was desirous of arriving at an arrangement with the Association. This Society for some time past has had clinics (first established in London, but now operating in several large towns) at which all patients are seen by ophthalmologists, the dispensing being done by opticians at the clinics who are paid at a contract rate. The doctors are paid so much per session.

Discussion also took place with the Association of Dispensing Opticians, the members of which do not test sight. This body was prepared to set up and finance throughout the country centres at which the sight-testing would be done by ophthalmic surgeons, and all the administrative, clerical and dispensing work by members of their Association. The clinics might either be at special rooms (in large centres) or they might be at the houses of the ophthalmologists, the payment of the doctor being 10s. 6d. per case; the scheme also provided for practitioners on the list seeing patients at their own private consulting rooms at fixed hours, at the same remuneration, half a guinea a head, the prescriptions to be forwarded to the optician at the local clinic. Further, the scheme provided for the continuance of the existing arrangement whereby a practitioner upon the list need see patients only at his own private consulting rooms at a fee of one guinea, paid possibly by the approved society, or alternatively, partly by the society and partly by the patient, prescriptions being forwarded for dispensing to the local clinic.

The Council being anxious to do nothing likely to compromise the principles of the Association with regard to the setting up of special medical services in connection with National Health Insurance, or to run counter to any scheme which the Ministry of Health might have in view, sought an interview with representatives of the Ministry of Health. It was ascertained (i) that there was no probability of an early extension of medical benefit to include the provision of ophthalmic service, and (ii) that the Ministry would be inclined to favour an arrangement such as that of the Dispensing Opticians' Association, above described. Subse-

quently the Dispensing Opticians saw representatives of the Ministry with regard to their proposed scheme, after which a conference was held of representatives of the Association, the Dispensing Opticians, and certain important approved societies, when it was found that the approved societies' representatives were favourably impressed with the scheme, but asked the Dispensing Opticians to clear up certain points. Discussions proceeded between these two parties, when the Association of Dispensing Opticians found that before they could go further it was necessary that they should be in a position to inform the approved societies not only that their scheme had the approval of the B.M.A., but that the B.M.A. had secured the co-operation of a number of ophthalmologists sufficient to make the scheme work.

A set of conditions was accordingly drawn up by the Council subject to which the Association, on behalf of the medical profession, declared its willingness in conjunction with the Association of Dispensing Opticians, to supply ophthalmic examination and advice for insured persons on lines already described.

A very important factor which moved the Council in approving this scheme was the attitude of the Departmental Committee on the Sight-testing Opticians (Registration) Bill. When the witnesses of the Association appeared before the Committee they were strongly pressed as to the possibility of provision being made of the services of ophthalmic surgeons at a rate which would fit the economic circumstances of insured persons and others in like economic condition, and the Association's witnesses practically pledged the Association to co-operate with any suitable body in an effort to make this provision. The Majority Report of the Departmental Committee is against State registration of opticians, but goes on significantly to say that unless within a reasonable time suitable provision is made by an adequate number of qualified ophthalmologists throughout the country a re-consideration of this question of some form of State registration of sight-testing opticians will be justified. That is to say if the Government adopts the findings of the Majority Report the medical profession, as represented by the Association, is to be given a reasonable time in which to show that an adequate service can be provided over the country at reasonable terms for insured persons and others of similar economic position. The value of the opportunity thus given can scarcely be over-estimated. If it can be utilised not only will the pretensions of the opticians to occupy a field the medical profession deems to be mainly medical be defeated, but a large amount of work hitherto done by opticians, or gratuitously at the hospitals, will accrue to ophthalmic surgeons, with great benefit it is believed to the public.

In furtherance of the above action the members of the profession on this Association's old "Ophthalmic List" were circularised as to the new proposals and practically all have expressed their willingness to fall in with them.

## Hospitals.

### VOLUNTARY HOSPITALS AND RECOVERY OF MONEY.

131. The A.R.M., 1926, passed the following resolution which was incorporated in the Hospital Policy of the Association:—

*Minute 59.*—Resolved: That in all cases of accident where medical attendance is given at a voluntary hospital, and such medical attendance is covered either directly or indirectly by insurance, the hospital authorities should recover from the insurance company the full cost of maintenance and treatment of such patient. That where patients who would ordinarily be considered as private patients are admitted to hospital solely on account of accident or emergency, they should be considered as "private patients."

and the Council reported to the Representative Body, 1927, that in view of the doubt which existed as to the legal position of a voluntary hospital recovering from patients the cost of maintenance and treatment in the circumstances detailed in the 1926 resolution, it was obtaining Counsel's opinion on the position. Counsel's opinion is appended hereto (Appendix VI.)

In view of the following paragraph which appears in Counsel's opinion:—

"In my opinion where an accident has been caused by negligence, and the victim receives emergency treatment in a hospital, the victim alone can bring an action against the person responsible for the negligence and he cannot include in his claim any sum in respect of the expenses of the hospital unless he is himself legally liable in contract to the hospital for the amount of the expenses, which—in such a case—can rarely be the fact. If the victim is legally liable to the hospital he can claim the amount for

which he is so liable as part of his damages but this gives no right to the hospital, whose only right of action is against the victim, its own debtor. If and when the hospital has obtained a judgment against its own debtor, and its own debtor has been awarded damages against the person responsible for the accident, the hospital may be in a position, as a judgment creditor, to make the award of damage available to satisfy its own judgment debt, but it will only be in the same position for this purpose as any other judgment creditor of the victim,

the Council considers that Minute 59 of the A.R.M., 1926, should be amended by the deletion of the words "from the insurance company."

The Council recommends:—

**Recommendation:** That above Minute 59 of the A.R.M., 1926, be amended by the deletion of the words "from the insurance company."

### "PAY BEDS COMMITTEE" OF KING EDWARD'S HOSPITAL FUND FOR LONDON.

132. His Royal Highness the Prince of Wales, as President of the King Edward's Hospital Fund for London, appointed a special Committee, the personnel of which was Viscount Hambleden (Chairman), Sir John Rose Bradford, Sir Bernard Mallet, Mr. V. Warren Low and Professor Winifred Cullis, (Mr. Leonard L. Cohen and Major Harold Weruher, Hon. Secretaries; and Mr. H. R. Maynard, Secretary), "to inquire and report upon the question of hospital accommodation in London for persons prepared to pay more than ordinary voluntary hospital patients; and to report the conclusions at which they may arrive."

The Association gave evidence, based on the policy of the Association, before that Committee on 5th October, 1927, and the evidence was supported verbally by the Chairman and Deputy-Chairman of the Hospitals Committee, the Treasurer and the Deputy Medical Secretary.

The Report of this Committee will, it is expected, be made public before the meeting of the Representative Body.

### HERTFORD BRITISH HOSPITAL, PARIS.

133. In paragraph 170 of its Annual Report for 1926-27 the Council stated that it had enquired into the circumstances connected with the dismissal in September, 1924, of the Resident Medical Officer of the Hertford British Hospital, Paris (who is a member of the Association), and the consequent resignation of the other British members of the medical and surgical staffs of that hospital, and that the Board of Management of the hospital and the Association (acting on behalf of the late medical and surgical staffs) had agreed to accept the decision of Mr. Vaughan Williams, K.C., who had been appointed by the Government to consider the whole of the evidence and decide whether or not the Committee of the Hertford British Hospital had been unjust in dismissing the late Resident Medical Officer.

In the conclusions arrived at by Mr. Vaughan Williams he stated (i) that the Committee of the hospital was entitled to terminate the contract of the Resident Medical Officer; (ii) that, notwithstanding the excellent services rendered by the Resident Medical Officer, it was not in the interests of the hospital to retain his services; (iii) that in net examining the person whose rejection as a patient culminated in the dismissal of the Resident Medical Officer that officer made an error of judgment, although the condition of the patient justified refusal of admission; (iv) that the resignation of the medical staff constituted no breach of contract, but was not justified by the action of the Committee or by the interests of the hospital and patients, and the dismissal of the Resident Medical Officer was not adequate grounds for resignation of the staff, neither was the dispute as to the administration of the hospital a justification for such resignation.

The late medical staff considered that Mr. Vaughan Williams' report exonerated the late Resident Medical Officer. The Council forwarded a copy of that report to the late Resident Medical Officer and nothing further has been heard of the matter.

The Committee of the hospital has agreed to submit suggestions for revision of the rules of the hospital and has in fact already submitted part of the rules, upon which several suggestions for variation have been made by the Association.

### MIDDLE CLASS HOSPITAL POLICY.

134. The Council is considering the formulation of a Middle Class Hospital Policy, pursuant to the following resolution of the Annual Representative Meeting, 1927:—

*Minute 219.*—That the Representative Body instructs the Council to consider the formulation of a Middle Class Hospital Policy.

## CO-ORDINATION OF HOSPITAL PROVISION.

135. The Minister of Health has suggested that voluntary hospitals should examine in conjunction with local authorities, including Boards of Guardians, the following questions:—

1. Having regard to the nature of the hospital accommodation available in the area, both in voluntary and public hospitals, are there any categories of cases which should, so far as practicable, be allocated to one type of hospital or the other?

2. Is it possible, after taking stock of local needs, to agree on any lines of demarcation between the province of the voluntary and public hospitals in the area?

3. Assuming that some understanding is reached as to the line of demarcation between the voluntary and public hospitals in a given area, to what extent would this modify schemes of enlargement in hand or in contemplation?

4. If there is a shortage of voluntary hospital beds, in what respect is the shortage most serious, e.g., is it a shortage of general surgical or medical beds, gynaecological or maternity beds, or orthopaedic? Is there vacant accommodation in public hospitals suitable, or capable of being adapted, for the type of case for which accommodation is specially needed?

5. Could not some "Clearing House" arrangement be established by agreement between the voluntary hospitals and the local authorities (including the Guardians), which would ensure a better distribution of patients and the more rapid admission of cases requiring institutional treatment?

6. To what extent and under what conditions could the medical staffs of the voluntary hospitals undertake responsibility for cases, or for a definite number of beds in public hospitals, so that the patient may be secured of the special type of experience required, whether medical or surgical, without regard to whether the bed he occupies is under voluntary or public management?

The Council, considering that the Association should take an active part in attempting to guide any legislation that may be the outcome of any principles adopted as a result of the consideration of the answers to these questions, has drawn up the following scheme which it submits herewith to the Representative Body for adoption.

**Recommendation:** That the appended scheme of co-operation of voluntary hospitals with municipal hospitals for the co-ordination of hospital provision be adopted and submitted to the Minister of Health (see Appendix VII).

## CRITERIA FOR PRACTITIONERS TREATING PRIVATE PATIENTS IN PRIVATE WARDS OR NURSING HOMES ATTACHED TO HOSPITALS.

136. The following paragraph 22 of the Hospital Policy of the Association:—

22. Where it is desirable that special accommodation in the nature of a nursing home should be provided in connection with voluntary hospitals for the reception of private patients, there should be provided as follows:—

(a) Private patients should be admitted to such special accommodation only on the recommendation of a private practitioner, except in cases of emergency. In the latter circumstances the patient's own medical attendant should be informed.

(b) It should be open to a private patient to select any registered medical practitioner as his attendant.

(c) The scale of charges for the private patient for maintenance should be such as fully to cover every cost to the hospital.

(d) No fixed rate of payment for professional services rendered to such patients should be established; the fees so payable to remain, as at present, a matter of arrangement between patient, family physician and consultant.

provides that a private patient in a private ward or nursing home attached to a hospital should be entitled to select any registered medical practitioner as his attendant whilst in such ward or home, but the Council considers that before any practitioner should be allowed to treat a patient in such ward or home it would be a reasonable requirement on behalf of the institution concerned to expect the practitioner to show that he possessed the necessary qualifications and experience for carrying out such treatment, and that the Hospital Policy of the Association should accordingly be amended in this respect. In considering the matter the Council has had before it the criteria laid down in the National Health Insurance Medical Benefit Regulations, 1924, relating to

services requiring special skill and experience. These criteria were arrived at with the help of the Association and they have been found to stand the test of time. The Council is therefore recommending that these criteria, with certain verbal modifications, should be adopted by the Association in this respect also.

The Council recommends:—

**Recommendation:** That paragraph 22 of the Voluntary Hospital Policy (United Kingdom) be amended by the insertion of the following, as sub-paragraph (e), present sub-paragraphs (c) and (d) being renumbered (d) and (e) respectively:—

(c) If the treatment of the patient involves the application of special skill or experience of a degree or kind which general practitioners as a class cannot reasonably be expected to possess then the attending practitioner before undertaking the treatment should satisfy one or more of the following conditions:—

(i) that he holds or has held hospital or other appointments affording special opportunities for acquiring special skill and experience of the kind required for the performance of the service to be rendered, and has had actual recent practice in performing the service to be rendered or services of a similar character, or

(ii) that he has had special academic or post-graduate study of a subject which comprises the service to be rendered, and has had actual recent practice as aforesaid, or

(iii) that he is generally recognised by other practitioners in the area as having special proficiency and experience in a subject which comprises the service to be rendered.

## CONFERENCE re CONTRIBUTORY SCHEMES FOR HOSPITAL BENEFIT.

137. The Council has, from time to time, brought to the notice of hospital staffs the following three fundamental principles which underlie the Association's policy as regards contributory schemes for hospital benefit:—

(a) That only persons below a definite income limit should be entitled to join a contributory scheme for hospital benefit.

(b) That (except in emergency) a contributor to a scheme should only be admitted to a hospital upon the recommendation of the attending practitioner.

(c) That recognition should be made of the services of the medical staff.

A large number of these schemes are being adopted, but in very few have all these principles been given effect, and the position is viewed with very considerable concern by the Council in view of the importance of safeguarding the position both of the medical staffs of hospitals and of private practitioners.

The Council is therefore convening on 6th June, 1928, a conference of representatives of medical staffs of voluntary hospitals (to be held at the Headquarters of the Association) in order that the policy of the Association in regard to these schemes may be explained and discussed.

## Naval and Military.

## REPRESENTATIVE OF ROYAL NAVAL MEDICAL SERVICE ON THE COUNCIL.

138. The regretted death of Surgeon Rear-Admiral Sir Percy Bassett-Smith, the representative of the Royal Naval Medical Service on the Council, has deprived the Association of an adviser whose help was of great assistance in respect of all matters concerning that Service. Sir Percy Bassett-Smith's term of office would have expired at the termination of the A.R.M. 1928. The Council recommends:—

**Recommendation:** That Surgeon Rear-Admiral J. Falconer Hall, C.M.G., R.N. (ret.), be elected as the representative on the Council of the Royal Naval Medical Service for the period 1928-31.

## APPOINTMENTS TO THE INDIAN MEDICAL SERVICE AND CONDITIONS OF SERVICE.

139. The whole question of the reorganisation of the Indian Medical Service is now under active consideration by the Government of India, and the Council hopes shortly to be in possession of the new proposals. There has already been issued by the Secretary of State for India a memorandum on

Medical Service which embodies certain of the decisions which have been reached following upon the recommendations of the Lee Commission. The memorandum was published in full in the Supplement of February 18th, 1928.

The Council hopes to report further on the whole question in its Supplementary Report.

#### INTERNATIONAL CONGRESS OF MILITARY MEDICINE AND PHARMACY.

140. The Council has expressed the willingness of the Association to co-operate with the Army Medical Department in the management and organisation of the 5th International Congress of Military Medicine and Pharmacy, and has appointed Sir Alfred Blenkinsop as the Association's representative on the organising committee of the Congress. The Congress will be held in London in May, 1929.

#### CONDITIONS OF SERVICE OF THE ROYAL NAVAL MEDICAL SERVICE.

141. The Portsmouth Division has represented to the Council that some of the terms of service of the Royal Naval Medical Service are unsatisfactory, and more especially that the clause relating to retirement at 50 should be amended, and that pensions should under no circumstances be reduced below the pre-war figure. The Council has been in communication with the Admiralty on the matter, but so far no reply has been received. It is hoped to deal further with the question in the Supplementary Report.

#### Medical Benevolence.

142. During the twelve months ending December 31st, 1927, the amounts collected by the Association on behalf of existing medical charities were as follows, the figures for the previous year being also given for the purpose of comparison:—

	1927.	1926.
	£ s. d.	£ s. d.
Royal Medical Benevolent Fund	1,271 14 7	1,141 0 6
Epsom College	909 17 3	841 2 3
Royal Medical Benevolent Fund		
Society of Ireland	31 19 0	35 13 0
Sir Charles Hastings Fund	167 8 0	17 8 11
	£2,380 18 10	£2,035 4 8

In addition, the sum of £1,746 13s. 6d. was received for distribution among existing medical charities at the discretion of the Trustees of the B.M.A. Charities Trust Fund. This amount was distributed as follows, the amount distributed in 1926 being also given:—

	1927.	1926.
	£ s. d.	£ s. d.
Royal Medical Benevolent Fund	800 0 0	500 0 0
Epsom College	500 0 0	400 0 0
Royal Medical Benevolent Fund		
Society of Ireland	60 0 0	50 0 0
Sir Charles Hastings Fund	116 13 6	124 12 11
Royal Medical Benevolent Fund		
Guild	270 0 0	150 0 0
	£1,746 13 6	£1,224 12 11

\* Includes £457 2s. 8d. received during 1925.

The above figures show that there was contributed to medical charities through the Association in 1927 about £1,325 more than in 1926. Although it is believed that this is made up largely of subscriptions and donations from new subscribers, it is impossible to say to what extent this is so. However, it is satisfactory to note that there has been an increase, although it can only be regarded as a small one. The Council aims at raising £20,000 annually, which is approximately five times as much as was received last year.

It is understood that, although the money at the disposal of medical charities for immediate relief work is on the increase, the applications for assistance are also on the increase. The situation is both distressing and urgent and the Council appeals to Divisions to use their best endeavours to meet it adequately. It should be made a very important part of a Division's activities to see that every practitioner in the area is a subscriber to medical charity through one channel or another.

Many Divisions have adopted the suggestion that a social function of some kind should be organised during the year with the object of benefiting medical charities, and

from the financial result, these functions have apparently been the means of stimulating cordial relations between the practitioners in the areas concerned.

A circular letter (D. 17) has recently been issued to Divisions, in which they have been asked to furnish a report of their activities in connection with medical charities during 1927. Divisions have also been informed that a similar report will be asked for early in 1929 in respect of 1928, and that it is proposed to submit a report to the Representative Body in 1929 showing what each Division has done in this matter.

#### CONSTITUTION OF THE CHARITIES COMMITTEE.

143. In accordance with Minute 223 of the R.B. of 1927, the constitution of the Committee is being altered. For reasons of convenience, as alterations of the Schedule to the By-laws are concerned, the exact form of the proposed alterations will be found in paragraph 56 of this report, under the heading "Organisation."

#### Oversea Branches.

##### WINDWARD ISLANDS MEDICAL SERVICE.

144. In 1923 the Representative Body approved the insertion of an "Important Notice," which is still appearing, in respect of the Windward Islands Medical Service. At that date this Service was one of the worst paid Services over which the Crown had control. From time to time various improvements on the lines of the recommendations of the Association have been effected, but there are still a number of points which have not been met.

On 5th March, 1926, a deputation from the Association invited the personal attention of the Secretary of State to this Service and suggested that the most essential reforms were:—

- (1) The progressive provision of adequate salaries with a view to the ultimate concession of the £600 net commencing salary recommended by the Committee appointed to enquire into the Colonial Medical Services in 1920.
- (2) Adequate provision for leave and study leave for members of the Service.
- (3) Modifications in the Ordinances regulating the conditions of medical service in the Windward Islands as follows:—

(a) Repeal of Sub-Section 15 of Section 6 of Chapter 27 of the Medical Officers Ordinance which leaves the remuneration of the medical officer in the hands of the Executive subject to the power of the Legislature to refuse a vote, but allows additional duties, with or without remuneration, to be imposed upon him by the Governor at any time in an arbitrary manner.

(b) Repeal of the special amending Ordinance of 1919 under which the medical officer is placed under the obligation of affording medical aid at a progressive tariff to every person requiring his services within his district.

(c) Repeal of the Ordinance of 1923 under which persons not entitled to registration in the United Kingdom are admissible to the Medical Register of the Colony.

The Secretary of State has recently approved legislation which will give effect to the suggestions contained in No. (3) above, but the Council does not consider that it can approve the withdrawal of the "Important Notice" in respect of this Service until the Association's suggestions with regard to salary, leave and study leave have been adopted, or at any rate, until considerable improvements have been made, and has so informed the Colonial Office.

#### DELETERIOUS DRUGS ORDINANCE OF STRAITS SETTLEMENTS.

145. In March, 1927, the Secretary of the Malaya Branch drew attention to a Bill "to consolidate and amend the law with regard to Deleterious Drugs," wherein it was provided, among other things, that a medical practitioner in order to become authorised to possess and dispense deleterious drugs (i.e., the drugs known as "Dangerous Drugs" in this country) would have to pay an annual licence of 20 dollars, which the Branch considered was unjustifiable. This licence law has been in force in the Federated Malay States for some time. As a result of action taken by the Council the Secretary of State has been in communication with the Governor of the Straits Settlements with a view to this legislation being brought into line with the Dangerous Drugs Regulations of

## INDIGENOUS SYSTEMS OF MEDICINE IN CEYLON.

116. A Committee appointed by the Government of Ceylon to consider:—

(a) whether it is practicable for the Government to assist financially or otherwise—

(i) in the training of those seeking to qualify themselves as practitioners of the indigenous systems of medicine;

(ii) and in the investigation of the medicinal value of drugs used by those practising such systems; and

(b) if practicable, to prepare a detailed scheme of such training and investigation for the consideration of the Government;

reported, in its Majority Report, in favour of the recognition, under certain conditions, of the indigenous systems of medicine. Whereupon the Council informed the Colonial Office and the General Medical Council that it considered that such official recognition would be a retrograde step. The Registrar of the General Medical Council stated that the Council was advised that "having regard to matters in India at the present time it is not advisable that the Council should intervene at this stage in a matter of this kind," and the Colonial Office replied that the Secretary of State had not yet received the report of the Committee appointed by the Government of Ceylon through official channels but when this was received the views of the Ceylon Government and the opinion of the Council of the Association would be borne in mind. The Ceylon Branch has passed the following resolutions:—

That a Sub-Committee of members of this Association be appointed to take such steps as are necessary to bring to the notice of the parent Association the detrimental effects that the adoption of the recommendations of the Majority Report would have on the progress of scientific medicine, both curative and preventive, in the Colony, and that copies of the Sub-Committee's findings be submitted to the Ceylon Government for its own information, and for transmission to the Secretary of State for the Colonies;

That the Ceylon Branch of the B.M.A. strongly support the Minority Report of the Indigenous Systems Committee;

and has forwarded detailed criticisms of the Majority Report of the Government Committee. The Council has again urged the Colonial Office not to approve action on the lines of the Majority Report.

## Scotland.

## EXTENSION OF THE SCOTTISH HOUSE OF THE ASSOCIATION.

147. When the Scottish House was acquired in 1925, it seemed likely to be adequate for all purposes for some time to come but experience has shown the need for a larger and better ventilated hall than could be provided in the existing building. When the adjoining property at No. 7, Drumsheugh Gardens came into the market, the Scottish Committee therefore recommended to the Council that it be purchased, a proposal which the Council, after report by the Building Committee, agreed to. The property was acquired in December, 1927, and the work of reconstruction was at once begun and is now nearing completion. By combining the first floors of the two properties and removing the staircase and partition walls, it has been found possible to provide a good, well-ventilated and well-lit hall capable of seating 250 persons and, in addition, a committee room and a common room. The office will be transferred from No. 6 to the ground floor of No. 7, and the Association will thus occupy a commodious unit. Access to the remainder of the building is from No. 6, and the whole of this is let at good rents.

On behalf of the membership in Scotland, the Scottish Committee has tendered its thanks to the Council and recorded its belief that the action taken will bear fruit in increased usefulness and activity.

## CONDITIONS OF SERVICE OF PAROCHIAL MEDICAL OFFICERS.

148. Various complaints having been received by the office as to unsatisfactory terms of appointment of parochial medical officers, it was decided to institute an inquiry. A circular asking for particulars was addressed to all such officers in Scotland, numbering over 800: to this only 160 replies were received, of which 61 expressed definite dissatisfaction with the terms of appointment. As a result the Council is of opinion that there is no evidence from the replies of any general discontent throughout the country with

the conditions of service, but that there is in some districts a local problem which calls for special examination by the Branches and Divisions concerned.

## FEES TO PRACTITIONERS CALLED IN BY MIDWIVES.

149. In 1925 the Scottish Committee reported that the legal advisers to the Board of Health had ruled that in terms of the Midwives (Scotland) Act every fee paid covers one subsequent visit, and the Committee asked that the scale should be revised, or, alternatively, that the Act should be amended. The Board adopted the latter course and inserted an amending clause in the Midwives and Maternity Homes (Scotland) Act. Negotiations were entered into with the Board, and an amended scale has been agreed to which is on the lines of the corresponding English scale. The fee for attendance at parturition has been raised from £1. 17s. 6d. to £2s. 2s. 6d. and now includes necessary visits during the first 10 days. The fee for visits under the old scale was 3s. 6d. for a day visit and 7s. 6d. for a night visit, and the Committee pressed for these fees to be raised to 5s. and 10s. There was considerable opposition to this on the part of the Board and local authorities, and in the end a compromise was agreed upon whereby the fee has been fixed at 5s. (day) and 10s. (night) for a first visit, and for subsequent visits in the same illness 3s. 6d. (day) and 7s. 6d. (night). The other fees payable under the scale are unaltered and are the same as in the English scale.

## HOSPITALS POLICY.

150. The Council has given careful consideration to the situation which has arisen in Scotland through the action of the Scottish Regional Committee of the British Hospitals Association in setting up Regional Committees in five regions of Scotland, with the object of exploring the needs of their areas and considering the possibility of co-operation between statutory authorities and the voluntary hospitals. These Committees are composed of representatives of the management of voluntary hospitals and contain no direct representatives of the medical profession. The Secretary of State for Scotland has commended the appointment of these Committees and, in addition, has appointed a small Liaison Committee to keep them in touch with representatives of his department. Without committing himself to details of a hospital policy, he has indicated that he looks to co-operation between the voluntary hospitals and the public authorities for the future development of the hospital services; that the co-operative arrangement should centre round voluntary hospitals, and that it must be part of a hospital policy to develop the poor law hospitals up to the standard of the voluntary hospitals. In view of the establishment of these Regional Committees, the Council is of opinion that corresponding Medical Committees should be set up in each of the five regions, on the lines of paragraph 36 of the Association's policy affecting hospitals, and is accordingly arranging, in conjunction with the Branches concerned, for meetings of the Branch Councils with the medical staffs of voluntary hospitals in each of the regions, the business of the meetings being to consider the appointment of Regional Medical Committees.

## Ireland.

## GENERAL ORGANISATION.

151. The outstanding event of the year was the visit of Dr. Cox, Medical Secretary, to Ireland. He arrived in Kingstown on April 28th and remained for ten days. During his visit he had a strenuous time travelling and attending meetings of the Branches accompanied in each case by the Irish Medical Secretary. He held his first meeting in Belfast on April 29th, where he received a very warm welcome and the meeting was a very decided success. On May the 3rd, he visited Cork, and was present on the same evening at a well attended meeting of the Munster Branch. A large number of the medical students from University College, Cork, attended the meeting and they much appreciated the advice given them by Dr. Cox. Successful meetings of the Leinster and South-Eastern Branches were also attended by the Medical Secretary, and on February 6th he was present at an exceptionally well attended meeting of the Irish Committee. He made the most of his many opportunities to explain the many and different ways the Association could be made helpful to its Irish members. The Irish Committee and the Irish Branches were very pleased with the warm reception extended to Dr. Cox everywhere he visited. Members who had not attended a meeting for years made long journeys to meet him and thus showed him their appreciation of his services at all times for the profession in Ireland.

On the other hand, Dr. Cox was unmistakably impressed with the popularity and the keen appreciation of the Association and its work in all parts of Ireland.

Arising out of a suggestion from Dr. Cox arrangements are being made for holding B.M.A. lectures in the different Branch areas. Dr. Robert J. Rowlette, F.R.C.P.I., Professor of Materia Medica, Medical School, Dublin University, delivered at Kilkenny to the members of the South-Eastern Branch a lecture on Gastro-duodenal Ulceration, which was very much appreciated by the members. This new departure of providing for lectures by leading men in the profession will undoubtedly be a source of attraction and benefit to members. Since the Medical Secretary's visit the Irish Branches have certainly become more active. For many years the Leinster Branch has not had so many well attended meetings, with the result that the seating accommodation of the Irish Office had to be considerably increased. The Organisation Committee invited Dr. J. P. Shanley, Honorary Secretary of the Leinster Branch, and the Irish Medical Secretary, to its meeting in London on February 28th, when the question of recruitment of newly qualified medical practitioners in the Free State was discussed and it was decided that the Irish Medical Secretary should arrange for meetings of newly qualified medical practitioners in Dublin and in Cork. In this connection the Irish Medical Secretary has been in correspondence with officials of the different medical schools and has been promised their assistance.

#### MEDICAL AFFAIRS IN NORTHERN IRELAND AND THE FREE STATE.

152. In the course of the year three important Reports dealing with medical questions of unusual interest to the medical profession in Ireland were published, namely, (1) Report of Departmental Commission on Local Government Administration in Northern Ireland, (2) Report of Committee of Inquiry into Health Insurance and Medical Services in the Free State, and (3) Report of the Commission on the Relief of the Sick and Destitute Poor including the Insane Poor. These enquiries meant a good deal of work for the various medical associations with regard to the preparation and presentation of the medical features involved in the enquiries.

153. The Departmental Commission for Northern Ireland was appointed in February, 1925, and finished its report in September, 1927. Professor R. J. Johnstone, F.R.C.S. (Eng.), M.P., acted as chairman of the Commission. Of the thirty-nine members of the Commission, eight were members of the medical profession. This report, with regard to public health administration recommends that the present local public health authorities—urban and district councils—be retained as the primary authorities but that the county council, acting through a county health committee, be the supervisory authority in each county area. The report recommends that the county health committee (in Northern Ireland) be composed of: one member appointed by each urban and district council in the county; members by the county council equal to the total number of urban and rural representatives; six co-opted members, of whom at least one should be a medical practitioner and at least two should be ladies. The functions of the county health committee recommended by the Commission are as follows:—

- (1) Administration of Public Health and allied Acts at present administered by the county council including the Tuberculosis Acts and School Medical Inspection.
- (2) Administration of Medical Relief and Hospital Services.
- (3) Supervision of all local public health authorities in the area of the county.
- (4) Appointment of health officers for the discharge of the functions allocated to the county health committee.
- (5) Administration of Vaccination Acts.

The report states that the demand for medical benefits applied with greater force to urban and industrial than to rural areas, and that a considerable section of medical practitioners in Northern Ireland were opposed to the system. From figures produced it was shown that about 60 to 70 per cent of insured persons either do not, or are not eligible to, receive treatment under the Medical Charities Act, and that these persons have to provide privately for their own medical attendance. The Commission came to the conclusion that a scheme of medical benefits should not be established for Northern Ireland. In a Reservation, nine of the thirty-nine members gave reasons in detail why medical benefits should be introduced forthwith. The Commission having decided not to recommend the inclusion of medical benefits make several suggestions for the re-organisation and improvement of the dispensary medical service. The report recommends the provision of post-graduate courses for dispensary doctors in order to enable them to keep abreast of modern development in medical science. The report deals more or less exhaustively with several aspects of medical treatment including the treatment of tuberculosis, administration of hospitals, maternity and child welfare schemes, etc.

154. The final Report of the Committee on Health Insurance and Medical Services in the Free State was completed in February, 1927. Of the nine members who constituted the Committee of Enquiry seven signed in favour of the extension of medical benefit to insured persons throughout the Free State with an increase of 2d. in the existing weekly contribution rates to be borne equally by the employer and employee. One of the representatives of the Department of Local Government and Public Health, with the representative of the Department of Finance, signed a minority report stating their reasons for not agreeing to the inclusion of medical benefits under the Insurance Act. This minority report goes to the extent of formulating a scheme by which the voluntary hospitals would provide medical treatment for insured persons amongst others. In support of this recommendation the two signatories, who are civil servants, refer to the grants made by the State to certain Dublin hospitals. To give this scheme effect it would be necessary that the medical staffs in the voluntary hospitals would be agreeable to undertake such work—which is very improbable. Dr. Robert J. Rowlette, whilst signing the majority report in favour of medical benefits for the insured, in a separate note goes further and recommends that a comprehensive scheme of medical services should be established—the scheme to apply to insured persons and to those who have a claim to treatment under existing legislation. Dr. E. F. Stephenson, Chief Medical Officer of the Department of Local Government and Public Health, explains in a Reservation his attitude towards medical benefit whilst signing the majority report. In the report is published a letter from the Irish Medical Secretary in which it is stated "that the Committee (the Irish Medical Committee) does not think that the medical profession of the Free State would be willing to provide treatment at a lower figure than that paid in Great Britain. Nor does the Committee think that it is desirable on the grounds of public policy to offer lower remuneration than is given for similar work in Great Britain. A service that thinks itself underpaid does not attract the best doctors and it is not likely to give efficient service."

#### MEDICAL LEGISLATION.

155. In the way of legislation the most important statutes were (1) the Medical Practitioners Act, 1927, which provided for the establishment of an Irish Medical Council and registration of newly qualified practitioners in the Free State, and (2) the Dentists Act, similar in its provisions to the Medical Practitioners Act. Both these Acts were the result of agreements between the British and Northern Governments on the one hand, and the Government of the Free State on the other.

H. B. BRACKENBURY,  
Chairman.

of the puerperal sepsis factor in doctors' and midwives' cases as set forth in the table on page 110 of that Report, where the percentage of infection is higher in midwives' than in doctors' cases. The authoritative status given to any such report by issue from the Ministry renders its statements and implications far-reaching, as the correspondence published in the *British Medical Journal* and elsewhere goes to show.

5. One of the most frequently quoted statements of that Report occurs in its opening paragraph, and is to the effect that whilst the general death rate has been reduced by one-third and the infant mortality rate halved since the beginning of the century, the maternal mortality rate is little lower than it was twenty years ago.

6. Whilst there is a desire to urge all branches of the profession concerned to aim at improvement in maternity practice this observation is calculated to disparage the substantial efforts which have already been made and to convey an erroneous impression. The table which appears on page 3 of the Report on "Maternal Mortality" (1924) shows that as between the first and last years taken (1900-22) the reduction in the maternal (sepsis) mortality rate is 33 per cent.; in "other causes" maternal mortality rate 19 per cent.; in total maternal mortality rate 25.5 per cent.; and that these reductions are at least comparable with the 29.6 per cent. reduction in the general death rate. It is true that the two years compared are high and low in figure value as well as in their tabular position, but taken by the stricter criterion of quinquennial periods a very appreciable improvement is also shown.

7. The view is taken that this extraordinarily responsible and difficult branch of practice is conducted by the profession as a whole conscientiously, carefully, and skilfully up to the limit of the knowledge and facilities available, and that to discredit the whole by reason of the shortcomings of the few must inevitably create resentment amongst the predominant part of the medical profession in whose hands the application of the standard of midwifery practice—whatever in the light of new facts and with administrative aids that may be—must, in large part, remain.

8. In "The Protection of Motherhood" (1927) Dame Janet Campbell quotes figures showing total mortality rates since 1891 and says:—

"From these figures it is evident that there has not been much variation in puerperal mortality since the early years of the present century, though the death rate has never again reached the figure of 4.27 which was the average rate for 1901-05 (the Midwives Act came into operation in 1903), but the average rate for the next 5 years was 3.74, a lower rate than we find in the next two quinquennial periods, and only slightly above that for 1921-25. In 1904, when the first effect of the Midwives Act was probably operative, the maternal death rate was 3.88; in 1926 it was 3.87. Since 1922, indeed the rate has been slightly but steadily rising. The relation between the death rate from sepsis and from "other causes" has remained fairly constant, and such reduction as has been effected since 1890 has been due chiefly to a reduction in puerperal sepsis."

9. The further reduction of the rates of puerperal mortality and morbidity involves the operation of factors other than those directly concerning the practitioner, and which the Government reports quote as essential for and complementary to the application of professional competence. It involves, too, the elucidation of that not inconsiderable group of cases to which the facts set out in the Report indicate that more prominence should have been given, but which is represented in every series of puerperal infection tables, where labour has been spontaneous and normal with no traceable interference by doctor, midwife, or other attendant (25 per cent. in a series of 356 cases in the Report on "Maternal Mortality" (1924)).

10. These points serve but to illustrate the complexity of the problem and the need for further research in regard to its various aspects.

The Council is confident that all branches of the profession concerned with the advance of obstetrics will gladly co-operate with the administrative authorities in devising and applying any agreed scheme to minimise the incidence of the diseases and accidents of childbirth.

#### PUERPERAL SEPSIS.

11. Investigation of this dominant factor of the problem brings to light common experiences which are worth noting as evidence of the fact that in certain directions there is still a great deal to be learned. That there is some factor at present not fully known is fully evident, for whereas on the one hand cases of women delivered under the worst possible hygienic conditions often show nothing abnormal, other

women delivered in hospital under the most stringent aseptic conditions sometimes develop puerperal sepsis.

12. Sepsis occurs not infrequently in cases in which the child has been born before the arrival of the doctor or midwife and in others in which no vaginal examination has been made.

The as yet unanswered question is "Why is this so?" The solution may well lie in the determination of the kind and degree of immunity of the pregnant women for there are factors in her defensive mechanism which obviously require further investigation.

The essential nature of puerperal infection is a problem in bacteriology, and requires the co-operation of specialists in that branch.

13. The principal facts may be briefly outlined.

Bacteriological examinations, in many clinics, have revealed the fact that in most cases puerperal sepsis is due to streptococcal infection. Streptococci are widely distributed both in the body and outside it. In the body they are frequently found in the mucous membrane of the pharynx, tonsils and nose, and even of the vagina and cervix uteri.

14. The possible sources of infection during childbirth are:—

(a) *Exogenous*, such as, any infective conditions of the patient or the attendant, the fingers, gloves, instruments, etc.;

(b) *Endogenous*, such as, the cervix uteri, or embolus from a primary focus elsewhere in the body, the organisms resting in devitalised tissues (e.g., osteomyelitis).

#### PROPHYLAXIS OF PUERPERAL SEPSIS.

15. Information on this subject may be derived from the Report on Puerperal Sepsis compiled by a Committee of the Section of Obstetrics and Gynaecology of the Royal Society of Medicine, and is based on an analysis of 249 reported cases. It is noteworthy that no prophylactic measures are mentioned even in the record of cases of long and difficult labour. Evidence furnished in the above-mentioned Report and in the equally valuable Report of the North of England Obstetrical and Gynaecological Society shows that in most cases the hæmolytic variety of streptococcus pyogenes is the infecting agent.

16. The prophylactic measures which are necessary to combat infection may be summarised as follows:

(1) Strict antiseptic or aseptic measures, in order to diminish the risk of conveyance of infection.

(2) A minimum of obstetric interference, which is especially dangerous after rupture of the membranes.

(3) The intelligent anticipation of complications likely to occur during labour by efficient ante-natal supervision.

(4) The efficient treatment of any complication of labour should it arise.

17. Efforts have been made to determine the degree to which sepsis may be attributed to perineal tears. It has not been found possible to obtain from individual doctors a sufficient volume of reliable data on which to base a definite conclusion, but the following example of institutional investigation is worth noting.

18. In a series of 888 confinements dealt with by the Birmingham General Hospital External Department there were 95 cases of perineal tear. In 72 of these 95 cases the trauma was due to natural forces, and in the remaining 23 the trauma was mainly attributed to forceps delivery. Eight cases only exhibited pyrexia and the most severe case was associated with a simple first degree tear due to natural expulsion. Immediate repair by suture is indicated, however small the tear.

19. The elimination of sepsis is an ideal to be aimed at; its reduction is a matter of practical politics though it is undoubtedly the most difficult part of the problem. There are many elements of difficulty, some due to incomplete scientific knowledge and others due to factors which at present are not under the control of the medical practitioner or the midwife, for example, the occurrence of sepsis where no definite reason can be assigned.

20. Administrative action has been taken which should go a long way to enable doctors and midwives to cope with cases of sepsis in the early stage, namely, the compulsory notification of puerperal pyrexia, the provision of a consultant's opinion, and the increased provision of beds for serious cases.

21. It is for the medical profession to take full and early advantage of these facilities. Every case of a rise of temperature, unless it is clearly explained by some morbid condition unconnected with the pregnancy, should be regarded as serious and dealt with promptly from the start: it is dangerous to wait until the condition is so marked as to be unmistakable. The necessity for this cannot be too strongly insisted upon.

Should the home surroundings be suitable and efficient nursing available, it is probably better that the case should be dealt with in the home, but in the absence of such facilities, removal to an institution is essential.

#### ANTE-NATAL WORK.

22. In any effort to reduce puerperal mortality and morbidity ante-natal supervision must take a prominent place. An examination of the causes of death in statistics connected with maternity work shows that many of these deaths might have been avoided and that it is through ante-natal supervision that this can be accomplished.

23. Deaths directly due to childbirth may be divided into three main classes, namely:—

(1) Toxæmias; albuminuria of pregnancy and its terminal complication, eclampsia; hyperemesis gravidarum; acute yellow atrophy of the liver.

(2) Accidents of pregnancy; hæmorrhages; rupture of the uterus; pulmonary embolism.

(3) Septic infections.

There are other conditions which may lead to a fatal termination at or about the time of confinement, such as tuberculosis, valvular disease of the heart, Bright's disease and diabetes. In such cases the public may regard the death as due to the childbirth rather than to the particular disease and the doctor or midwife, or both, are unjustly blamed.

Ante-natal examination, supervision, and treatment can do much to reduce the number of deaths from such associated conditions.

In class (1) there is a great field for ante-natal work.

24. The cause or causes of the toxæmias of pregnancy remain largely unknown in spite of world-wide research. It has been estimated that in Great Britain the incidence of eclampsia amounts to 3,000 cases annually, and that it is responsible for 600 deaths, most of which occur among young mothers. That eclampsia is a preventable disease the work of every ante-natal clinic bears testimony. With the routine examination of the urine during pregnancy, the systematic recording of the blood pressure when albuminuria is discovered, and the appropriate prophylactic treatment when the warning signs are present, eclampsia would practically disappear. The investigations of the Eclampsia Committee of the Royal Society of Medicine have shown that the number of cases in which eclampsia comes "as a bolt from the blue" without any warning signs is very small indeed.

The value of a routine and repeated examination of the urine is so universally recognised that it is unnecessary to stress the point.

25. As examples of the value of ante-natal work in this connection the following figures supplied to the Committee are worth recording:—

In the Dudley Road Infirmary Maternity Home, Birmingham, in 1925 there were 1,217 confinements in the Institution. Among those patients who had ante-natal observation there were no cases of eclampsia while among those who had no such observation there were 9 cases with one death.

In 1926 there were 1,084 confinements. Among those who had received ante-natal attention there were no cases of eclampsia while among those not so dealt with there were 6 cases but no deaths.

26. In Class (2) ante-natal supervision can do much to reduce mortality and morbidity by the early treatment of hæmorrhages, by the detection and rectification of mal-presentations, and the recognition of any conditions likely to lead to delayed labour. Systematic ante-natal work will reduce the accidents of parturition to a small figure but can never eradicate the factor of hæmorrhage entirely, nor in the present state of our knowledge does it seem possible to eliminate such sudden and unexpected disasters as deaths due to syncope and embolism.

27. In class (3) much can be done to lessen the risk of puerperal infection by the discovery of septic conditions already existing in the prospective mother and by dealing with them before labour supervenes. Among such conditions may be mentioned septic infections of the nose, mouth and ears, septic ulcerations of various parts of the body, and septic vaginal discharges. It has been shown that sepsis is responsible for about one-half of the total maternal deaths. Ante-natal supervision can and should bear an important part in the attack on this aspect of the problem.

28. A practically unexplored field is the condition of the pregnant woman as contrasted with that of the unimpregnated woman. There are grounds for believing that changes occur in her bio-chemical and her endocrine conditions and the

results as regards increased or decreased immunity and susceptibility to sepsis seem to afford an important field for research.

29. So far as private practitioners are concerned the replies to the questionnaire sent out to Divisions and Branches of the Association show that while women are seeking ante-natal advice in increasing numbers there are still very many who do not. The movement is still in its infancy and no substantial progress will be made until every woman, whether rich or poor, is examined at least once in her pregnancy by a qualified medical practitioner, and further that the urine be examined at regular intervals during pregnancy. The tendency of patients to postpone consulting a doctor or midwife until late on in pregnancy should be discouraged. A general adoption of the principle which will result in ante-natal examination becoming the rule rather than the exception can only be attained by a persistent campaign of education and it is for the profession and the midwives, whose opportunities for propaganda work are unrivalled, to educate their patients.

30. It is noteworthy as evidence of the need for further propaganda work in the value of ante-natal supervision that in answer to the question, "Do many women seek ante-natal advice and treatment?" of 104 of the Association's Divisions sending in replies, half replied in the affirmative and half in the negative.

This would not be so were women aware of the importance of ante-natal supervision, and it rests largely with the medical profession to educate public opinion on this point.

It is only when financial difficulty is experienced in meeting the cost of necessary examinations that there should be need for the local authority to set up clinics under the Maternity and Child Welfare Act.

31. Figures showing unmistakably the value of ante-natal work are available and if only they can be put before the public in an attractive form they cannot fail to convince. The following examples speak for themselves:—

2,000 confinements of women who, with one exception, had been ante-natally examined took place in the Louise Margaret Hospital for Women at Aldershot in the four years 1920-1923. There were only two deaths: one from mitral disease in the woman who had no ante-natal examination and one from pulmonary embolism. A mortality rate of 1 per 1,000 against the normal rate of 3.81.

888 cases were dealt with in the Extern Midwifery Clinic of the Birmingham General Hospital. The cases were delivered in their own homes in some of the worst slums of the City. There was only one death and this in the case of a woman who only registered on the day of her confinement. The case was one of hydrocephalus and the uterus ruptured.

Experience at the Dudley Road Infirmary, Birmingham, shows that the percentage of abnormalities during labour and the puerperium in the case of those who have not attended the ante-natal clinic is more than double the percentage of those who have attended.

The records of the Glasgow Royal Maternity and Women's Hospital for 1926 show that the percentage of deaths was less than half in those cases which had had ante-natal supervision as compared with those which had not.

32. From what has already been said it is clear that ante-natal supervision is a powerful weapon with which to attack the problem. Apart from the education of the public by the doctor and the midwife, in regard to its possibilities further means may be devised for increasing the prevalence of ante-natal supervision.

In Australia there is a Maternity Allowance Act. This provides for a payment of £5 to a mother on the birth of a child, and in 1926 the Royal Commission on Health of that country recommended the amendment of the Act to provide that application for the allowance should be made at least five months before childbirth: "no payment to be made unless a medical certificate be produced showing that the mother has had ante-natal supervision."

Under the National Health Insurance Acts an insured woman gets a maternity benefit of £2 on production of evidence of the birth of a child; if her husband is also insured she can claim an additional £2.

The Royal Commission on National Health Insurance recommended that the National Health Insurance Regulations be amended so as to make it a condition of payment that the recipient has had at least one thorough examination by a qualified medical practitioner during her pregnancy. For this service no special payment need be provided in the case of

women insured under the National Health Insurance Acts, as ante-natal examination is regarded as part of the duty of the insurance practitioner. Of those remaining it may be assumed that many could afford to pay, or, if they could not, could avail themselves of the ante-natal clinic. In view of the admitted inadequacy of midwifery fees generally the extra work involved in the extension of ante-natal care would appear to raise the question of appropriate remuneration.

#### THE NEED OF BEDS FOR MATERNITY CASES.

33. An important element in the armament for an attack on maternal mortality is an adequate supply of beds for midwifery cases. It is difficult, if not impossible, to obtain a comprehensive analysis of the beds definitely set aside for maternity cases in all parts of the country, but replies by the Association's Divisions to the question, "How many maternity beds are there in the area?" confirm what is common knowledge, namely, that there are not sufficient beds for midwifery cases evenly distributed throughout the country. Twenty replies out of 118 indicated that there were no beds specially allocated to midwifery in their areas.

In London the available beds for maternity cases in registered lying-in homes, municipal, maternity homes, special hospitals, general hospitals and poor law infirmaries would permit of 43 per cent. of the total births within the area taking place in institutions.

There are no data available to show the total number of confinements which take place in institutions in this country, but the percentage cannot be very high.

While it is not considered necessary that all maternity cases should be institutionally treated it is regarded as essential that there should be an adequate supply of beds for certain classes of cases, viz., those with obstetric or other complications, and those whose home circumstances are unsuitable.

The provision of beds in many areas would probably be more feasible if provided by a combination of local authorities, rather than by individual authorities.

#### COMMENTS.

34. It has already been shown that ante-natal work can do a great deal towards the reduction of morbidity and mortality by the detection and rectification of abnormalities. Its utility might be carried still further by classification of cases into those which are normal and those which are abnormal allocating the former to the midwife, whose function it is to attend normal cases, and the latter for the supervision of the medical practitioner.

No such ideal can be accomplished without full and cordial co-operation between doctor and midwife. There is here a field for team work comprising ante-natal examination by the doctor in the patient's home or at the clinic, the confinement being carried out by the doctor or midwife or both with the specialist and bacteriologist available in cases of special difficulty, and, in certain cases, institutional treatment.

35. An organised attack should be made in towns and rural areas in which it is common knowledge that the general maternal mortality rate is persistently much higher than the general rate for the whole country. There would seem to be here a great opportunity for the Divisions of the Association to inaugurate a campaign. It has not yet been explained why in certain industrial towns a death rate as high as 6 or even 8 per 1,000 is met with. There must be some special cause to account for this high rate, possibly bad housing, a poor standard of living, or faulty methods of attendance. The results obtained by an organisation working in the East End of London which deals with a large number of confinements annually and which for four years has kept its mortality rate down to 0.67 per 1,000 give good grounds for optimism.

36. With regard to the apportionment of blame for the admittedly unsatisfactory morbidity and mortality rates it seems that no useful purpose is to be served by an attempt to lay it at the door of either doctor or midwife. Both are doing their best under very difficult circumstances. There is ample evidence that in the present state of scientific knowledge and with the lack of proper facilities for dealing with cases of grave difficulty a quite appreciable proportion of the trouble is outside the control of either. To create a feeling of despondency or lack of confidence in themselves would not be helpful. Far better is it to promote a spirit of co-operation between them to let them feel that they have the confidence and support of the public and to stimulate them to renewed efforts to improve midwifery practice.

37. There is need for a great educational campaign throughout the country, in which the Association should take an important part in consolidating medical opinion and directing the lines upon which progress may best be made.

As a special means to this end it is suggested that a committee should be set up to watch the course of events. Such a committee would have under review the various measures which are proposed or adopted for general improvement of position, would keep in touch with research work and initiate activities designed to bring about a more satisfactory state of affairs. The committee should be a committee of the Association consisting of the ex-officio officers, other members of the Association and representatives of other bodies concerned.

38. A matter of considerable importance is the shortage of material available for instructional purposes and it is of utmost importance that such material as exists should be turned to the best account. Cases are not only required for instruction of medical students but also of midwives. It is a well-known fact that large numbers of nurses take the C.I. as an additional qualification without any intention of practising midwifery, the result being that a large amount of the available material is wasted. It is possible that the longer and more strenuous course of training for the C.I. certificate might deter those who have no intention of practising midwifery from taking the certificate and the problem is certainly deserving of the close attention of those responsible for the training of both doctors and midwives.

39. The Ministry of Health is pressing upon the local authorities the necessity of an investigation in every area by a competent and experienced medical officer of all rates of deaths and all cases of puerperal fever, with a view to ascertaining more exactly the actual causes which lead to maternal mortality, in order to provide further means of prevention. The Council, on being asked for its support, agreed that such an investigation would be useful if carefully controlled by a competent and experienced medical officer. If the results were used exclusively for scientific and public health purposes, and urged that it was most important where necessary such an investigation should be followed by the offer of expert advice and assistance, institutional otherwise. The Council would press on the Divisions, on members of the profession generally, the necessity of giving all the assistance they can towards making observations secured by such investigation as accurate and complete as possible under the conditions named.

#### Recommendations.

40. (1) That steps should be taken to determine by further experimental research:—

(a) The factors which constitute and the conditions which vary resistance to disease, particularly as regards pregnancy and the puerperium.

(b) The best specific prophylactic measure to employ for the prevention of infection by streptococcus pyogenes.

(c) The length of time required to acquire immunity and the degree and duration of immunity.

(d) The therapeutic value of specific as opposed to antiseptic measures in the treatment of septicæmia caused by streptococcus pyogenes.

(2) That increased facilities should be provided for training medical students with special reference to ante-natal work.

(3) That a condition of the payment of maternity benefits under the National Health Insurance Acts should be that the mother has had at least one ante-natal examination by a qualified medical practitioner during her pregnancy.

(4) That members of the medical profession should be encouraged to keep regular and careful records of their midwifery cases.

(5) That there is need for further provision of beds specially set aside for maternity cases in institutions. That every maternity home should provide for the complete isolation of septic cases.

(6) That the Association should consider the allocation of additional grants to promote research into the problems raised in this report, including especially the questions raised in the first recommendation of this report.

(7) That a Committee be set up to formulate measures designed to bring about reduction in puerperal morbidity and mortality rates, to keep in touch with research work

and to assist Divisions and Branches of the Association in arranging for education and propaganda with regard to the value of ante-natal service, the method of dealing with confinements and the post-partum care of the mother and care of the infant.

#### RECOMMENDATIONS THAT HAVE ALREADY BECOME EFFECTIVE.

##### 41. Compulsory notification of puerperal pyrexia.

Provision of compensation to midwives who are unable to carry on their work owing to having been in contact with a septic case.

### APPENDIX V.

#### MEMORANDUM ON REPORT OF ROYAL COMMISSION ON LUNACY AND MENTAL DISORDER (AS REGARDS ENGLAND AND WALES.)

Note.—References marked "R" are to pages in the Report of the Royal Commission; those marked "M" to paragraphs in the present Memorandum.

#### INTRODUCTORY.

1. In many important respects the Report of the Royal Commission on Lunacy and Mental Disorder (as regards England and Wales), published July, 1926, is in harmony with the principles advocated by the Association in the evidence which it tendered to the Commission.

2. In particular, the Commissioners report unanimously:—

(a) "that the treatment of mental disorder should approximate as nearly to the treatment of physical ailments as is consistent with the special safeguards which are indispensable when the liberty of the subject is infringed" (R 157); that "the keynote of the past has been detention; the keynote of the future should be prevention and treatment." (R 17)

(b) "that certification should be the last resort and not a necessary preliminary to treatment; and that the procedure for certification should be simplified, made uniform for private and rate-aided cases alike and dissociated from the Poor Law." (R 157)

(c) that "the present facilities for treatment without certification are on a very limited scale, and need extensive development" (R 157); and "that the evidence . . . points to the need for some provision whereby certain classes of case may be placed under care and treatment without the necessity for full certification." (R 157)

(d) that "voluntary boarders might be received in any public mental hospital, registered hospital, licensed house, general hospital, nursing home, or in single care." (R 157)

(e) that "it is not fair to ask them [medical practitioners] to perform their essential part [in connection with the Lunacy Act] under the menace of litigation which, even if unsuccessful, may spell financial or professional ruin"; . . . and "that further protection should be given to medical men in the discharge of their professional duties in relation to insanity." (R 24)

(f) "that the evidence . . . does not support the suggestion that the present safeguards against wrongful certification if properly observed are inadequate" (R 157); "that in none of the cases which were investigated by us were we satisfied on the evidence that improper detention had been suffered, while the general evidence which we received on this subject was reassuring" (R 87); and "that in practice instances of sane persons being wrongfully certified or improperly detained must be of the rarest occurrence." (R 87)

(g) that "a considerable extension of after-care work is urgently needed, . . . and that the establishment of closer touch between the medical staff of mental institutions and the general practitioners attending patients after discharge would prove an important factor in improving the after-care system." (R 164)

3. The Council welcomes the propositions above stated as substantially in agreement with the evidence given by the Association before the Royal Commission, and gratefully acknowledges the courtesy and care with which this evidence has been received. There are, however, in the Commissioners' Report some conclusions from which the Committee finds itself compelled to dissent. These relate mainly (a) to the methods by which patients falling ill of mental disorder can be brought under treatment, and (b) to the protection from the menace of litigation of medical practitioners who discharge duties in pursuance of the Lunacy Acts.

The Council proposes in the present Memorandum both to indicate in what respect its views on the above topics differ from those of the Royal Commission and to offer certain alternatives to the procedures the Commission has suggested; also to comment on some other matters that seem to call for special remark. First will be considered the methods by which the interests of patients suffering from various degrees of mental disorder can best be secured, and later the Memorandum will deal with the protection of members of the medical profession from vexatious actions at law instituted by patients who believe themselves aggrieved.

#### ARRANGEMENTS FOR BRINGING UNDER TREATMENT PERSONS SUFFERING FROM MENTAL DISORDER.

##### (a) Mental Cases outside the Lunacy Act.

4. The Council desires to emphasise the existence of forms and degrees of mental disorder which need not bring the patients under the Lunacy Acts or within the cognizance of the Board of Control. These patients are conscious or some degree of mental disorder and desire to be treated, but do not, either in their own interests or in the interests of the public, require compulsory restriction of their liberty. They can be satisfactorily treated at out-patient departments, or in general hospitals, or by private practitioners in their own houses or in nursing homes. As a fact, they are so treated at the present day, although the existing provision for treatment of this order, and especially for the poorer patients, is quite inadequate and ought to be increased. If the suggestion on page 150 of the Report regarding arrangements for treatment "without certification" is to be read as a proposal to bring these patients in any way under the Board of Control, then the Council is bound to disagree. Such a formality, with the consequent prospect of official visits on behalf of the Board of Control, is quite unnecessary, and would certainly deter many patients from accepting the medical treatment they require; and similarly, the managers of general hospitals and other institutions might well be reluctant to receive patients who appeared to be regarded officially as of unsound mind.

The Commissioners recognise (R 40) that Section 315 of the Lunacy Act, 1890, puts some difficulty in the way of treatment of these slight and curable cases, and recommends that the "provision needs considerable amendment." The Council supports this recommendation but re-affirms its opinion that the cases here considered ought not to be brought within the jurisdiction of the Board of Control or of any other Government Department.

The term "certification" as used in the Commissioners' Report is not quite free from ambiguity. Probably it generally means "full" certification of the patient as of "unsound mind" and the proper subject of a Reception Order. But it might be held to include all patients who by a formal process are undergoing treatment for mental disorder.

The Council repeats that there are patients who suffer from some degree of mental disorder but who need neither a formal "recommendation for treatment" nor a formal "certificate" and therefore ought not to be brought within the purview of the Board of Control. When either of these documents is required the Council of course recognises that the jurisdiction of the Board of Control at once applies.

##### (b) Mental Cases under the Lunacy Act.

5. Of patients who, in consequence of mental disorder, come within the provisions of the Lunacy Acts three groups may be recognised, namely:—

(a) Volitional (i.e., patients who realise that their mental disorder requires or may require treatment in an institution where restriction of liberty is permissible, and who to this end voluntarily surrender their liberty subject to certain conditions governing the right to resume it);

(b) Resistive (i.e., patients who, suffering from mental disorder, are in need of restraint for their own protection, care and treatment or for the protection of others but who refuse to acquiesce in, or deliberately object to, such treatment);

(c) Non-Volitional (i.e., patients who are the subject of mental disorder which needs institutional treatment but which prevents them giving either a reasoned assent, or a reasoned objection, to the detention required, such as would place them in the "Volitional" or "Resistive" class respectively).

#### VOLITIONAL: VOLUNTARY BOARDERS.

6. With the proposal of the Royal Commission approving the admission, under proper conditions, of Voluntary Boarders into public mental hospitals, registered hospitals, licensed

houses, general hospitals, nursing homes, and in single care, the Council is in entire agreement. The Commissioners prescribe a written application from the person wishing to be received as a Voluntary Boarder; presumably the application would have to be addressed to the Superintendent of the hospital or other institution concerned, and it would be well to indicate this precisely.

7. In contemplating the possibility that the mental condition of a Voluntary Boarder may, during his residence, deteriorate, so that he is no longer capable of volition, the Commissioners advise that should this condition continue for a month he should no longer be regarded as a "voluntary" patient but should be placed under certificate. The alternative would be to claim that as the voluntary entrance implies surrender of personal liberty for the purpose of treatment this surrender should continue even though the patient's mental capacity to express it had for the time being failed. The Council fully recognises the importance of keeping faith with a "voluntary" patient. To receive such a patient under the guarantee that he is at liberty to leave on a few hours' notice and then to put him, while in "voluntary" residence, under compulsory detention would be hard to justify; and in a system which sanctioned such a procedure "voluntary" patients would not place their confidence. The Council is of opinion that a distinction should be made between two groups. The patient who, received as a Voluntary Boarder, becomes mentally inert and acquiescent may be continued on a "voluntary" status, but he who is resistive, and demands his freedom in the terms of the bond, should be discharged, although this action may have immediately to be followed by certification and compulsory detention.

#### RESISTIVE PATIENTS: RECEPTION ORDERS AND EMERGENCY PROCEDURE.

8. The more or less sudden and acute manifestation of mental disorder creates a very difficult situation. Unless forcibly restrained, the patient may harm himself or others, or may destroy property, and in these circumstances careful medical examination may well be impossible. As the law now stands, if the doctor certifies the patient he runs the risk of an action for damages by an indignant convalescent; if he declines to certify and the patient harms himself or others there will be public reproach and the chance of censure by a Coroner's jury; while, in a doubtful issue, should the patient be placed in an ordinary nursing home, Section 315 of the Lunacy Act, 1890, may provide heavy penalties for all concerned.

9. The Commissioners recognise that in some of these cases law rather than medicine must take the initial step. Hence they advise that if a patient suddenly develops acute symptoms at home, rendering medical examination impossible, or is found at large in a condition that requires instant restraint, a constable, relieving officer or overseer should be empowered to remove him and place him under control. (R 57) Should, however, a patient be detained in this fashion proceedings must be taken within seven days to secure an authoritative warrant in the shape of a provisional treatment order or a reception order. (R 57) Unless this is done further detention of the patient will be illegal.

10. Procedure somewhat different from that just described is proposed. (R 57) when the development of dangerous symptoms is not quite so acute. Here an "order" signed by a relative or friend or public official and supported by a medical certificate to the effect that "it is expedient for the welfare of the patient or for the public safety that he should be forthwith placed under care" will justify the reception and detention of the patient in an appropriate institution. But once again, proceedings to obtain a provisional treatment order or a reception order must be taken if detention beyond seven days is contemplated. The procedure is that of the existing "Urgency Order."

11. There are yet other patients who require forcible removal and detention. Less violent and urgent perhaps than those mentioned in the two preceding paragraphs, they may none the less be dangerous to themselves or to others; and as they deliberately refuse advice and resist treatment force is the inevitable remedy. Under the present law such a position can be met by the existing Reception Order granted by a magistrate after consideration of a Petition presented by a relative or friend and supported by two medical certificates. The present medical certificate describes the patient as "a lunatic, idiot, or person of unsound mind," but in the new form the reading is to be a person "of unsound mind and a proper person to be taken charge of and detained under care and treatment." This amendment of the "certificate" adopts the proposal made by the Association in the evidence given to the Royal Commission.

12. The Commissioners suggest certain modifications of the present Reception Order. Thus they alter the rule which instructs the two doctors to act independently, and recommend that the doctors be entitled to consult together. The Council welcomes this proposal. Another recommendation is that the Reception Order shall apply only to patients who are not likely to recover within a period of six months, and this must be stated on the medical certificate; the Council cannot endorse this proposal. Obviously, one result will be that at the outset of institutional treatment the Reception Order will rarely be used, for in so uncertain a region as the prognosis of mental disorders the doctor will be reluctant to suggest an unfavourable outlook and the prospect of unlimited detention. The Council thinks that this time-clause should be omitted and the doctors left free to judge in each case which form of procedure is the more suitable.

Another suggested modification of the Reception Order is that the magistrate must see the patient and any available relatives; also, if he thinks it necessary, one or both doctors. He is further to exercise a "directed discretion" whether or not to inform the patient of the "allegations" made regarding his conduct. Later in this Memorandum the Council will argue that the Reception Order, and the intervention of the magistrate, as here advised, should apply only to certain cases. In such cases the activities of the magistrate as prescribed by the Commission may perhaps be of value.

The Council questions the Commissioners' demand that the Petition shall be accompanied by "a disclosure of the patient's property, if any." The immediate distress inflicted on the relatives by the necessity for certification may well claim some postponement of a matter that can hardly be described as urgent.

13. There is one other position for which provision must be made. According to the existing law, when a Justice of the Peace is informed that a person deemed to be a lunatic is not under proper care and control or is cruelly treated or neglected, the Justice shall direct two medical practitioners to examine the alleged lunatic and shall on their report order the detention of the patient if he judges it fit so to do. In such cases the right of entry of the doctors may be contested and the Justice ought to be empowered to secure this.

14. Subject to the criticisms presented in the above paragraphs the Council agrees with the proposals of the Commissioners relative to mental patients who are "resistive" in the sense defined in this Memorandum. (M 5(b))

#### NON-VOLITIONAL PATIENTS: PROVISIONAL TREATMENT ORDER.

15. The Commissioners take the view that cases of mental disorder should be classified in two categories, namely, (a) voluntary, (b) involuntary. The voluntary group consists of patients who enter a mental institution on their own initiative as Voluntary Boarders. All others are "involuntary" and can be placed under compulsory treatment only after medical examination and on the order of a magistrate. If recovery is anticipated within six months a single medical examination is sufficient, but if the outlook is less promising two medical certificates are required. The instrument justifying the shorter detention is the Provisional Treatment Order, while that for the longer period is the Reception Order. Such, essentially, is the scheme outlined by the Commission so far as the formal procedure governing the admission of mental patients to appropriate institutions is concerned.

16. The Council, with great deference, and assuming that the ends desired by the Commissioners are to be obtained, cannot accept as a practical scheme the classification of cases adopted by the Commission; nor can it agree that the intervention of a judicial officer prior to institutional treatment is invariably desirable. On the contrary, if the early treatment of mental disorders is to be realised, then, in the view of the Council, such intervention should be limited to cases in which the patient is capable of volition and definitely refuses or resists institutional treatment—cases, that is, where the use of force is necessary either for the patient's welfare or for the protection of the public. What has to be recognised is that between the Voluntary Boarder at one extreme, and the recalcitrant or deliberately resistive patient at the other, there are numerous patients in whom the will is in abeyance (non-volitional patients). The incapacity may be associated either with the irresponsiveness of stupor or melancolia, or with a state of mental confusion and indecision; in either event the patient is manifestly beyond the point at which any appreciable degree of judgement or choice is possible. Such patients are numerous, and many of them made an early recovery; hence they ought, if possible, to be saved from the stigma of formal certification. The Council's claim is that these patients can properly be admitted to an appropriate institution on an "Authorisation

for Treatment" given by a relative or friend and supported by a "recommendation" signed by two medical practitioners. The intervention of a judicial authority in these cases the Council regards as unnecessary and possibly harmful.

17. The contrast between the two positions above discussed may be briefly stated. Both the Commission and the Council propose a Reception Order and a Provisional Treatment Order, though the Council would prefer to name the latter instrument an "Authorisation for Treatment." Both agree that the Reception Order requires two medical certificates and the warrant of a magistrate. But while the Commission applies this Order when a patient is not likely to recover within six months, the Council proposes it when a patient capable of volition resists treatment, or, when a limited term of detention having failed, prolonged or even permanent detention appears inevitable. Again, the Commission's Provisional Treatment Order is to be supported by only a single medical "recommendation" and a magisterial authority, and is to be used when the patient is deemed likely to recover within six months. On the other hand, the Council's Provisional Treatment Order or Authorisation for Treatment needs merely the "authorisation" of a relative or friend or public official and "recommendations" from two medical practitioners but no magisterial intervention; it is offered as appropriate to all cases in which the patient either can be persuaded to submit to institutional treatment or exhibits evidences which show him to be incapable of volition.

18. To put the position in other words, while the Commissioners' Provisional Treatment Order is the Reception Order made by a magistrate but limited to a period of six months and needing only one medical certificate, the Council's Authorisation for Treatment is made by a relative or friend, or public official (not by a magistrate), is effective for 28 days but capable of extension, and is supported by two medical "recommendations." According to the Commissioners' scheme no patient other than a Voluntary Boarder can receive institutional treatment except on the approval of a magistrate, while the Council's proposal makes available such treatment without magisterial intervention for all patients who either yield to the doctors' advice or are mentally incapable of appreciating or judging this advice.

19. The Provisional Treatment Order proposed by the Commissioners is, like the Reception Order, granted by a magistrate on a Petition presented by a relative or friend. But it differs from the Reception Order in three respects, (a) it requires one medical "recommendation," but one only, (b) the "recommendation" must state that "the patient's mental condition is such that it is expedient for his welfare, or for the welfare of the public, that he should be detained under observation care and treatment," and (c) the Order is effective only for a month. If, however, the patient has not recovered at the end of a month the Order, if there is a reasonable prospect of recovery at an early date, may be extended for a further period of five months. To secure this extension a judicial authority (preferably the one who signed the original Order) must again see the patient, and a recommendation for "renewal" must be given by an "independent medical practitioner, or by the medical superintendent of a public mental hospital or other medical officer in the public service." The term "independent" as here used needs definition, and again it is not clear whether the proposal would or would not sanction a "renewal recommendation" by the medical superintendent of the institution where the patient had spent the previous month. These are points of detail, but in practice the exact interpretation of them will need authoritative explanation.

20. The following are, in the view of the Council, unwelcome features of the Commissioners' Provisional Treatment Order:—

(a) It imposes, at the outset of treatment, except in the case of the Voluntary Boarder, the intervention of a legal official on every patient who needs institutional treatment; in this respect it continues the formalities of the existing law. There is here, therefore, no approach to what the Commissioners desire, namely, the approximation of the treatment of mental disorders to the treatment of bodily ills. Again, as the relatives of the patient dislike the publicity and stigma which they associate with the presence of a magistrate, they will postpone active measures as long as possible, and the chance of early and hopeful treatment, which the Commissioners are anxious to encourage, will be prejudiced. Another appropriate comment is that detention under a "legal" warrant emphasises in the public mind the "stigma" of certification; it is this feature of the present practice that is so much resented.

(b) By prescribing a second legal interview at the end of a month the Commissioners actually enlarge the part

to be played by the law in the treatment of mental patients. They thus further depart from the ideal towards which amendments of the existing law ought, as they themselves urge, to be directed.

(c) The Order can be continued only for a period of six months; if at the end of this time further detention is advisable and the patient refuses to become a Voluntary Boarder, he must either be discharged or placed under a Reception Order. The last-mentioned course must mean another legal interview and further medical certification. As opposed to this the flexibility of the Council's Authorisation for Treatment would avoid these multiplied administrative complications, and would meet the position both of patients who may be expected to recover promptly and of those for whom the outlook is less promising.

(d) These increased legal activities will be unwelcome to the patient and to his friends. The Commissioners, contemplating the necessity for the removal of a patient, write, "in such a domestic crisis the first and natural concern of doctors and relatives alike is to obtain for the patient, with the least possible delay and the least possible publicity, his necessary removal to a place of safety and treatment. The unfamiliar formalities of legal procedure may well prove an additional cause of distress in such circumstances." (R 20) And yet, on the Commissioners' advice, "legal procedure" is to become not less but more formidable than in the present practice. Again, a multiplication of legal interviews will put a considerable burden on magistrates and, what is more important, on the medical officers of mental hospitals. This position becomes all the more evident when it is realised that the great majority of patients will, under the Commissioners' scheme, enter institutions under the Provisional Treatment Order. The belief that the medical practitioner can confidently estimate the probable date of the patient's recovery and thus sharply decide between a Provisional Treatment Order on the one hand and a Reception Order on the other, is not well-founded. The uncertainty of the future, the pressure of relatives, and the natural inclination of the doctor towards a hopeful prognosis, will combine to select the less forbidding course, and the Provisional Treatment Order therefore will usually be adopted. This will mean that every patient who enters an institution through this avenue will have an interview with a magistrate before he enters, a second interview after a month's interval unless he has recovered, and a third five months later, if, as will sometimes happen, a period of treatment extending over more than six months is required. Both magistrates and medical officers under such a scheme will find their burdens much increased. This also must be said, that the procedure here considered is largely superfluous, seeing that the patient during his residence enjoys the supervising and protective activities of the Board of Control; and so efficient have these activities proved that the Commissioners in the course of their investigations failed to discover a single instance of improper detention.

(e) Though called by another name and supported by one medical "recommendation" instead of two medical "certificates," the new Provisional Treatment Order will present to the patient and his friends no substantial difference from the present Reception Order. It will offer the same obstacles to early treatment and will carry the same objectionable stigma. To protest that it does not mean "full certification" does not alter the fact that the patient is removed and detained by legal authority just as he is under the present practice. He is openly the subject of legal detention and not of medical care and treatment. To assure the friends that a patient who has been "recommended" by a doctor, interviewed by a magistrate, and compulsorily detained, has not been "certified" and is under no "stigma," will hardly afford consolation and may possibly be regarded as an attempt to cheat the situation by a form of words.

(f) The Order suggested by the Commissioners needs the "recommendation" of only one medical practitioner. From this the Council strongly dissents. Except in an acute emergency and as a merely temporary expedient while a more formal warrant is being prepared (M 11), an issue so important as the restriction of a citizen's liberty ought not to rest on a single medical judgement; and collaboration with a colleague is clearly in the interests both of the patient and of the doctors concerned.

21. Altogether the Council finds it difficult to reconcile the conditions of the proposed Provisional Treatment Order with the expressed desire of the Commissioners that certification should be the last resort and not a necessary

preliminary to treatment, that facilities for the treatment of early and curable cases without certification should be encouraged, that procedure should be simplified, and "that the intervention of the law should be as unobtrusive as possible." (R 21) All these ends would be promoted were the intervention of the magistrates avoided in all cases other than those where the patient deliberately resists treatment and where, therefore, force must be used in opposition to his will. Such in essence, is the scheme which the Council ventures to set in opposition to the Provisional Treatment Order proposed by the Royal Commission.

22. The proposals of the Royal Commission and those of the Council are in substantial agreement as to the rules which should govern the reception of Voluntary Boarders. But, whereas, when this point is passed, the Commissioners at once introduce the magistrate, the Council urges that patients who will accept advice or persuasion, and also those who are incapable of volition, should be admitted to an institution for treatment for a specified period at the instance of a relative or friend with the sanction of two medical practitioners and without any need for magisterial approval (Authorisation for Treatment). Such approval the Council claims should be required only when the patient deliberately refuses to accept medical advice and resists the restraint necessary either for his own welfare or for the public safety (Reception Order).

23. The Commissioners, the Council fully recognises, have decided, not lightly, that the Provisional Treatment Order must be made by a magistrate. They have "not without reluctance," rejected the contrary proposition as impracticable "in the immediate future," while admitting as possible "that ultimately the treatment of mental illness will be so assimilated to the treatment of physical illness that the participation of a magistrate will no longer be considered necessary." (R 53) Even more decisively they say "if we were free to consider exclusively the medical treatment of the patient, we should have little hesitation in accepting this suggestion." (R 53) They doubt, however, whether public opinion is ready to countenance a departure from the "principle of English law that the liberty of the subject may not be infringed without the intervention of some judicial authority." (R 53)

24. It may, perhaps, be a delicate question to consider how far a Royal Commission should attempt to guide public opinion and how far it should consult popular prejudice. In any event, while the Commissioners acknowledge that "the liberty of the individual to manage himself and his property is a cardinal principle of our law," they acknowledge equally "that the principle is not an inviolable one." (R 17) As an illustration of the need in given circumstances for a suspension of the rule they quote the restricted liberty imposed on sufferers from certain infectious diseases. The position thus presented is not without its value in the present discussion. To-day, patients who are the victims of the infectious fevers not only go readily to hospital when so advised but they and their friends often request this measure. Yet, a generation ago, the fear of removal to hospital led, not infrequently, to concealment of the nature of the illness and to vigorous opposition to the proposal. Gradually the public has learned that the hospital policy means both adequate treatment for the patient and protection for the community; and this change of attitude has been brought about not by conspicuous legal intervention but by experience of medical good faith and of practical benefits. It is not unreasonable to expect that were a similar policy adopted in reference to sufferers from mental disorders there would be a similar advance in public education and opinion. The alternative is to emphasise and stereotype the present attitude for at least another generation. Perhaps the objection may be made that while the liberty of the sufferers from infectious disease is restricted only for a brief and easily estimated period, the victim of mental disorder may have to be the subject of an indefinite and perhaps a prolonged detention. Broadly, this proposition may be accepted; but it is surely qualified by the arrangement which secures for the mental patient the supervision of an organised and independent legal and medical authority (Board of Control) open to appeal at any time and empowered to terminate detention when this is no longer necessary. The Commissioners have found as a fact that this supervision is effective, and such a finding, pressed on the public attention and associated with procedure in which the early and formal intervention of the law is avoided, might well be utilised to establish in the public mind the conviction "that insanity is, after all, only a disease like other diseases," (R 16) and that the medical treatment of its victims is hindered rather than helped by a compulsory participation of the magistrate.

25. There may be added the further remark that the "principle" advanced by the Commissioners is qualified by exceptions in the area now actually under discussion. Thus under the present Lunacy Laws—

(a) a lunatic may, under various sections of the existing Acts, be detained in a workhouse for as long as twenty-three days before a Justice is asked to give official sanction to the detention.

(b) the present Urgency Order is valid for seven days on medical certificate alone, and the Commissioners propose to retain this arrangement.

A principle which allows such exceptions as the above cannot well be quoted as an absolute authority, and should not be allowed to stand in the way of the interests either of individual patients or of the general community.

Under the existing law the so-called pauper patient may have the advantage of a period of observation extending even to twenty-three days on medical judgment alone. As many of these patients recover during this period they are discharged without any legal interview or warrant. What is desired is that a similar chance of escape from stigma shall be open to mental patients generally, and this would be secured by the Council's Authorisation for Treatment. (M 17)

26. Further, it is the absence of such a neutral ground between full freedom for treatment and formal judicial detention such as is here suggested that inevitably gives rise to the difficulties associated with Section 315 of the Lunacy Act, 1890, both for patients and their friends, for doctors and those who take charge of patients on the one hand and for those who administer the Act on the other.

#### MEDICAL DUTIES AND RESPONSIBILITIES.

27. The Council recognises in the Commissioners' Report certain statements of peculiar interest to members of the medical profession. Some of these are quoted in the "Introduction" to this Memorandum; a few additional passages may here be added. Thus, in considering the nature of the problem presented to them the Commissioners write:—

(a) "that insanity is, after all, only a disease like other diseases . . . and that a mind diseased can be ministered to no less effectively than a body diseased. . . . For this new conception of the nature of insanity we are chiefly indebted to pioneers of the medical profession who have laboured to instil more scientific views into the mind of the public. . . . The modern conception calls for the eradication of old-established prejudices and a complete revision of the attitude of society in the matter of its duty to the mentally afflicted." (R 16)

(b) that "in slight or incipient cases compulsion is unnecessary and harmful. But it is in such cases and at that stage that curative treatment is most valuable and is likely to be productive of the best results." (R 18)

"Hence the necessity . . . of making provision either in connection with existing institutions or by the provision of new institutions, for the treatment of mental disease from the very earliest moment of the appearance of its symptoms." (R 19)

(c) "if the asylum be regarded, as it ought to be, . . . as a hospital for a special type of disease . . . the whole outlook is changed." (R 19)

(d) that the legal and administrative purpose should be "to bring the means of treatment and recovery within the reach of as many patients as possible without resort to certification." (R 43)

(e) That "the problem of insanity is essentially a public health problem to be dealt with on modern public health lines." (R 22)

The Commissioners, in short, in the above and in allied passages, endeavour to educate public opinion to the view that insanity is a manifestation of disease to be met by the technical arts of medical diagnosis and treatment; that here, as in bodily ills, it is from early recognition and expert treatment that therapeutic success may be anticipated; that many mental patients may be effectively cared for without any question of detention or restraint; and that when compulsory measures are needed these, while affording protection to the public, are essentially agencies directed to the patient's welfare. All these conclusions emphasise the argument advanced in this Memorandum, namely, that it is to the art and science of medicine rather than to legal intervention that the problem of insanity must be committed.

28. In the "Introduction" to this Memorandum are quoted also passages from the Report relative to the part played by medical practitioners in the administration of the Lunacy

Acts. These, and parallel phrases, show that the Commissioners were satisfied that "the existing lunacy code bristles with precautions against improper detention" (R 19); that they did not in the course of their investigations discover even a single instance of improper certification or detention; that medical practitioners in undertaking responsibilities under the Lunacy Acts are placed in an unfair position by their liability to vexatious and unreasonable litigation; that in consequence of this risk practitioners are, not unnaturally, becoming reluctant to sign lunacy certificates; and that both policy and justice demand that doctors should receive further protection against the menace of unjustifiable litigation. Further, on the subject of the importance of the part played by the medical practitioner, the Commissioners write—

(a) that "the more mental illness is assimilated to physical illness the more the public must rely on the medical profession." (R 20)

(b) that "it is remarkable that in the case of a form of disease probably more subtle and difficult of diagnosis than any other, the layman should insist on his right to sit in judgement on the expert." (R 20)

(c) that "when all is said and done reliance must inevitably be placed at some point on the skill and integrity of the medical man." (R 20)

The Council, in view of these findings, is bound to claim that various sensational rumours and suggestions which have at times alleged abuses in the administration of the law have been entirely disproved; and also, that the most searching enquiry has shown that in taking an important part in the application of the Lunacy Acts the medical profession has failed neither in integrity nor in sound judgement. The difficulties of decision, at least in a minority of cases, are great, for, as the Commissioners well say, "insanity is not a definitely ascertainable state. It is a matter of degree, upon which there must often be room for honest difference of opinion." (R 19)

#### PROTECTION OF THE MEDICAL PRACTITIONER DISCHARGING DUTIES IN PURSUANCE OF THE LUNACY ACTS.

29. The Council has now to consider the "further protection" which the Commissioners advise should be given to medical practitioners in the discharge of their professional duties in relation to insanity.

30. The present position is admittedly a most unsatisfactory one. Recent cases in the Courts have shown that a practitioner who has signed a certificate under the Lunacy Acts is liable to a civil action months, or even years, after the event, and on the plea that he has not acted with due care and in good faith. His difficulties may be increased by evidence from mental experts who feel justified in challenging a certificate though they may not have seen the patient until months or years after his recovery. In more than one recent instance the issue for the jury has in substance been, not, Was the doctor careless, but, Was the patient of unsound mind at the date of certification? That is, a court of law is asked long after the event to dispute a medical judgment made on the spot; and, if not convinced of the accuracy of the diagnosis, to draw the inference that the doctor has acted without due care. Whether the tribunal is an appropriate one or not, it is hardly reasonable to urge that when two authorities differ on a diagnostic issue one of them is necessarily guilty either of carelessness or of bad faith or of both of these faults. As quoted above from the Royal Commission "insanity is not a definitely ascertainable state. It is a matter of degree upon which there must often be room for honest difference of opinion." (R 19)

31. The most radical proposal for the further protection of the certifying practitioner appears in the claim that when an Order authorising the detention of a patient is signed by a magistrate it is this legal instrument and not the medical certificate that assumes responsibility. As a corollary there follows the contention that the medical practitioners in constructing the certificates are merely giving evidence which the magistrate may or may not accept. The doctors, that is, are witnesses and the magistrate is the deciding authority. Some colour is lent to this argument by the fact that the magistrate may call for other opinions and may take all the evidence under the sanction of an oath. But if the doctor in the procedure which leads to the detention of a patient has the status of a witness, he ought to enjoy the immunities of a witness, that is to say, that unless he commits perjury no civil or criminal proceedings can be taken against him for the evidence he has given. He does not exercise authority but merely gives to the representative of the law his opinion on the technical question at issue. Authority is exercised by the law; with the law, therefore, must rest responsibility.

Of considerable interest in relation to this argument is a judgement delivered in a recent case by Mr. Justice McCardie. The learned Judge said that if he had been freed from authority he would have thought that the effective cause of the detention was the order of the Justice and not the certificate of Dr. D. The decision under Section 16 of the Lunacy Act, 1890, lay with the Justice and not with the doctor. The Justice could decide as he pleased, whatever the certificate stated. The doctor's certificate although an essential requirement was a mere opinion which possessed, of itself, no operative force. Apparently, the learned Judge felt himself bound by a previous decision of one of the superior Courts, but it is noteworthy that even the judicial bench gives some measure of support to the claim that not medicine but the law is responsible for the detention of a certified patient.

32. The Association's witnesses before the Royal Commission presented the case just stated. The Commissioners, however, did not accept the claim; they rejected it on the ground that it would protect a practitioner "who gave a certificate negligently or in bad faith." Upon this it may respectfully be suggested that when the law appoints an official to decide *ay* or *no* on the proposed detention of a citizen it is the duty of the official to appraise the value of the evidence before he decides to act on it. Again, according to the existing law, the two doctors who take part in a Reception Order must not be in partnership with one another nor related to one another or to the patient, and in these circumstances a deliberate conspiracy on the part of two independent medical practitioners to act carelessly or in bad faith is difficult to imagine. Once more, when, as is the rule, one of the certificates is signed by the usual medical attendant of the patient or of his family it is against the interest of the doctor to send the patient out of his own care into an institution; in such circumstances the law forbids the family doctor to act as the regular medical attendant of the patient, and the same principle applies even when the patient is placed under "single care." Worthy of consideration, too, in this respect, is the failure of the Commissioners, either on enquiry or visitation, to find a single instance of improper certification or detention. Altogether, the fear of the negligent or disloyal practitioner seems decidedly over-stressed; if he exists, his opportunities are certainly severely restricted by the conditions here defined.

33. There is in the Lunacy Act, 1890, one protecting clause for the benefit of those who with due care and in good faith undertake any duty in pursuance of the Act. This is Section 330, which provides that if any proceedings are taken against any person for doing anything in pursuance of the Act, such proceedings may be stayed upon summary application to the High Court or to a Judge thereof "if the Court or Judge is satisfied that there is no reasonable ground for alleging want of good faith or reasonable care." Under this provision a doctor against whom an action has been entered may apply to the Court for stay of the action. But to succeed he must satisfy the Court, not only that there was no carelessness or want of good faith on his part, but also that there was no ground for alleging either of these faults. The doctor applies to the Court and the burden of proving a negative is placed on his shoulders. Such is the extent of the protection afforded by the existing law.

34. The Commissioners agree that "further protection" must be given to medical practitioners; and to secure this they propose that "the certifying doctor should not be exposed to an action in respect of anything done under the Act, unless the plaintiff can first satisfy a judge in chambers that there is *prima facie* ground for an allegation of want of good faith or reasonable care." (R 41) In short, while at present in an application to the Court that an action be stayed the onus of proving that there is no ground for an allegation of carelessness or of bad faith rests on the doctor, in the new proposals the burden of proof is placed on the plaintiff, and it is for him to establish (if he can) a *prima facie* case in support of such an allegation. Should he fail to satisfy the Court in this respect the action will be stayed.

35. As the alteration of Section 330 of the Lunacy Act as proposed by the Commissioners will transfer the onus of proof from the defendant to the plaintiff it may possibly improve matters. There is considerable doubt, however, whether in itself such an alteration will be sufficient to secure the object in view. Every now and again some victim of mental disturbance, in the future as in the past, will doubtless believe himself to have been wronged by a procedure which confined him in a mental hospital, and will seek a remedy at the hands of the law and at the expense of the doctor or doctors concerned. The defendant practitioner may apply for a stay of the action, and may, perhaps, under the new proposal, be more hopeful of success. But even if the Court grants the

application (and the standard of what is judged to be satisfying evidence is likely to vary) the decision will presumably be subject to legal review, with resulting expense and anxiety for the doctor.

36. The Council, therefore, while recognising the goodwill of the Commissioners and their desire to assist the medical profession in a difficult situation, yet doubts whether the mere modification of Section 330 will give an adequate degree of protection to the certifying practitioner or will secure that "willingness of the medical profession" (R 23) without which, as the Commission recognises, any system that can be devised must ultimately break down.

37. What the Council suggests is that the recommendation of the Commission on this point should be supplemented by a step which would place technical knowledge at the disposal of the Court when an application for a stay of an action is being heard. This aim would be secured by requiring the Court, before refusing such an application, to hear the opinion of an impartial expert competent to advise the Court on the technical values of the affidavits or other evidence that may be submitted. The Council is of opinion that the Association should press this proposal on the Government and the legislature in the hope that if adopted, together with the suggested modification of Section 330, it will command the goodwill of the profession. To meet the Council's proposal on this point a panel of medical experts should be set up by the Government.

38. The Council recognises that as the claim for the complete protection of the certifying practitioner (M 36) presented by the Association's witnesses to the Royal Commission has not been approved by the Commission, the chance of securing legislative sanction for it is not a good one. If this assumption proves to be correct the doctor will, as at present, continue to bear the responsibility for the patient's detention, that is, so far as the doctor is concerned the magistrate will have no protective value. The Commissioners' Report (R 36, 37) shows that in the judgement of many experienced persons the magistrate is valueless also to the patient. Whether the more active and more inquisitorial duties which are to be imparted to him will afford added efficacy in this direction may be open to debate, but it is certain that these new activities will not make him more welcome to the patient's friends, and they may in individual instances be prejudicial to the patient. In face of these considerations the Council urges (i) that in very many cases, as explained in this Memorandum, magisterial intervention is quite unnecessary, and (ii) that the interests of such patients will be best served by leaving the decision on methods of treatment to a medical judgement. This arrangement may seem, although there is no real change in this respect, to make more manifest the responsibility of the doctors concerned. Be this as it may, the Council believes that the profession will be prepared to meet the responsibility provided (a) that in an application for the stay of an action against a doctor the onus of proving an allegation of carelessness or of bad faith shall be on the plaintiff who affirms it, and (b) that when such an application is heard the Court shall have the opinion of an independent medical expert on the technical values of the affidavits or other evidence submitted.

#### ADDITIONAL NOTES.

39. The Royal Commission has considered the appointment, by local health authorities, of special "certifying medical officers" who would in whole or in part remove from the family practitioner the responsibility of lunacy certification; and the Commissioners rather encourage this view in respect at least to one of the certificates in cases where two of these documents are required.

The Council does not favour such appointments. An official announced as a "public certifying officer" would be avoided by the public as long as possible and certainly would not be welcome as a substitute for the trusted and confidential family practitioner. It might, however, be possible for each health authority to provide here as in other cases (e.g., the notification of Puerperal Pyrexia) a panel of experts any one of whom would meet the family doctor when a consultation was desirable and the patient's circumstances did not permit the payment of a consultation fee.

40. A small but convenient improvement to each medical recommendation or certificate would be the addition of a footnote drawing the doctor's attention to the fact that if he signs the document he cannot act as the "medical attendant of the patient" while the patient is in a mental hospital or in single care. This restriction exists under the present law, and presumably he will be continued. If the friends desire that the usual medical adviser shall continue as medical attendant, not he, but some other doctor must sign the official document.

## APPENDIX VI.

### COUNSEL'S OPINION IN RELATION TO THE LEGAL POSITION AND POWERS OF VOLUNTARY HOSPITALS WITH REGARD TO THE RECOVERY OF MONEY FOR THE TREATMENT OF PATIENTS.

Counsel was requested to advise the Association upon the following specific questions:—

(1) A hospital, supported in whole or in part by voluntary contributions and rendering gratuitous services to those unable to pay for hospital treatment makes special provision for more affluent patients on the basis of payment upon a scale determined with reference to the financial resources of individual patients. It also agrees with a local authority to treat certain classes of patients for a definite fee payable by the authority for every patient so treated and with a provident association to treat members of that association at a certain rate. Is that hospital, by reason of the fact that it is a charitable institution, unable to recover (a) from the individual patient, (b) from the local authority, and (c) from the provident association, the amount of the charges laid down in respect of the treatment rendered? If so, on what grounds and for what reason?

(2) Where the victim of any accident receives emergency treatment in a hospital, and establishes a claim to damages in an action for negligence against a third party, is there any means by which the hospital concerned can recover through such patient any sum on account of the expenses incurred by such hospital (a) if the victim falls within the class not treated gratuitously by the hospital, (b) if he falls within the class normally eligible for gratuitous treatment? and

(3) Generally with regard to the subject-matter of this case for the guidance and assistance of the Association.

#### OPINION OF MR. J. H. STAMP.

(1) A hospital, supported in whole or in part by voluntary contributions and rendering gratuitous services for those unable to pay for hospital treatment, which makes special provision for more affluent patients on the basis of payment on a scale determined with reference to the financial resources of individual patients and which agrees with a local authority to treat certain classes of patients for a definite fee payable by the authority for every patient so treated and with a provident association to treat members of that association at a certain rate, is not in my opinion by reason of the fact that it is a charitable institution unable to recover (a) from the individual patient, (b) from the local authority, or (c) from the provident association the amount of the charges laid down in respect of the treatment rendered.

Except in the case of any incorporated institution which by the terms of its incorporation might be prohibited from charging for its services or from suing for moneys owing to it (a case which so far as I am aware is wholly imaginary and not likely to arise in fact) the question whether a hospital can recover charges for its services depends upon the ordinary law of contract and whenever there is in fact a contract with a hospital by a person or body capable of entering into such a contract for the payment to a hospital of charges for services to be rendered by the hospital and the hospital renders services pursuant to the contract the hospital can, in my opinion, recover the agreed charges from the other contracting party.

Where a charitable institution such as a hospital differs from a commercial undertaking is not in relation to the enforcement of a contract which has been in fact entered into with it, but in relation to the question whether or not there is in fact any contract between the parties, and the difference is this, viz.:—That where a person invites or knowingly accepts services from a commercial undertaking in the course of its business a contract will be implied for payment of a reasonable price for the services so rendered, and when an implied contract for payment has arisen the amount to be paid can be subsequently agreed or determined by an action at law; but a charitable institution habitually renders its services gratis, so that the mere acceptance of services from such an institution raises no implied contract to pay for them, and even a promise to pay for the services after they have been rendered is not in law enforceable because there is in law no consideration for it, the services being past services and no implied obligation of payment having arisen from them. But where the services are in fact rendered pursuant to a contract, including a term requiring that payment should be made for the services, this difference of course disappears; and an express request to be admitted to a "paying ward" or "as a paying patient" would *prima facie*

amount to such a contract unless there were in the circumstances of any particular case something definite to exclude this result.

(2) In my opinion where an accident has been caused by negligence, and the victim receives emergency treatment in a hospital, the victim alone can bring an action against the person responsible for the negligence and he cannot include in his claim any sum in respect of the expenses of the hospital unless he is himself legally liable in contract to the hospital for the amount of the expenses, which—in such a case—can rarely be the fact. If the victim is legally liable to the hospital he can claim the amount for which he is so liable as part of his damages, but this gives no right to the hospital, whose only right of action is against the victim, its own debtor. If and when the hospital has obtained a judgment against its own debtor, and its own debtor has been awarded damages against the person responsible for the accident, the hospital may be in a position, as a judgment creditor, to make the award of damage available to satisfy its own judgment debt, but it will only be in the same position for this purpose as any other judgment creditor of the victim.

(3) It will I think be very difficult for the hospital to establish a legal claim to charge for emergency services to accident cases. In serious cases the victim is not in a position to enter into any contract before treatment and in few cases would it be practicable to raise with the victim any question as to the terms upon which he is to be treated so as to bring a legal contract into existence.

In other cases it would be a simple matter to require the signature of a formal request for admission in relation to any patient who ought to make a payment for the services of the hospital, the request being expressed to be made in the terms that payment should be made by the person signing the request, according to a specified scale, or "such of the ordinary scales of payment of the hospital as the Committee may consider applicable to the case"; the scales being indicated on the back of the form, or otherwise published so as to be capable of being incorporated in the request by a simple reference.

It is an obvious injustice that a person who has caused an accident through negligence or has granted a policy of insurance covering treatment in case of accident should escape liability because a charitable institution has given the necessary assistance and possibly the legislature might be induced to interfere if the case is of frequent occurrence.

The provisions for the purpose would not be of extreme simplicity as might be thought at first sight. They might enact in effect:—

(a) That (subject to the exception mentioned) a person treated in a hospital in consequence of injuries received in an accident should be liable to pay reasonable remuneration to the hospital for the treatment;

(b) That in any proceedings to recover such remuneration it should be a sufficient defence to prove that the patient was a proper object of gratis treatment by the hospital, unless the patient has recovered compensation or damages from any person responsible for the accident or under any policy of assurance entitling him to recover the cost of medical treatment; or

(c) That in any proceedings against any such responsible person or under any such policy in which the Plaintiff is successful any sum awarded in respect of the hospital treatment should be separately awarded and should be paid direct to the hospital.

An enactment on the foregoing lines would make well-to-do people liable in any event for hospital treatment, and poor people only when they had a remedy over against others. The exact form of any such enactment would require very careful consideration.

The payment of fees in a proper case would not necessarily interfere with the character of a hospital as a charity, any more than the admission of paying pupils to a school has a corresponding effect upon the school, provided that as a whole its object is charitable (See *Cann v. Committee of Nottingham Hospital* (1891) 1 Q.B. 585, and *Slater v. Mayor of London*, 19 Q.B.D. 79).

18th June, 1927.

## APPENDIX VII.

### SCHEME FOR CO-ORDINATION OF HOSPITAL PROVISION.

#### NEED FOR CO-ORDINATION.

At the present time there are in this country three types of hospital in which provision is made for the treatment and nursing of the sick, viz.:—voluntary hospitals, poor-law hospitals and municipal hospitals. If the proposed suggestions of the Minister of Health are carried into effect the poor-law hospitals will probably become municipal hospitals

and some scheme of co-ordinating the work of the voluntary hospitals and the municipal hospitals is essential so as to ensure (1) that there shall be no duplication of accommodation or competition with or between these two types of institution, and (2) that in the development of additional accommodation this development may be related to existing hospital accommodation.

#### CENTRAL ADVISORY HOSPITAL AUTHORITY.

The first step in the attempt to co-ordinate the work of the voluntary and municipal hospitals must be the establishment of a central advisory authority, appointed by the Minister of Health, and it is suggested that there should be established a Central Consultative Hospitals Council for England and Wales, constituted in such a manner so as to be thoroughly representative of all the various interests involved. The Voluntary Hospitals Commission might very well be used as the type of this Council. The Central Consultative Hospitals Council would act as between the Minister of Health and area co-ordinating hospital committees (the areas of which would be mapped out by the Council) in all matters concerning the hospital policy of the Ministry and the allocation of any grants which may be allotted to hospitals not directly maintained by the State in its various functions.

#### AREA CO-ORDINATING HOSPITAL COMMITTEES.

The local Voluntary Hospital Committees now in existence in many parts of the country might with advantage be used as the basis in any scheme for co-ordination, their constitution being so altered as to make them representative of all the interests involved in the areas with which they are concerned. They would act as area co-ordinating hospital committees. The areas covered by these area hospital committees should be large enough to be effective from an administrative point of view and not necessarily confined to local Government areas.

These area committees would normally deal with a comparatively large area in which will be situated a varying number of hospitals, both voluntary and municipal, which for effective administration would have to be grouped into smaller areas. The King Edward's Hospital Fund for London might well serve as the basis for the area co-ordinating hospital committee for London.

#### GENERAL SCHEME OF HOSPITAL GROUPING.

The hospital grouping which the Association envisages would be on lines similar to those suggested in the Interim Report of the Consultative Council on Medical and Allied Services, 1920, by which all hospitals in a given area will be grouped round a central or base hospital. In view of the existing state of affairs the central or base hospital will generally be one of the bigger voluntary hospitals. This may or may not be the locus of a medical school, but will in any case be expected to set the standard of hospital practice in the area and be the chief centre of education and research. The areas with which local co-ordinating committees will have to deal will generally be too large for effective administrative control, therefore they will have to be sub-divided, committees being appointed to act as the administration for a grouped system of hospitals.

#### GROUP HOSPITAL COMMITTEES.

These group hospital committees would act as advisers, and in some respects as administrators in connection with the work of the central or base hospitals, and the other hospitals grouped round the central or base hospitals. The areas with which these group committees would be concerned would be determined by (a) the needs of the population as ascertained by experience, (b) the locality of the central or base hospital, and (c) the position and grouping of the secondary hospitals.

#### CENTRAL OR BASE HOSPITAL.

Before a hospital could be said to occupy the position of a central or base hospital it should fulfil one or other of the following conditions:—

1. It should be a hospital with which a recognised medical school (under-graduate or post-graduate) is associated.

2. It should be a general hospital (voluntary or public) other than one associated with a medical school where such hospital—

(a) has outstanding advantages as regards staff and equipment, and is of sufficient size;

(b) acts as a consultative centre;

(c) deals with the investigation of the more difficult cases; and

(d) undertakes the more specialised methods of treatment.

Where a district is considered to be suitable for a grouped area but cannot be said to have a hospital fulfilling the necessary conditions then the central or base hospital should be developed from the most suitable hospital available, a necessary condition, however, being an adequate and efficient staff.

No class of case, other than infectious and certifiably insane, should be excluded from the central or base hospital. Certain categories of cases might, however, according to local circumstances, be allocated to other hospitals of the area provided they were still available for teaching purposes when necessary.

#### OTHER HOSPITALS.

All the other hospitals in the area as defined by the area co-ordinating hospital committee, including special and cottage hospitals, should be grouped round the central or base hospital and be co-ordinated with it.

The public hospital as at present must continue to provide accommodation for those cases which are outside the province of the respective voluntary hospital. Where the voluntary hospital is already holding the leading position and is progressive and locally supported it should maintain this position and any further developments which are necessary in the area should be made in co-operation with it. The public hospital, where not itself the central or base hospital, should develop not in competition with, but in co-ordination and co-operation with the voluntary hospital.

Where there is vacant accommodation in existing public hospitals such accommodation is not generally suitable at present to meet the needs of development without considerable alteration or adaptation. The provision of an adequate and efficient staff will also be necessary.

#### NECESSITY FOR CLEARING HOUSE.

A "clearing house" (i.e., a central bureau) to co-ordinate the distribution of cases requiring admission to the various hospitals would be essential under a system of co-ordination of grouped hospitals. It should work in close connection with the central or base hospital, and be situated near it, or even within it, but should be under the control of an area hospitals committee. It should also co-ordinate the hospital ambulance transport of the area.

#### RESPONSIBILITY FOR TREATMENT.

The responsibility for the treatment of cases in public hospitals could be undertaken by a visiting medical staff (on a part-time basis) with the assistance of a resident medical staff. This would help to ensure for them the same standard of treatment which exists in voluntary hospitals. The source would depend upon the needs of the area and the supply available.

It must, however, be made clear that the practitioners treating patients for whom the Government and Local Authorities are responsible, must be remunerated, and it is considered that the remuneration should take the form either of a fixed salary or of an honorarium for definite services and responsibility.

It is essential that such a visiting staff should have the right of access directly to the governing body of the particular hospital through its accredited representatives.

#### FUNCTIONS OF A GROUP HOSPITAL COMMITTEE.

Whilst an area committee should in no way interfere with the autonomy of any hospital within its area as to:—

- (i) Finance;
- (ii) Management;
- (iii) Election of Governing Body and Medical and Surgical Staffs;

it should definitely have in its functions:—

- (a) the co-ordination of admission and transfer of in-patients;
- (b) the establishment of a central clearing house or bureau;
- (c) the development of any new hospital accommodation for the area;
- (d) the co-ordination of the ambulance transport service in its area;
- (e) to ensure a uniform system of keeping hospital accounts;
- (f) the organisation and distribution of massed voluntary hospital contributions of the area.
- (g) the proportional distribution of any Government grants in aid that may become available.

## British Medical Association.

### CURRENT NOTES.

#### The Chairman of Council's Visit to South Africa.

DR. BRACKENBURY, as our readers will be aware from the article by him in this week's *Journal*, has returned from his brief but very successful visit to South Africa. The issue of the *Journal of the Medical Association of South Africa (British Medical Association)* for March 24th opens with an editorial article headed "Our departing guests."

"Yesterday Dr. Brackenbury, who came to attend our first Annual General Meeting as the official representative of the parent Association, left for England. His hurried visit to South Africa has been made at the expense of personal comfort to himself. We are all the more grateful, therefore, for the spirit of fellowship that prompted him, on the urging of the Council of the parent Association, to undertake it. It has been, from our part at least, a grand success. Dr. Brackenbury has gained our respect and admiration for his high qualities that we have learned to appreciate. He spoke, when he addressed us, with vigour, terseness, and knowledge; we realized at once that he knew his subject, and could give us points on it. At Bloemfontein he had an opportunity of meeting a number of members from the country areas, and we know that the impression he made will go far to strengthen that cordial conviction, engendered by Dr. Cox's visit three years ago, that our interests are one, and that our co-partnership should be fruitful in the future."

After graceful references to Sir Frank Colyer, Dr. Densham, and Dr. Hatrick, who also attended the South African Congress, our contemporary says:

"To all of them we express our thanks and our cordial appreciation of the services they have rendered on behalf of the parent Association to our Association. . . . We can assure them that when they decide to revisit us they will find a cordial welcome, not only from the Medical Association of South Africa and its officials, but from many personal friends whom they have made on their first visit."

#### Insurance Acts Committee.

The Insurance Acts Committee, at a special meeting called for the purpose, gave consideration to the proposals contained in the National Health Insurance Bill which is at present engaging the attention of Parliament. The Committee was chiefly concerned with the new arrangements which will govern the administration of additional benefits of a medical nature. It was considered advisable by the Committee to request the Secretary of the Ministry of Health to receive a deputation in order that the Committee's views might be explained. Accordingly a conference was held on Monday, April 23rd, when these views were explained at length to the Secretary of the Ministry. After discussion of the problems arising out of the Committee's suggestions, Sir Arthur Robinson promised that the Committee's views would receive immediate consideration. The Committee will decide what further action is necessary when the Ministry's reply is received.

#### Sir Charles Hastings Clinical Prize.

The Council has awarded the Sir Charles Hastings Clinical Prize, which includes an illuminated certificate and a money award of the value of fifty guineas, to Dr. Ambrose W. Owen, Aberdare, for his clinical study entitled "Some renal conditions met with in general practice." The award will be made at the forthcoming Annual Meeting of the Association at Cardiff. The prize will be open for competition in 1929. The following are the regulations governing its award:

#### Regulations.

1. The prize is established by the Council of the British Medical Association for the promotion of systematic observation, research, and record in general practice; it includes a money award of the value of fifty guineas.
2. Any member of the Association who is engaged in general practice is eligible to compete for the prize.

3. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made.

4. Essays, or whatever form the candidate desires his work to take, must be sent to the British Medical Association House, London, W.C.1, not later than December 31st, 1928, and the prize will be awarded at the Annual General Meeting of the Association to be held at Manchester in July, 1929.

5. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work.

6. If any question arises in reference to the eligibility of the candidate or the admissibility of his essay, the decision of the Council on any such point shall be final.

7. Each essay must be typewritten or printed, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto, and enclosing the candidate's name and address.

8. The writer of the essay to whom the prize is awarded may, on the initiative of the Science Committee, be requested to prepare a paper on the subject of his essay for publication in the *British Medical Journal* or for presentation to the appropriate Section of the Annual Meeting of the Association.

9. Inquiries relative to the prize should be addressed to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

#### Medical Appointments Abroad.

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas, which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

### Association Notices.

#### ELECTION OF MEMBER OF CENTRAL COUNCIL 1928-31, TO REPRESENT THE AFRICAN GROUP OF BRANCHES.

DR. J. BARCROFT ANDERSON, London, England, and Dr. W. WATKINS-PITCHFORD, Bridgnorth, Salop, England, having been nominated in respect of the election to the Council of a member to represent the African Group of Branches for 1928-31, voting papers were issued from the Head Office to every member of the Branches in the Group. Of the 518 voting papers returned, 5 were spoiled; of the remainder, 292 were in favour of Dr. Watkins-Pitchford and 221 in favour of Dr. Barcroft Anderson.

Dr. Watkins-Pitchford thereby becomes elected a member of the Central Council for the period 1928-31, representing the African Group of Branches.

In the *British Medical Journal Supplement* of February 18th, 1928 (p. 51), will be found particulars as to the representation on the Central Council of the other Branches of the Association outside the United Kingdom.

#### SALISBURY AND TROWBRIDGE DIVISIONS.

The following change has been made by the Council, and takes effect as from the date of publication of this notice:

That the urban district of Warminster be transferred from the area of the Salisbury to that of the Trowbridge Division.

#### TABLE OF DATES.

May 12, Sat. Publication in *BRITISH MEDICAL JOURNAL SUPPLEMENT* of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.

May 15, Tues. Voting papers posted from Head Office, where there are contests in above elections. Motions by Divisions and Branches for A.R.M. agenda on matters of which two months' notice must be given must be received at Head Office by this date.

May 19, Sat. Last day for receipt at Head Office of voting papers for election where there are contests, of (i) 24 members of Council by grouped Branches in British Isles; and (ii) 2 Public Health Service Members of Council, and 4 Representatives of Public Health Service in Representative Body.

Publication in *BRITISH MEDICAL JOURNAL SUPPLEMENT* of motions by Divisions and Branches for A.R.M. on matters of which two months' notice must be given. Representatives and Deputy Representatives must be elected by this date.

June 2, Sat.

Publication in *BRITISH MEDICAL JOURNAL SUPPLEMENT* of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members.

Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).

June 7, Thurs.

Names of Representatives and Deputy Representatives must be received at Head Office by this date.

June 13, Wed.

Council.

June 21, Thurs.

Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.

June 30, Sat.

Supplementary Report of Council appears in *BRITISH MEDICAL JOURNAL SUPPLEMENT*.

July 4, Wed.

Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.

July 23, Fri.

Annual Representative Meeting, Cardiff, 10 a.m.

Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.

July 21, Sat.

Annual Representative Meeting, Cardiff.

July 23, Mon.

Council, Cardiff.

Annual Representative Meeting, Cardiff.

Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.

July 25, Wed.

Council, Cardiff. Conference of Honorary Secretaries, Cardiff.

ALFRED COX, Medical Secretary.

#### BRANCH AND DIVISION MEETINGS TO BE HELD.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting will be held at St. John's Hospital, Morden Hill, Lewisham, S.E.13, on Tuesday, May 1st, at 8.45 p.m. Clinical cases will be shown by Dr. E. Openheim and other members of the staff of the hospital.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—The annual general meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, May 8th, at 9 p.m.

**METROPOLITAN COUNTIES BRANCH: WESTMINSTER AND HOLBORN DIVISION.**—The annual general meeting of the Division will be held to-day (Saturday, April 28th), at the Bottling Works of the United Dairies at Scrubbs Lane, Willesden. The United Dairies, Ltd., have kindly invited members of the Division and their wives and friends to a demonstration of modern methods of milk collection, treatment, and bottling. Tea will be provided after the demonstration, and the annual general meeting will follow immediately. Transport, by charabanc, will be provided by the United Dairies to and from their works. The charabanc will leave Connaught Place, Marble Arch, at 2.15 p.m. Members are asked to make use of the transport provided, and not travel by their own cars.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—The annual meeting of the Willesden Division will be held on May 16th. Agenda: Election of officers and committees, and consideration of Annual Report of Council.

**MIRLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, May 11th, at 8.15 p.m. A British Medical Association Lecture will be delivered by Professor Louise McIlroy on the management of labour.

**NORTH OF ENGLAND BRANCH: BISHOP AUCLAND DIVISION.**—A meeting of the Bishop Auckland Division will be held in the Cottage Hospital, Bishop Auckland, to-day (Friday, April 27th), at 8 p.m., for the election of representative to the Annual Representative Meeting.

**NORTH OF ENGLAND BRANCH: BLYTH AND MORPETH DIVISIONS.**—A clinical meeting of the Blyth Division will be held at the Thomas Knight Memorial Hospital, Blyth, on Wednesday, May 2nd, at 8.30 p.m., when Dr. W. H. Dickinson (Newcastle-upon-Tyne) will speak on some practical points in the diagnosis of pulmonary tuberculosis, and will show films.

**SOUTH-WESTERN BRANCH.**—An intermediate meeting of the South-Western Branch will be held at the Royal Cornwall Infirmary on Thursday, May 24th. Will members kindly inform the honorary secretary as soon as possible of any cases, notes, papers, specimens, or notices of motion they may wish to bring forward in order that they may be placed on the agenda paper? It is advisable that papers should be as short as possible.

**SUFFOLK BRANCH: WEST SUFFOLK DIVISION.**—One of the series of post-graduate lectures arranged by the West Suffolk Division will be given by Mr. T. H. Just on diagnosis and treatment of acute inflammatory conditions of the ear, at the West Suffolk General Hospital on Saturday, May 5th, at 8.45 p.m.; coffee will be served at 8.30 p.m. A clinic will be held on Sunday, May 6th, at 11 a.m. The course is open to medical practitioners in West Suffolk and their guests.

**SURREY BRANCH: GUILDFORD DIVISION.**—A meeting of the Guildford Division will be held at the Royal Surrey County Hospital, Guildford, on Thursday, May 3rd, at 4 p.m.; tea served at 3.45 p.m. There will be a clinical meeting in the wards and pathological demonstrations.

**YORKSHIRE BRANCH: DEWSBURY DIVISION.**—The annual meeting of the Dewsbury Division will be held at the Dewsbury Infirmary on Friday, May 4th, at 8.15 p.m.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—The annual meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Stratford Arms Hotel, Wakefield, on May 10th, preceded by a supper at 7.45 p.m. Dr. A. Manknell (Bradford) will give an address on the British Medical Association and its work for the general practitioner.

## NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

### Proprietary Medicines.

By ABERDEEN: That, in the opinion of the Representative Body, steps should be taken, in view of the very great number of proprietary medicines which have been put upon the market in recent years, to set up at Head Office a department to investigate these proprietary medicines and to supply information regarding them to members, either on request or in the *Journal*, or as otherwise deemed expedient; or, if this is considered impracticable, the publication entitled *Secret Remedies* should be brought up to date.

### Position of General Practitioners in relation to Hospitals and Clinics.

By ABERDEEN: That it be remitted to the Council to consider and report to the next Annual Representative Meeting upon the position of the general practitioner in relation to the voluntary and rate-supported hospitals and clinics.

## Meetings of Branches and Divisions.

### ABERDEEN BRANCH: ABERDEEN DIVISION.

A MEETING of the Aberdeen Division was held on April 12th, Dr. RORIE, chairman of the Division, presiding. Dr. Thomas Fraser was nominated as member of Council for election by Group Branches. Mr. F. K. Smith and Dr. John Craig were elected representatives and Mr. G. H. Colt and Dr. Charles Forbes deputy representatives for the forthcoming Annual Representative Meeting. The Model Rules (Organization and Ethical) were adopted by the Division.

### BOMBAY BRANCH.

A MEETING of the Bombay Branch was held on April 2nd at the Pathological Laboratory of the Grant Medical College, with Dr. R. Row in the chair.

It was agreed unanimously that the recommendations of the subcommittee of the Branch on the question of registration of midwives in the Bombay Presidency be approved, and that a copy of these recommendations should be sent to the honorary secretary of the Women's Medical Association.

Opening a discussion on the question of public hospitals and free treatment, Dr. YOUNG said that copies of the letter of Dr. Sandilands, who had opened the question, were sent to the superintendents and honorary staffs of nine hospitals in Bombay. Replies showed that the opinion was practically unanimous that the public hospitals should be reserved for the poor. Only in cases of emergency should well-to-do persons be admitted, and they should be charged on the same scale as they would have to pay to private medical practitioners or in private nursing homes. After discussion the following resolutions were adopted by the meeting unanimously:

- (1) That the public hospitals should be reserved for the poor only.
- (2) In emergency anybody might be admitted, and, if not poor, he should be charged fees at least on the scale as laid down by the Government resolution.
- (3) That it was desirable that small paying wards should be established in all the public hospitals as in the case of the Nowrosjee Wadia Maternity Hospital.

That a copy of these resolutions be sent to (i) the Surgeon with the Government of Bombay; (ii) the President of the Bombay Municipality and Dr. Sandilands, the executive health officer, thanking him for taking up this question.

### LANCASHIRE AND CHESHIRE BRANCH: ST. HELENS DIVISION.

At a general meeting of the St. Helens Division held on April 18th the payment for reports to coroners was discussed. A letter from Medical Services, London, was read with reference to contract practice for juveniles; the terms were considered inadequate, and disapprobation was expressed of club practice being restarted. Three names were submitted for the inquiry into varicose ulceration. A letter from St. Helens Hospital was discussed, and the meeting, in view of the offer to leave to practitioners the option of attending their patients as at present, decided to assist in the appointment of a surgical staff. The secretary was asked to call a meeting when he had any more information.

Reference was made to the deaths of Drs. J. Cotton and J. H. Don, both past chairmen of the Division.

### METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.

A CLINICAL meeting of the Lambeth and Southwark Division was held at the Belgrave Hospital, Clapham Road, on April 18th, when Dr. H. M. OMBY showed the following cases: (1) tuberculous cervical glands; (2) congenital morbus cordis; (3) rickets; (4) chronic parenchymatous nephritis; (5) tuberculous glands in cervical region and axilla, possibly Hodgkin's disease; (6) a doubtful case of cretinism; (7) a case of enlarged liver and spleen.

### NORTHERN COUNTIES OF SCOTLAND BRANCH.

A MEETING of the Northern Counties of Scotland Branch was held in the District Asylum on April 19th, under the chairmanship of the president, Dr. T. MACDONALD.

Dr. T. C. MACKENZIE read a paper on epochal insanities, in which he classified them as insanities of puberty, adolescence, the climacteric, and senility. He dealt very fully with each, describing the salient features. He read case histories illustrating the different forms, and showed two striking examples of senile insanity.

Mr. A. J. C. HAMILTON showed a typical case of Kohler's disease, with skiagrams of the affected foot.

Tea was served at the end of the meeting.

### SIERRA LEONE BRANCH.

The fourteenth scientific meeting of the Sierra Leone Branch was held on March 8th at the Connaught Hospital, with the president, Dr. PEACOCK, in the chair.

Dr. E. A. RENNER showed a case of trypanosomiasis in an adult African with a history of six months' illness. On admission to hospital the patient was dull, lethargic, and slept all day, but could easily be roused. After three intravenous injections of tryparsamide he became brighter, more active, and hardly slept at all during the day, but subsequently he was sent to the asylum as he showed marked signs of insanity. *T. gambiense* and *Loa loa* were found in the peripheral blood. Dr. Renner also showed a case of lymphadenoma in an African girl, aged 18; the illness had lasted for fifteen months. The cervical, right axillary, and the right and left inguinal glands were all markedly enlarged, and the spleen and liver were both palpable, but the blood picture was not striking. Treatment with novarsenobillon did not effect any improvement, and the patient subsequently returned with oedema of both legs.

Dr. M. C. EASMON showed four leprosy cases to illustrate the common types: an adult male, typical nodular type; an adult female, typical anaesthetic type—one digit missing from left foot and numerous light-coloured areas on trunk, face, and limbs, which were anaesthetic; and two youths, very early cases, the nasal smear examination being negative in both, but in one there was very early thickening of the lobes of both ears. Leprosy-like bacilli (acid fast) were obtained from the serum from these lobules. Both patients had pale areas on the face and apparently anaesthetic incisions at the back of the heel. Dr. Easmon showed a photograph of the back of a chicken-pox case illustrating an unusual complication in some of the pustules. After maturation and commencing to dry, a large ring of very superficial vesicle formation about the size of a penny appeared around some of the pustules. If protected from scratching there was no involvement of the true skin, and in a few days the dried blister scales dropped off. Dr. Easmon also showed a skiagram of a hip-joint for diagnosis. From infancy the left leg from the knee downwards had been a little smaller in all dimensions than the right. The patient was now 23 years old, and for the last two or three years had complained of excessive pain, after walking or standing, in the hip, knee, and back. The pain was never so severe as to arrive at a definite diagnosis, although there was obviously some abnormality about the hip-joint. The great trochanter had not yet ossified on to the rest of the femur.

Dr. R. M. GORDON exhibited larvae and adults of *A. smithii*, also infected salivary glands from the same species. The infections had been obtained by feeding bred adults on crescent carriers. *A. smithii* had not previously been shown to be a transmitter of malaria. He also showed microfilaria of *Loa loa* from a West African native suffering from trypanosomiasis; the patient had never been outside the colony of Sierra Leone.

Mr. Q. STEWART showed a patient who had had partial gastrectomy for suspected carcinoma of the stomach, Moynihan's modification of the Polya operation being used. The patient was a Liberian woman, 32 years old, who had lived in Freetown for a year. The symptoms pointed to pyloric obstruction, and there was a marked peristaltic wave in the epigastrium. The specimen showed a large saddle-shaped ulcer on the lesser curvature just proximal to the pylorus; the edges of the ulcer were markedly hypertrophied and hard, and enlarged hard glands were present along the lesser and greater curvatures. Mr. Stewart said that he had only seen two cases of gastric cancer in six years in West Africa. In regard to the question of diet and the apparent low incidence of cancer amongst African natives, it was interesting to find that tinned foods had entered largely into the diet of this patient. He also exhibited a radiograph of the humerus from a young man with a history of the arm giving way when he was using it to aid him in rising from a chair. There had been slight pain in the arm for one month previously. The radiograph showed a fracture with marked loss of bone substance. The important point was the diagnosis, so that the proper treatment could be applied, and Mr. Stewart was inclined to the diagnosis of a central sarcoma. A third case was that of a child, aged 4, with marked genu valgum and other signs of rickets, the interesting point being that rickets should occur in Freetown, where so much sunlight was present. Dr. E. J. Wright had, however, shown that the diet of the mother in these cases was deficient in vitamin content.

Dr. WRIGHT showed a case of tumour of the lower jaw in a pregnant African woman, aged 20. She gave a history of pain in the second left premolar two years previously, but there was no caries of the tooth, which loosened and came out. After a quiescent period of two months she noticed swelling of the jaw about the region from which the tooth had been extruded; this

steadily increased in size until it reached its present dimensions—about the size of a fowl's egg. The x-ray photograph shown was consistent with a diagnosis of myeloma.

The President welcomed Dr. J. Beringer, a guest at the meeting, remarking that it was through the efforts of Dr. Beringer that the Sierra Leone Branch of the Association had come into being.

#### JAMAICA BRANCH.

At a recent special meeting of the Jamaican Branch at the Public General Hospital Dr. ORR described the methods of ninking tuberculin injections for diagnostic purposes and their value; ten cases were shown. Dr. ORR answered numerous questions from Drs. L. M. MOODY, VINE, BROUSTORPH, GIFFORD, and ALLEN, and, on the proposition of Dr. L. M. CLARKE, seconded by Dr. GIFFORD, he was accorded a vote of thanks.

At another meeting of the Jamaica Branch, on March 15th, Dr. BORN delivered a lecture on malarial surveys, and afterwards gave a demonstration on anopheline mosquitos and larvae.

#### SOUTH WALES AND MONMOUTHSHIRE BRANCH: SWANSEA DIVISION.

At a meeting of the Swansea Division on March 23rd, at the Swansea General Hospital, a lecture was given by Mr. H. R. WAKEFIELD on marvels of insect life, illustrated by lantern slides from original photographs by himself. Mr. Wakefield, one of the leading naturalists in South Wales, gave an admirably lucid lecture, and the thanks of the meeting were recorded him by Dr. J. S. H. ROBERTS, Dr. J. M. MORRIS NEATH, and Mr. H. L. QUICK.

#### STAFFORDSHIRE BRANCH: NORTH STAFFORDSHIRE DIVISION.

A MEETING of the North Staffordshire Division was held on April 13th, when Dr. GORDON HOLMES gave a most interesting address on acute infective diseases of the nervous system. A dinner was held in the evening.

## Correspondence.

### An Approved Society's Attitude towards Ophthalmic Benefit.

SIR,—If I may ventilate in your columns a grievance which I share with many others I would be grateful. I refused to sign for a patient a form (O.1) issued by the Amalgamated Engineering Union Approved Society, No. 334, which has a space only for recommendation to an optician, and gave him a letter in these terms: "I have examined Mr. — and consider he would be benefited by examination and treatment by an ophthalmic surgeon." This he forwarded to the society. In reply he received a form (Oph./T.4) stating:

"The society is not satisfied that for the reason stated by your doctor it is necessary for you to see an ophthalmic surgeon. Enclosed herewith is a note for you to take to a qualified optician to examine your eyes and, unless the optician is of opinion that your case is beyond his skill for sight-testing, to give an estimate for glasses in Part 2. Form O.1 must then be returned to the society for authorization O.1 optical benefit."

Enclosed was a letter to an optician, which ended with the instructions in block letters:

"If, however, you consider that an examination by an ophthalmic surgeon is necessary, will you kindly communicate with the society by letter before estimating for glasses, stating the specific grounds for recommending same?"

I shared the patient's indignation that my recommendation should be ignored, or, which is more important, be subject to revision or approval by an apparently higher authority—that of the optician. As the patient lives in Bootle, I communicated with the Panel Committee of that district, but was informed that, as ophthalmic benefit is styled "additional," there was no action they could take to remove the absurdity they recognized.

In the words of a colleague, "I have no more intention of recommending my patients to an optician than I have of entrusting my gold watch to a blacksmith." Nor do I feel it incumbent upon me to attempt to delude an approved society into thinking that my knowledge of eye diseases is very great by using the euphemism "retinitis" to describe any condition which is beyond my ken.

The optician did, in fact, recommend the patient in question for examination by an ophthalmic surgeon, which was carried out to our combined satisfaction, but it is a very real grievance that an optician's advice should be accepted by an approved society after that of the panel doctor has been ignored. The boast that panel patients are treated in exactly the same way as private patients can no longer be upheld if such an absurdity to be a cloak under which benefits required may be granted as if they were favours to be dispensed from the bounty and at the pleasure of the societies concerned.—I am, etc.,

Liverpool, April 20th.

J. K. REID, M.B., Ch.B.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commander R. J. INMAN to the *Marborough*; A. J. TOZER to the *Victory* for R.N. Barracks, Portsmouth; A. G. BEE to the *Champion*; G. CARLILE to the *President* for three months' post-graduate course; F. E. SEARILL to the *Nelson*, temporarily.  
Surgeon Commander C. H. DAWES is placed on the retired list, with the rank of Surgeon Captain.  
Surgeon Lieutenants G. RORISON to the *Scarab*; W. D. M. SIM to the *Janita*.  
W. W. DARLEY and F. C. M. DAMFORD to be Surgeon Lieutenants.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant G. MCCOULL to be Surgeon Lieutenant Commander.  
Surgeon Lieutenant H. WILLOUGHBY to the *Champion* for training.  
Surgeon Sublieutenant F. T. HOLMAN to the *Suffolk* for training.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant C. J. S. O'MALLEY to Headquarters, R.A.F., Middle East.  
Flight Lieutenants A. BRISCOE to Headquarters, Aden Command; G. S. STRACHAN to Headquarters, R.A.F., India.

### INDIAN MEDICAL SERVICE.

Lieut.-Colonel J. W. D. MCGAW, C.I.E., Director, School of Tropical Medicine and Hygiene, Calcutta, to be Inspector-General of Civil Hospitals, Punjab.  
Lieut.-Colonel T. O. MCCOMBIE Young, an officer of the Medical Research Department, is placed on foreign service under the Indian Research Fund Association.

Consequent on the grant of leave to Brevet Colonel S. R. CHRISTOPHERS, C.I.E., Lieut.-Colonel J. CUNNINGHAM, Director, Pasteur Institute of India, Kasauli, is appointed to officiate as Director, Central Research Institute, Kasauli, and Major R. H. MALONE, Officiating Assistant Director, Central Research Institute, Kasauli, is appointed to officiate as Director, Pasteur Institute of India, Kasauli.

The services of Captain K. R. K. IYENGAR are, from April 11th, 1928, placed at the disposal of the Government of Madras for appointment as Director of the Pasteur Institute of Southern India, Coonoor.

### TERRITORIAL FORCE.

#### ROYAL ARMY MEDICAL CORPS.

Captain D. STEWART to be Major, with precedence as from July 14th, 1927.  
H. W. L. NICHOLS, late R.F.A. Special Reserve, to be Lieutenant.

## VACANCIES.

BARNSLEY AND WAKEFIELD JOINT SANITARIUM COMMITTEE.—Assistant Tuberculosis Officer and Resident Medical Officer. Salary £450 per annum, rising to £600.

BIRMINGHAM: PINK PNEUMOTIC MENTAL HOSPITAL.—Second Assistant Medical Officer (male). Salary £450 per annum, rising to £550, with an additional £100 a year while acting as Pathologist.

BURY BOROUGH.—Assistant Medical Officer of Health (part-time, female). Fee £1 12s. 6d. per session of two hours, twice weekly.

DEDFORD BOROUGH.—Medical Officer of Health. Salary £900 per annum, rising to £1,100.

BIRMINGHAM CITY INFECTIOUS DISEASES HOSPITAL.—Third Assistant Medical Officer. Salary £350 per annum.

BRIGHTON: ROYAL SUSSEX COUNTY HOSPITAL.—Casualty House-Surgeon. Salary £120 per annum.

BRISTOL GENERAL HOSPITAL.—Pathologist and Curator of the Museum. Salary at the rate of £500 per annum.

BRISTOL ROYAL INFIRMARY.—Honorary Surgeon in charge of the Ear, Nose, and Throat Department.

BURNLEY: VICTORIA HOSPITAL.—House-Surgeon. Salary £125 per annum.

CENTRAL LONDON THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1.—Resident House-Surgeon (male). Salary at the rate of £75 per annum.

CUMBERLAND AND WESTMORLAND MENTAL HOSPITAL, Carlisle.—Medical Superintendent. Salary £850 per annum, rising to £1,000.

ESSEX COUNTY COUNCIL.—Two Assistant County Medical Officers of Health. Salary £600 per annum respectively.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Assistant House-Surgeon (male). Salary at the rate of £100 per annum.

FRIE GOVERNMENT.—District Medical Officer. Salary £500 per annum, rising to £725.

GOLDEN SQUARE THROAT, NOSE, AND EAR HOSPITAL, W.1.—House-Surgeon (male). Salary £100 per annum.

HAMPSHIRE GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.—Surgeon to Out-patients.

HONG-KONG UNIVERSITY.—Professor of Physiology. Salary £800 a year, rising to £1,000.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—Medical Registrar and Pathologist (male). Salary £300 per annum.

HULL ROYAL INFIRMARY.—Assistant House-Physician (male). Salary at the rate of £130 per annum.

KING EDWARD VII WELSH NATIONAL MEMORIAL ASSOCIATION.—Two Resident Medical Officers at the Glan Ely Hospital. Salaries £350 and £200 per annum respectively.

LEEDS PUBLIC DISPENSARY.—(1) Honorary Physician. (2) Honorary Surgeon. (3) Junior Resident Medical Officer; salary £150 per annum. LIVERPOOL: DAVID LEWIS NORTHERN HOSPITAL.—Honorary Assistant Orthopaedic Surgeon.

LONDON COUNTY COUNCIL.—Eighth Assistant Medical Officer (male) in the Mental Hospitals Service. Salary £300 a year, rising to £400 with fluctuating additions.

MADRAS AND SOUTHERN MAHARATTA RAILWAY COMPANY, LIMITED.—District Medical Officer. Salary according to age and qualifications, rising to a maximum of Rs.900 per mensem payable in India, plus £30 per mensem payable in England.

MIDDLESBROUGH: NORTH RIDING INFIRMARY.—Honorary Assistant Surgeon.  
PRINCE OF WALES'S GENERAL HOSPITAL, Tottenham, N.15.—Clinical Assistant in Medical Out-patient Department.  
ROTHERHAM HOSPITAL.—House-Physician (male). Salary £180 per annum.

### APPOINTMENTS.

ST. NERLAND ROYAL INFIRMARY.—House-Surgeons: L. D. Nelson, M.B., B.S., T. F. Jarman, M.B., B.S. House-Physicians, Children's Branch: Miss C. McLeay, M.B., Ch.B.

CERTIFYING FACTORY SURGEONS.—I. H. Maciver, M.B., Ch.B.Ed., for the East William District (Inverness); J. A. Whyte, M.B., Ch.B.Aberd., for the Abercharder District (Banff); J. A. Mulligan, M.B., Ch.B.Aberd., for the Bervie District (Kincardine); J. McKenzie, M.B., Ch.B.Aberd., for the Rhynie District (Aberdeen).

### DIARY OF SOCIETIES AND LECTURES.

#### ROYAL SOCIETY OF MEDICINE.

Section of Orthopaedics.—Tues., 4.30 p.m., Cases. 5.30 p.m., Annual General Meeting: Election of Officers and Council for 1928-29.

Section of History of Medicine.—Wed., 5 p.m., Annual General Meeting: Election of Officers and Council for 1928-29. Papers will be read dealing with the sources of Harvey, as follows:—Professor F. J. Cole: The History of Embryology; Dr. J. F. Prendergast: Galen.

Section of Tropical Diseases.—Thurs., 8.15 p.m., Annual General Meeting: Election of Officers and Council for 1928-29. Demonstration by Sir Leonard Rogers: Climate and the Incidence of Small-pox, Cholera, and Plague: Forecasting Epidemics.

Section of Anaesthetics.—Fri., 8.30 p.m., Annual General Meeting: Election of Officers and Council for 1928-29. Discussion on Late Ether Convulsions. Opener: Dr. C. F. Hadfield.

Section of Otolaryngology.—Sat., 9.30 a.m., Cases. 10.30 a.m., Annual General Meeting: Election of Officers and Council for 1928-29. Papers:—Mr. John P. Stuart: The Histopathology of Mastoiditis; Dr. R. Graham Brown: Case of Spherical Bulging of the Floor of the Third Ventricle, Secondary to Internal Hydrocephalus and Stimulating a Pituitary Tumour. Cases and Specimens.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W.1.—Tues. and Thurs., 5 p.m., Oliver-Sharpay Lectures by Dr. E. P. Poulton: An Experimental Study of Certain Visceral Sensations.

### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Mon., April 30th, to Fri., May 5th. Royal Waterloo Hospital, Waterloo Road, S.E.1: Tues., 3 p.m., Clinical Demonstration; no fee. Royal London Ophthalmic Hospital, City Road, E.C.1: Tues., 1 p.m., Clinical Demonstration; no fee. Maudsley Hospital, Denmark Hill, S.E.5: Course in Psychological Medicine, Lectures, Demonstrations, and Clinical Instruction; one month, fee £5 5s. St. John's Hospital, Leicester Square, W.C.1: in the logical Waterloo Course in Medicine, Surgery, and Gynaecology. Royal Free Hospital, Gray's Inn Road, W.C.1: Wed., 5.15 p.m., Third Lecture Demonstration London School of Hygiene and Tropical Medicine: Tues. and Thurs., 2 p.m., Lecture clinic. Copies of all syllabuses sent on request. Apply Secretary, 10, Abchurch Lane, W.C.1.  
St. John's Hospital, Leicester Square, W.C.2.—Tues., 5 p.m., Eczema. Thurs., 5 p.m., Acne Vulgaris. Fri., 5 p.m., Warts.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics: Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics: Operations. Wed., 2.30 p.m., Demonstration of Eye Cases; 2.30 to 5 p.m., Medical, Skin, and Eye Clinics: Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics: Operations.

Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 p.m., Demonstration of Surgical Cases; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics: Operations.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations, Surgical Wards. Skin Department; 2 p.m. to 5 p.m., Eye and Gynaecological Departments. Tues., 10 a.m. to 1 p.m., Medical Wards. Demonstration of Venereal Diseases, Electrical and Dental Departments; 2 p.m. to 5 p.m., Gynaecological Operations, Throat, Nose, and Ear Department. Wed., 10 a.m. to 1 p.m., Children's Medical Department, Medical Wards, Pathological Demonstration; 2 p.m. to 5 p.m., Eye Department, Surgical Wards. Thurs., 10 a.m. to 1 p.m., Neurological and Massage Departments; 2 p.m. to 5 p.m., Eye and Genito-urinary Departments. Fri., 10 a.m. to 1 p.m., Skin, Dental, and Electrical Departments, Medical Wards. Clinical Demonstration; 2 p.m. to 5 p.m., Throat, Nose, and Ear Department. Sat., 9 a.m. to 1 p.m., Medical Wards, Throat, Nose, and Ear Operations, Medical Children's Department, Bacteriological Therapy Department. ### SPECIAL NOTICE TO MEMBERS.

Every Member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he or she belongs.

#### British Medical Association.

##### CURRENT NOTES.

##### The Winnipeg Annual Meeting in 1930.

During the past three weeks the Officers and officials of the Association have been in consultation, in regard to the details of the Winnipeg Annual Meeting, with two delegates specially sent by the Canadian Medical Association for this purpose. These delegates were Dr. T. C. Routley, General Secretary of the Canadian Medical Association, and Dr. J. D. Adamson of Winnipeg, a prominent Officer of the Manitoba Medical Association. The arrangements provisionally decided upon will be submitted to the Council at its June meeting, but members will be interested to know that the delegates showed that much thought had been already given to the arrangements in Canada: that every facility for interest and enjoyment will be given, not only at Winnipeg, but in every part of Canada which members can find time to visit; and that the Canadian Medical Association in general, and its members in Manitoba in particular, would cordially welcome a large attendance. The representatives of the B.M.A. had the pleasure of entertaining Dr. and Mrs. Routley and Dr. and Mrs. Adamson to lunch at the May Fair Hotel on April 25th. Dr. and Mrs. Routley left for Canada at the end of the week, but Dr. Adamson is staying for several months to do some post-graduate study, and will be a delegate of the Canadian Medical Association at the Annual Meeting of the British Medical Association at Cardiff.

##### Liability for Injuries to Assistants and Locumtenents.

The question arises from time to time whether a principal is liable under the Workmen's Compensation Acts for injuries sustained by assistants or locumtenents while carrying out their duties. It has been suggested by a correspondent in the *Journal* (see pp. 712 and 766 of October 15th and 22nd, 1927) that the way to avoid trouble and expense in this matter is to employ only those who have insured themselves for their own benefit. The matter cannot be settled quite so simply.

The Solicitor to the Association has been asked for his opinion, and informs us that no insurance by a workman (assistant or locumtenent in this case) would relieve the employer of his liability under the Acts. The position is as follows: a deputy or assistant whose salary does not exceed £350 per annum comes within the scope of the Workmen's Compensation Acts, and is entitled to the protection afforded by them. Quite apart from the amount of his salary, the locumtenent or assistant, if injured while carrying out his duties, might even have a claim against his principal at common law.

It seems, therefore, that the only safe course for a doctor employing a locumtenent or assistant to pursue is to insure himself against all risks by taking out a policy which would cover a common law claim as well as a claim under the Workmen's Compensation Acts. Such an insurance can be effected for a moderate annual payment through the Medical Insurance Agency, B.M.A. House, Tavistock Square, W.C.1.

##### The Home Divisions and Branches in 1927.

The Grants Subcommittee at its recent meeting reviewed the annual reports of the Divisions and Branches for 1927. With few exceptions all the home bodies have reported for the year, and the Subcommittee was much gratified with the activity recorded. As shown in the reports, the average annual cost of running a Division in the British Isles is 2s. a head, and a Branch 3s. 8d. a head. Among items of special interest reported by Divisions are the post-graduate activities of the Hereford, and Rochester, Chatham, and Gillingham Divisions. The former records a course of general post-graduate lectures under the auspices of the University of Birmingham in the autumn of 1927, and the Rochester, Chatham, and Gillingham Division organized a course of orthopaedic lectures and demonstrations.

##### Medical Appointments Abroad.

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas, which may be very useful to those proposing to accept medical appointments abroad. Practitioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

Having examined the Balance Sheet, dated 31st December, 1927, and Accounts with the Books and Vouchers of the Association, except as regards the Irish Committee and Scottish Committee Accounts, and having received all the information and explanations we have required, we report that the Balance Sheet is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Association according to the best of our information and the explanations given to us and as shown by the Books of the Association.

*We have inspected the Lease of the New Building and the Disposition in favour of the Association of the original premises in Edinburgh, and have verified the investments of the Association on General Account, on account of the Trust Funds, and of the Office Staff Superannuation Fund, and have further ascertained that the Deeds of the Freehold Property, 429, Strand, Agar Street, and Harvey's Buildings, are held by the Westminster Bank for the Association as security against the amount still unpaid by the New Zealand Government. The transfer of No. 7, Drumstrough Gardens, Edinburgh, was in course of registration at the close of the year.*

*We further report that we have examined the Accounts, with the books and vouchers, of the Medical Benevolent Funds for whom the Association receives remittances, and found them correct.*

N. BISHOP HARMAN, F.R.C.S.,  
*Treasurer.*

L. FERRIS-SCOTT, F.C.A.,

## APPENDIX III.

## EXISTING ARTICLES AND BY-LAWS OF THE ASSOCIATION PROPOSED BY THE COUNCIL TO BE REVISED.

(See *Annual Report of Council*, H.M.J. SUPPLEMENT, of April 28th, 1928, page 143, para. 53.)

## ARTICLE 3.

## "Eligibility (for Membership).

3. Any Medical Practitioner registered in the United Kingdom under the Medical Acts, and any Medical Practitioner who does not reside within the area of any Branch of the Association and who, though not so registered, is possessed of any qualification entitling him to be so registered, and any Medical Practitioner residing within the area of any Branch of the Association not in the United Kingdom, who is so registered or possesses such medical qualification as shall, subject to the By-laws, be prescribed by the Rules of the said Branch, shall be eligible as an ordinary Member of the Association. Subject as aforesaid, the mode and conditions of election to membership shall from time to time be determined by or in accordance with the By-laws."

## ARTICLE 10.

## "Expulsion.

10. (a) The Council shall have power, on the representation of any Division or Branch, and after due enquiry, of which not less than fourteen days' notice specifying a time and place at which he may be heard in his defence shall have been served on the Member in the manner prescribed by the By-laws, finally to expel from membership of the Association any Member of such Division or Branch whose conduct shall be held by the Council to be such as renders him liable to expulsion under paragraph (d) of the last preceding Article. Provided that no such representation shall be entertained if made by a Division or Branch within an area outside the United Kingdom for which a Federal Council has been formed under the Articles and By-laws where that Federal Council has been invested with the powers of paragraph (c) of this Article.

(b) The Council shall have power on the application of the Branches within an area outside the United Kingdom for which a Federal Council has been or is being formed under the Articles and By-laws to invest that Federal Council with the powers of the next succeeding paragraph of this Article.

(c) (i) The Council of each Branch not in the United Kingdom having a membership of not less than thirty and not being within the area of a Federal Council invested with the powers of this paragraph, upon the representation of any two Members of such Branch, and (ii) any Federal Council invested with the powers of this paragraph, upon the representation of a Branch within the area of that Council shall have power at a Special Meeting of the Branch Council or Federal Council (as the case may be) convened at not less than one month's notice, and after due enquiry of which not less than twenty-eight days' notice in writing, specifying the time and place at which he may be heard in his defence, shall have been given to the Member, to expel from membership of the Association any Member of such Branch whose conduct shall be held by the Branch Council or the Federal Council (as the case may be) to be such as to render him liable to expulsion under paragraph (d) of the last preceding Article.

## ARTICLE 12 (1).

## "Incorporation (of Branches not in the United Kingdom).

12. (1) Subject as hereinafter provided, it shall be competent for the Members of a Branch not in the United Kingdom to procure themselves to be incorporated (in accordance with the law in force in the area of the Branch) under a name indicating that the body so incorporated is a Branch of the Association. A Branch so incorporated is hereinafter referred to as a Corporate Branch.

## ARTICLE 13.

## "Formation, Alteration, Dissolution, etc., of Branches and Divisions.

13. Subject in the case of Divisions and Branches not in the United Kingdom to the provisions of the By-laws, it shall rest with the Council from time to time to determine, recognise, and declare by resolution published in the Journal, what bodies of Members shall be Divisions, and what Divisions and groups of Divisions shall be Branches of the Association, and what shall be the local area of each Division, and accordingly the Council shall have full power from time to time to

annul, amend, subdivide and modify Divisions and Branches and the local areas thereof. Nevertheless, not less than one month's notice in all cases shall be given (in the manner prescribed by the By-laws) to any Division or Branch in whose boundaries or area any change is proposed, and in the case of a Corporate Branch no alteration in the boundaries or area thereof or of any Division thereof shall be made without the consent of that Branch."

## ARTICLE 16.

## "Federal Councils.

16. Federal Councils representative of the Branches in any area outside the United Kingdom defined and approved by the Council may be formed in the manner and for the purposes specified in the By-laws."

## ARTICLES 22 AND 23.

## "Extraordinary General Meetings.

22. The Council may, whenever it thinks fit, and it shall, upon a requisition made in writing as hereinafter provided by any 100 or more Members, convene an Extraordinary General Meeting for the purpose of transacting any such business as by Statute or by the Regulations or the By-laws is appointed to be transacted by a General Meeting.

23. Any such requisition shall state the object of the Meeting proposed to be called, such object being to transact some business which by Statute or by the Regulations or the By-laws is required to be transacted by a General Meeting, and the said requisition shall be left at the registered office of the Association."

## ARTICLE 28.

## "Annual Scientific Meetings.

28. The Council shall at least once a year arrange Meetings or Conferences, alone or in conjunction with other bodies, which it shall be open to every Member of the Association to attend, for the purpose of receiving addresses or other communications relating to the Medical or Allied Sciences, and discussing such subjects pertaining thereto as the Council may think proper, and the Council may arrange to hold such Meetings or Conferences in the United Kingdom or abroad. When held in the United Kingdom, one such Meeting shall be convened at the same place as the Annual General Meeting of the Association and in connection, but so as not to conflict therewith. For the more convenient consideration of the matters to be discussed, the Council may provide that they shall be considered in Sectional Meetings, and the Council shall appoint a President and other Officers of such Section as well as readers of any addresses that may be given."

## ARTICLE 33.

## "Resolutions (of Representative Body).

33. (1) Subject as provided by the Regulations, a resolution of the Representative Body (not being a resolution inconsistent with the provision of any Statute or of the Memorandum of Association) which affects the funds of the Association, or relates to the Regulations or By-laws, or to the policy of the Association in matters affecting the honour or interests of the medical profession and is carried by a majority of not less than two-thirds of the votes given thereon in the manner prescribed by the By-laws, or which relates to any other business within the powers of the Representative Body and is carried by a simple majority, shall be deemed to be a decision of the Association.

(2) Provided that no resolution of the Representative Body to make any addition to or any amendment, alteration, or repeal of any Regulation or By-law, or to make any new Regulation or By-law, shall have any operation unless a proposal to make the same shall have been previously approved and submitted to the Representative Body, either by the Council, or by a Branch or by a Division, and shall have been published in the Journal, not less than two months before the Annual Representative Meeting, or one month before the Special Representative Meeting at which such resolution is passed."

## ARTICLE 34.

## "Referendum.

34. In respect of every resolution of a General Meeting of the Association (except a resolution capable of being confirmed as a special resolution or a resolution confirming as a special resolution a resolution previously passed, or an extraordinary resolution or a resolution relating solely to the procedure of the Meeting), and in respect of every resolu-

14. It shall be competent for any Division or Branch offering special privileges to its Members to require a special subscription from those Members who desire to avail themselves of such special privileges, and it shall likewise be competent for any Division or Branch to charge such special subscription as it may think proper to its Extraordinary Members; but no Ordinary Member of any Division or Branch in the United Kingdom shall be called upon to pay any further subscription than that paid to the Association as a condition of enjoying any ordinary privilege of membership of such Division or Branch."

## BY-LAW 15.

*"Subscriptions to Branches not in the United Kingdom."*

15. (1) It shall also be competent (a) for any Corporate Branch to fix and from time to time alter the amounts of the subscriptions to be paid by its Members, and (b) for any other Branch not in the United Kingdom, by Rule (approved as hereinafter mentioned), to require each Member of such Branch to pay (in addition to his subscription to the Association and to any special subscription) an annual subscription of such amount as may be deemed by such Branch to be necessary for defraying expenses occasioned by the special circumstances of such Branch, and not capable of being defrayed out of any grant from the funds of the Association made in pursuance of the By-laws.

## TITLE OF BY-LAW 16.

*"Incorporation of Branches not in the United Kingdom."*

## BY-LAW 18 (1).

*"Local Management: Branches."*

18. (1) The management of the affairs of each Branch (other than a Corporate Branch) shall, save as otherwise provided in the By-laws, be vested in a Branch Council, composed of the following persons (being members of the Association):—

(a) In the case of a Branch in the United Kingdom those of the 24 Members (hereinafter mentioned) of the Council who are elected (as hereinafter provided) by the Branch or by any group of Branches to which the Branch belongs, and such one, if any, of the 12 Members (hereinafter mentioned) of the Council elected by Representatives of Constituencies at the Annual Representative Meeting as resides within the area of the Branch.

(e) In the case of a Branch in the United Kingdom a Public Health Service Member or Public Health Service Members of the Branch (in the proportion of one for every fifteen or fraction of fifteen of the other members mentioned in this By-law) to be elected in such manner as the Branch shall prescribe.

## BY-LAW 22.

*"Branches not in the United Kingdom: Special Powers."*

22. (1) A Branch not in the United Kingdom shall be competent from time to time to adopt by the vote of a General Meeting of the Branch, and without the approval of the Council, and use, at the expense of its own Members and for their benefit, or for the benefit of the local profession, any means authorised by the Memorandum of Association for the attainment of any of the objects of the Association, notwithstanding that such means shall not have been adopted, or shall not for the time being be used by the Association generally, but without power to impose any liability upon, or to pledge the credit of the Association in connection with any such adoption or user. Any such adoption shall forthwith be notified to the Council by the Branch.

(2) A Branch not in the United Kingdom shall be competent from time to time to adopt by the vote of a General Meeting of the Branch, and without the approval of the Council, Rules dealing with all or any of the following matters, which Rules shall be binding upon the Members of the Branch:—

(i) The number and area of the Divisions of the Branch.

(ii) The number, duties, and designation of office-bearers of the Branch, provided that the Branch shall at all times have an Honorary Secretary, who shall be the official medium of communication with the Association and with other Branches and Divisions.

(iii) The holding of Meetings of the Branch and the business to be considered thereat, but so as not to conflict with the Regulations as to the autonomy of Divisions.

(iv) The voting by proxy at any such Meeting and at any Meeting of the Council of the Branch.

(v) The eligibility of practitioners not registered in the United Kingdom for election by the Branch as Members of the Association.

(vi) The privileges of ordinary Membership of the Branch, other than the right to attend Meetings convened for the consideration of Association business.

(vii) Any other matter as to which the Council may, from time to time, authorise the Branches not in the United Kingdom to make Rules without the approval of the Council."

## BY-LAW 23 (1).

*"Federal Councils."*

23. (1) The Branches in any defined area outside the United Kingdom which shall be approved by the Council for the purpose may form a Federal Council, consisting of Members of the Association representing each of the Branches concerned, for the purpose of carrying out the objects of the Association on behalf of those Branches collectively within the area so defined and approved. Subject as hereinafter provided, any such Federal Council may be corporate or unincorporate."

## BY-LAW 27.

*"Divisions not in the United Kingdom: Special Powers."*

27. A Division not in the United Kingdom shall (subject in the case of a Division forming part of a Corporate Branch to any directions or regulations given or made by that Branch) be competent from time to time to adopt, by the vote of a General Meeting of the Division, and without the approval of the Council, Rules dealing with all or any of the following matters, which Rules shall be binding upon the Members of the Division to which they relate:—

(iv) Any other matter as to which the Council may, from time to time, authorise the Divisions not in the United Kingdom to make Rules without the approval of the Council."

## BY-LAW 40.

*"Number of Representatives."*

40. (1) Each Constituency shall be entitled to elect one Representative.

(2) Each Constituency in the United Kingdom having not less than 150 Members (according to the Annual List in force at the time of the election) shall be entitled to elect one additional Representative for each complete number of 100 Members in excess of fifty Members."

## BY-LAW 47.

*"Business of Annual Representative Meeting."*

47. The business of the Annual Representative Meeting shall be to elect a Representative of a Constituency as the Chairman of the Representative Body, and also a Representative of a Constituency as Deputy-Chairman; to elect a President of the Association; to elect such Members of the Council, and such other Officers and such Members of Committees as by the Regulations or By-laws may be required to be so elected; to consider the election of Honorary Members when recommended by the Council; to appoint a place at which the next Annual Representative Meeting shall be held; to consider the Annual Financial Statement and Balance Sheet presented by the Council; to consider Reports of the Council, Reports of Committees instructed to report to such Meeting, and Reports of Branches and motions relating to the adoption of such Reports in whole or in part; to make new By-laws, and alter and repeal By-laws, and to consider any resolution relating to the promotion of the medical or allied sciences or the maintenance of the honour or interests of the medical profession or of the Association which shall have been adopted by any Division or Branch; provided that any such resolution proposing material alteration of the constitution or policy of the Association shall have been published in the Journal for the consideration of all the Divisions not less than two months previously."

## BY-LAW 53.

*"Council: Composition of."*

53. The Council shall be composed of the Members *ex officio* mentioned in the Regulations and of Members elected in manner following, namely:—

(a) Twenty-four (being persons who have been Members of the Association for at least the period of three years immediately preceding their respective elections) by the Branches and Divisions of the Association in the United Kingdom, which shall be grouped for that purpose as hereinafter mentioned.

(b) Seven by the Branches of the Association not in the United Kingdom, which shall be grouped for that purpose as hereinafter mentioned.

- (c) Twelve (being persons who have been Members of the Association for at least the period aforesaid) by the elected Representatives of the Constituencies comprised in the Branches and Divisions of the Association in the United Kingdom, which Branches and Divisions shall be formed for that purpose into twelve groups as hereinafter mentioned, the Representatives of all the Constituencies in each such group being entitled together to elect one Member of Council.

## BY-LAW 55.

*"Mode of Election by Groups in the United Kingdom."*

55. (1) The election of twenty-four Members of Council by the Branches or Groups of Branches and Divisions in the United Kingdom shall be by means of voting papers sent by post by the Association from the Head Office to each Member of every Branch comprised in the Group.

## BY-LAW 56.

*"Mode of Election by Groups not in the United Kingdom."*

56. (1) The election of seven Members of Council by the Groups of Branches not in the United Kingdom shall be conducted in the manner prescribed by this By-law.

## BY-LAW 59.

*"Qualification."*

59. No person shall be eligible for election as a Member of Council to represent a Branch or Group of Branches in the United Kingdom (whether the election be by the Branch or Group or by the Representatives of Constituencies) unless at the time of his election he shall be a member of that Branch or of a Branch comprised in that Group.

## BY-LAW 60.

*"Terms of Office of Members of Council."*

60. (1) Each Member of Council elected by a Branch or Group or by the Representatives of Constituencies in the United Kingdom or by Public Health Service Members shall hold office for one year, and at the end of that time shall be eligible for re-election. Provided that a person who has served as the representative on the Council of one and the same Branch or Group of Branches or group or class of Members for six years successively shall for one year be incapable of being elected as such representative.

(2) Each Member of Council elected by a Branch or Group not in the United Kingdom or elected to represent the Royal Naval Medical Service, the Royal Air Force Medical Service, the Army Medical Service, or the Indian Medical Service, shall hold office for such period not exceeding three years as the electing body may determine, and at the expiration of such period shall be eligible for re-election, provided that no such Member shall be re-elected so as to make his period of continuous service as the Representative on the Council of one and the same Branch or Group exceed six years.

## BY-LAW 78.

*"Committees and Standing Committees."*

78. Each Standing Committee except the Scottish, Irish, Welsh and Dominions Committees shall appoint from its own number a Member of Council as Chairman. Each such excepted Committee shall appoint from its own number a Deputy-Chairman, as well as a Chairman, and either the Chairman or the Deputy-Chairman or the Honorary Secretary of that Committee shall be appointed from amongst Members of Council.

## BY-LAW 85.

*"Expenses."*

85. The expenses of any person which in pursuance of the 42nd Article of Association are to be defrayed out of the general funds of the Association, are the first-class travelling expenses within the United Kingdom of that person.

SCHEDULE TO BY-LAWS, AS TO APPOINTMENT OF MEMBERS TO INSURANCE ACTS COMMITTEE, OTHER THAN (1) MEMBERS THEREOF *ex officio*, (2) MEMBERS APPOINTED THERETO BY THE REPRESENTATIVE BODY OR COUNCIL.

*"Appointed Members . . ."**Otherwise appointed.*

Registered medical practitioners appointed as follows:—

5 such practitioners (being Members of the Association) elected (in the manner prescribed by the Representative Body) by the elected Representatives of the Constituencies formed for Great Britain under By-law 39, namely, 4 by all the elected Representatives (acting together) of the Constituencies so formed for England and Wales, and one by all the elected Representatives (acting together) of the Constituencies so formed for Scotland together with 27 practitioners (whether Members of the Association or not) to be nominated or qualified as under, viz.:—

23 to be selected so far as possible on a territorial basis from among practitioners nominated by the Local Medical Committees and Panel Committees formed in Great Britain under the Insurance Acts;

1 (being a member of the Staff of a Voluntary Hospital) to be nominated by the Hospitals Committee of the Association;

1 to be nominated by the Medical Women's Federation;

1 to be nominated by the Society of Medical Officers of Health;

1 to be nominated by the Poor Law Medical Officers' Association of England and Wales;

with power for the Members of the Committee appointed as above provided to co-opt as additional Members such number (if any) of non-panel practitioners as shall be required to secure that 4 such practitioners shall be Members of the Committee, 1 of whom shall be in general practice in an industrial area."

## SCHEDULE TO BY-LAWS, AS TO CHARITIES AND DOMINIONS COMMITTEES.

Name of Committee	Additional Members <i>ex-officio</i>	Appointed Members			Duties, Powers, &c.
		Appointed by the Representative Body	Appointed by the Council	Otherwise Appointed	
Charities		3	3	..	To direct the attention of members of the medical profession to the financial and educational positions which arise as a result of misfortune falling on members thereof; to appeal for contributions to meet these positions and to advise the Council on the administration of the Charities Trust Fund of the Association.
Dominions	All the Members of the Council who represent Branches not in the United Kingdom.	2	2	..	To consider questions specially relating to the Branches not in the United Kingdom."

## SCHEDULE TO BY-LAWS, AS TO DUTIES, POWERS, ETC., OF CENTRAL ETHICAL COMMITTEE.

Provided that, notwithstanding the foregoing provisions, the Committee shall not adjudicate upon or entertain any such question as aforesaid which has arisen in a Branch not in the United Kingdom having a membership of not less than thirty, except upon the request of the Council of that Branch.

# British Medical Association.

## NINETY-SIXTH ANNUAL MEETING, CARDIFF, JULY, 1928.

Patron: HIS MAJESTY THE KING.

President: SIR ROBERT W. PHILIP, M.D., LL.D., F.R.C.P.Ed., Consulting Physician, Royal Infirmary, Edinburgh.

8.30 p.m.—Reception by National Museum of Wales.  
10.0 p.m.—Dance.

SATURDAY, JULY 28TH.  
Excursions.

## PATHOLOGICAL MUSEUM.

The committee appointed to organize the Pathological Museum in connexion with the Annual Meeting of the British Medical Association at Cardiff next July proposes to arrange the material under the following heads: (1) Exhibits bearing on discussions and papers in the various Sections. (2) Specimens and illustrations relating to any recent research work. (3) Instruments concerned in clinical diagnosis and pathological investigation. (4) Individual specimens of special interest or a series illustrating some special subject. (5) Exhibits of general interest. The committee appeals for the co-operation of the profession in making the museum a success. It will be easy of access, being situated in the same building in which the Sections will meet; it is hoped to make arrangements for exhibitors to demonstrate their specimens. Every care will be taken of the exhibits, and the contents of the museum will be insured. The honorary secretaries (Dr. J. B. Duguid and Dr. J. Mills, Department of Pathology and Bacteriology, Welsh National School of Medicine, The Parade, Cardiff) ask intending exhibitors to notify them as soon as possible.

## REDUCED RAILWAY FARES.

Reduced fares will be granted to persons travelling to attend the Annual Meeting. The railway companies in Great Britain (except the Metropolitan, Metropolitan District, and London Electric Railway Companies) have agreed to issue return tickets to passengers travelling to Cardiff in this connexion at the ordinary single fare and one-third, fractions of 3d. to be reckoned as 3d., and the minimum adult fare to be 1s. A voucher of the usual type must be surrendered when the ticket is bought; these vouchers, signed by the Financial Secretary of the Association, will be obtainable from him in due course on application.

## IRISH MEDICAL SCHOOLS' AND GRADUATES' ASSOCIATION.

The annual luncheon of the Irish Medical Schools' and Graduates' Association will be held at the Royal Hotel, Cardiff, on Wednesday, July 25th, at 1 o'clock sharp. The President-Elect of the British Medical Association, Sir Ewen Maclean, will be the guest of the association. Tickets for the luncheon, price 4s. 6d. each, exclusive of wines, may be obtained from the honorary secretary for the provinces, Dr. Falkland L. Cary, 67, King's Road, Harrogate. Members of the association are particularly requested this year to obtain their tickets well in advance, owing to the difficulty of catering for an unknown number of guests.

## Association Notices.

## TABLE OF DATES.

May 12, Sat.	Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of list of nominations for election of (i) 24 members of Council by grouped Branches in British Isles; (ii) 2 Public Health Service members of Council, and 4 Representatives of Public Health Service in Representative Body.

	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

## BRANCH AND DIVISION MEETINGS TO BE HELD.

CAMBRIDGE AND HUNTINGDON BRANCH.—A meeting of the Cambridge and Huntingdon Branch with the Cambridge Medical Society will be held at Addenbrooke's Hospital to-day (Friday, May 4th) at 2.30 p.m. Dr. H. C. C. Veitch will read notes on a case of acute suppurative dacryo-adenitis, and clinical cases and pathological specimens will be shown.

DORSET AND WEST HANTS BRANCH.—The annual meeting of the Dorset and West Hants Branch will be held at the Yeoman Hospital, Sherborne, on Wednesday, May 9th, at 3 o'clock, with Dr. Grey-Edwards in the chair. Agenda: To confirm appointment of officers for 1928 elected at October meeting, 1927.—Mr. A. Basil Rooke (president), Dr. Whitaker and Dr. McCall (vice-presidents), Dr. McCall (honorary secretary); the president will read a paper on some recent advances in medicine and surgery. The Sherborne members invite visiting members to lunch, which will be provided at the Digby Hotel, and also to tea after the general meeting. Places of interest, such as the abbey and the almshouses, may be visited before the general meeting. Visiting members who have no cars of their own may be accommodated on communicating with the honorary secretary.

DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.—The annual meeting of the Bournemouth Division will be held on Tuesday, May 8th, in St. Peter's Small Hall, Bournemouth, at 4.15 p.m. Agenda: Annual report and financial statement; election of officers for committees for 1928; consider proposal to hold Division meetings in the evenings instead of in the afternoons. The chairman, Dr. How White, invites members to tea at 4 p.m.

EDINBURGH BRANCH: SOUTH-EASTERN COUNTIES DIVISION.—The annual meeting of the South-Eastern Counties Division will be held in the Railway Hotel, Newtown St. Boswells, on Wednesday, May 9th, at 3 p.m. Agenda: Election of officers; annual report and financial statement for year 1927; instructions to representative to Representative Meeting; nominate candidate for Scottish Committee; members' and non-members' lists; motion by Dr. McLay (Galashiels):

That the formation of a clinical group at Galashiels be considered;

Motions by Dr. Fairfax (Inverleithen):

(a) That the question of over-certification be considered;

(b) That representation be made to headquarters, British Medical Association, with a view to securing a rebate in proposed petrol tax for practitioners in the course of their professional duties; arrangements for annual dinner.

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.—The annual general meeting of the Lanarkshire Division will be held at St. Euoch Station Hotel, Glasgow, on Wednesday, May 9th, at 3 p.m.

LANCASHIRE AND CHESHIRE BRANCH: MID-CHESHIRE DIVISION.—A lecture on intracranial birth injuries, illustrated by lantern slides, will be given on Sunday, May 6th, at 4 p.m., in the board room of the General Hospital, Altrincham, by Dr. Capon, physician to the Royal Southern Hospital, Liverpool. Tea will be served at 3.45 p.m.

LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.—The annual meeting of the Southport Division will be held on Friday, May 11th, at 8.15 p.m., at 52, Houghton Street, Southport. Agenda: Annual report; election of office-bearers and committee; ophthalmoscopy demonstrations; scarlet fever recovery certificate for State-aided schools; "heart disease" certified as cause of death; social function; Public Medical Service for London letter contract medical service for juveniles; Annual Report of Council.

LANCASHIRE AND CHESHIRE BRANCH: WARRINGTON DIVISION.—The meeting of the Warrington Division will be held at the Infirmary, Kendrick Street, Warrington, to-day (Friday, May 4th), at 8.30 p.m. Agenda: Minutes of last meeting; election of officers any other business.

METROPOLITAN COUNTIES BRANCH: CITY DIVISION.—A clinic meeting of the City Division will be held on Friday, May 11th when Dr. E. Cantley will show cases.

METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.—A meeting of the Hampshire Division will be held at the Hampstead General Hospital on Thursday, May 10th, at 8.30 p.m., for discussion of the Annual Report of Council.

METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.—The annual meeting of the Lewisham Division will be held at the Town Hall, Catford, S.E.6, on Tuesday, May 15th, at 8.45 p.m.

METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.—The annual meeting of the Marylebone Division will be held at 8.30 p.m. on Wednesday, May 9th, at 11, Chandos Street, Cavendish Square, W.1. Agenda: Recommendations of Executive Committee re officers of the Division; Executive Committee's report; the Annual Report of Council; Dr. Hawthorne will open a discussion on lunacy law reform, and Mr. McAdam Eccles on the general practitioner and paying beds in hospitals.

METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.—The annual general meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1 on Tuesday, May 8th, at 9 p.m.

METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.—A meeting of the South-West Essex Division will be held at the Claybury Mental Hospital, Woodford Bridge, on Tuesday, May 15th at 3.30 p.m. Dr. G. F. Barham, medical superintendent, will give a demonstration of cases.

METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.—The annual meeting of the Willesden Division will be held on May 16th. Agenda: Election of officers and committees, and consideration of Annual Report of Council.

MIDLAND BRANCH: CHESTERFIELD DIVISION.—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, on Friday, May 11th, at 8.15 p.m. A British Medical Association Lecture will be delivered by Professor Louise McIlroy on the management of labour.

NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, May 16th, at 8.15 p.m. Dr. J. C. Spence will give a lecture entitled "Hypertrophic pyloric stenosis—its importance as an example of the method of diagnosis, treatment, and study of disease in childhood."

OXFORD AND READING BRANCH: OXFORD DIVISION.—A meeting of the Oxford Division will be held at the Radcliffe Infirmary on Wednesday, May 23rd, at 2.30 p.m. Dr. F. G. Chandler will read a paper entitled "Bronchiectasis—early diagnosis and treatment."

SOUTHERN BRANCH: JERSEY DIVISION.—A meeting of the Jersey Division will be held at the General Hospital on Thursday, May 17th. Mr. C. H. B. Avarne will read a paper on the diagnosis and treatment of gall-stones.

SOUTH-WESTERN BRANCH.—An intermediate meeting of the South-Western Branch will be held at the Royal Cornwall Infirmary on Thursday, May 24th. Members are asked to inform the honorary secretary as soon as possible of any cases, notes, papers, specimens, or notices of motion they may wish to bring forward in order that they may be placed on the agenda paper. It is advisable that papers should be as short as possible.

SUFFOLK BRANCH: WEST SUFFOLK DIVISION.—One of the series of post-graduate lectures arranged by the West Suffolk Division will be given by Mr. T. H. Just on diagnosis and treatment of acute inflammatory conditions of the ear, at the West Suffolk General Hospital to-day (Saturday, May 5th), at 8.45 p.m.; coffee will be served at 8.30. A clinic will be held on Sunday, May 6th, at 11 a.m. The course is open to medical practitioners in West Suffolk and their guests.

SUSSEX BRANCH: BRIGHTON DIVISION.—A special meeting of the Brighton Division will be held to-day (Friday, May 4th), at 8.30 p.m., at Steine House (Y.M.C.A.), Old Steine, Brighton, when Messrs. Kodak, Ltd., will give a cinematograph display of medical subjects, with a little lighter relief. It is hoped that there will be a large attendance.

SUSSEX BRANCH: CHICHESTER AND WORTHING AND HORSHAM DIVISIONS.—The annual meeting of the Chichester and Worthing Division will be held in the Burlington Hotel, Worthing, on Wednesday, May 9th, at 6 p.m. Agenda: Election of office-bearers for 1928-29. A combined meeting of the two Divisions will be held immediately afterwards for the election of a representative and

a deputy representative for the Annual Representative Meeting at Cardiff in July. A paper will be given by Mr. P. B. Feilden on some observations on renal tuberculosis. Dinner will be served in the Burlington Hotel at 7.30 p.m.; members who intend to be present should notify Dr. Mackintosh so that adequate provision may be made.

**YORKSHIRE BRANCH: DEWSBURY DIVISION.**—The annual meeting of the Dewsbury Division will be held at the Dewsbury Infirmary to-day (Friday, May 4th), at 8.15 p.m.

**YORKSHIRE BRANCH: SHEFFIELD DIVISION.**—The annual meeting of the Sheffield Division will be held at the Church House, St. James Street, Sheffield, on Wednesday, May 16th, at 8.30 p.m. Agenda: Report of Executive Committee; election of officers for the ensuing year.

**YORKSHIRE BRANCH: WAKEFIELD, PONTEFRAC, AND CASTLEFORD DIVISION.**—The annual meeting of the Wakefield, Pontefract, and Castleford Division will be held at the Stratford Arms Hotel, Wakefield, on May 10th, preceded by a supper at 7.45 p.m. Dr. A. Manknell (Bradford) will give an address on the British Medical Association and its work for the general practitioner.

**YORKSHIRE BRANCH: YORK DIVISION.**—The annual general meeting of the York Division will be held to-day (Saturday, May 5th), at 8.30 p.m., in the York Medical Society's Room, 17, Stonegate. Agenda: Report of honorary secretary for 1927; election of officers and committee for ensuing year; reports on cases of varicose ulceration; fees for ambulance lectures; communication from West Riding Local Medical and Panel Committees regarding the proposed establishment of a medical institute in Leeds; the "Ideal Benefit Society"; reports by medical practitioners at request of coroners; York Civic and Health Week—appointment of subcommittee by Executive Committee; fees for medical service to non-insured persons.

## Meetings of Branches and Divisions.

### BIRMINGHAM BRANCH: NUNEATON AND TAMWORTH DIVISION.

A MEETING of the Nuneaton and Tamworth Division was held at Nuneaton General Hospital on April 18th.

Dr. C. F. RYAN read a paper on oedema of the eyelids. He emphasized the great importance of early examination of the eye itself, and for this purpose, he said, retractors might often be necessary, and in young infants even a general anaesthetic. Dr. Rudd classified the oedemas as follows: (1) inflammatory and non-inflammatory cases in which the conjunctiva and eyeball were normal; (2) cases in which there were changes in the conjunctiva and eyeball. In the inflammatory group he placed adjacent sepsis, dacryocystitis, dacryodermatitis, acute inflammation of lacrimal gland, conjunctivitis, herpes zoster ophthalmicus, and neutro eczema. In the non-inflammatory group he referred to general oedemas, as in heart case and nephritis, and to angioneurotic oedema. In group (2) included acute inflammation of the conjunctiva, any acute inflammation in the interior of the eyeball, acute glaucoma, acute iritis and iridocyclitis, parophthalmia, orbital cellulitis, tenonitis, thrombosis of cavernous sinus. He described two rare cases, one aneurysm between the carotid artery and the cavernous sinus, and one of thrombosis of the lower half of the conjunctiva only, following an operation on the maxillary antrum and possibly due to thrombosis in the pterygoid plexus. Dr. Rudd dealt very practically with the diagnosis, and especially the differential diagnosis, the conditions mentioned, and gave many helpful hints on treatment. A discussion followed, in which many members took part. Dr. Rudd having replied, on the motion of the CHAIRMAN he was ordered a hearty vote of thanks for his very useful and practical paper.

The SECRETARIES reported that they had written, with reference reports by medical practitioners at request of coroners, to three coroners, parts of whose districts were in the Division area, and it very favourable replies had been received from them all. He meeting instructed the secretaries to write to the county councils on the lines of the draft letter issued by headquarters. Dr. W. Lawson was elected representative and Dr. J. Chalmers deputy representative for 1928-29.

A letter received from the secretary of the London Public Medical Service was then considered, and after full discussion the following resolution was passed with one dissentient:

This meeting of the Nuneaton and Tamworth Division is entirely in sympathy with the resolutions passed by the annual meeting of the Public Medical Service for London on March 25th last, and desires its representative to vote against the acceptance of any capitation fee for public medical services, including medicine, either for juveniles or adults, which is less than 13s. per annum.

It was decided to hold the annual meeting at Nuneaton on Wednesday, July 18th.

### DORSET AND WEST HANTS BRANCH: WEST DORSET DIVISION.

A social meeting of the West Dorset Division was held on April 18th, when about sixty members and friends were present. The party gathered at Corfo Castle at 3 p.m., and Dr. DRU DRURY gave a most interesting address on its history and architecture; afterwards a tour of the ruin was made. Later some of the old cottages in the village of Corfo were pointed out, and then the party proceeded to view the Church of St. Edward the Martyr; the verger gave an account of its history and special features. Tea was provided by Dr. and Mrs. Dru Drury at the villa, which had been kindly lent by Mr. Cavendish-

Bentnck, one of the governors of the Middlesex Hospital. He also had thrown open his extensive gardens, and the party was thus able to take a pleasant stroll after tea. Later a move was made to Church Knowle, two miles away, when the rector, the Rev. H. L. Russell, described the Early English church. Finally Barnstone was visited; this manor house, containing a mixture of thirteenth century and Tudor architecture, was kindly opened for inspection by the tenant, Mr. Cooper. Very cordial votes of thanks were accorded, at the suggestion of the chairman, Dr. REES, to all who had assisted to make the meeting so successful, and especially to Dr. and Mrs. Dru Drury.

### METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held on April 17th at the Town Hall, Catford, S.E., with Dr. W. E. HALLINAN in the chair, when Dr. WILLIAM GOLDSMITH gave an address on the diagnosis and treatment of pruritic skin conditions.

Dr. Goldsmith defined three groups: those due to external irritants, those accompanied by eruptions, and the primary or essential. Scabies was the most common dermatosis; its distribution made diagnosis easy, and treatment with sulphur ointment, 1 drachm to the ounce, for three or four days was a certain cure. Sulphur must not be used longer or dermatitis followed. Urticaria was an idiosyncrasy, similar to serum rash and anaphylaxis; it was treated by adrenaline or pilocarpine. Parathyroid extract and calcium were useful, also injections of pituitrin, while externally carbolic lotion and calamine were recommended, with avoidance of baths and changes of temperature. Papular urticaria of children might persist till the age of 12; impetigo often followed. Eczema was a specialized reaction; external causes were more important than the internal, and trauma, rough clothing, improper drying, and wind were cited. In the treatment of early stages 1 per cent. resorcin in water was used first, then lead lotion, followed by calamine when the exudate was lessened, and zinc and ichthyol paste. X rays were beneficial in persistent cases. Eczema of nipples was frequently an after-effect of scabies. In the axilla it was due to hyperhidrosis. A lotion of spirit and tannic acid was used, and X rays would reduce the sweat glands. Primary facial eczema of infants occurred more often in males and the first-born; they were often ravenous feeders, and might be breast-fed or bottle-fed. The condition was often associated with asthma. Scratching must be prevented. A mask of white lint was used, smeared with 3 per cent. coal tar and zinc paste. The skin should be cleaned with liquid paraffin.

DRS. BRACKEN, BEATTIE, H. EVANS, and BANTOCKMAN joined in the discussion, and Dr. BUCHAN proposed a vote of thanks to the lecturer.

### METROPOLITAN COUNTIES BRANCH: WESTMINSTER AND HOLBORN DIVISION.

THE annual general meeting of the Westminster and Holborn Division was held on April 28th at the bottling works of the United Dairies at Scrubbs Lane, Willesden. The directors of the United Dairies had very kindly invited members and their friends to a short lecture by Mr. P. B. TUSTIN, and to an inspection of their methods of receiving, pasteurizing, and bottling milk. Tea was afterwards provided, and the annual general meeting followed immediately, at which the following officers were elected for 1928-29:

Chairman, Mr. Cecil Rowntree. Vice-Chairman, Mr. D. C. L. Fitzwilliams, C.M.G. Honorary Secretary and Treasurer, Dr. Cedric Hilliard. Representative in the Representative Body, Dr. R. R. Hay, O.B.E., Dr. F. Howard Humphris, and Dr. G. E. Orme.

This was the most successful meeting of the year, and everyone was interested and pleased with the modern methods used in this the largest bottling works in the world. Thanks were accorded to Mr. Ben Davies, the managing director, and to Mr. Tustin for their excellent arrangements and for providing transport to and from the works.

### METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.

A CLINICAL meeting of the Willesden Division was held on April 18th at the Willesden General Hospital, when Dr. BRIGHT BAXISTER spoke on ante-natal work.

He was strongly of the opinion that ante-natal work should be the province of the medical profession, and should be undertaken by them and not by the local municipal officers of health or by the midwives. In a large district there must be some central authority for purposes of organization, but other than this the work should be done by the general practitioner. The curriculum for midwives was insufficient to qualify them, and the local officer was not in a position to cultivate, between doctor and patient, the personal touch essential to the success of ante-natal work. It was most important that the doctor should appreciate the problems of the mother, and should be her friendly adviser; supervision of the general health was of prime importance, and should involve an inclusive medical examination of the patient. Unless there were definite indications a vaginal examination should not be performed during the first half of pregnancy, but should be a routine about the thirty-fourth week. The urine should be examined on several occasions during the first part, and part of pregnancy. The blood pressure was not raised as a rule during pregnancy, and a systolic blood pressure above 140 mm. Hg was not normal in a pregnant woman. The progress of the child should be watched. Suggestive evidence of twins was a uterus higher than normal at mid-term and an early slight oedema of the legs. A small patient often had a small

pelvis. Women with a boyish or male type of figure, small women with a flattening of the back just above the posterior superior iliac spines, and women with short forearms seemed particularly prone to contracted pelvis. Pelvimetric measurements were not of great reliability. An external conjugate of 7½ inches or less was unfavourable. Also unfavourable were cases in which the interspinous approached the interistal measurement. The best pelvimeter was the infant head; if it would engage in the brim, all was well, since a contracted pelvic outlet only comprised 1 per cent. of all pelvic contractures. A late engagement of the head was not always associated with abnormality, since it was not uncommon in otherwise normal cases. The resistance of the perineum, the dilatability of the vaginal canal, and the degree of softening of the cervix discovered on digital examination were important points in considering how long the dilatation of the genital would take. Toxaemia could not be totally excluded. Dr. Banister cited cases in which the urine had been normal three days previous to an eclamptic convulsion. Auto-infection undoubtedly occurred, but in cases in which haemolytic streptococci were found in the vagina prior to labour no known vaginal toilette would eradicate the organism. Ante-natal work was a personal matter always requiring the services of a doctor.

An interesting discussion followed. A unanimous vote of thanks was accorded to Dr. Banister for a very practical and enlightening address on the motion of Dr. J. WALKER BRASH, seconded by Dr. W. WOOLLEY SPOCKER.

Dr. William Paterson was nominated for the Council, Dr. C. F. T. Scott was elected representative at the Annual Representative Meeting, and Dr. G. W. R. Skene and Dr. C. de B. Thomson were elected deputy representatives.

#### SOUTHERN BRANCH: WINCHESTER DIVISION.

A MEETING of the Winchester Division was held at the County Hospital, Winchester, on April 18th. It was decided to refer the question of payment for police calls to the Southern Branch with the request that action be taken.

A discussion arose in connexion with a communication that had been received from the secretary of the Public Medical Service for London, in which it was advocated that a contract fee of 13s. per head per annum should be paid for attendance on juvenile members of the Independent Order of Oddfellows instead of 8s. 8d. suggested by the Medico-Political Committee. There was general agreement that the higher fee was not justifiable for rural districts, and it was resolved that the fee to be aimed at should be 8s. 8d., and that medical examinations should be insisted upon before acceptance of any applicant.

Dr. Livingston, chairman, and the honorary secretary were elected representative and deputy representative respectively of the Division in the Representative Body for 1928.

Mr. B. H. PROCOCK, surgeon to the hospital, then read a paper on the etiology and treatment of movable kidney.

#### STAFFORDSHIRE BRANCH: SOUTH STAFFORDSHIRE DIVISION.

A MEETING of the South Staffordshire Division was held on March 29th. After supper Mr. C. B. GOULDEN, ophthalmic surgeon to the London Hospital, delivered a lecture on ophthalmic emergencies in general practice. He dealt with ophthalmia neonatorum, concomitant squint, and acute glaucoma, referring particularly to the diagnosis, prevention, and treatment of each. There were forty-five members present, and at the close of the lecture many questions were asked, to which Mr. Goulden replied. A vote of thanks to the lecturer, proposed by Mr. W. F. CHOLMELEY, was carried unanimously.

#### WILTSHIRE BRANCH: TROWBRIDGE DIVISION.

THE annual general meeting of the Trowbridge Division was held at the Town Hall, Trowbridge, on April 18th, fourteen members being present.

A vote of condolence with the relatives of the late Dr. John Aage was passed.

The following officers were elected for the year 1928:

Chairman, Dr. D. Leigh Spence. Vice-Chairman, Dr. J. C. Keir. Honorary Secretary, Dr. A. D. Hamilton. Representative in Representative Body, Dr. C. E. S. Flemming. Deputy Representatives in Representative Body, Drs. Crossley and Lawrence.

A letter from the Public Medical Service for London re fees for contract practice was discussed. A motion was passed "that this Division considers that it would be a mistaken policy for the British Medical Association to fix terms for contract practice for juveniles which would apply throughout the country, should such rates be lower than those for adult members." The secretary was instructed to report this resolution to headquarters, enclosing a copy of the letter from the Public Medical Service for London.

The programme of meetings for 1928-29 was provisionally arranged.

#### WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.

THE spring meeting of the Worcestershire and Herefordshire Branch was held at the Infirmary, Worcester, on April 26th, at 5 p.m., with the president, Dr. NALST, in the chair.

Mr. J. B. CAVENAGH of Worcester read an instructive and interesting paper on the diagnosis and treatment of acute otitis media, with illustrations and statistics, emphasizing the necessity of early incision. Mr. POWER of Hereford described a successful case of arthroctomy for acute tuberculous disease of the elbow-joint.

Mr. DEVEREUX of Malvern showed a case of osteosarcoma of the right scapula, and Dr. NEVILLE CROWE of Worcester one of rudimentary arms in an infant.

## National Insurance.

### PRACTITIONER'S NAME REMOVED FROM WORCESTER MEDICAL LISTS.

WE have received from the Ministry of Health notification the Minister's decision in the case of Dr. J. I. Hagard, who conduct was the subject of an inquiry at Worcester on Janus 10th, 20th, and 21st, following a representation by the C. of Worcester Insurance Committee to the effect that the continuance upon its medical list of this practitioner would be prejudicial to the efficiency of the medical service of the insured. The formal document embodying the Minister's decision, dated April 25th, reads as follows.

#### National Health Insurance Act, 1924.

The Minister of Health, having read and considered the report made by the Inquiry Committee constituted by him under Part of the National Health Insurance Medical Benefit Consolidated Regulations, 1924, to inquire into the case of Dr. John Ian Hagard of 51, Broad Street, Worcester, is satisfied that Dr. Hagard's continuance on the medical list would be prejudicial to the efficiency of the insured, and he has accordingly decided to remove, and does hereby in pursuance of Section 24 (2) (i) of the National Health Insurance Act, 1924, and of all other powers enabling him, remove Dr. Hagard's name from the medical list of the Insurance Committees for the county borough and county of Worcester, and further hereby directs that this decision shall take effect as from and including the 14th May, 1928.

The Minister has also considered the question of the costs of the inquiry, and hereby directs that no order be made as to such costs.

## Correspondence.

### The Petrol Tax.

SIR,—I am writing as an ordinary general practitioner, who car is on the road for fourteen hours a day, seven days a week in a practice which consists of myself and a partner. The petrol tax is going to mean an addition of £30 to the £28 already pay-as-car-taxation. I am not claiming that I am worse off than my brethren, for I know that there are men in crowded industrial or poorer country districts who must be even harder hit. When we all returned to our practices after our service in the war we were given a rebate of 3d. in the gallon on the petrol tax then in force.

I am writing to you, Sir, to ask whether, as an Association we are going to take up this matter and try to obtain such a rebate before the Budget gets through committee.—I am, etc.

A. P. HOPE SIMPSON.

•• We think that Dr. Hope Simpson may take it for granted that the Medico-Political Committee of the British Medical Association will take this matter into consideration. Experience of what happened in 1920 seems to suggest, however, that any concession would be difficult to extract from the Government. When the horse-power tax was introduced in that year, and the petrol rebate for medical practitioners was wiped out, the Association made every effort to secure preferential treatment for doctors from the Ministry of Transport, but without success.

### Contract Rate for Juvenile Oddfellows.

SIR,—It has very seldom happened that I am in agreement with the expressed views of the Medical Practitioners' Union; but I must confess that I think that a circular which I have just received from that society, dealing with the action of the Insurance Acts Committee and the Central Council of the British Medical Association in the matter referred to above, is justified, and merits the approval of panel practitioners.

I was amazed when I read the report of the action of the Council, as reported in the Supplement for April 21st (p. 130), more particularly when I saw that the Insurance Acts Committee had approved this retrograde step with only four dissentients. I can imagine nothing more calculated to reduce all fees for medical practice among the working classes, and nothing more certain to influence approved societies in demanding a lowering of the capitation fee under the National Insurance Acts, and the Minister of Health in his consideration of the subject.

Years ago it was decided by the Association that the rates of contract practice for juvenile members of friendly societies should not be less than the capitation fee under the Insurance Acts. I know of nothing that has transpired since then to account for this *volte face* in the attitude of the Council. It is, of course, disappointing and depressing to learn that practitioners in some places—some of them doubtless members of the British Medical Association—have been, and are, accepting less rates. But these "non-union" men have always, unfortunately, been with us. It is something new to me that the policy of the

Association is to be governed by those who will not act in conformity with its expressed views, or by the actions of doctors who do not even belong to the Association or any other medical society.

It is useless for Dr. Dunn to say that the proposed fee would not in any respect form a standard for the fee to be paid in national health insurance. He may not regard it as such, but the Minister and the approved societies will make it such. And Dr. Bone's argument that the proposed 6s. 6d. is as good as the insurance 9s., by reason of the freedom from certification, records, etc., is simply begging the question. It assumes that the profession is satisfied with the 9s. capitation fee, whereas, as Dr. Bone knows very well, it never has been satisfied with it or allowed that it constitutes a proper payment for the work done, and only accepted it under what one may term *force majeure*. The action of the Council and the Insurance Acts Committee in this matter seems to me to be the most retrograde step that has been taken for a long time, and tends to cut from under our feet all ground for future bargaining with either the Minister or the approved societies. It is to be hoped that the subject will form matter for discussion at the Representative Meeting, and perhaps also at the Annual Conference of Local Medical and Panel Committees; although, whatever be the result of such discussion, I fear that the real mischief has already been done.—I am, etc.,

Hull, April 26th.

JOS. NELSON.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon-Commander F. J. Gowan to the *Victory*; G. F. Syms to the *Flora*; E. L. Markham, O.B.E., to the *Conquest*; G. V. Hobbs to the *Cardiff*.

Surgeon Lieutenants R. A. Graft to the *Birmingham*; J. Hamilton to the *Pembroke* for R.N. Barracks, Chatham; C. B. Nicholson to the *Victory*.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon-Lieutenant G. McCull to be Surgeon-Lieutenant-Commander. Surgeon-Lieutenant B. R. B. Roberts to the *Courageux*. E. C. Johnson and S. Jenkins have entered on probationary Surgeon Lieutenants and attached to List 2 of the London Division. Probationary Surgeon Sublieutenant W. McE. Macgregor is confirmed in his rank, with seniority of March 18th, 1927.

### ROYAL ARMY MEDICAL CORPS.

Captains J. F. W. Meenan and G. J. McGorty, M.C., to be Majors (prov.).

### ROYAL AIR FORCE MEDICAL SERVICE.

Flying Officer L. I. Hyler is promoted to the rank of Flight Lieutenant, with effect from January 6th, 1928, and with seniority of January 6th, 1927 (substituted for notification in the *London Gazette* of January 10th, 1928).

P. B. L. Potter is granted a short service commission as a Flying Officer for three years on the Active List, with effect from and with seniority of March 20th, 1928, and is seconded for duty with the Princess Alice Memorial Hospital, Eastbourne.

### RESERVE OF AIR FORCE OFFICERS: MEDICAL BRANCH.

Flight Lieutenant L. Game ceases to be employed with the Regular Air Force.

### INDIAN MEDICAL SERVICE.

Consequent on the grant of leave to Lieut.-Colonel J. K. S. Fleming, O.B.E., Lieut.-Colonel H. E. Stanger-Leathes, Assistant Director of Public Health, Delhi, is appointed to officiate as Deputy Director-General, Indian Medical Services.

Major L. A. P. Anderson, an officer of the Medical Research Department, is confirmed as Assistant Director, Central Research Institute, Kasauli, with effect from April 4th, 1928.

Major C. Newcomb is placed on foreign service under the Indian Research Fund Association. He is to be placed in the Medical Research Department, are placed in the Medical Research Department of the Government of Bombay to undertake a malaria survey of Bombay city.

The services of Major J. R. D. Webb, O.B.E., are placed temporarily at the disposal of the Chief Commissioner, Delhi, for appointment as officiating Assistant Director of Public Health, Delhi, vice Lieut.-Colonel H. E. Stanger-Leathes.

To be Captains: P. E. B. Manning, with seniority April 3rd, 1925; S. Smyth, with seniority January 24th, 1927. To be Lieutenants: J. Quigley, with seniority September 1st, 1924; R. A. Hawthornthwaite, with seniority February 19th, 1925; R. D. Alexander, with seniority November 21st, 1926.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

The following officers, having attained the age limit of liability to recall, cease to belong in the Reserve of Officers: Lieut.-Colonels H. E. J. A. Howley and A. F. Carlyon.

#### TERRITORIAL ARMY.

##### ROYAL ARMY MEDICAL CORPS.

Captain W. Leslie, M.C., to be Major, with precedence as from November 30th, 1927. Lieutenant C. C. P. Anning is restored to the establishment. J. A. Kerr to be Lieutenant.

### TERRITORIAL ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Captain G. F. Shepherd, from the Active List, to be Captain.

### COLONIAL MEDICAL SERVICES.

Dr. E. J. Clark, M.C., appointed Medical Officer of Health, Sanitation Branch, Medical Department, Gold Coast. Dr. D. D. Barker appointed Medical Officer, West African Medical Staff (Sierra Leone). Drs. J. Cauchi and A. Robertson promoted Senior Sanitation Officer and Medical Officer of Health, Nigeria, respectively. Dr. V. E. Whitman appointed Medical Officer of Health, Sanitation Branch, Medical Department, Gold Coast. Dr. W. Magowan appointed Medical Officer, Medical Department, Gold Coast.

### VACANCIES.

ACTON BOROUGH EDUCATION COMMITTEE.—School Dental Surgeon. Salary £500 per annum, rising to £600.

ACTON HOSPITAL, Gimmersbury Lane, W.3.—Male Resident Medical Officer. Salary £150 per annum.

BIRNLEY AND WAKEFIELD JOINT SANATORIUM COMMITTEE.—Assistant Tuberculosis Officer and Resident Medical Officer. Salary £450 per annum, rising to £600.

BENFORD BOROUGH.—Medical Officer of Health. Salary £900 per annum, rising to £1,100.

HELPS.—QUEEN'S UNIVERSITY.—Professor of Pathology. Salary £900 with supplement and pension.

BIRKENHEAD UNION.—Two Resident Assistant Medical Officers. Salary £200 per annum, rising to £300.

HOLINGROVE HOSPITAL, Wandsworth Common, S.W.11.—Honorary Physician. HINSTON UNIVERSITY.—Demonstrator in Pathology (part-time).

CHURCH ROYAL INFIRMARY.—House-Surgeon (male). Salary £150 per annum.

CYMRIDLAND AND WESTMORLAND MENTAL HOSPITAL, Carlisle.—Medical Superintendent. Salary £850 per annum, rising to £1,000.

DARLINGTON GENERAL HOSPITAL.—Senior House-Surgeon (male). £150 per annum.

DEVON MENTAL HOSPITAL, Exminster, near Exeter.—Junior Assistant Medical Officer (male, unmarried). Salary £300 per annum, rising to £350.

DEPTFORD COUNTY COUNCIL.—Assistant Medical Welfare Medical Officer (woman). Salary £600 per annum, rising to £650.

EXETER: ROYAL DEVON AND EXETER HOSPITAL.—Assistant House-Surgeon (male). Salary at the rate of £100 per annum.

FIM GOVERNMENT.—District Medical Officer. Salary £500 per annum, rising to £725.

HAMSTEAD GENERAL AND NORTH-WEST LONDON HOSPITAL, Haverstock Hill, N.W.3.—Surgeon to Out-patients.

HONG-KONG UNIVERSITY.—Professor of Physiology. Salary £800 a year, rising to £1,000.

HOSPITAL OF ST. JOHN AND ST. ELIZABETH, Grove End Road, N.W.8.—Resident House-Physician (male). Salary at the rate of £100 per annum.

KING EDWARD VII WELSH NATIONAL MEMORIAL ASSOCIATION.—Two Resident Medical Officers at the Glan Ely Hospital. Salaries £350 and £200 per annum respectively.

LEDS CITY.—Assistant Medical Officer for Maternity and Child Welfare. Salary £600 per annum.

LEDS PUBLIC DISPENSARY.—(1) Honorary Physician. (2) Honorary Surgeon. (3) Junior Resident Medical Officer; salary £150 per annum.

LEWISHAM BOROUGH COUNCIL.—Assistant Medical Officer of Health and Maternity and Child Welfare Medical Officer (male). Salary at the rate of £550 per annum, rising to £750.

LIVERPOOL AND DISTRICT HOSPITAL FOR DISEASES OF THE HEART.—Research Fellowship. Value £150 per annum.

LONDON JEWISH HOSPITAL, Stepney Green, E.1.—Resident Medical Officer and Junior Resident Medical Officer. Salaries at the rate of £150 and £100 per annum respectively.

LONDON SKIN HOSPITAL, Fitzroy Square, W.1.—Honorary Physician or Surgeon, and Surgical Registrar.

MANCHESTER: AROCHS HOSPITAL.—House-Physician. Salary at the rate of £100 per annum.

MELBOURNE: CHILDREN'S HOSPITAL.—Medical Superintendent of Orthopaedic Section. Salary £1,000 per annum with emoluments, or £1,250 without.

NEW ZEALAND GOVERNMENT.—Senior Assistant Medical Officers (male) in the Mental Hospitals Department. Salary, single men £765, married men £900.

NORTHERN IRELAND.—Medical Referee under the National Health Insurance Scheme. Salary £600 a year, rising to £900, together with bonus.

PRINCESS LOUISE KENSINGTON HOSPITAL FOR CHILDREN, St. Quintin Avenue, W.16.—Honorary Assistant Dental Surgeon.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—Physician in charge of the Skin Department.

ROTHERHAM HOSPITAL.—House-Physician (male). Salary £180 per annum.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—(1) Ophthalmic Surgeon. (2) Assistant Physician.

ROYAL NORTHERN HOSPITAL, Holloway, N.7.—House-Surgeon. Salary at the rate of £70 per annum.

ST. ALBANS AND MID-HERTS HOSPITAL AND DISPENSARY.—Male Resident Medical Officer. Salary £150 per annum, rising to £200.

ST. JOHN'S HOSPITAL, Lewisham, S.E.13.—Honorary Anaesthetist.

SHEFFIELD ROYAL HOSPITAL.—Assistant Physiologist. Salary £400 per annum.

SOUTHAMPTON: ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL.—House-Physician (male). Salary £130 per annum.

STOCKTON AND THORNTON HOSPITAL, Stockton-on-Tees.—Junior Resident Medical Officer (male). Salary £150.

STOKE NEWINGTON BOROUGH COUNCIL.—Medical Officer of Health. Salary at the rate of £700 per annum, rising to £800.

STOKE-ON-TRENT: NORTH STAFFORDSHIRE ROYAL INFIRMARY.—(1) Assistant House-Physician; salary £125 per annum. (2) Honorary Anaesthetist. (3) Honorary Assistant Aurist Surgeon. (4) Honorary Assistant Orthopaedic Surgeon.

WALSALL COUNTY BOROUGH.—Assistant Medical Officer (Maternity and Child Welfare) (female). Salary £600 per annum, rising to £700.

WALSALL GENERAL HOSPITAL.—Senior House-Surgeon. Salary £200 per annum.

WATERLOO AND DISTRICT GENERAL HOSPITAL, Waterloo, near Liverpool.—Resident House-Surgeon. Salary £50 per annum.

WEST HAM COUNTY BOROUGH.—Assistant Resident Medical Officer at Dagenham Sanatorium. Salary at the rate of £250 per annum.

WILLESDEN PARISH.—Resident First Assistant Medical Officer (male) at Park Royal Hospital, Acton Lane. Salary £430, rising to £460.

WOOLWICH AND DISTRICT WAR MEMORIAL HOSPITAL, Shooters' Hill, S.E.18.—House-Surgeon. Honorarium £120 per annum.

WORCESTER GENERAL INFIRMARY.—Senior and Junior Resident Medical Officers. Salaries £180 and £120 per annum respectively.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Bradford-on-Avon (Wiltshire), St. Margaret's Hope (Orkney), Slough (Buckinghamshire), Buckhaven (Fifehire). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

### APPOINTMENTS.

FELLOWS, F. M., M.B., C.M., F.R.C.S.Ed., District Medical Officer and Public Vaccinator for the Poynton, etc., District of the Macclesfield Union.

FOWLER, W. M., M.B., Ch.B., Medical Referee for the Lochaber District (Sheriffdom of Inverness, Elgin, and Nairn), vice A. C. Miller, M.D., deceased.

McGIBBON, John E. C., M.B., B.S.Lond., D.L.O., Honorary Assistant Laryngologist and Aurist, Royal Southern Hospital, Liverpool.

### DIARY OF SOCIETIES AND LECTURES.

#### ROYAL SOCIETY OF MEDICINE.

Social Evening.—Mon., 8.30 p.m., Reception by the President and Lady Berry. 9.15 p.m., Illustrations Address by Mr. P. B. Tustin: Milk—from Cow to Consumer. A number of exhibits, lent by the lecturer, will be on view. Music and light refreshments.

Section of General Medicine.—Annual General Meeting.

Section of General Surgery.—Annual Meeting. Dr. Graham J. Dukes (Pathology). Mr. Ernest Miles will also speak.

Section of Neurology.—Thurs., 8.30 p.m., Annual General Meeting, followed by Pathological Meeting.

Clinical Section.—Fri., 5 p.m., Cases.

Section of Paediatrics.—Sat. and Sun., Annual Provincial Meeting at Bath.

HARVEIAN SOCIETY, Paddington Infirmary, Harrow Road, W.—Thurs., 4.30 p.m., Clinical Meeting.

WEST KENT MEDICO-CHIRURGICAL SOCIETY, Miller General Hospital, Greenwich Road, S.E.10.—Fri., 8.45 p.m., President's Address.

#### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Mon., May 7th, to Sat., May 12th. Cancer Hospital, Fulham Road, S.W.3: Tues., 2 p.m., Operations and Demonstrations; no fee. Hospital for Sick Children, Great Ormond Street, W.C.1: Tues., 2.30 p.m., Ward Round, no fee. Royal London Ophthalmic Hospital, City Road, E.C.1: Wed., 12 noon, Demonstration; no fee. Central London Throat, Nose and Ear Hospital, Cray's Inn Road, W.C.1: Intensive Course (Clinical), Operative Surgery Clinics, Maudsley Hospital, Denmark Hill, S.E.5: Special Post-graduate Course in Psychological Medicine, afternoons only; fee 45 s.; continuing for four weeks. Central Hospital, Judd Street, W.C.1: After-course in Lecture Demonstrations and Operations p Hospital, Vincent Square, S.W.1: Afternoon Course. London School of Tropical Medicine, Endsleigh Gardens, W.C.1: Tues. and Thurs., 2 p.m., Lecture Demonstrations. Royal Free Hospital, Cray's Inn Road, W.C.1: Wed., 5.15 p.m., last Lecture Demonstration in Series in Electrophysiology. St. John's Hospital, Leicester Square, W.C.2: Special Course (Clinical), and Series of Lectures throughout the month; Pathology Course can be arranged if desired. Copies of all syllabuses sent on application, also details of general course of work. Apply Secretary, Fellowship of Medicine, 1, Wimpole Street, W.1.

BELGRAVE HOSPITAL FOR CHILDREN, 1, Clapham Road, S.W.9.—Wed., 4.30 p.m., Clinical Meeting.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Mon., 5 p.m., Drug Eruptions. Tues., 5 p.m., Alopecia, Areata and Vitiligo. Thurs., 5 p.m., Mycosis Fungoides. Fri., 5 p.m., Skin Diseases due to Protein Sensitization.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 p.m., Demonstration of Surgical Cases; 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 p.m., Demonstration of Medical Cases; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.7.—Tues., 3.15 p.m., Treatment of Acute Suppuration.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations, Surgical Wards. Skin Department; 2 p.m. to 5 p.m., Eye and Gynaecological Departments. Tues., 10 a.m. to 1 p.m., Medical Wards. Demonstration of Venereal Diseases, Electrical and Dental Departments; 2 p.m. to 5 p.m., Gynaecological Operations, Throat, Nose, and Ear Department. Wed., 10 a.m. to 1 p.m., Children's Medical Department, Medical Wards. Pathological Demonstration; 2 p.m. to 5 p.m., Eye Department, Surgical Wards. Thurs., 10 a.m. to 1 p.m., Neurological and Massage Departments; 2 p.m. to 5 p.m., Eye and Genito-urinary Departments. Fri., 10 a.m. to 1 p.m., Skin, Dental, and Electrical Departments, Medical Wards, Clinical Demonstration; 2 p.m. to 5 p.m., Throat, Nose, and Ear Department. Sat., 9 a.m. to 1 p.m., Medical Wards, Throat, Nose, and Ear Operations, Medical Children's Department, Bacterial Therapy Department. Daily at 2 p.m., Operations, Medical and Surgical Out-patient Departments. Special Lectures, Tuesdays, May 8th and 11th, at 4.30 p.m.: Gastric and Duodenal Ulceration.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Royal Infirmary: Wed., 4.15 p.m., Medical Cases.

LIVERPOOL UNIVERSITY CLINICAL SCHOOL ANTE-NATAL CLINICS.—Royal Infirmary: Mon. and Thurs., 10.30 a.m. Maternity Hospital: Mon. Tues., Wed., Thurs., and Fri., 11.30 a.m. (Fee £2 2s. for three months' attendance.)

MANCHESTER ROYAL INFIRMARY.—Tues., 4.15 p.m., Constipation. Fri., 4.15 p.m., Demonstration of Surgical Cases.

### Diary of the Association.

#### MAY.

- 4 Fri. London: Consulting Pathologists Group Committee, 2.30 p.m.
- 5 Sat. West Suffolk Division: West Suffolk General Hospital. Mr. T. H. Just on Acute Inflammatory Conditions of the Ear, 8.45 p.m.
- York Division: Annual Meeting, York Medical Society's Room, 17, Stonegate, 8.30 p.m.
- 6 Sun. Mid-Cheshire Division: General Hospital, Aldrincham. Dr. Capon on Intracranial Birth Injuries, 3.45 p.m.
- 8 Tues. Bournemouth Division: Annual Meeting, St. Peter's Small Hall, Bournemouth, 4.15 p.m.
- St. Pancras Division: Annual Meeting, B.M.A. House, Tavistock Square, W.C.1, 9 p.m.
- 9 Wed. Chichester and Worthing and Hnrsham Divisions: Annual Meeting, Burlington Hotel, Chichester, 7.30 p.m.
- Renal Tuberculosis, 6 p.m.
- Dorset and West Hants Hospital, Sherborne, 3 p.m.
- Lanarkshire Division: Annual Meeting, St. Enoch Station Hotel, Glasgow, 3 p.m.
- Marylebone Division: 11, Chandos Street, Cavendish Square, W.1. Dr. Hawthorne will open a discussion on Lunacy Law Reform, and Mr. McAdam-Eccles on the General Practitioner and Paying Beds in Hospitals, 8.30 p.m.
- South-Eastern Counties Division: Annual Meeting, Railway Hotel, Newtown St. Boswells, 3 p.m.
- 10 Thurs. London: Charities Committee, 2.30 p.m.
- Hampstead Division: Hampstead General Hospital, 8.30 p.m.
- Walsfield, Pontefract, and Castleford Division: Annual Meeting, Stratford Arms Hotel, Walsfield. Dr. A. Macknell on the British Medical Association and its Work for the General Practitioner. Meeting preceded by supper, 7.45 p.m.
- 11 Fri. London: Library Subcommittee, 2.30 p.m.
- Chesterfield Division: Maternity Hospital, Chesterfield. R.M.A. Lecture by Professor Louise Mellroy on the Management of Labour, 8.15 p.m.
- City Division: Clinical Meeting.
- Southport Division: Annual Meeting, 52, Houghton Street, Southport, 8.15 p.m.
- 15 Tues. London: Central Ethical Committee, 2.15 p.m.
- Lewisham Division: Annual Meeting, Town Hall, Calford, S.E.6, 8.45 p.m.
- South-West Essex Division: Claybury Mental Hospital, Woodford Bridge, 3.30 p.m.
- 16 Wed. London: Hospitals Committee, 2.15 p.m.
- Sheffield Division: Annual Meeting, Church House, St. James Street, Sheffield, 8.20 p.m.
- Sunderland Division: Royal Infirmary, Sunderland. Dr. J. C. Spence on Hypertrophic Pyloric Stenosis, 8.15 p.m.
- Willesden Division: Annual Meeting.
- 17 Thurs. London: Insurance Acts Formulary Subcommittee, 11 a.m.
- London: Insurance Acts Foods and Drugs Conference, 2.20 p.m.
- London: Naval and Military Committee, 2.20 p.m.
- Jersey Division: General Hospital. Mr. C. H. B. Avarne on *Smallpox*, 2.30 p.m.
- 18 Fri. Suffolk Hospital. Sir Thomas Little, 2.30 p.m.
- 19 Sat. rs in Fibrosis, 8.30 p.m.
- 23 Wed. mittee, 12 noon.
- 24 Thurs. Cornwall Infirmary.

### BIRTHS, MARRIAGES, AND DEATHS.

*The charge for inserting announcement of Births, Marriages, and Deaths is 2s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.*

#### BIRTHS.

SHERRARD.—On April 26th, at "Sarnia," 394, Upper Richmond Road, East Sheen, London, S.W.14, to the wife of Raphael Sherrard, L.R.C.P., L.M., L.R.C.S.I., a son.

SPROTT.—On April 27th, 1928, at the Prince Christian Nursing Home, Windsor, to Laura, the wife of Norman A. Sprott, M.D., M.Ch., F.R.C.S., of Eton, a daughter.

#### MARRIAGES.

RICHES-BRAND.—At All Saints' Church, Driffield, East Yorks, on May 2nd, by the Rev. Canon Sharrock, M.A., Vicar, assisted by the Rev. Sidney Barker, Eric William Riches, M.C., M.S., F.R.C.S., son of the late William Riches, Esq., Alford, Lincs, to Anne Margaret Selvia, youngest daughter of Dr. A. T. Brand, J.P., V.D., Inverly, Driffield.

TUCK-ELMIST.—On April 25th, at St. Peter's, Littleover, Derby, by the Rev. C. R. Brown, M.A., Vicar, Wilfred Henry, second son of Mr. W. H. Tuck, Stoke Ferry, Norfolk, to Mary Hermione Elmist, M.B., B.S., only child of Mr. and Mrs. W. Elmist, Lindum, Littleover, Derby.

#### DEATHS.

LYNN-THOMAS.—On April 30th, 1928, at Ruthven, Kinross-shire, Inverness-shire, Lynn, the beloved husband of Dorothy Guthrie, and the only son of Sir John and Lady Lynn-Thomas, Ltwyndrys, Llechryd, Cardiganshire, aged 31.

RYMER.—On April 23rd, 1928, at Sullom Holt, Barnacre, Gar-lang, Amy Gertrude, the beloved wife of Arthur Ernest Rayner, M.D., of Preston, Lanes.

#### CURRENT NOTES.

##### Hotel Accommodation at the Cardiff Meeting.

The following is a list of the hotels in Cardiff and district, with a statement of the charges for bed and breakfast:

	s.	d.
Angel Hotel ... ..	14	0
Royal Hotel ... ..	14	0
Queen's Hotel ... ..	14	0
Grand Hotel ... ..	10	0
Barry's Hotel ... ..	9	6
Alexandra Hotel ... ..	8	0
Railway Hotel ... ..	8	6
Great Western Hotel ... ..	8	6
Central Hotel ... ..	7	6
Sandringham Hotel ... ..	7	6
Esplanade Hotel, Penarth ... ..	18	0
Washington Hotel, Penarth ... ..	10	0
King's Head Hotel, Newport ... ..	10	0
Westgate Hotel, Newport ... ..	10	0

\*This charge includes dinner.

Penarth is only about five miles from Cardiff and so within easy reach. Newport (Mon.) is about twelve miles from Cardiff, and the new arterial road connecting the two towns will be in an advanced stage of completion by July. There is also an excellent train service, the journey taking about twenty minutes. Besides the above accommodation a number of boarding-houses and hostels are available, also a large amount of private accommodation. It would be a great favour if those intending to come to the Cardiff Meeting would write as soon as possible, stating the exact amount and kind of accommodation required; also those who cannot come, after booking accommodation, are earnestly requested to notify the hotels and lodgings secretary to that effect. It would be of great assistance if members would state if they are coming by car. All communications regarding the reserving of accommodation should be sent to the honorary secretary of the Hotels and Lodgings Committee, Dr. Abel Evans, 36, Newport Road, Cardiff.

##### Middlemore Prize, 1929.

The Middlemore Prize consists of a cheque for £50 and an illuminated certificate, and was founded by the late Richard Middlemore, F.R.C.S., of Birmingham, to be awarded for the best essay or work on any subject which the Council of the British Medical Association may from time to time select in any department of ophthalmic medicine or surgery. The Council is prepared to consider an award of the prize in the year 1929 to the author of the best essay on the following subject: "The clinical study of the vitreous body, its swellings, contractions, opacities, and reactions to toxic invasion; with special reference to glaucoma and detached retina." Essays submitted in competition must reach the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, by December 31st, 1928. Each essay must be signed with a

motto and accompanied by a sealed envelope, marked on the outside with the motto, and containing the name and address of the author. In the event of no essay being of sufficient merit, the prize will not be awarded in 1929.

##### Prizes for Essays by Medical Students, 1929.

The Council of the British Medical Association proposes to award, in March, 1929, prizes of £25 each for the best essays by final-year medical students on "The symptoms and sequelae of encephalitis lethargica, with their appropriate treatment." One prize will be given in each of the following groups of medical schools:

- Group 1.—St. Bartholomew's Hospital; St. Thomas's Hospital; Guy's Hospital; London Hospital.
- Group 2.—University College Hospital; St. Mary's Hospital; Middlesex Hospital; Royal Free Hospital (London School of Medicine for Women); Charing Cross Hospital; Westminster Hospital; King's College Hospital; St. George's Hospital.
- Group 3.—University of Birmingham; University of Bristol; University of Durham; University of Leeds; University of Liverpool; Victoria University of Manchester; University of Sheffield; Welsh National School of Medicine.
- Group 4.—University of Aberdeen; Anderson College of Medicine; University of Glasgow; Glasgow School of Medicine for Women; St. Mungo; Edinburgh; School of Medicine of Royal St. Andrews.
- Group 5.—Queen's University of Dublin (Trinity College); National University of Ireland (University College, Cork; University College, Dublin; University College, Galway); Royal College of Surgeons in Ireland (Schools of Surgery).
- Group 6.—The Medical Schools in the British Empire outside the British Isles.

The prizes will be awarded to the writers of the essays deemed by the examiners to be the best sent in, but if no essay received from a group is considered by the examiners to be deserving of a prize, no prize will be awarded. The essays, which must not exceed 5,000 words, should be clinical in nature, and must include concise notes of three cases personally observed by the student. Essays should be plainly written or typed on foolscap paper (one side only), and must reach the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than January 12th, 1929. Each essay must be signed by a pseudonym only, and be accompanied by a signed and dated statement that the essay has been the bona-fide work of the competitor, and that he or she has not yet passed the final professional examination, together with the candidate's full name, pseudonym, address, and medical school. The essays received will be adjudicated on by examiners appointed by the Council from among members of the Association not resident in the area of the group. The decision of the Council will be final.

##### Subject for Prize Essay, 1930.

The subject for an essay in a competition on somewhat similar lines, the prize for which will be awarded in March, 1930 (essays to be received by mid-January, 1930), will be: "Three cases illustrative of the value of ante-natal observation of pregnant women." Further particulars of this competition will be announced in due course.

## MEDICAL CERTIFICATION IN HEALTH INSURANCE.\*

BY

J. O. LYTH, M.B., B.S.LOND.,

LATE HONORARY SECRETARY, YORK LOCAL MEDICAL AND PANEL COMMITTEE.

We are all human, but rules and regulations do not always make allowances for human nature; and before proceeding to deal with the certification rules individually, I would like to stress one aspect of the question which has, I think, sometimes been rather lost sight of. It is that medical practitioners as a profession are not trained to regard the issuing of medical certificates as their main object in life, nor even as an important part of it. The Hippocratic oath, which still forms the ideal after which every medical student is trained to strive, contains no mention of medical certification. Yet we must recognize the fact that we have come to live in a bureaucratic age; more and more our lives are governed by rules and regulations. But the practice of medicine is essentially difficult to tie up into parcels with red tape; all sorts of unforeseen side issues crop up. However good rules may be, if too rigidly applied they may become a tyranny. No allowance can be made for times of epidemic, when every moment of a doctor's life, from getting up to going to bed—and often when called out of bed—may be occupied with responsible and worrying work.

It is for these reasons that I shall appeal to you, as principally representing approved societies, to make what allowances you can for the trials of medical practitioners in this matter of medical certification. We cannot but view the question from different angles. You are naturally and rightly concerned to save your societies' funds, or at least to see that they are properly expended. The doctor is not directly concerned with the funds of the societies; his aim is to get his patient well as quickly as possible; and as a doctor lives by his practice, and his practice depends on the goodwill of his patients, he must also have regard to his patient's point of view too. It is possibly these somewhat opposing points of view which have in the past engendered a lack of sympathy—I had almost said an antipathy—which it would be useless to ignore as having existed between the medical profession and approved societies generally. I can truly say that during the fifteen years or so that I have been interested in medical politics it has been my aim to improve the relations of doctors and approved societies, and it is in the hope that this aim may be furthered that I am here to-day.

I propose now briefly to consider some of the present certification rules, pointing out the difficulties which face medical practitioners, and offering some suggestions whereby they may be lessened or removed by the co-operation and goodwill of the approved society officials.

### *Change of Doctor and Certification.*

The forms under Rule 2 shall not be used for any patient other than one whom the practitioner is attending as an insured person. This raises the question of the proper procedure to be adopted when an insurance practitioner is attending an insured person, not on his list, in a private capacity. Cases are likely to crop up more frequently than formerly owing to the recently introduced regulation requiring a fortnight's notice before an insured person can change his doctor. If he refuses to be attended during the fortnight by the doctor on whose list he is, and requires attention from another insurance practitioner, this will have to be given privately. Whether a charge is made or not, if certificates have to be given, Form Med. 40 cannot be used. In such cases a plain private certificate, stating the cause of incapacity, can be, and should be, accepted by the approved society. I have personally on several occasions had such a form refused in the first instance, though after explanation it has been accepted. I suggest that it should be generally made known that such forms will in these circumstances be accepted.

Several pitfalls are exposed to the feet of the unwary practitioner when giving a first certificate under Rule 3. It is to be given "if desired by the insured person." In actual practice I have found that here, as in many other things, it is necessary to usurp the place of Providence, and either provide them with a certificate without demand, or ask them whether they desire one; but it is not a duty.

It is in the interpretation and carrying out of the rule regarding second certificates and further intermediate certificates that in my experience most of the friction between doctors and approved societies arises. I have found in a limited number of cases that there is an impression that the second certificate is required three days after the first one. Actually the second certificate must be given not later than the end of the seventh day after the first certificate. Further intermediate certificates are under a different rule—Rule 5—which states that if incapacity continues beyond the eight days from the first certificate further intermediate certificates shall be given by the practitioner (always if so desired by the insured person) *week by week* during the continuance of incapacity, and the word "week" is specifically defined as meaning midnight to one Sunday to midnight on the following Sunday. I believe I am justified in saying that this rule really is not properly understood by most approved society agents. It means that the length of time which may elapse between two consecutive intermediate certificates may be anything from seven to near fourteen days; and it means that the week-dates of intermediate certificates after the first one need not bear any relation either to the previous one, or to the approved society pay-day or to the insured person's working week, so long as each one is given on a day in the week, Sunday to Sunday, following the previous one. It is unfortunately true that in the past many approved society officials have instructed insured persons to ask for certificates on certain days of the week. No such demand can be justified, and I believe an understanding knowledge of the rule by approved society agents would do a great deal to remove the friction which still exists between agents and doctors.

### *Problem of Fitness for Work.*

It should be noted that the final certificate, given under Rule 6, is the only one which a doctor *shall* issue, whether or not he is asked to do so. Differences of opinion between practitioner and patient as to the fitness of the latter for work are bound to exist, and you will be conversant with the necessity under which the Ministry of Health found itself a year or so ago to define the term "incapable of work." Even the Ministry's circular leaves it a moot point as to exactly where the incapacity which prevents an insured person from following his usual employment, but does not prevent him from doing any work at all, ceases to be certifiable under the rules. As a profession we have always objected to this wording, and personally I think it would have been much better had the words been "incapable of following his or her usual employment," leaving it to be decided by the regional medical officer when and whether, and if so what, other employment could be followed.

The second part of Rule 6 provides for the giving of a delayed final certificate in cases where the doctor is of opinion that the insured person, though not fit at the time of examination, will be fit on the second day afterwards (or third day in rural practice). I would suggest that if this time limit were extended to even four days generally it would benefit all concerned. I think it very unlikely that the funds of approved societies would suffer, as I believe that in actual practice it would more often cut short the final week of incapacity to a few days than extend it by a day or two. The issuing of a final certificate when an insured person has started work is, of course, a breach of the regulations, and I have not very often, though occasionally, been asked to do so. Almost invariably when that has occurred I have been informed that it is asked for by the society agent—with what truth I cannot always say.

### *Rules that are Too Rigid.*

The particulars to be inserted in the certificate include the dates of examination and of signing, and the specific disease. An earlier form of certificate made it essential that such certificates should be signed on the date of examination; the present forms allow twenty-four hours' grace only. I suggest that this rule is a bad one, particularly when applied to the first certificate. How frequent it is for an insured person to come up with a slightly septic finger, or a sore throat, or a cold, all of which may prevent him from working that day and perhaps the next, but may be better in a couple of days or so, or, on the other hand, may develop into an incapacity lasting for a week or more. As he is not fit to work he is entitled to a certificate; but if he gets one the chances are that he will make a week of it. If we could say, "I won't put you on the sick list to-day, and you will probably be all right in a

\* A lecture (abridged) given on February 20th to the members of the York and District Centre of the Faculty of Insurance.

couple of days," and yet if he got no better could later give him a certificate showing that he was examined and was unfit for work on the first date, but signed at the date of the second examination, and the signature dated accordingly, who would be a penny the worse off? I am well aware that it is possible to give the first certificate at once, and to insist that the insured person, under Rule 10, intended for convalescent patients, shall come up again for examination in a period less than a week if the doctor thinks fit by filling in the appropriate space on the form instructing the patient to do so. But I certainly think that it would benefit everyone concerned, and conserve the funds of societies, if this rule were altered so that the dates of examination and signing need not coincide. So long as the facts stated on the certificate are true, what can it matter?

Now as to the definition of the "specific disease or bodily or mental disablement." Here is another of the bones of contention between doctors and insurance agents. Non-medical opinion seems to hold that in every case of illness it should be possible for the doctor on the first examination to give a definite diagnosis, and there has certainly been a good deal of friction in regard to so-called vague wording of certificates. The term "debility" is perhaps the surest word to raise a hornet's nest about the unfortunate doctor's ears, though I have had "gastritis" queried, and even "anaemia," though it is probably now generally known that there are several forms of primary anaemia, of which at least one is commonly fatal. If you go round the wards of any of our great hospitals and look at the charts of the patients, I guarantee that you will not find a diagnosis written up in 50 per cent. of the cases; and yet these are patients who have been under the skilled observation of several doctors and nurses, often for weeks.

#### Difficulties in Diagnosis.

I am not for one moment defending the practitioner who deliberately misleads or fails in his duty to make a diagnosis where one is possible. But I do suggest that the popular opinion that the doctor is a fool who cannot at once tell what is the matter with a patient, whom he knows is not fit for work, is quite wrong. On the other hand, a skilled and painstaking effort to find out may take weeks; whereas the attitude which I am afraid is too often adopted by approved societies places a premium on the charlatan who calls it a "chill on the liver" (whatever that may mean), and lets it go at that. Surely this is one of the instances where a little trust in the integrity of the medical practitioner would not be misplaced.

The rule that no fresh certificate shall be given without further examination is one which was almost bound to be made, and I hold no brief for a practitioner who attempts to evade it. But I would suggest that so far as possible the temptation to break this rule should not be placed in the way of practitioners by approved society agents. Quite often we are informed that an agent has asked for certificates dated so-and-so, quite irrespective of whether the patients were seen on those dates or not. At one time this was so prevalent that I felt compelled to report one case (a thing I have very rarely done) to the Ministry of Health, where an agent had actually given a list of dates to an insured person, who had long since returned to work without having seen me, for which he wanted a series of intermediate certificates covering quite a long period. On the other hand, I know that there has been laxity in this respect by insurance practitioners—so much so that Dr. Peter Macdonald, as chairman of our Insurance Committee, issued a very useful and necessary warning on the subject to doctors on the panel. But it is hardly playing the game to suggest to our patients that they shall ask us for something we cannot give them, when they inevitably think we are being obstinate and awkward if we refuse, no matter how we try to explain the position.

The rule, number 10, governing arrangements for examining convalescent patients, is at present practically a dead letter. I doubt whether the space provided on the certificate forms for the insertion of a date on which patients should next come to see the doctor is filled in on 1 in 10,000 of the forms. Yet with a little more mutual goodwill it might be made a useful way of saving funds and getting the insured persons back to work as soon as possible. But this is one of those instances where you cannot expect the disinterested support of a medical man, acting against the wishes of his patients very often, unless you are prepared to give as well as take, and to spare him all the worry and bother you can.

#### The Use of Special Certificates.

Rule 11, I suggest, is rather a stupid one; it permits of the giving of a special convalescent certificate, to cover a period of not more than fourteen days, only if the insured person has been continuously ill for twenty-eight days before. Surely the arbitrary period of twenty-eight days is too long; and anyway the special intermediate certificate, while not serving exactly the same purpose, might conceivably be used. It should not be beyond the wit of man to produce one form which would cover both Rule 11 and Rule 12 (regarding special intermediate certificates), and allowing a little more elasticity in their interpretation. Appeal could always be had to the regional medical officer in cases of serious doubt.

I think the maximum period of four weeks for special intermediate certificates is hardly long enough. It seems a little ridiculous to have to go on certifying an incurable case such as hemiplegia or a blind man every month. Also I suggest that perhaps here approved societies would not suffer any injury by trusting the insurance practitioners a little more than some of them do. Certain societies have actually, as a matter of routine, immediately referred to the regional medical officer every case in which a special intermediate certificate has been given. They may conserve their funds a little by having the decisions of the medical practitioners reversed in a few cases; but such a practice does not lead to good feeling, and in the long run I feel sure the funds will suffer more from the lack of incentive on the part of practitioners generally to assist in conserving them than they will gain by checking the possibly faulty judgement of a few. Moreover, even the regional medical officer is but human, and cases are not unknown where his judgement has proved less correct than that of the practitioner who knows the patient, with the result that a patient sent back to work against a practitioner's advice has in a short time again been on the sick list, perhaps for a much longer period than would otherwise have been the case.

Rule 13 allows a statement of cause of incapacity to be given as an alternative to stating the precise diagnosis on the certificate. This alternative operates only in the very exceptional cases where the stating of a precise diagnosis would be prejudicial to the patient. The procedure to be followed is cumbersome in the extreme, and in any case it does not, and is not intended to, provide for the holding up of a diagnosis in doubtful cases.

I think voluntary certificates might be used more freely than they are. Properly employed, they do something to lessen the rigidity of Rules 8 and 9 in regard to the times and circumstances in which certificates may be given. It is permissible for doctors to charge a fee for these, and as where they are used it is implied that the necessity for them has arisen through the neglect of the insured person to ask for a proper certificate at the proper time, no doubt this is technically justified. But since, as I have mentioned, in my experience it is usually necessary for the doctor to give the certificates required without waiting to be asked, unless there is to be trouble later on. I do not think most of us actually insist on a fee unless there has been a flagrant piece of carelessness on the part of the insured person. But certificates given under this rule will not cover the point I raised under Rules 7 and 8 in regard to the holding up of a first certificate for a few days in cases of slight illness.

#### Advice as to Additional Benefits.

The rule providing for the insertion of advice as to additional benefits on the certificate forms is not, I think, always understood. I have in at least one instance had such advice, given in the appropriate space, at first rejected by an approved society, though it was accepted later on my referring to this rule. Curiously, this rule seems to take it for granted that an insured person in need of additional benefits (such as dental treatment) will be necessarily or usually on the sick list and in receipt of certificates, whereas, of course, this is much more usually not the case.

The form of certificate for use on the death of a patient seems to have been drawn up with less consideration for the necessities of the occasion than the various other forms required. It provides for the insertion by the doctor of a number of quite unnecessary details, such as the date of the last certificate and various numerals showing the deceased's society, branch, and number, all of which can readily be found by referring to the previous certificate issued; and further, the wording is enviously vague, as it is addressed "To —," a blank individual, without any instructions as to what person's

name or designation is to occupy the blank. In point of fact, I have never had the slightest idea to whom the certificate is intended to be addressed, and have usually filled in the words "To whom it may concern"; but if these are intended they could have been printed in.

Now that I have said my say on this vexed question of medical certification, I do not pretend to have dealt with all the problems involved, but I trust I have said sufficient to show that as a profession we have no easy task in fulfilling these regulations—regulations which are, perhaps necessarily, so complex that I think only a minority of the officials concerned, whether medical practitioners or approved society agents, really thoroughly understand them; while I am sure that not one in a thousand of the insured persons has the slightest working knowledge of their intricacies. Like all laws, they are based upon the supposition that most people are either fools or knaves. Human nature being what it is, I suppose the regulations are necessary. It therefore behoves us on both sides to carry them out in as friendly a spirit and with as little unnecessary trouble as we can.

### Association Notices.

#### ELECTION OF 24 MEMBERS OF COUNCIL BY GROUPED BRANCHES IN THE BRITISH ISLES.

The following is a list of the nominations received for 1928-29:

Group.	Branches in Group.	Candidates Nominated.	No. of Seats.
A	North of England	Dr. J. HUDSON (Newcastle-on-Tyne)	1
B	Yorkshire	Dr. PETER MACDONALD (York)	1
C	Lancashire and Cheshire, North Lancashire and South Westmorland	Dr. J. C. MATTHEWS, M.C. (Liverpool) No nomination	2
D	East Yorks and North Lincoln. Midland	Dr. R. WALLACE HENNY (Leicester)	1
E	Cambridge and Huntingdon, Essex, Norfolk, South Midland, Suffolk	Dr. J. F. WALKER (Southend-on-Sea)	1
F	Birmingham Staffordshire	No nomination	1
G	North Wales Shropshire and Mid Wales	Dr. E. LEWIS-LLOYD (Towyn, Merioneth)	1
H	South Wales and Monmouthshire	Dr. W. E. THOMAS (Ystrad-Rhondda)	1
I	Metropolitan Counties	Dr. F. W. GOODBODY (Marylebone) Dr. CHRISTINE MURRELL (Kensington) Dr. W. PATERSON (Willesden) Mr. H. S. SOUTTAR, O.B.E. (Marylebone)	4
J	Bath and Bristol Gloucestershire West Somerset Worcestershire and Herefordshire	Dr. D. E. FINLAY (Gloucester)	1
K	Dorset and West Hants. South-Western. Wiltshire	Dr. C. E. S. FLEMING (Bradford-on-Avon)	1
L	Oxford and Reading. Southern	Mr. N. P. L. LUMB, O.B.E. (Southsea)	1
M	Kent. Surrey. Sussex	Dr. E. R. FOTHERGILL (Hove) Dr. S. MORTON MACKENZIE (Dorking)	1
N	Aberdeen. Dundee. Northern Counties of Scotland. Perth	Dr. T. FRASER, C.B.E., D.S.O. (Aberdeen) Dr. G. SMITH SOWDEN (Elgin)	1

June 30, Sat.	Supplementary Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.
July 4, Wed.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 20, Fri.	Meeting, Cardiff, 10 a.m. of 12 members of Council by must be received (at A.R.M. p.m. setting, Cardiff.
July 21, Sat.	
July 23, Mon.	Annual Representative Meeting, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
	Meetings of Sections, etc., Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

#### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.**—The annual meeting of the Dumfries and Galloway Division will be held in the Royal Infirmary, Dumfries, on Tuesday, May 15th, at 3 p.m. Agenda: Report of executive; election of officials and executive; consideration of Annual Report of Council and instructions to representative thereon; Dr. J. D. Robson will open a discussion on the present-day treatment of borderline cases.

**EAST YORKS AND NORTH LINCOLN BRANCH: EAST YORKS DIVISION.**—The annual general meeting of the East Yorks Division will be held in Wilherforce House, Hull, on Friday, May 18th, at 3.30 p.m. Agenda: To receive the annual report of the Executive Committee and the treasurer's financial statement; to consider the new Division Model Rules of Organization; to elect officers; to receive the first link in the chain of office for the chairman's badge from Dr. Mackay, the retiring chairman; to consider the provision of a prize

for medical students at the University College. After tea there will be an inspection of local antiquities, with a commentary by the Director of Museums.

**LANCASHIRE AND CHESHIRE BRANCH: SOUTHPORT DIVISION.**—The annual meeting of the Southport Division will be held to-day (Friday, May 11th), at 8.15 p.m., at 52, Houghton Street, Southport. Agenda: Annual report; election of office-bearers and committee; ophthalmoscope demonstrations; scarlet fever recovery certificates for State-aided schools; "heart disease" certified as cause of death; social function; contract medical service for juveniles; Annual Report of Council.

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—A clinical meeting of the City Division will be held to-day (Friday, May 11th), when Dr. E. Cautley will show cases.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—The annual meeting of the Lewisham Division will be held at the Town Hall, Calford, S.E.6, on Tuesday, May 15th, at 8.45 p.m.

**METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.**—A meeting of the South-West Essex Division will be held at the Claybury Mental Hospital, Woodford Bridge, on Tuesday, May 15th, at 3.30 p.m. Dr. G. F. Barham, medical superintendent, will give a demonstration of cases.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—The annual meeting of the Willesden Division will be held on May 16th. Agenda: Election of officers and committees, and consideration of Annual Report of Council.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Chesterfield Division will be held at the Maternity Hospital, Chesterfield, to-day (Friday, May 11th), at 8.15 p.m. A British Medical Association Lecture will be delivered by Professor Louise McIlroy on the management of labour.

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The final clinical meeting of the Northern Counties of Scotland Branch for this season will be held at the Lawson Memorial Hospital, Golepie, on Saturday, May 19th, at 12 noon. The programme will include the demonstration of some surgical cases by Mr. B. S. Simpson, and notes on general anaesthetics by Dr. J. B. Simpson. Golfing members will note that Dr. Simpson has arranged for the courtesy of the green at Golepie, Brora, and Dornoch to be extended to them for that day. Members desiring to lunch at Golepie should notify the honorary secretary by May 17th. The annual meeting of the Branch is to be held at Kyle of Lochalsh on June 30th. This will be the first meeting of the Branch which has been held in the area of the Island Division.

**NORTHERN COUNTIES OF SCOTLAND BRANCH: BANFF, MORAY, AND NAIN DIVISION.**—The annual meeting of the Banff, Moray, and Nain Division will be held in the Fife Arms Hotel, Banff, on Saturday, May 12th, at 3 p.m. Agenda: Annual report of the Division; election of office-bearers; the Annual Report of Council; the B.M.A. Charities Fund. The courtesy of the Duff House golf course has been granted for those who wish to play.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A meeting of the Sunderland Division will be held at the Royal Infirmary, Sunderland, on Wednesday, May 16th, at 8.15 p.m. Dr. J. C. Spence will give a lecture entitled "Hypertrophic pyloric stenosis—its importance as an example of the method of diagnosis, treatment, and study of disease in childhood."

**NORTH WALES BRANCH: SOUTH CARNARVON AND MERIONETH DIVISION.**—A clinical meeting of the South Carnarvon and Merioneth Division will be held at the Towyn War Memorial Hospital on Tuesday, May 29th.

**OXFORD AND READING BRANCH: OXFORD DIVISION.**—A meeting of the Oxford Division will be held at the Radcliffe Infirmary on Wednesday, May 23rd, at 2.30 p.m. Dr. F. G. Chandler will read a paper entitled "Bronchiectasis—early diagnosis and treatment."

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, May 17th. Mr. C. H. B. Avarne will read a paper on the diagnosis and treatment of gall-stones.

**SOUTHERN BRANCH: PORTSMOUTH DIVISION.**—The annual dinner of the Portsmouth Division will be held at the Queen's Hotel, Culzeau, on Wednesday, May 16th, at 8 p.m. Tickets (price 1.6d. each) can be obtained from Dr. H. H. Warren. An after-dinner address will be given by Mr. Herbert Tilley.

**SOUTH MIDLAND BRANCH: BEDFORDSHIRE DIVISION.**—A general meeting of the Bedfordshire Division will be held at the Bedford County Hospital on Wednesday, May 16th, at 3 p.m. Agenda: To elect a representative and deputy representative; to consider communication from the B.M.A. Charities Committee; to consider the Annual Report of Council; a paper by Mr. W. G. Nash on "Some cases of obstruction of the large intestine: their diagnosis and treatment."

**SOUTH-WESTERN BRANCH.**—An intermediate meeting of the South-Western Branch will be held at the Royal Cornwall Infirmary on Thursday, May 24th. Members are asked to inform the honorary secretary as soon as possible of any cases, notes, papers, specimens, or notices of motion they may wish to bring forward in order that they may be placed on the agenda paper. It is advisable that papers should be as short as possible.

**SUFFOLK BRANCH: WEST SUFFOLK DIVISION.**—In connexion with the post-graduate course arranged by the West Suffolk Division at the West Suffolk Hospital, Sir Thomas Horder will give a lecture on Saturday, May 19th, at 8.45 p.m., on etiological factors in phthisis and their bearing on treatment. Coffee will be served at 8.30 p.m. A clinic of medical cases will be held on Sunday, May 20th, at 11 a.m. The course is open to medical practitioners in West Suffolk and their guests.

**SUSSEX BRANCH: BRIGHTON DIVISION.**—The next clinical meeting of the Brighton Division will be held at the Brighton Borough Sanatorium on Thursday, May 17th, at 3.45 p.m.

**WEST SOMERSET BRANCH.**—A meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital, Taunton, on Friday, May 18th, at 3.30 p.m. Agenda: Election of representative and deputies to the Annual Representative Meeting; consideration of Annual Report of Council.

**YORKSHIRE BRANCH: SHEFFIELD DIVISION.**—The annual meeting of the Sheffield Division will be held at the Church House, St. James Street, Sheffield, on Wednesday, May 16th, at 8.30 p.m. Agenda: report of Executive Committee; election of officers for the ensuing year.

## Meetings of Branches and Divisions.

### METROPOLITAN COUNTIES BRANCH: WANDSWORTH DIVISION.

The Wandsworth Division held a dinner on May 2nd to celebrate the twenty-fifth anniversary of its foundation and to do honour to Dr. M. G. Biggs, one of the oldest members of the Division and still in active practice. The Division was inaugurated towards the end of April, 1903, and Dr. Biggs was its first chairman. A letter was read from Dr. Cox regretting his inability to attend, and commending highly the long service rendered to the British Medical Association by Dr. Biggs, especially in connexion with the work of the Central Ethical Committee. Dr. SNEKLETON, chairman of the Division, proposed the toast of "The British Medical Association," and Dr. ANDERSON, the Deputy Medical Secretary, replied. Dr. ARTHUR HOWELL, proposing the health of Dr. Biggs, recalled their early associations in the Wandsworth area. Dr. BIGGS, replying, said that in a few days he would be celebrating his eightieth birthday. Not many doctors were in practice at that age, but he might, perhaps, look forward to another ten years yet. Dr. HAWTHORNE, Chairman of the Representative Body, proposing the toast of "The Wandsworth Division," referred to the days when, owing to the energies of a former secretary, the Wandsworth Division was particularly well known at headquarters. After a period of quiescence there was renewed activity, and he wished the Division success in all its enterprises. He also recalled pleasant associations with Dr. Biggs. Dr. GARDNER, vice-president of the Division, replied. Dr. ARTHUR STANLEY, one of the representatives to the Representative Body, proposed "The Guests," and Dr. BISHOP, the other representative, proposed "The Chairman." Dr. SNEKLETON, replying from the chair, said his duties had been made easy by the work of the honorary secretary, Dr. G. Pollock, whose health he then proposed.

### SURREY BRANCH: CROYDON DIVISION.

The annual general meeting of the Croydon Division was held at the Croydon General Hospital on May 2nd. A letter was read from the United Dairies Company offering to convey members and their wives to Streatham to view their plant, and it was resolved that the invitation be accepted.

The report of the Executive Committee was received and adopted. The following officers were elected:

Chairman, Dr. G. E. E. Bravne-Nicholls. Vice-Chairman, Dr. R. L. Plakerton. Secretary, Dr. C. G. C. Seudamore. Assistant Secretary, Dr. G. G. Hamond. Auditor, Dr. G. G. Genge. Body, Dr. P. W. Hamond and Dr. G. G. C. Seudamore. Deputy Representative, Mr. E. M. Cowell.

After the conclusion of the business Dr. J. STANLEY WHITE gave an address on some recent aspects of biological therapy, illustrated by lantern and cinematograph.

### SURREY BRANCH: GUILDFORD DIVISION.

An ordinary meeting of the Guildford Division was held at the Royal Surrey County Hospital, Guildford, on April 5th, with Mr. H. B. BULLER in the chair. The meeting proceeded to elect representatives and deputies to the Annual Representative Meeting. Drs. Arnold Lyndon and G. M. Bluett were elected as representatives in the Representative Body, and Drs. James McGlashan and G. A. Clarkson were nominated as deputies. After some correspondence with the county medical officer of health and one of the members had been read and the subject discussed, Dr. Lyndon proposed that in the opinion of the Guildford Division the mileage fee under the Midwives Act, 1918, in the area of the Division should be one shilling each way. This was seconded by Dr. PEARSE and carried unanimously.

The CHAIRMAN exhibited skiagrams of osteomyelitis in children, of the femur, the radius, and the fibula, also one of a cervical rib. Mr. E. W. SNEAF showed a woman in the ward who had had three years' standing. The pulse fell from days, and had remained down. He also showed a case of myeloma of the head of the tibia in a middle-aged man discovered during an x-ray examination for a fracture which had occurred through it with slight violence.

### YORKSHIRE BRANCH: HARROGATE DIVISION.

At the annual meeting of the Harrogate Division, held on May 3rd, the following were elected as officers for 1923-29:

Chairman, Dr. R. T. Morris. Vice-Chairman, Dr. P. A. Stephen. Representative in Representative Body, Dr. Solly. Deputy Representative in Representative Body, Dr. Milburn.

Two recommendations were adopted by the meeting for inclusion in the agenda of the Annual Representative Meeting at Cardiff.

## NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

*Reports by Medical Practitioners at Request of Coroners.*

By HARROGATE: That (with reference to para. 89 of the Annual Report of Council), following the custom in Scotland, the fee for a report from a practitioner to the coroner shall be £1 1s.

*Scheme of the Spa Federation for Spa Treatment of Insured Persons.*

By HARROGATE: That para. (m) of the recommendation contained in para. 128 of the Annual Report of Council be deleted and the following substituted therefor:

That an initial certificate as to incapacity for work up to one month be given by the home practitioner, any subsequent certificates that may be necessary being given at the spa.

*Life Insurance for Members.*

By SOUTH-EASTERN IRELAND BRANCH: That the Council be instructed to appoint a committee to inquire into the possibility of a compulsory scheme of life insurance for the members being established, the premium for such insurance to be included in the annual subscription.

*Medical Profession and Motor Spirit.*

By SOUTH-WEST WALES: That as the medical profession is such a large consumer of petrol (and its homologues)—used for professional purposes—the Representative Body is of the opinion that the Association should officially approach the petrol companies so that the medical profession may obtain petrol (and its homologues) at commercial rates.

*Maternal Mortality and Morbidity.*

By SOUTH-WEST WALES: That in the opinion of the Representative Body general practitioners should be adequately represented on any committee which may be appointed by the Association to consider and formulate schemes for the improvement of maternal mortality and morbidity.

*Midwives Act, 1918.*

By SOUTH-WEST WALES: That in the opinion of the Representative Body the Midwives Act, 1918, should be amended so that adequate payment be made for ante-natal work.

## Correspondence.

### *Right of Appeal to the Courts.*

SIR,—The leading article in the *Times* of May 3rd on "The Courts and the Executive" must have recalled to anyone who attended the Panel Conferences of recent years the claim so often urged in them for a right of appeal by panel doctors from decisions of the Minister to the High Court.

We have not got that appeal. We are at present working on a trial of a departmental system, and there has been no recent occasion of protest; but this article in the *Times* reveals the potential insecurity of the method in which we have been led to acquiesce. "These cases," it says, "occur at intervals long enough to prevent them making a lasting impression upon general readers. They go about their business and grow indifferent or forget." That is exactly what happens to the panel doctors in the intervals between *causes célèbres*. The echo of "the £1,000 fine" die away in a year or two, and can hardly be reawakened. It is not so with the officials. They "... go about their business, and consider how best they may further augment the power of their department by ousting the jurisdiction of the courts."

The last words of the article put the whole position in a nutshell. "Administrative tribunals may be necessary for the efficient dispatch of the mass of business entrusted to the departments by recent legislation. ..." But the system should "... save the Executive from all suspicion of desiring to interfere with the independence of the courts, and safeguard the subject's right of access to them on all proper occasions as his necessary protection from the extravagance of bureaucratic zeal."

The Cheshire Panel Committee has urged, in season and out of season, that that principle should be accepted and

established as governing the relation of the profession to the Ministry of Health. "There should be an appeal to the courts 'on the merits.'" were the words of our spokesman, Sir William Hodgson; an appeal, that is, not limited to mere technical points as at present.

There is no objection to administrative tribunals so long as the tension that may be engendered in such a system is limited by the safety valve of an appeal to the High Court. It is merely stupid to argue that such an appeal would be distasteful to doctors because public and expensive. So much the better if it be, for no one would make the appeal unless he had a good case that would command the backing of one of the professional bodies. Appeal would be rare, but decisive; but the fact that an appeal was possible would be constantly operative in mitigating the tone of the bureaucratic machine. To argue that the right of appeal would be bilateral—would cut both ways—is to mislead; for the other parties—the patients—have access to the courts already.

In the earlier stages of the controversy we were told an appeal was impossible because unconstitutional. Even those who used that argument now admit that this is not so. It is the denial of the right of appeal that is essentially unconstitutional.

It was the timidity engendered by the two other arguments I have mentioned that stiffened the will of the Panel Conference and made it pliable enough to accept on trial, the present departmental system. However "successful" it may be—for a time—it leaves us in a wrong relation with the Minister—not free contractors but dependent for reasonable conditions in the exercise of our calling on his interpretation of regulations which he is free to make and alter.—I am, etc.,

Holmes Chapel, Cheshire, May 3rd.

LIONEL JAMES PICTON.

### *Nursing Homes Registration Act, 1927: Doctors' Private Houses.*

SIR,—Buried away in the Annual Report of Council (*Supplement*, April 28th, pp. 152-53) is a most important report on this Act, with an explanation as to the position of those doctors—probably many hundreds, if not thousands—who receive into their private houses persons known as "private patients" or "paying guests," this latter euphemism being adopted to solace the patients or relatives. This report should be carefully read by all whom it concerns.

The position is this. Before July 1st this year every such doctor who receives into his private house even only one mentally or physically ill patient, and includes in his agreement or contract the provision of "nursing," whether by a nurse or attendant or otherwise, will have to register that house, which, together with his domestic staff and organization, will then become subject to inspection by the local supervising authority. In addition, he must display, in a conspicuous position in his house, his certificate of registration.

There are only two ways for him to escape from this objectionable position: either he should cease as from July 1st next to receive such patients, or if "nursing" is required he should stop "the provision of nursing," arranging that this should be an extra beyond his contract. He should recommend to the relatives a suitable person for them to engage, charge them for the board and residence, receive as the agent from the relatives the wages, and, handing them over from time to time to the nurse or attendant, obtain a receipt for the same addressed to the relatives.

In the case of those doctors who have no objection to inspection or whose houses cannot be conducted on these suggested lines, and must in consequence become registered, one would urge that they get into touch as soon as possible with their local authority (county or county borough) and obtain a copy of the draft by-laws, in order to see whether they contain anything thought to be objectionable. If so, then the recognized local medical organization should be urged to take immediate steps before it is found to be too late.—I am, etc.,

Hove, May 8th.

E. ROWLAND FOTHERGILL.

*The Bottle of Medicine.*

Sir,—Panel doctors are from time to time accused of extravagance in the provision of medicines for their patients; the latter certainly expect and demand drug treatment whenever their standard of health falls the slightest degree below what they believe to be the normal.

We are told—no doubt correctly—that more lectures in hygiene and health knowledge are necessary for the workers, that the people must be educated up to doing without medicine. Apropos of this, we would expect that such centres of learning as the great London hospitals would take the lead in giving non-medicinal treatment when possible. This, however, does not seem to be the case. Quite recently a lady who consulted the out-patient department of a hospital complaining of symptoms which, she was told, indicated "nothing serious," was given three bottles of medicine, one to be taken on rising, another before food, and the other after food. Owing to careless labelling the lady had no idea which to take first; she guessed, but as she vomited the meal concerned she concluded that she may have been mistaken. Finally, she brought the three bottles to her own doctor for an opinion. This is not an isolated instance.

It would be difficult for a panel doctor to justify the prescribing of three separate bottles of medicine to be taken by one patient in one day, and there is no doubt that he would be called upon to justify it sooner or later. May I venture to suggest that the hospitals are "letting down" panel doctors by such generous dispensing?—I am, etc.,

PHILIP R. KEMP.

London, E.15, May 2nd.

*Naval and Military Appointments.*

## ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders P. B. Egan to the *Iron Duke*, May 12th, and to the *Tiger*, May 2nd; R. R. Rickford, D.S.O., to the *Hibernia* on Squadron Medical Officer; G. A. S. Hamilton to the *Marlborough*; R. J. Inman to the *President*.

Surgeon Lieutenants O. D. J. Ball to the *Royal Oak*; T. L. Cleave to the *Pembroke* for R.N. Barracks, Chatham. M. Clifford has entered as Surgeon Lieutenant for short service and appointed to the *Victory* for Harlar Hospital for course of instruction.

## ROYAL AUSTRALIAN NAVY.

Surgeon Commander W. E. Roberts to the *Victory* for H.M.A.S. *Canberra* for trials.

## ROYAL ARMY MEDICAL CORPS.

Major J. da P. Langrish, D.S.O., retires on retired pay, and is granted the rank of Lieutenant-Colonel.

Captain P. R. O'R. Phillips to be Major (prov.).

Lieutenant (on probation) P. V. MacCarthy, from the seconded list, is restored to the establishment.

Lieutenant (on probation) J. M. Quinlan resigns his commission.

Temporary Lieutenant A. F. Dowling relinquishes his commission on account of ill health.

## ROYAL AIR FORCE MEDICAL SERVICE.

Squadron Leader P. H. Young to R.A.F. General Hospital, Iraq. Flight Lieutenants J. G. Russell to R.A.F. Depot, Unbridge; D. L. Edwards to R.A.F. General Hospital, Iraq; L. I. Hyder to R.A.F. Combined Hospital, Iraq.

Flt. Lieut. G. W. McAleer, J. Freeman, and W. Heron to R.A.F. General Hospital, Iraq; E. P. Carroll and J. F. McGovern to R.A.F. Combined Hospital, Iraq.

## RESERVE OF AIR FORCE OFFICERS: MEDICAL BRANCH.

P. G. Mogg is granted a commission in Class DD as a Flying Officer.

## REGULAR ARMY RESERVE OF OFFICERS.

Major-General C. E. Pollock, C.B., C.B.E., D.S.O., into R.A.M.C., and Lieut.-Colonel B. A. Craig, R.A.M.C., having attained the age limit of ability to recall, cease to belong to the Reserve of Officers.

## MILITIA.

## ROYAL ARMY MEDICAL CORPS.

Major W. A. Lethem, M.C., resigns his commission.

## TERRITORIAL ARMY.

## ROYAL ARMY MEDICAL CORPS.

Lieutenant O. G. Miquith to be Captain.

Lieutenant D. R. McGregor is seconded under paragraph 137 T.A. Regulations.

Lieutenant N. F. C. Burgess from supernumerary for service with the University of London Contingent, Senior Division, O.T.C., to be Lieutenant A. Bowie to be Lieutenant.

## COLONIAL MEDICAL SERVICES.

Dr. V. V. H. Hoak appointed Assistant Government Medical Officer, East Guluana. Miss Grace M. L. Summerhayes appointed Lady Medical Officer, Gold Coast. Dr. J. A. Dunne, Medical Officer of Health, Sanitary Branch, Gold Coast, promoted Senior Sanitation Officer, Nigeria. Dr. C. R. C. Wilson transferred from Tanga to Arusha, Tanganyika.

## VACANCIES.

STOCKPORT INFIRMARY.—House-Surgeon (male). Salary £175 per annum.

SUNDERLAND: DUNHAM COUNTY AND SUNDERLAND EYE INFIRMARY.—House-Surgeon. Salary £450 per annum, rising to £550.

WALSALL COUNTY BOROUGH.—Assistant Medical Officer (Maternity and Child Welfare) (female). Salary £600 per annum, rising to £700.

WALSALL GENERAL HOSPITAL.—House-Surgeon. Salary £125 per annum.

WARRINGTON GENERAL HOSPITAL, Leamington Spa.—Resident House-Physician. Salary at the rate of £165 per annum.

WEST HAM UNION.—Assistant Medical Officer (male). Salary £400 per annum, rising to £475.

WEMBLEY HOSPITAL.—Honorary Consulting Radiologist.

WINCHESTER: ROYAL HAMPSHIRE COUNTY HOSPITAL.—House-Physician (male). Salary £150 per annum.

CERTIFYING FACTORY SURGEONS.—The following vacant appointments are announced: Kirkwall (Orkney), Halesd (Essex), Lewes (Sussex). Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

### APPOINTMENTS.

BEADLES, John N., M.B., B.S.Lond., Ophthalmologist, Norwood School Clinic.

HACKWOOD, John Fereday, M.B., B.S., F.R.C.S., F.R.C.S.Ed., Resident Medical Officer, Farnborough Hospital, Kent.

ROBERTS, John, M.B., Ch.B., F.R.C.S., Honorary Assistant Laryngologist, Liverpool Stanley Hospital.

PADDINGTON GREEN CHILDREN'S HOSPITAL.—House-Physician: John McMichael, M.B., Ch.B. House-Surgeon: George L. Alexander, M.B., Ch.B.

CERTIFYING FACTORY SURGEONS.—J. L. C. Doyle, M.R.C.S., L.R.C.P., for the Fakenham District (Norfolk); R. Dawson, M.B., Ch.B., Aberd., for the Middleton-in-Teesdale District (Durham); K. L. S. Ward, M.R., Ch.B., Ed., for the Westernham District (Kent); H. M. Roberts, L.R.C.P., L.R.C.S.Ed., L.R.F.P.S.Glas., for the Saltcoats District (Ayr); N. H. Linzee, M.R.C.S.Eng., L.R.C.P.Lond., D.P.H., for the Kingston District (Surrey); F. K. Beaumont, M.B., Ch.B., Leeds, for the Finedon District (Northampton); C. W. Cassell, M.B., Ch.B., Ed., D.T.M.L., for the Chaddesley-Corbett District (Worcester); R. Alderson, M.D., Durl., for the Crowborough and Uckfield Districts (East Sussex).

### DIARY OF SOCIETIES AND LECTURES.

#### ROYAL SOCIETY OF MEDICINE.

General Meeting of Fellows.—Tues., 5.30 p.m., Ballot for Election to the Fellowship.

Sections of Dermatology and Surgery.—Wed., 8.30 p.m., Special Discussion: Treatment of Venereal Ulcers by Intravenous Injection. Openers: Professor Sclater and Mr. Twistington Higgins, to be followed by Sir Sidney Alexander, Dr. Goldsmith, and Mr. David Levi.

Section of Dermatology.—Thurs., 4 p.m., Cases. 4.45 p.m., Annual General Meeting. Election of Officers and Council for 1928-29. Annual Dinner, 8 p.m.

Section of Disease in Children.—Fri., 4.30 p.m., Cases. 5 p.m., Annual General Meeting. Election of Officers and Council for 1928-29.

Section of Obstetrics.—Fri., 8 p.m., Annual General Meeting. Election of Officers and Council for 1928-29. Short Communication by Dr. Everard Williams: Full-term Pregnancy in a Patient with Grave Myelocytic Leukaemia.

Section of Electro-Therapeutics.—Fri., 6.30 p.m., Annual General Meeting. Election of Officers and Council for 1928-29. 7.30 p.m., Annual Dinner at the Café Verry, Regent Street.

ROYAL SOCIETY OF TROPICAL MEDICINE AND HYGIENE, II, Chandos Street, W.1.—Thurs., 7.45 p.m., Demonstration and Paper by Dr. G. W. Bray: Vitamin B Deficiency in Infants—its Possibility, Prevalence, and Prophylaxis.

LONDON CLINICAL SOCIETY, London Temperance Hospital, Hampstead Road, N.W.1.—Thurs., 8.15 p.m., Clinical Evening.

ST. CYRES LECTURE.—In the Barnes Hall of the Royal Society of Medicine: Wed., 4.30 p.m., Professor K. F. Wenckebach: The Heart and Circulation in a Tropical Avitaminosis (Beri-beri).

### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION.—Mon., May 14th, to Saturday, May 19th.—National Hospital for Diseases of the Heart, Westmoreland Street, W.1.: Tues., 2.30 p.m., Clinical Demonstration; no fee. St. Mark's Hospital, City Road, E.C.1.: Tues., 5 p.m., Clinical Demonstration of Cases illustrating Diseases of the Rectum; no fee. Royal London Ophthalmic Hospital, City Road, E.C.1.: Thurs., 1 p.m., Clinical Demonstration; no fee. Infants Hospital, Vincent Square, S.W.1.: Course in Diseases of Infants, afternoons only; second week; fee £3 3s. Central London Throat, Nose and Ear Hospital, Gray's Inn Road, W.C.1.: Intensive Course—Clinical and Operative; three weeks; all day, fee 45 5s. clinical course. Maudsley Hospital, Denmark Hill, S.E.5.: Course in Psychological Medicine; third week. National Hospital, Queen Square, W.C.1.: Course in Neurology for two months; particulars and fees from the Fellowship of Medicine. Royal Free Hospital, Gray's Inn Road, W.C.1.: Wed., 5 p.m., First of four Lecture Demonstrations on Ante-Natal Diagnosis and Treatment; fee for the course, £1 1s. Copies of syllabuses on application to the Fellowship of Medicine, 1, Wimpole Street, London, W.1.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Mon., 5 p.m., Napkin-urea Eruptions in Infants. Tues., 5 p.m., Treatment of Syphilis. Thurs., 5 p.m., Pathology Demonstration. Fri., 5 p.m., Alopecia.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 p.m., Demonstration of Surgical Cases; 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 p.m., Demonstration of Cases for J.-Ray; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.—Tues., 3.15 p.m., Some Reflections on Tumours of the Breast.

SHEFFIELD UNIVERSITY POST-GRADUATE CLINICS.—At Royal Hospital: Fri., 3.30 p.m., Neurological Cases.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations, Surgical Wards, Skin Department; 2 p.m. to 5 p.m., Eye and Gynaecological Departments. Tues., 10 a.m. to 1 p.m., Medical Wards, Demonstration of Venereal Diseases, Electrical and Dental Departments; 2 p.m. to 5 p.m., Gynaecological Operations, Throat, Nose, and Ear Department. Wed., 10 a.m. to 1 p.m., Children's Medical Department, Medical Wards, Pathological Demonstration; 2 p.m. to 5 p.m., Eye Department, Surgical Wards. Thurs., 10 a.m. to 1 p.m., Neurological and Massage Depart-

ments; 2 p.m. to 5 p.m., Eye and Genito-urinary Departments. Fri. 10 a.m. to 1 p.m., Skin, Dental, and Electrical Departments, Medical Wards, Clinical Demonstration; 2 p.m. to 5 p.m., Throat, Nose, and Ear Department. Sat., 9 a.m. to 1 p.m., Medical Wards, Throat, Nose and Ear Operations, Medical Children's Department, Bacterial Therapy Department. Daily at 2 p.m., Operations, Medical and Surgical Outpatient Departments. Special Lecture, Tuesday, May 15th, at 4.30 p.m. Gall-stones.

GLASGOW POST-GRADUATE MEDICAL ASSOCIATION.—At Victoria Infirmary Wed., 4.15 p.m., Surgical Cases.

LIVERPOOL UNIVERSITY CLINICAL SCHOOL ANTE-NATAL CLINICS.—Roy Infirmary: Mon. and Thurs., 10.30 a.m. Maternity Hospital: Mon. Tues., Wed., Thurs., and Fri., 11.30 a.m. (Fee £2 2s. for three month attendance.)

MANCHESTER ROYAL INFIRMARY.—Tues., 4.15 p.m., Dr. A. Ramsbottom Treatment of Pernicious Anaemia. Fri., 4.15 p.m., Mr. W. H. Hey Demonstration of Surgical Cases.

### SPECIAL NOTICE TO MEMBERS.

Every Member is requested to preserve this "Supplement," which contains matters specially referred to Divisions, until the subjects have been discussed by the Division to which he or she belongs.

#### MATTERS REFERRED TO DIVISIONS.

##### British Medical Association.

#### ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

The Annual Representative Meeting of the British Medical Association will be held in Cardiff on Friday, July 20th, 1928, and the following days as may be necessary.

#### RESOLUTIONS BY DIVISIONS AND BRANCHES FOR THE REPRESENTATIVE BODY, TOGETHER WITH RELEVANT RECOMMENDATIONS OF COUNCIL.

[Note.—This includes only those Recommendations of the Council contained in the Annual Report to which Amendments or Riders have been sent in; also any Motions from Divisions and Branches, of which two months' notice must be given.]

##### PRELIMINARY.

**Annual Meetings and Annual Representative Meetings.**  
Motion by SUNDERLAND: That the Council be instructed to consider the advisability of restricting the business of the Annual Meeting, which is held at various centres, to scientific and social work, and of an Annual Representative Meeting being held on a separate date at the British Medical Association House in London, to deal with medico-political business.

##### FINANCE.

##### Life Insurance for Members.

Motion by SOUTH-EASTERN IRELAND: That the Council be instructed to appoint a committee to inquire into the possibility of a compulsory scheme of life insurance for the members being established, the premium for such insurance to be included in the annual subscription.

##### Annual Subscription.

Motion by BATH: That the annual subscription to the Association be reduced to £2 2s.

##### MEDICAL ETHICS.

##### Membership and Acceptance of Post which is subject of "Important Notice."

Motion by NORTH MIDDLESEX: That no medical practitioner shall be eligible for membership of the Association who has obtained and holds a position to which he was appointed whilst it was the subject of an "Important Notice" in the *British Medical Journal*.

#### MEDICO-POLITICAL.

##### Contract Rate for Juvenile Oddfellows.

Motion: That the following recommendation of Council (*Supplement*, April 28th, 1928, pp. 153-54, para. 104) be adopted:

That the Representative Body approve a standard rate of 8s. 8d. per head per year including drugs for the remuneration of medical practitioners for medical attendance and medicine for juvenile members of the Manchester Unity of the Independent Order of Oddfellows; that the Council be authorized to approve a slightly lower rate than 8s. 8d. per head per year, for a time to be definitely stated, for application in any area in which it is satisfied that owing to economic conditions the standard rate of payment is not feasible; and that it be an essential part of this arrangement that there must be free choice of doctor by patient and of patient by doctor.

**Amendment by WANDSWORTH:** That "13s." be substituted for "8s. 8d." in the second and eighth lines of the recommendation.

**Amendment by TORQUAY:** That the Representative Body does not approve of the recommendation, and strongly deprecates the acceptance of any fee for contract medical practice, including medicine, either for juveniles or adults, which is less than 13s. per head per annum.

**Amendment by STOCKTON:** That any standard rate per head per year for the remuneration of medical practitioners for medical attendance and medicine for juvenile members of the Manchester Unity of the Independent Order of Oddfellows be not less than the capitation fee in force for persons insured under the National Health Insurance Acts.

**Amendment by STOCKTON:** That the arrangement by which the approved society pays the practitioner for work done in individual cases is preferable to an agreed capitation fee.

##### Reports by Medical Practitioners at Request of Coroners.

Motion by HARRGATE: That (with reference to para. 89 of the Annual Report of Council, see p. 150 of *British Medical Journal Supplement* of April 28th, 1928), following the custom in Scotland, the fee for a report from a practitioner to the coroner shall be £1 1s.

##### Private Practice.

Motion by CARDIFF: That (with reference to para. 91 of the Annual Report of Council) the Representative Body views with anxiety the tendency to transfer the treatment of many diseases and conditions previously in the hands of general practitioners and consultants to departments controlled by medical officers of health.

##### Proprietary Medicines.

Motion by ABERDEEN: That in view of the very great number of proprietary medicines which have been put upon the market in recent years steps be taken to set up at

Head Office a department to investigate these proprietary medicines and to supply information regarding them to members, either on request or in the *British Medical Journal*, or as otherwise deemed expedient; or, if this is considered impracticable, the publication entitled *Secret Remedies* be brought up to date.

*Position of General Practitioners in Relation to Hospitals and Clinics.*

**Motion by ABERDEEN:** That it be remitted to the Council to consider and report to the next Annual Representative Meeting upon the position of the general practitioner in relation to the voluntary and rate-supported hospitals and clinics.

*Medical Profession and Motor Spirit.*

**Motion by SOUTH-WEST WALES:** That as the medical profession is such a large consumer of petrol (and its homologues)—used for professional purposes—the Association officially approach the petrol companies so that medical practitioners may obtain petrol (and its homologues) at commercial rates.

*Midwives Act, 1918.*

**Motion by SOUTH-WEST WALES:** That in the opinion of the Representative Body the Midwives Act, 1918, should be amended so that adequate payment be made for ante-natal work.

*Ambulance Lectures.*

**Motion by YORK:** That the following resolutions of the Representative Body are hereby rescinded:

(A) "That ambulance work . . . should be treated by the profession as a matter of business and not of philanthropy."

(Adopted by the A.R.M., 1905, Minute 107, in approving a report by the Medico-Political Committee on "The position of medical men in connexion with ambulance competitions.")

(B) Minute 259, A.R.M., 1910. That members of the medical profession should be suitably remunerated for teaching subjects in connexion with the public health, such as nursing, first aid to the injured, and hygiene, and that the fee adopted by the London County Council of £1 ls. for each lecture is one which appears suitable for general adoption.

(C) Minute 263, A.R.M., 1910. That a fee should be charged for ambulance lectures given to the British Red Cross Society, and that the fee be not less than £1 ls. for each lecture.

*Medical Practitioners and Road Accidents.*

**Motion by BUCKINGHAMSHIRE:** That the Representative Body is of opinion that some arrangement should be made for payment for the emergency services rendered by doctors to patients meeting with accidents on the roads.

*Venereal Disease Schemes.*

**Motion by EDINBURGH and LEITH:** That the venereal disease schemes which are at present being administered are proving inadequate to secure the proper control and treatment of venereal disease, and that it is essential that further power should be conferred on medical practitioners and local authorities with a view to strengthening the voluntary system by placing a "compulsitor" on all persons infected with a venereal disease in order to secure the submission to treatment, and continuance under treatment, of such persons until discharged by a registered medical practitioner.

*Case of Tyndall v. Alcock.*

**Motion by BATH:** That the Representative Body regards with consternation the decision of the Assize Court in the case of Tyndall v. Alcock and the dismissal of the appeal; that this decision would seem to expose any surgeon who, although operating in good faith and with due precautions, failed to obtain a perfect result from his operation to be found in damages by a jury of laymen; that while recognizing that trial by jury is an integral part of the Constitution the Representative Body desires the Council to consider whether means cannot be found to ensure that expert witnesses appearing on opposite sides in a case shall not so confuse the issue by a divergent representation of facts that a lay jury cannot assess these facts at their true value.

**PUBLIC HEALTH.**

*Noise and Public Health.*

**Motion by EDINBURGH and LEITH:** (1) That in the interest of the public health the British Medical Association should support any measures which may be taken to so alter or amend existing legislation as to give greater power to local authorities to suppress unnecessary noise which is dis-

turbing to the lieges; and (2) that any noise from 11 p.m. to 6 a.m. which is capable of being prevented or mitigated, and which is dangerous or injurious to health, shall be a nuisance within the meaning of the Public Health Acts.

**CAUSATION OF PUERPERAL MORBIDITY AND MORTALITY.**

*Maternal Mortality and Morbidity.*

**Motion by SOUTH-WEST WALES:** That general practitioners should be adequately represented on any committee which may be appointed by the Association to consider and formulate schemes for the improvement of maternal mortality and morbidity.

**NATIONAL HEALTH INSURANCE.**

*Scheme of the Spa Federation for Spa Treatment of Insured Persons.*

**Amendment by HARNOGATE:** That subpara. (m) of the recommendation of Council (Supplement, April 28th, pp. 158-59, para. 128) be deleted and the following substituted therefor:

That an initial certificate as to incapacity for work up to one month be given by the home practitioner, any subsequent certificates that may be necessary being given at the spa.

*Medical and Dental Examination of Insured Persons.*

**Motion by WINDSOR:** That in the opinion of the Representative Body the establishment of periodical medical and dental examinations of all persons insured under the National Health Insurance Acts is urgently called for as an economic proposition, having regard to the return so to be obtained in health and productive efficiency; that every such insured person, when accepted as a patient on a doctor's panel, shall be by that doctor medically examined, and the result of that examination placed on record; that preliminary examination shall apply also to dental examination, when that additional benefit is included and available under the National Health Insurance Acts.

**HOSPITALS.**

*Industrial Accidents in Hospitals.*

**Motion by NEWCASTLE-ON-TYNE:** That industrial accidents should not be a charge on the voluntary hospitals or on the services of the visiting staff.

**British Medical Association.**

**CURRENT NOTES.**

**Some Work of the Week.**

On May 10th the Charities Committee of the Association allocated certain moneys to the several charities, discussed various methods of arousing a keener interest in medical charities amongst practitioners throughout the country, and dealt with a few points of internal administration. During the week representatives of the Insurance Acts Committee again discussed with Sir Arthur Robinson at the Ministry of Health the vexed question of increased sickness claims. As the outcome of this discussion Sir Arthur Robinson will prepare a memorandum, which will be considered by the representatives of the Insurance Acts Committee prior to a further discussion with the Ministry's representatives. The Library Subcommittee also met during the week and discussed various questions touching on the future of the Association's Library.

**Conference of Medical Staffs of Voluntary Hospitals.**

We wish to remind the medical staffs of the voluntary hospitals throughout the country of the conference which is to be held at the British Medical Association's House on Wednesday, June 6th, at 2 p.m., to consider hospital contributory schemes in their relation to the medical profession. The Medical Secretary would be glad to be advised at the earliest opportunity of the names of the representatives who have been appointed to attend the conference, as if a sufficient number of representatives signify their intention of being present it will be possible to arrange for reduced railway fares on lines similar to those adopted in connexion with the Annual Meeting—namely, a single fare and a third for the return journey. It cannot be definitely stated at this stage that this railway fare concession will be granted, but if the numbers are large enough to secure it the representatives who are nominated to attend will be advised in due course.

## MEDICAL SERVICES IN INDIA.

## REORGANIZATION SCHEME.

IN the Supplement of February 18th we reproduced, substantially in full, a memorandum on the terms and conditions of appointments to permanent commissions in the Indian Medical Service, issued from the India Office. The Secretary of State for India has now sanctioned a scheme for the reorganization of the medical services in India, based on proposals framed by the Government of India in consultation with the local governments. The details of this scheme are embodied in the communiqué by the Government of India printed below. The matter is being considered this week by the Naval and Military Committee of the British Medical Association.

## COMMUNIQUE BY THE GOVERNMENT OF INDIA.

1. In para. 23 of their Report the Royal Commission on the Superior Civil Services in India recommended that a Civil Medical Service should be constituted in each province, provision being made for the maintenance of a sufficient number of British officers to provide adequately for medical attendance on British members of All-India Services and their families. The Government of India have since been in correspondence with the Local Governments and with His Majesty's Secretary of State for India on the question of giving practical effect to these recommendations, and the Secretary of State has now sanctioned the following scheme, which is based on the proposals framed in consultation with Local Governments.

2. The Indian Medical Service, constituted on the same broad lines as at present, will be retained primarily to meet the needs of the Indian Army. In order to maintain the necessary minimum war reserve of military medical officers and to provide for European medical attendance for European officers of the Superior Civil Services and their families, Local Governments will be required to employ a stated number of Indian Medical Service officers. The Government of India will draw on the same Service to meet requirements of the civil administration for which they are responsible.

3. *War Reserve.*—It has been calculated on as precise a basis as possible that the war reserve to be employed by the civil side should consist of 131 British and 65 Indian officers. The larger number of British officers is due to the fact that British officers cannot be recruited in India in an emergency from the ranks of private practitioners.

4. *Civil Requirements.*—The other factor which enters into the reckoning is the need for making adequate arrangements for medical attendance on British personnel of the Superior Civil Services and their families, and for the requirements of the civil administration for which the Central Government are responsible. This factor includes the provision of a number of appointments hereafter termed "residuary," the incumbents of which must be retained permanently in civil employment, so as to ensure the continuance of a skeleton staff to cope with the medical requirements of the Civil Government, whether for the purpose of treatment or of administration, and who cannot therefore be treated as part of the war reserve.

5. Working on these data, the total number of Indian Medical Service officers required for civil employment is calculated at 302. The details are given below. (1) War reserve, 200; (2) For "residuary" posts in provinces, 46; (3) Requirements of Foreign and Political Department, 17; (4) Jails, 8; (5) Special posts under the Government of India, 14; (6) Port Health Officers, Bombay and Aden, 2; (7) Reserve of 5 per cent. as allowance for officers who would not be available on mobilization owing to illness, 15; total, 302. (The figures shown against (2), (3), (4), (5), and (6) represent "residuary" posts.) Of the total of 302, 212 will be Europeans and 90 Indians.

6. To provide employment for 302 officers, 237 posts are required. The remaining 65 officers will constitute the leave and study-leave reserve calculated at 21½ per cent. Of the 237 posts, 59 are available under the Government of India, including posts in the Foreign and Political Department, and 178 posts will be provided in the provinces; 112 of the 178 posts primarily represent requirements of Civil Services in the matter of European medical attendance, and must be held by British officers. This estimate of the medical requirements of the European members of the Superior Civil Services and their families is based on data which will change from year to year as proportion of European to Indian civil officers gradually diminishes. It will, therefore, be subject to periodical scrutiny and, if necessary, to revision. The remaining 66 posts will be open either to Europeans or Indians; 28 out of 59 appointments under the Government of India will similarly be open to officers of either race. Complete lists of (a) posts to be reserved for the Indian Medical Service and (b) reserved posts for which Indian officers of the service will be eligible, either equally with European officers or exclusively, are printed with this communiqué.

7. Under regulations framed by the Secretary of State in Council in 1923 under Rule 12 of the Devolution Rules, 258 appointments are at present reserved for the Indian Medical Service in provinces. The new scheme, which reserves only 178 posts for them, will gradually release 80 posts for Provincial Medical Services. It represents the maximum which can at present be set apart for these services consistently with the need for providing economical employment in peace time for the Medical War Reserve of the Indian Army, and with the obligation to provide European doctors for European personnel of the Superior Services.

8. The adoption of the new list of reserved posts will leave, on the civil side, a surplus of Indian Medical Service officers who are now holding appointments which are at present reserved for the service. The existing rights of these officers will be fully preserved, and prospects equivalent to those afforded by the present list of reserved posts will be retained for them. These prospects will be allowed to diminish only *pari passu* with the absorption of the surplus which will exist until the number of Indian Medical Service officers now in civil employ is equal to the number of posts reserved for them in the new list. The detailed measures required to safeguard the prospects of Indian Medical Service officers already in civil employ are now being worked out.

9. In the interests of the Army, the Local Governments, and of officers themselves, the following rules will come into force forthwith as an integral portion of the scheme: (i) Liability to serve on either civil or military side will be a definite condition of service for all future entrants to the Indian Medical Service; (ii) no officer will be transferred to civil employment without the consent of the Government of India and Local Government; (iii) an officer transferred to civil employment will not ordinarily be liable to be recalled to military employment (except on general or partial mobilization) without the consent of the Local Government, but the Government of India will retain the power to recall an officer against the wishes of a Local Government in very exceptional cases of absolute necessity; (iv) a Local Government will not be at liberty, without the consent of Government of India, to return to military employment an officer transferred to civil employment; (v) all officers in civil employment (including those now in the Service) about a year before the date on which they are expected to be due for promotion to the rank of Colonel will be required to state whether they wish to return to military employment, in order that they may be considered for promotion to administrative rank; (vi) those officers who elect to return to military employment will be recalled and employed in a position suitable to their rank without, however, any guarantee of eventual promotion; (vii) the case of each officer will then be considered on its merits when his name comes up for promotion, and (a) those considered suitable for military promotion will be retained on the military side until promoted to administrative rank, after which they would not normally revert to civil employment, while (b) those not considered suitable for promotion will normally revert to civil employment or, subject to approval of military authorities, be given the option of remaining in military employment in the rank of Lieutenant-Colonel until retirement; (viii) those officers who do not elect to return to military employment will either (a) sever their connexion with the Indian Medical Service and become members of the Provincial Medical Service on such terms as may be mutually agreed upon between themselves and the Local Government, in which case they will cease to belong to the war reserve, or (b) will continue to belong to the Indian Medical Service, in which case they will be eligible for further promotion on the civil side, and will continue to belong to the war reserve provided that they do not hold residuary appointments. Also they will be eligible to receive promotion in military rank, as at present, on the basis of the civil administrative posts which they hold; (ix) an officer who desires permanent civil employment, but does not succeed in obtaining it, will be guaranteed employment in the Military Medical Services unless he is unfit for active service, or there is some other equally valid impediment to his being employed on military duties.

## Civil Appointments Reserved for Officers of the Indian Medical Service.

## GOVERNMENT OF INDIA.

## Department of Education, Health and Lands and Home Department.

- \*1 Director-General, I.M.S.
- \*1 Deputy Director-General, I.M.S.
- \*12 Assistant Directors-General, I.M.S.
- \*1 Superintendent, X-Ray Institute.
- \*1 Imperial Serologist.
- \*1 Chief Medical Officer, Delhi.
- \*2 Civil Surgeons, Simla.
- \*1 Civil Surgeon, Coorg.
- \*1 Health Officer, Suma.
- \*1 Assistant Director of Public Health, Delhi.
- \*15 Medical Research Department appointments.
- \*1 Senior Medical Officer, Port Blair.
- \*1 Civil Surgeon, New Delhi.
- \*1 Public Health Commissioner with the Government of India.

—30—

Incumbents of posts marked with an asterisk (\*) are not liable to be recalled on mobilization. Of the posts marked (1) only one Assistant Director-General, Indian Medical Service, and 11 officers of the Medical Research Department are liable to be recalled on mobilization.

## BRANCH AND DIVISION MEETINGS TO BE HELD.

**EAST YORKS AND NORTH LINCOLN BRANCH: EAST YORKS DIVISION.**—The annual general meeting of the East Yorks Division will be held in Wilberforce House, Hull, to-day (Friday, May 18th), at 3.30 p.m. Agenda: To receive the annual report of the Executive Committee and the treasurer's financial statement; to consider the new Division Model Rules of Organization; to elect officers; to receive the first link in the chain of office for the chairman's badge from Dr. Mackay, the retiring chairman; to consider the provision of a prize for medical students at the University College. After tea there will be an inspection of local antiquities, with a commentary by the Director of Museums.

**GLASGOW AND WEST OF SCOTLAND BRANCH.**—The annual meeting of the Glasgow and West of Scotland Branch will be held in the Pathological Department, Royal Infirmary, Glasgow, on Wednesday, May 30th, at 2.30 p.m. After the annual meeting there will be a clinical demonstration given by the members of the staff.

**METROPOLITAN COUNTIES BRANCH.**—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 19th, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) presidential address by Dr. Christine Murrell entitled "Our changing times."

**METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.**—The annual meeting of the Camberwell Division will be held at St. Giles's Hospital, Camberwell, on Tuesday, May 22nd, at 9 p.m. An address will be delivered by Mr. James R. Ogden on Tutank-Amen's tomb.

**MIDLAND BRANCH: CHESTERFIELD DIVISION.**—A meeting of the Midland Branch will be held at the Royal Hospital, Chesterfield, at 3 p.m., when there will be a

**NORTH CARNARVON AND ANGLESEY DIVISION.**—The annual meeting of the North Carnarvon and Anglesey Division will be held at the Anglesey Arms Hotel, Menai Bridge, to-day (Friday, May 18th), at 3 p.m. Agenda: Election of officers and committees, reception of annual report and financial statement; consideration of the Report of Council and instruction of the representative. The chairman, Dr. Helsby, invites members and ladies to tea at 4 o'clock in the hotel gardens.

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The final clinical meeting of the Northern Counties of Scotland Branch for this season will be held at the Lawson Memorial Hospital, Golspie, on Saturday, May 19th, at 12 noon. The programme will include the demonstration of some surgical cases by Mr. B. S. Simpson, and notes on general anaesthetics by Dr. J. B. Simpson. Golfing members will note that Dr. Simpson has arranged for the courtesy of the green at Golspie, Brora, and Dornoch to be extended to them for that day. The annual meeting of the Branch is to be held at Kyle of Lochalsh on June 30th. This will be the first meeting of the Branch which has been held in the area of the Island Division.

**NORTH WALES BRANCH: SOUTH CARNARVON AND MERIONETH DIVISION.**—A clinical meeting of the South Carnarvon and Merioneth Division will be held at the Towy Wm Memorial Hospital on Tuesday, May 29th.

**OXFORD AND READING BRANCH: OXFORD DIVISION.**—The next meeting of the Oxford Division will be held at the Radcliffe Infirmary, Oxford, on Wednesday, May 23rd, at 2.30 p.m. Agenda: Election of associate member of the Division; clinical cases: Dr. F. G. Chandler: Early diagnosis and treatment of bronchiectasis (with lantern slides).

**SHROPSHIRE AND MID-WALES BRANCH.**—The fifty-third annual spring meeting of the Shropshire and Mid-Wales Branch will be held at the Royal Salop Infirmary on Friday, May 25th, at 3.30 p.m. Agenda: Election of president for 1923-24; consideration of Annual Report of Council.

**SOUTH WALES AND MONMOUTHSHIRE BRANCH: SOUTH-WEST WALES DIVISION.**—A meeting of the South-West Wales Division will be held on Thursday, May 24th, at 3 p.m., at the Ivy Bush Hotel, Carmarthen, when a display of medical and other cinematograph films will be given by Kodak, Ltd.

**SOUTH-WESTERN BRANCH.**—An intermediate meeting of the South-Western Branch will be held at the Royal Cornwall Infirmary, Truro, on Thursday, May 24th, at 3.15 p.m. Agenda:—Papers and notes: Mr. L. C. Panting, notes on cases of aplastic kidney, lipoma of the caecum, obstruction of the ileum by a band with unusual findings, death from diabetic coma without pre-operative glycosuria; Dr. Eric Wordley: The transfusion problem; Dr. William King: A puzzling abdominal case; Dr. J. Stephen Moore: Myosarcoma of the jejunum; Dr. F. G. Bushnell: Sun and air bathing; Drs. Francis and Dorothy Chown: The use of sanocrysin in pulmonary tuberculosis; Dr. Frank O. Graham: Congenital high elevation of the scapula.

**SUFFOLK BRANCH: WEST SUFFOLK DIVISION.**—In connexion with the post-graduate course arranged by the West Suffolk Division at the West Suffolk Hospital, Sir Thomas Horder will give a lecture to-day (Saturday, May 19th), at 8.45 p.m., on etiological factors in fibrosis and their bearing on treatment. Coffee will be served at 8.30 p.m. A clinic of medical cases will be held on Sunday, May 20th, at 11 a.m. The course is open to medical practitioners in West Suffolk and their guests.

**WEST SOMERSET BRANCH.**—A meeting of the West Somerset Branch will be held at the Taunton and Somerset Hospital, Taunton, to-day (Friday, May 18th), at 3.30 p.m. Agenda: Election of representative and deputies to the Annual Representative Meeting; consideration of Annual Report of Council.

## Meetings of Branches and Divisions.

## DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.

The annual meeting of the Bournemouth Division was held on May 8th; the annual report and financial statement were adopted. The following officers were elected for the ensuing year:

Chairman, Dr. Arden. Vice-Chairman, Dr. McCall. Honorary Secretary and Treasurer, Dr. Carter. Representatives in Representative Body, Dr. Le Fleming and Dr. Johnson Smyth. Deputy Representatives, Dr. Mahomed and Dr. Hutton.

A proposal to hold meetings of the Division in the evening instead of in the afternoon was referred back to the Executive.

## LANCASHIRE AND CHESHIRE BRANCH: MID-CHESHIRE DIVISION.

At a meeting of the Mid-Cheshire Division at the Altrincham General Hospital on May 7th Dr. CAPON, physician to the Royal Southern Hospital, Liverpool, gave a lecture, illustrated by lantern slides, on intracranial birth injuries. The basis of this lecture was a series of autopsies and clinical observation. The causes, pathology, symptoms, and treatment were fully discussed, and Dr. Capon received a cordial vote of thanks for a lucid and instructive lecture.

## LANCASHIRE AND CHESHIRE BRANCH: WARRINGTON DIVISION.

The annual meeting of the Warrington Division was held at the Infirmary on May 4th.

The following officers were elected for 1923-24:

Chairman, Dr. L. S. B. Tasker. Vice-Chairman, Dr. W. H. C. Patrick. Secretary and Treasurer, Dr. William Grant. Representative on Branch Council, Dr. Donald Ferguson. Representative in Representative Body, Dr. J. S. Manson.

A general discussion on the Annual Report of Council took place, and the representative received instructions.

In connexion with the proposed contract rate for juvenile Odd-fellows, strong opposition was expressed to any contracting with insurance societies.

## METROPOLITAN COUNTIES BRANCH: CAMBERWELL DIVISION.

A MEETING of the Camberwell Division was held at St. Giles's Hospital, Camberwell, on April 24th, when Dr. Cox was in the chair. An address was delivered by Dr. GUY BOUSFIELD, pathologist to the hospital, on modern methods of combating diphtheria. The lecturer criticized the methods hitherto used in the diagnosis of diphtheria; he did not agree with the view commonly held of the infallibility of the throat swab, but urged more extensive use of the Schick test. Dr. Bousfield fully explained the method of performing this test, and demonstrated a number of cases showing the positive and negative reactions. After the lecture an interesting address was given by Dr. J. G. FORBES of the London County Council Public Health Department on the statistics comparing the incidence and mortality rate of diphtheria in the borough of Camberwell during recent years. Several members took part in the general discussion later, and the meeting closed with a hearty vote of thanks to Dr. Bousfield and Dr. Forbes.

## METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

A MEETING of the Lewisham Division was held at St. John's Hospital, Lewisham, on May 1st, with Dr. D. J. MILLER in the chair. Mr. WINSBURY WHITE showed a case in which he had removed the left kidney with an oxalate stone. He also exhibited the nozzle from an enema syringe which he had extracted, with the aid of the cystoscope, from the bladder of a woman who had tried to induce abortion. Dr. GOLDSMITH showed four cases, the first being an untreated epithelioma of the region of the eye and nose. The second patient was a man suffering from dermatitis herpetiformis, which was very irritating at night, but had no constitutional effects; it was treated with arsenic. The third patient was a child with systematized naevi on one side; and the fourth was a man with black hairy tongue, which resisted all forms of treatment. Dr. OFFENHEIM showed four patients, each of whom had had the radius plated, the movements being good; he also exhibited a case of fibrocystic disease of the humerus, occurring in a girl. Three cases were shown in which the clinical symptoms were similar, but the diagnoses were respectively kinked colon, gallstones, and duodenal ulcer. Dr. E. H. ROBERTS showed a case of pleurisy with effusion, which had cleared up, but pyrexia persisted; the x rays showed thickened pleura. Dr. HALLINAN moved a vote of thanks to the members who had shown cases.

## OXFORD AND READING BRANCH: WINDSOR DIVISION.

A POPULAR lecture on "What should we eat?" was given by Dr. S. H. DAUKES, director of the Wellcome Bureau of Scientific Research, in the Small Town Hall, Windsor, on April 20th, under the auspices of the Windsor Division. The speaker was introduced by Dr. J. J. PATERSON.

Dr. Daukes dealt first with fads and fancies in connexion with food, saying that many ideas called fads were customs or habits based upon sound reasons, while "fancies," especially those of children, should be tenderly dealt with, for there might be good grounds for the preferences and antipathies. He then emphasized the importance of the "aesthetic" side of digestion, explaining the parts played by appearance and service in their influence on the flow of the gastric juice. He proceeded to discuss the question

*Attendance of Witnesses at Service Subcommittee*

The committee had before it a communication of the Hastings Insurance Committee with regard to the attendance of witnesses at inquiries held by the Medical and Pharmaceutical Service Subcommittees. The Hastings Committee was of opinion that subcommittees should have power to compel the attendance of witnesses, and pointed out that in the absence of such compulsion a person might decline to give evidence, the subcommittee

to a decision in the absence of such evidence, and then, if the case proceeded to appeal, it was within the power of either party to compel the attendance of the witness, when the evidence given might materially alter the whole aspect of the case. The London Committee resolved to reiterate the view which it had placed before the Commissioners ten years ago (when it was turned down because the Commissioners felt that more experience was desirable) that power should be conferred upon the committee to subpoena witnesses in connexion with inquiries. In reply to a question by Dr. Chase, Mrs. HANDEL BOOTH, who had brought forward the recommendation, said that the question of requiring evidence to be on oath had not been considered.

#### Urgent Calls.

The committee further considered two cases of complaints against practitioners which, on account of exceptional difficulty in apportioning responsibility, had been twice previously adjourned. In the one case it was alleged that the practitioner failed to realize the seriousness of the patient's condition and to supply treatment, and in the other that he did not visit when he should have done. Both cases were complicated, however, by the fact that the practitioner did not appear to have been properly informed as to the seriousness and urgency of the case. In the first case the committee finally agreed that the practitioner had not failed to comply with the terms of service, but on the motion of Mr. MEANMORE, seconded by Dr. CARDALE, it was further agreed "that it was to be regretted that the insured person did not give to the practitioner when he called upon him some better indication of the urgency of his need, but it was also regrettable that the practitioner should appear to have been more concerned about the hour at which the call was made than about the condition of the patient." In the second case the committee found that the practitioner had been negligent, and added a rider, again on Mr. MEANMORE's proposition, "that it is desirable to emphasize the fact that a practitioner's express obligation under his terms of service is to visit a patient whose condition so requires, and that the committee cannot regard the absence of a specific request for a visit as invalidating that obligation." Dr. CARDALE, in supporting the rider, said that he did not believe there was anyone in the profession who would say that a doctor was relieved from responsibility for visiting a patient merely because he did not receive a request to do so.

#### Accuracy in Dispensing.

Dr. CARDALE raised a point on a case brought forward by the Pharmaceutical Service Subcommittee in which the subcommittee had recommended cautioning the chemist, but not a monetary penalty, for making up a prescription in which bicarbonate of soda was 35 per cent. over the amount ordered. The sentence in the report to which he took exception read: "It will be observed that the potassium iodide, which is the important and the most potent drug in the mixture, was dispensed with remarkable accuracy, and this to some extent influenced us in considering the matter from the point of view of the excess of bicarbonate of soda, which is not such a potent remedy." Dr. Cardale thought the qualification of "accuracy" by "remarkable" was unrivalled for, and that the suggestion that accuracy in dealing with drugs, which were of a potent nature should excuse inaccuracy in dealing with drugs less potent was wholly unwise. Mr. D. DAVIS, chairman of the subcommittee, agreed to delete the offending words.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders E. Cameron and F. C. Robinson are placed on the retired list with the rank of Surgeon Captain.  
Surgeon Commanders J. B. Crawford to the President for three months' post-graduate course; W. F. Beattie to the President for Medical Department, temporary supernumerary.

### British Medical Association.

#### CURRENT NOTES.

##### Access to the B.M.A. House.

THE private roadway and pavements leading into the British Medical Association House from Tavistock Square are now entirely closed for traffic while excavations are in progress, and the Association can take no responsibility for accidents occurring to persons who may pass over the site of the work now proceeding. A covered wooden passage has been constructed to form an entrance to the building for foot passengers from Tavistock Square. Members and others who do not wish to use this covered way, or who wish to bring motor cars or other vehicles into the Association's premises, must proceed southwards down Tavistock Square, turning left at the bottom of the Square into Tavistock Place, turning left again into Marchmont Street, and again left round Cartwright-Gardens, thus entering the courtyard of the B.M.A. House through the archway under the Great Hall.

##### Some Work at Headquarters.

On Wednesday the Hospitals Committee completed its arrangements for the conference of medical staffs of voluntary hospitals to be held at the British Medical Association House on Wednesday, June 6th. As indicated in a Current Note in last week's *Supplement*, if a sufficient number of representatives notify their intention to be present it will be possible to arrange for reduced railway fares at the rate of a single fare and a third for the return journey. The committee directed the preparation of a model contributory scheme to be submitted for discussion at its next meeting. The Association is constantly hearing of schemes in one part of the country or another which fail to conform to the requirements laid down from time to time by the Hospitals Committee, and it is thought that if a model contributory scheme is formulated it may serve as a useful guide, especially for members of hospital staffs in any area where a new scheme may be brought into existence. The committee also directed the preparation of a memorandum dealing with cottage hospitals in their relation to the hospital policy of the Association. On May 24th the National Formulary Subcommittee, to which the Retail Pharmacists' Union and the Ministry of Health were asked to send representatives, met to discuss the projected national formulary. It will be remembered that the subcommittee was set up to carry out the instruction of the Panel Conference that the Insurance Acts Committee should expedite the production of such a formulary. The subcommittee hopes to finish its work in time to report to the next conference.

##### By-laws under the Nursing Homes Registration Act, 1927.

THE Ministry of Health is just about to issue draft model by-laws under the Nursing Homes Registration Act, 1927. By the courtesy of the Ministry the British Medical Association was given an opportunity of seeing the draft by-laws and making suggestions for their amendment. Particulars of these suggestions will be found in the Annual Report of Council published in the *Supplement* to our issue of April 28th (p. 152), under the heading "Registration of Nursing Homes." It is important that Divisions should take an early opportunity of approaching their local authorities in order to secure that no amendments are made locally to which exception is taken. Clause 5 (1) of the Act lays down that there shall be no inspection of medical records. In order that this provision shall not be lost sight of the Ministry of Health has consented, at the suggestion of the Association, to recommend local authorities to print this section at the end of their by-laws, and it is very important that Divisions should see that this is done. The Ministry has already circularized local authorities (Circular 862 of March, 1928) calling their attention to the obligations imposed by the Act and the desirability of advertising its requirements to all concerned, and issuing the necessary forms of application for registration at the earliest possible date.

##### Examination of Vagrants for Small-pox.

THE Medical Secretary has received a number of requests for information as to what remuneration doctors should ask from the guardians for the duty of examining vagrants under Order No. 859 of the Ministry of Health to determine if they show any sign of being affected by small-pox. This Order places on Poor Law medical officers the duty of the daily inspection of vagrants for signs of small-pox before they are discharged, and states that "in view of the extra work and responsibility which may be involved the Minister will be prepared to consider any application which may be made by a board of guardians for his sanction to the payment of reasonable additional remuneration to the medical officer." The Public Health Committee has given careful consideration to the matter, and has also been in consultation with the Secretary of the Poor Law Medical Officers' Association, and has decided that the remuneration asked for should be 1s. a head, with a minimum of 10s. for each attendance.

##### Scholarships and Grants in Aid of Scientific Work. *Scholarships.*

THE Council of the British Medical Association is prepared to receive applications for Research Scholarships as follows: An Ernest Hart Memorial Scholarship, of the value of £200 per annum, and three Research Scholarships, each of the value of £150 per annum. These Scholarships

are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State Medicine) relating to the causation, prevention, or treatment of disease. Each Scholarship is tenable for one year, commencing on October 1st, 1928. A Scholar may be reappointed for not more than two additional terms. A Scholar is not necessarily required to devote the whole of his or her time to the work of research, but may hold a junior appointment at a university, medical school, or hospital, provided the duties of such appointment do not interfere with his work as a Scholar.

#### Grants.

The Council of the British Medical Association is also prepared to receive applications for Grants for the assistance of research into the causation, treatment, or prevention of disease. Preference will be given, other things being equal, to members of the medical profession and to applicants who propose as subjects of investigation problems directly related to practical medicine.

#### Conditions of Award: Applications.

Applications for Scholarships and Grants must be made not later than Saturday, June 2nd, 1928, on the prescribed form, a copy of which will be supplied on application to the Medical Secretary of the Association, B.M.A. House, Tavistock Square, London, W.C.1.

Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated, to whom reference may be made.

### NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

#### Treatment by Radiation and Electricity.

By BIRMINGHAM CENTRAL: That subpara. (3) of the recommendation contained in para. 81 of the Annual Report of Council be amended by the deletion of the words "except on the responsibility and under the general supervision of a registered medical practitioner" and the substitution thereof of the words "except on the recommendation by and under the direction of a registered medical practitioner."

#### Paying Centres for Infant Hygiene.

By BIRMINGHAM CENTRAL: That (with reference to Recommendation A contained in para. 95 of the Annual Report of Council), as it is a matter of experience that instructional centres frequently lead to subsequent treatment, the Representative Body considers it undesirable that paying centres for infant hygiene should be instituted.

#### Contract Rate for Juvenile Oddfellows.

By BIRMINGHAM CENTRAL: That the recommendation contained in para. 104 of the Annual Report of Council be amended to read as follows:

That in view of the fact that the whole cost of medical attendance on the juvenile falls on the parent, who is often in poor circumstances, the Representative Body approve of a standard rate in urban areas of 8s. 8d. per head per year, including drugs, for the remuneration of medical practitioners for medical attendance and medicine for juvenile members of the Manchester Unity of the Independent Order of Oddfellows; that the Council be authorized to approve a slightly lower rate than 8s. 8d. per head per year, for a time to be definitely stated, for application in any area in which it is satisfied that owing to economic conditions the standard rate of payment is not feasible; and that it be an essential part of this arrangement that there must be free choice of doctor by patient and of patient by doctor.

By CLEVELAND: That the recommendation contained in para. 104 of the Annual Report of Council be amended by the deletion of the words "that the Council be authorized to approve a slightly lower rate than 8s. 8d. per head per year, for a time to be definitely stated, for application in any area in which it is satisfied that owing to economic conditions the standard rate of payment is not feasible."

By WIGAN: That (with reference to the recommendation contained in para. 104 of the Annual Report of Council) the Representative Body deprecates the acceptance by medical practitioners of any contract to provide medical attendance and treatment for uninsured women and juveniles except through the agency of the State.

#### Membership and Acceptance of Post which is subject of "Important Notice."

By STRATFORD: That (with reference to the Motion by North Middlesex—see p. 213 of *British Medical Journal Supplement*, May 19th) any registered medical practitioner who has obtained a position to which he was appointed whilst it was the subject of an "Important Notice" in the *British Medical Journal* shall not be eligible for membership of the British Medical Association until the propriety of his membership has been considered and recommended by the Central Ethical Committee.

### Association Notices.

#### TABLE OF DATES.

June 2, Sat.	Publication in BRITISH MEDICAL JOURNAL SUPPLEMENT of result of election of members of Council by grouped Branches, and of result of election of members of Council and Representatives in Representative Body by Public Health Service members. Nomination papers available (on application at Head Office) for election of 12 members of Council by grouped Representatives (British Isles).
June 7, Thurs.	Names of Representatives and Deputy Representatives must be received at Head Office by this date.
June 13, Wed.	Council.
June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in BRITISH MEDICAL JOURNAL SUPPLEMENT.
July 4, Wed.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 20, Fri.	Annual Representative Meeting, Cardiff, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Council, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

#### BRANCH AND DIVISION MEETINGS TO BE HELD.

BORDER COUNTIES BRANCH.—The annual general meeting of the Border Counties Branch will be held at the County Buildings, Dumfries, on Friday, June 15th, at 3 p.m. Agenda: Branch Council's report and financial statement; report of the election of office-bearers for 1928-29; Dr. John Ritchie will give his presidential address entitled "Some primitive conceptions of disease and their bearing on public health."

GLASGOW AND WEST OF SCOTLAND BRANCH.—The annual meeting of the Glasgow and West of Scotland Branch will be held in the Pathological Department, Royal Infirmary, Glasgow, on Wednesday, May 30th, at 2.30 p.m. After the annual meeting there will be a clinical demonstration given by the members of the staff.

GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.—A meeting of the Lanarkshire Division will be held at the Stonehouse Hospital on Wednesday, June 6th, at 3.30 p.m.

GLOUCESTER BRANCH.—The annual general meeting of the Gloucester Branch will be held at the General Hospital, Stroud, on Thursday, May 31st, at 6 p.m. Agenda: Election of officers; annual report of the Branch Council; to make new rules, or alter or repeal existing rules; address by Dr. J. R. Charles, physician to Bristol Royal Infirmary, on manganese toxæmia.

KENT BRANCH.—The annual meeting of the Kent Branch will be held at Acacia Hall, Dartford, on Thursday, June 14th, at 2 p.m. The presidential address will be delivered by Dr. M. W. Renton on the increasing influence of hospital practice and clinics on private practice, both general and special. Dr. M. W. Renton invites all members and their wives to a luncheon at 1 p.m. in the gymnasium, Acacia Hall. Messrs. Burroughs Wellcome and Co. have arranged an exhibition of micrographs of the commoner parasites and pathogenic organisms with reference to the sero- and vaccine-therapy associated with their presence, and will entertain members and their wives at a garden party in the grounds of Acacia Hall. The Tennyson Smith golf challenge cup competition will be held on the same day.

KENT BRANCH: BROMLEY DIVISION.—A meeting of the Bromley Division will be held to-day (Friday, May 25th), at 8.30 p.m., at the Town Hall, Anerley (adjoining Anerley Station), when Mr. Philip Turner will give a paper on modern methods in surgical diagnosis. The annual meeting of the Division will be held on Thursday, May 31st, at the White Hart Hotel, Bromley, at 8.30 p.m. Agenda: Report of executive; election of officers; Annual Report of Council.

**KENT BRANCH: DARTFORD DIVISION.**—A general meeting of the Dartford Division will be held at Livingstone Hospital on Tuesday, May 29th, at 3 p.m. Agenda: Annual Report of Council; instruct representative in Representative Body; elect chairman, 1928-29.

**LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.**—The annual general meeting of the Hyde Division will be held in the Hyde Town Hall on Thursday, June 14th, at 8.30 p.m.

**METROPOLITAN COUNTIES BRANCH.**—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 19th, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) presidential address by Dr. Christine Murrell entitled "Our changing times."

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The annual general meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, June 5th. The next clinical meeting of the Division will be at the Metropolitan Hospital on Friday, June 8th, at 4.30 p.m.; tea at 4 o'clock.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—A meeting of the Hendon Division will be held at the Hendon Cottage Hospital on Friday, June 29th, at 8.30 p.m., when members are invited to show cases. The meeting will subsequently discuss the Supplementary Report.

**METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.**—The annual meeting of the Hampshire Division will be held at the Hampstead General Hospital on Thursday, June 14th, at 8.30 p.m., for the election of officers and Executive Committee.

**METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.**—The annual meeting of the Lambeth and Southwark Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Wednesday, June 6th. Tea at 4.15 p.m.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, June 19th, at 8.45 p.m. Mr. J. M. Redding will read a paper on some points in the x-ray examination of the alimentary tract.

**METROPOLITAN COUNTIES BRANCH: NORTH MIDDLESEX DIVISION.**—The annual general meeting of the North Middlesex Division will be held on Wednesday, May 30th, at 3.30 p.m., in the Southgate Council Offices, Palmer's Green. Agenda: Financial statement for 1927; election of Divisional officers; Annual Report of Council; instruction of representatives in Representative Body.

**MIDLAND BRANCH: LINCOLN DIVISION.**—The annual meeting of the Lincoln Division will be held at the Lincoln General Dispensary to-day (Friday, May 25th), at 3 p.m. Agenda: Election of officers; arrangement of a meeting to be addressed by a representative from headquarters.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 12th, at 9 p.m. Dr. W. Langdon Brown will read a paper on endocrinology and the future.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden Hospital, Harlesden Road, N.W., on Wednesday, June 20th. Dr. Margaret Emslie will discuss the care of the infant.

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The annual meeting of the Northern Counties of Scotland Branch is to be held at Kyle of Lochalsh on June 30th. This will be the first meeting of the Branch which has been held in the area of the Islands Division.

**NORTH WALES BRANCH: SOUTH CARNARVON AND MERIONETH DIVISION.**—The next meeting of the South Carnarvon and Merioneth Division will be held at the War Memorial Hospital, Towyn, on Tuesday, May 29th, at 2.15 p.m. Agenda: Minutes and correspondence; report of Executive Committee (members are asked to bring with them the SUPPLEMENTS of April 28th, May 5th, and May 19th); demonstrations of x ray and artificial sunlight by Dr. F. A. Davies; cases will be shown by Dr. J. A. Davies and Dr. F. S. Jackson.

**SHROPSHIRE AND MID-WALES BRANCH.**—The fifty-third annual spring meeting of the Shropshire and Mid-Wales Branch will be held at the Royal Salop Infirmary to-day (Friday, May 25th), at 3.30 p.m. Agenda: Election of president for 1928-29; consideration of Annual Report of Council.

**SOUTHERN BRANCH.**—The annual meeting of the Southern Branch will be held at Queen's Hotel, Southsea, on Friday, June 8th. Supper will be served at 9 p.m., and there will then follow an address by Colonel Macarthur entitled "Some medical references to Pepys," which will be illustrated by lantern slides.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, June 21st, at 8.30 p.m. Dr. A. H. Jacob will read a paper on tuberculosis from the point of view of the tuberculosis officer.

**SUSSEX BRANCH: HASTINGS DIVISION.**—The next meeting of the Hastings Division will be held at the Hastings Infirmary, Frederick Road, on Tuesday, June 12th, at 3.15 p.m. Dr. Bower will conduct members over the infirmary, and after tea clinical cases will be shown.

**WILTSHIRE BRANCH: TROWBRIDGE DIVISION.**—A social meeting of the Trowbridge Division will be held at the Norton Hill Colliery, Midover Norton, on May 31st, at 3 p.m., open to members and friends. After inspection of the colliery tea will be provided at the Commercial Hotel by the chairman, Dr. Spence.

## Meetings of Branches and Divisions.

### BIRMINGHAM BRANCH: BIRMINGHAM CENTRAL DIVISION.

The annual meeting of the Birmingham Central Division was held on May 8th, with Dr. BEARNS in the chair. The annual report of the Executive Committee was received and approved. The following officers were elected to serve during the ensuing year:

Chairman, Dr. Morris. Vice-Chairman, Dr. Beards. Honorary Secretaries, Drs. Garbutt and L. A. N. Lane. Representatives in Representative Body, Mr. W. Stark Adams, Mr. A. W. Nuthall, Drs. J. A. Brown, H. G. Dain, and W. A. Morris. Deputy Representative in Representative Body, Dr. L. A. N. Lane.

A letter was read from the medical officer of health about the provision of electrical and medicated baths in connexion with a public bath in Birmingham. It was decided to reply that there seemed to be ample provision at most of the hospitals, and that the probable demand would not justify the expense. It was decided that expenses, such as for stationery, incurred by the secretaries of the Medical Charities Fund should be met by the Central Division. The meeting was subsequently adjourned until May 18th, for further consideration of the report.

### DORSET AND WEST HANTS BRANCH.

The Dorset and West Hants Branch held its summer meeting at the Yealham Hospital, Sherborne, on May 9th. The following officers were elected for 1927-28:

President, Mr. A. Basil Rooke. Vice-Presidents, Drs. Whitaker and McCall. Honorary Secretary, Dr. McCall. Honorary Treasurer, Dr. Grey-Edwards.

The reports from the Bournemouth and West Dorset Divisions were approved. Mr. A. B. Rooke read a paper on some recent advances in medicine and surgery. The Sherborne members entertained the visiting members to lunch and tea.

### METROPOLITAN COUNTIES BRANCH: MARYLEBONE DIVISION.

The annual meeting of the Marylebone Division was held on May 9th, when the chairman, Dr. JONSON HORNE, presided. Dr. PERCY SPURGIN and Sir WILLIAM WILCOX were elected chairman and vice-chairman respectively for 1928-29. The Annual Report of Council was considered.

Mr. McANAM ECCLES opened a discussion on the general practitioner and paying beds in hospitals. He described in detail the various proposals that were under discussion in this connexion, and laid emphasis on the points that were likely to come before the Annual Representative Meeting for consideration and decision. Mr. BISHOP HARMAN, Mr. HAWTHORSE, Mr. WALTER SPENCER, Dr. ROXBURGH, Dr. GOULLET, and other members took part in the discussion, and accounts were given of the various schemes already in operation in London.

### METROPOLITAN COUNTIES BRANCH: STRATFORD DIVISION.

The members of the Stratford Division, at the invitation of their chairman, Dr. GARLAND COLLINS, visited the West Ham Council's sanatorium for adult cases of tuberculosis at Upton Park on May 9th, and were shown over the institution. From Dr. COLLINS they proceeded to the council's convalescent home at Upton Park, where, after inspecting the wards and grounds, tea was provided and the visitors were welcomed by the chairman of the hospitals committee of the council, who emphasized its desire to elicit the co-operation and goodwill of the local medical practitioners. Dr. CHALLANS, chairman of the West Ham Insurance Committee, responding for the visitors, congratulated the council on its efficient and up-to-date institutions. On behalf of the Stratford Division he reciprocated the desire of the council in respect to co-operation, and referred to the fact that the chairman of the Division was the medical officer of health for the borough.

### NEW SOUTH WALES BRANCH.

#### A Year's Work.

The annual report of the Council of the New South Wales Branch for the year ending March 29th, 1928, has now been issued to the members. During the period under review the membership of the Branch rose from 1,593 to 1,661. Ten ordinary meetings, three extraordinary, and seven clinical meetings of the Branch were held, the average attendance being fifty-one. The ordinary meetings were arranged in conjunction with meetings of clinical sections, a system which has been found to work very satisfactorily. The special clinical meetings were held at various hospitals, and the extraordinary meetings were concerned with the passing of the revised articles and by-laws. In connexion with the holding of the third session of the Australasian Medical Congress (British Medical Association) in Sydney in the spring of 1929, Sir Alexander MacCormick has been appointed president by the Federal Committee, and the organization of the Congress is proceeding satisfactorily. Additional land has been acquired for the Association's new premises in Macquarie Street, Sydney, and the desired frontage of 60 feet has now been secured; competitive designs for a building have been invited from architects throughout the Commonwealth. During the year seven British Medical Association Lectures were delivered at meetings of local associations outside the metropolitan area, and post-graduate courses were held in diseases of children and in obstetrics.

A combined meeting of the Chichester and Worthing and the Horsaam Divisions was then held for the purpose of electing a representative to the Annual Representative Meeting at Cardiff in July. Dr. H. J. M. Milbank-Smith was elected representative and Dr. M. H. H. Vernon deputy representative. Mr. F. E. FELDEN (Hove) read a most interesting paper on some observations on renal tuberculosis, which was illustrated by lantern slides. In the discussion which followed the CHAIRMAN, Drs. GIBSON, GARRATT, GRIFFITHS, TEMPLETON, and HEYWOOD-WARDINGTON spoke. Dinner followed in the Burlington Hotel. The health of the chairman was proposed by Dr. LEDGER and seconded by Dr. PARRY; both referred to the esteem in which Dr. Hinds was held, and wished him happiness in his approaching retirement from practice.

## GENERAL COUNCIL

OF

## MEDICAL EDUCATION AND REGISTRATION.

## SUMMER SESSION, 1928.

THE one hundred and twenty-seventh session of the General Medical Council was opened on Tuesday, May 22nd, at the Council's offices at Hallam Street, under the presidency of Sir DONALD MACALISTER, Bt., K.C.B.

*New Members.*

The following new members were introduced and took their seats: Alfred William Sheen, C.B.E., M.S., F.R.C.S., as representative of the University of Wales for one year from December 12th, 1927; John Kay Jamieson, M.B., as representative of the University of Leeds for three years from January 1st, 1928; Sir William Taylor, K.B.E., C.B., M.D., F.R.C.S.I., as representative of the Royal College of Surgeons in Ireland for one year from February 1st, 1928; Sir Robert Alfred Bolam, O.B.E., M.D., as representative of the University of Durham for five years from March 6th, 1928; and George Henry Edington, M.D., as representative of the Royal Faculty of Physicians and Surgeons of Glasgow, from May 7th, 1928, to April 6th, 1930.

*PRESIDENT'S ADDRESS.*

Sir DONALD MACALISTER then delivered the following address from the chair:

GENTLEMEN,—We have to record with regret the loss of no fewer than six members of the Council since our last session in November. Dr. James Alexander Macdonald of Taunton died on April 23rd. He was first elected a direct representative of English practitioners in 1911, and again and again re-elected. His energetic character and his skill in practical affairs won him a high place in the regard of his brethren, and enabled him to attain to leadership in their councils. His lamented death creates a vacancy on the Council, which must be filled by an election to be held "as soon as conveniently may be" during the summer. Sir Arthur Chance has for twelve years been a conspicuous figure among us; his keen intellect and knowledge of professional conditions gave value to his frequent contributions to our discussions and to our administrative work. I am sorry to say that it is not to waning interest but to ill health that his retirement is due. Our cordial good wishes for his recovery go with him. The Royal College of Surgeons in Ireland have honoured us by sending in his room Sir William Taylor, K.B.E., C.B., Regius Professor of Surgery in the University of Dublin, and Past-President of the College. Dr. James Alexander Adams, for eight years our esteemed colleague from the Royal Faculty of Glasgow, has also been constrained by impaired health to withdraw from our fellowship. We shall miss his sturdy good sense and his hearty goodwill. I am happy to learn that rest and care are already effecting an improvement in his strength. To Dr. Adams's seat the Royal Faculty have elected my Glasgow colleague Colonel George Henry Edington, M.D., D.Sc., Honorary Physician to His Majesty the King, and President of the Faculty, to whom in your name and my own I offer a cordial welcome. Three other members have retired from office at the expiration of their respective terms—Dr. Thomas Wardrop Griffith, C.M.G., University of Leeds, Dr. David Hepburn, C.M.G., University of Wales, and Dr. Robert Howden, University of Durham. For a series of years these have been our familiar friends and fellow members in this Council, and we cannot let them leave us without acknowledging gratefully their loyal helpfulness in our common tasks. The University of Leeds has chosen to represent its Professor James Kay Jamieson, Dean of its Medical Faculty; Wales has appointed Professor Alfred William Sheen, C.B.E., director of the Surgical Unit in the Welsh National School of Medicine at Cardiff; and Durham has presented us an old friend in a new guise by returning Sir Robert Bolam, O.B.E., to bear for a time a double burden of representation. By experience in his case, by reputation in the case

of his professional colleagues, we are well assured that their co-operation in the work of the Council will be as serviceable as it is welcome.

Of members *emeriti* three in the fullness of years have passed in honour from our veterans' roll. These are Sir William Solby Church, Bt., K.C.B., from 1889 to 1899 member for Oxford, and until his death trustee for the English Branch Council; Sir Dyce Duckworth, Bt., who at the end of last century represented the Royal College of Physicians of London, and acted as our treasurer for fifteen years; and Dr. Henry William Langley Brown, from 1906 to 1919 elected and re-elected by the suffrages of his fellow practitioners in England and Wales. As one of the few members of the Council who was privileged to serve with and to learn from all of these, I offer my memorial tribute to the worthy examples they furnished to their successors.

On November 23rd, 1858, nearly seventy years ago, the Council met for the first time pursuant to a summons by the Secretary of State. During threescore years and ten many wise and good members of our profession have been inscribed upon its roll of members *emeriti*. From them we have received a heritage which we are proud to cherish and emulous to maintain. For more than half of its lifetime I have been privileged to take part in the Council's fellowship, and, recalling memories of nearly forty years, I am convinced that at no previous period was it more conscious than it now is of its responsibilities or more zealous to fulfil them for the public good. Our inheritance from the "fathers and brethren" of past generations has not been dissipated, it has been enhanced.

Twenty-four years ago the Council adventurously entrusted me, then one of its junior members, with the onerous task of upholding the dignity of the President's chair. My term of office expires a week hence; but as May 27th may fall outside the limits of the present session, I propose to consult your convenience in making a fresh election of a President by resigning my trust into your hands this afternoon, so soon as certain necessary business is completed. No President, let me say, has ever received a fuller measure of loyal support and encouragement than has fallen to me. For that, and for the opportunity you have thus given me of rendering service to the public, and to the profession as its ministers, I shall ever be proud and grateful.

The Lord President of the Council, with whose office we stand in special relation, has informed us that on March 22nd His Majesty in Council revoked the Order in Council of 1908, by which the privilege of practising in this country was originally afforded to the practitioners of Quebec. That Province, by formal legislation, had already withdrawn the reciprocal privilege of practice within its territory hitherto accorded to the registered practitioners of the United Kingdom.

*The British Pharmacopoeia.*

In June, 1926, the Council, on the recommendation of the Pharmacopoeia Committee, requested the Lord President "to take steps for the appointment of a suitable committee, including members of the Council, empowered to make inquiries, to collect information, to receive evidence, and to make recommendations on the question whether it is desirable to make any, and if so what, alterations in the existing law or practice relating to the preparation or publication of the *British Pharmacopoeia* and to its adaptation to the requirements of the British Empire." The Lord President was pleased to grant the Council's request, and a subcommittee of the Committee of Civil Research was duly appointed in July, 1926, the terms of reference being those suggested by the Pharmacopoeia Committee. The Right Hon. H. P. Macmillan, K.C., was appointed chairman, and your President and Dr. Dalo were members. The report of the subcommittee, which is unanimous, has now been submitted for the Council's consideration, and will be brought before you by the Pharmacopoeia Committee at this session. Its conclusions were reached, as I can testify, after very careful and judicial consideration of the problems that have to be solved in the altered circumstances of the times; and I shall have no hesitation in commending to you, as worthy of adoption, the proposals for the readjustment of our practice which have been wrought out.

harmonious deliberation, by the subcommittee. I record here with special satisfaction the first conclusion—"that it is not necessary or desirable to make any alterations in the existing law relating to the preparation or publication of the *British Pharmacopoeia*." For if that view is accepted, it will rest with the Council, without waiting for legislation, to take immediate action for such alterations in our practice as may be found necessary or desirable in view of the current revision of the *British Pharmacopoeia* 1914. I am but giving expression to the sentiments of my fellow members when I say that we are all deeply and gratefully sensible of the singular ability and wisdom of our chairman, Mr. Macmillan, and of the eminent service which, through him, the Lord President has rendered to the Council and to British pharmacopoeial science and practice. [The report is summarized at p. 915 of this week's *Journal*.]

#### Medical Education in India.

By your instructions the important reports on medical education in India furnished by Sir Norman Walker and Colonel Needham, with the conclusions of the Executive Committee thereon, have been communicated to the Secretary of State for India, and through him to the Government of India and to the Indian universities. We have been officially assured that in the course of this year the question of the central control of standards of medical qualification in India will be dealt with in connexion with the pending inquiry on Indian government generally; and further, that proposals are now before the Central Legislature for the establishment of an All-India Medical Council, with which this Council will be able to discuss and settle questions of reciprocal recognition of professional qualifications more conveniently and more satisfactorily than is possible in present conditions.

The University of Calcutta, which has meantime applied for the recognition of its degrees, has brought into early operation its new regulations, revised so as to bring them into better accordance with the statutory requirements for practice in this country, and desired that its final examinations held under the amended regulations should be inspected and reported on by an inspector approved by the Council. The Indian Government, notified of this application, has deputed Lieut.-Colonel J. W. D. Megaw, I.M.S., to perform this service, in the absence of Colonel Needham on leave. His appointment has been duly approved, and the Executive Committee will probably have to meet in July to receive his report and others relating to India.

#### The General Council's Income Tax.

Two recent decisions, in the Court of Appeal and in the High Court, directly affect the Council and call for mention. The first has reference to an application for exemption from income tax payments on dividends received from investments of surplus income by the General Council and its Branch Councils. The Court appears to have decided that, though the Council is concerned by statute with medical education and registration, its functions are not so exclusively "educational" as to make it legally a "charity" within the meaning of the law. Our Legal Assessor has kindly prepared an opinion bearing on the purport of the decision which will be at our disposal for guidance.

#### Proceedings for Misdemeanour.

The second decision, obtained at the instance of the Dental Board, may be held to dispose finally of the objection sometimes raised to the Council's proceedings in cases of conviction in England or Ireland for "misdemeanour" under Section 29 of the Medical Act, 1858. It has been asserted by counsel for the defence that in that section "misdemeanour" must be read as if the words were "indictable misdemeanour." The objection has, under legal advice, been again and again overruled from the chair. That ruling is now sustained by the judgement of the High Court.

The Act for ratifying the Agreement on Medical Registration, made on behalf of Great Britain, Northern Ireland, and the Irish Free State, has been passed into law, and the Agreement is now in force.

#### Registration of Opticians Bill.

The Departmental Committee appointed to consider the

Registration of Opticians Bill, before which Mr. Eason and I gave evidence on your behalf, have reported against the Bill, and it will no doubt now be dropped.

I regret to say that the greater part of your time this session must be occupied by judicial inquiries into allegations of misconduct or of conviction against registered practitioners. Some of them offer features of difficulty, which will probably call for prolonged deliberations; all of them will certainly receive your close and considerate attention. It may well be that to do justice to all the evidence brought before you the session may be prolonged beyond the end of the present week, and so encroach upon the Whit Monday holiday. Much will depend on the progress we make in the first two or three days of the session.

#### The Medical Register.

The publication in February of the *Medical Register* and of the *Students' Register* shows that the annual numbers of registered practitioners and of registered medical students continues to fall steadily from those of the post-war inflation period. In 1927, 1,941 new practitioners were enrolled, as compared with an average number of 2,167 for the preceding seven years. The number of medical students entered in the *Register* was 1,214, as compared with the seven years' average of 1,441 per annum. The decrease in both figures is likely to continue for two or three years, more particularly as regards practitioners, for the effects of the drop in the number of students, which took place in 1923 and 1924 under the influence of the new regulations, are not yet exhausted.

Though the decrease in annual registration is reflected in our financial statement, I am glad to say that, owing to prudent anticipation on the part of the Finance Committee, it has been discounted in advance. Our surplus for the past year is less than it has been, but it still reaches the substantial amount of £3,031; while the assets of the General and Branch Councils have been increased by £2,557. Our financial position is, in fact, sound and satisfactory.

#### RE-ELECTION OF PRESIDENT.

A vote of thanks was accorded to the President on the motion of Professor LEATHES, seconded by Sir NORMAN WALKER.

Sir Donald MacAlister then retired from the chair, which was occupied temporarily by Sir Holburt Waring.

Sir NORMAN WALKER proposed the re-election of Sir Donald MacAlister for a period of five years. Sir JOHN MOORE seconded, and this was carried unanimously.

Sir DONALD MACALISTER, on again taking the chair, was heartily applauded. He said: "I am getting rather old for service, but if you think there is anything I can do for you still, my services are heartily at your disposal."

#### National Insurance.

##### WARWICKSHIRE PANEL AND LOCAL MEDICAL COMMITTEE.

##### Case of Excessive Cost of Prescribing.

A MEETING of the Warwickshire Panel and Local Medical Committee was held at Coventry on May 10th, when Dr. HERBERT MALINS presided over a very full attendance. A considerable part of the proceedings was taken up with the hearing of a representation made by the Minister of Health that excess cost had been imposed on the Drug Fund by the nature of a certain practitioner's prescribing. The case of the Ministry was laid before the Panel Committee by one of the Ministry's medical officials, and the practitioner concerned attended in person. It was subsequently decided by the Panel Committee that excess cost had been imposed on the Drug Fund by reason of the large quantities of proprietary articles ordered; a charge of undue frequency not being satisfactorily established. The sum of £10 was assessed as the amount of the excess in the three months reviewed.

The Warwickshire Insurance Committee asked the Panel Committee to meet in conference and to be regarded with a view to advising how the excess could be avoided. The Panel Committee decided that this was an administrative matter, as they had already expressed opinions upon several doubtful cases and were prepared to give further decisions as requested.

##### Proposed Joint Post-Graduate Scheme.

The question arose of combining with the Oxfordshire and Northamptonshire areas for a joint scheme providing facilities of post-graduate study for doctors in rural areas. The suggestion

emanated from the Ministry of Health consequent upon the Panel Committee's previous application for a local scheme financed from the Special Mileage Fund. It was intimated that the Ministry were prepared to sanction a joint scheme for doctors in rural areas, the circumstances of whose practices are such that it would be necessary to employ locumtenents if they proposed to absent themselves for purposes of post-graduate study and could not afford other expenses incidental to a course of study. The chairman was authorized to represent the Panel Committee in further negotiations and arrangements.

The chairman reported that in accordance with the discretion given to him he had authorized realization of the Panel Committee's assets accumulated as the result of voluntary levies, and had paid over to the National Insurance Defence Trust the sum of £669, which was the quota ascertained to be due. The question of further methods of raising the Panel Committee's administrative income was deferred.

Dr. C. R. LUXN reported in detail with regard to the recent meeting of the Midland Conjoint Group, and it was decided to take advantage of the offer to give publicity to reports of the Panel Committee's meetings made by the *Birmingham Medical Review*.

## Correspondence.

### Contract Rate for Juvenile Oddfellows.

SIR,—At a meeting of the Kingston-upon-Hull Panel and Local Medical Committee, held on May 10th, the recommendation of the Council of the British Medical Association that the contract rate for attendance upon juveniles should be 8s. 8d. per annum (in some cases less), including medicine, was considered; and I was instructed to send to you for publication in the *Supplement* the following resolution, which was passed unanimously:

"That this Committee strongly disapproves of the proposal put forward by the Medico-Political Committee, endorsed by the Insurance Acts Committee and approved by the Council, recommending the acceptance of a fee of 8s. 8d. per annum for attendance upon juvenile members of clubs or societies;

"That it is especially disappointed at the apparent attitude of the Insurance Acts Committee, inasmuch as it holds—as the Insurance Acts Committee has hitherto held—that any such lowering of the fee for any form of contract practice will prejudicially affect the capitation fee under the National Health Insurance Acts.

"And that it urges all Local Medical Committees to see that the matter is brought forward before the Local Divisions of the British Medical Association in order that representatives may be instructed to oppose and vote against the recommendation of Council when it comes before the Annual Representative Meeting in July."

—I am, etc.,  
Hull, May 12th.

JOS. NELSON,  
Honorary Secretary.

\* \* This matter is of primary interest and importance to those practitioners who have hitherto been rendering services of the character indicated at a rate, at the highest, of 6s. 6d. per annum. There is no suggestion, of course, that there is any obligation at all to develop this class of work in areas where other methods prevail or are preferred. The general effect of such raising of the contract rate on that adopted for insurance work or other classes of contract work has been carefully considered by the Medico-Political Committee, the Insurance Acts Committee, and the Council, who are of opinion that a favourable rather than an unfavourable effect on the other capitation fees may be expected. In these circumstances it appears desirable that practitioners and areas not primarily concerned with contract attendance on juvenile Oddfellows should not commit themselves to a final decision before discussion at the Representative Meeting in July.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Commanders C. M. R. Thatcher to the *Greenwich* in continuation and as Naval Health Officer and Medical Transport; F. C. Hunot to the *Victory* X1 for R.N. Hospital, Portland; G. D. Ferguson to the *Maize*; J. S. Orwin to the *Royal Sovereign*; G. E. D. Ellis, O.B.E., to the *Victory* X1 for Portland Dockyard.

Surgeon Lieutenant Commanders A. B. Grant to the *Cambrian*; J. E. Clark to the *President*, additional for three months' post-graduate course; A. De B. Joyce to the *Triad*.

Surgeon Lieutenants A. M. McDonnell to the *President* for three months' post-graduate course; C. B. Nicholson to the *Dolphin*; P. J. A. The O'Rourke to the *Yarmouth*; J. A. Cusack to the *Royal Sovereign*; E. G. Davis to the *Tamar* for R.N. Hospital, Hong-Kong; P. B. Jackson to the *Mantis*.

Surgeon Lieutenant (short service) E. J. K. Weeks has transferred to the permanent list, seniority of September 8th, 1924.

To be Surgeon Lieutenants A. R. Ewart and M. Clifford.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant D. R. F. Bertram to the *Victory* for R.N. Hospital, Haslar, for training.

Surgeon Lieutenant J. L. Cox to the *Emperor of India* for training.

### ROYAL ARMY MEDICAL CORPS.

Major (temporary Lieut.-Colonel) B. Biggar, from the seconded list, is restored to the establishment, and relinquishes the temporary rank of Lieutenant-Colonel, March 2nd, 1927 (substituted for notification in the *London Gazette* of March 11th, 1927).

Captains to be Majors: D. H. Coats, G. T. Garraway, and P. C. Russell. A. MacMillan to be Lieutenant on probation.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant G. S. Strachan to No. 28 Squadron, India, instead of to Headquarters, India, as previously notified.

Flight Lieutenant T. Sheehan relinquishes his temporary commission on completion of service and is permitted to retain his rank, April 29th, 1928 (substituted for notification in the *London Gazette* of May 8th, 1928).

The following are granted permanent commissions in the ranks stated: Flight Lieutenant F. B. C. L. B. Crawford and Flight Lieutenant R. G. Freeman.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel R. McK. Skinner, having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers.

#### SUPPLEMENTARY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS.

Lieutenant G. Marshall to be Captain.

B. R. Crossley to be Lieutenant.

### INDIAN MEDICAL SERVICE.

Colonel H. M. Cruddas, C.M.G., O.B.E., has retired from the service. Lieut.-Colonel W. V. Coppinger, Professor of Ophthalmic Surgery, Medical College, Calcutta, and Ophthalmic Surgeon of the College Hospital, is appointed to officiate as Surgeon-General, Bengal, during the absence of Major-General Tate on leave.

The services of Major M. G. Bhandari are placed at the disposal of the Government of the Punjab for employment as Superintendent of the Borsal Institute, Lahore.

Lieutenants to be Captains: K. M. Bharucha and J. D. O'Neill.

## VACANCIES.

BELFAST: ULSTER HOSPITAL FOR CHILDREN AND WOMEN.—(1) Honorary Physician. (2) Honorary Assistant Physician.

BETHNAL GREEN HOSPITAL, E.2.—Assistant Medical Officer. Salary £400 per annum.

BIRMINGHAM AND MIDLAND HOMOEOPATHIC HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary £150.

BIRMINGHAM EDUCATION COMMITTEE.—Assistant School Medical Officer (male). Salary £60 per annum.

BRIDGES OF WEIR: SANATORIA OF SCOTLAND.—Resident House-Physician (Protestant, male, unmarried). Salary £200 per annum.

BURNLEY COUNTY BOROUGH.—Assistant Medical Officer of Health (lady). Salary at the rate of £475 per annum.

CAMBRIDGE UNIVERSITY: PATHOLOGICAL LABORATORY.—John Lucas Walker Studentship. Annual value £300.

CANCER HOSPITAL (FREE), Fulham Road, S.W.3.—House-Surgeon. Salary at the rate of £103 per annum.

CHILTHSDON: ADMINISTRATIVE COUNTY OF ESSEX.—Three Assistant County Medical Officers of Health. Salary £600 per annum each.

CHESTER UNION.—Resident Assistant Medical Officer at the Institution. Salary £200 per annum.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE HEART AND LUNGS, Victoria Park, E.2.—House-Physicians (male). Salary at the rate of £103 per annum.

COSHAM MEMORIAL HOSPITAL, Kingswood, Bristol.—House-Surgeon (male). Salary £150 per annum.

DERBY: BOROUGH MENTAL HOSPITAL, Rowditch.—Second Assistant Medical Officer. Salary £350 per annum.

DOWN COUNTY REGIONAL EDUCATION COMMITTEE.—School Medical Officer (male). Salary at the rate of £750 per annum.

EASTBOURNE: PRINCESS ALICE MEMORIAL HOSPITAL.—Junior House-Surgeon (male, unmarried), rising to Senior after three months. Salary at the rate of £100 per annum as Junior, and £125 per annum as Senior.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.1.—House-Physician (male). Salary at the rate of £125 per annum.

HARTLEPOOL HOSPITAL.—House-Surgeon. Salary £150 per annum, rising to £200 after six months.

HASTINGS: ROYAL EAST SUSSEX HOSPITAL.—Honorary Assistant Surgeon.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—(1) House-Physician. (2) House-Surgeon. (Males, single.) Salary £50 for six months. (3) Medical Registrar (male) in Out-patient Department; salary £250 per annum.

KENSINGTON BOARD OF GUARDIANS.—Assistant Medical Officer (woman) at St. Mary Abbott's Hospital. Salary £250 per annum.

KENT COUNTY COUNCIL.—Locumtenent Assistant Medical Officer at the County Sanatorium, Lenham. Salary 18 8s. a week.

LEICESTER ROYAL INFIRMARY.—Locumtenent House-Surgeon. Four guineas weekly.

LONDON UNIVERSITY.—(1) Professor of Pathology (Sir William Dunn); salary approximately £1,350 a year. (2) University (part-time) Chair of Dietetics, tenable at St. Thomas's Hospital Medical School; salary £1,000 a year.

MANCHESTER: ANCOATS HOSPITAL.—House-Surgeon (Orthopaedic). Salary £100 per annum.

MANCHESTER NORTHERN HOSPITAL FOR WOMEN AND CHILDREN.—Senior and Junior House-Surgeons. Salary £130 and £100 per annum respectively.

NEWPORT, MON.: ROYAL GWENTY HOSPITAL.—(1) Honorary Surgeon. (2) Two Honorary Assistant Surgeons. (3) Honorary Assistant Ophthalmic Surgeon.

NOTTINGHAM: CITY MENTAL HOSPITAL.—Deputy Medical Superintendent. Salary £650 per annum, rising to £700. In addition £50 per annum for D.P.M. and £10 for M.P.C.

POPULAR HOSPITAL FOR ACCIDENTS, East India Dock Road, E.14.—Second Resident Officer. Salary at the rate of £175 per annum.

QUEEN'S HOSPITAL FOR CHILDREN, Hackney Road, E.2.—(1) Casualty Officer. (2) House-Surgeon (male). (3) Physician in charge of the Skin Department. Salary for (1) and (2) £100 a year each.

ROYAL COLLEGE OF PHYSICIANS OF LONDON.—Charles Murchison Scholar in Clinical Medicine.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—House-Physicians, House-Surgeons, Casualty Officer (female), and Obstetric District Assistant.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.7.—Clinical Assistant in the Medical Out-patient Department.

ST. MARY'S HOSPITAL, W.2.—Surgical Registrar. Salary £200 per annum.

SALFORD ROYAL HOSPITAL.—Casualty House-Surgeon (male). Salary at the rate of £125 per annum.

STAFFORDSHIRE GENERAL INFIRMARY.—House-Physician (male). Salary at the rate of £150 per annum.

STOCKPORT INFIRMARY.—Visiting Anaesthetist.

SURREY COUNTY COUNCIL.—Medical Superintendent at the Sanatorium, Milford, Surrey. Salary £900 per annum.

SWINSEY HOSPITAL.—House-Surgeon (male, unmarried). Salary £150 per annum.

TONBRIDGE UNION.—Resident Assistant Medical Officer (male) at the Institution. Salary £275 per annum, rising to £350.

WARRINGTON INFIRMARY AND DISPENSARY.—Junior House-Surgeon (male, unmarried). Salary £175 per annum.

WEIR HOSPITAL, Grove Road, Balham, S.W.12.—Junior Resident Medical Officer (male, unmarried). Salary £150 per annum.

WEST LONDON HOSPITAL, Hammersmith Road, W.6.—(1) House-Physician. (2) House-Surgeon. (3) Resident Assistant Casualty Officer and Aural and Ophthalmic House-Surgeon. (Males.) Salary at the rate of £100 per annum.

WREXHAM AND EAST DENBIGHSHIRE WAR MEMORIAL HOSPITAL.—Two Resident House-Surgeons (male). Salary at the rate of £100 per annum.

WOOLWICH UNION.—First Assistant Medical Officer at the Plumstead and District Hospital, Salary £400 per annum, rising to £500.

CERTIFYING FACTORY SURGEON.—The appointment at Salford and Stretford (Lancashire) is vacant. Applications to the Chief Inspector of Factories, Home Office, Whitehall, S.W.1.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

### APPOINTMENTS.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.—Honorary Physician: W. Ernest Lloyd, M.D., M.R.C.P. Out-Patients' Officer, Ophthalmic Department: Alexander Lumsden, M.B., Ch.B.

LEVY, S. I., F.R.C.S., Assistant Surgeon to the London Jewish Hospital, Stepney Green.

CERTIFYING FACTORY SURGEONS.—T. E. Skinner, M.R.C.S., L.R.C.P., for the Wivenhoe District (Essex), and S. Jackson, M.D.E., at Penarth (Glamorgan).

### DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.  
*Sections of Laryngology and Otology.*—Summer Meeting. Thurs., 10 a.m. to 12.30 p.m. (Laryngological).—Mr. Rake: Achalasia and Degeneration of Auerbach's Plexus; Mr. A. J. Wright: Silent Tracheotomy, its Signification; Dr. Lowndes Yates: Methods of Estimating the Linfinity to Post-operative Haemorrhage from Unsutured Wounds; Mr. W. M. Mollison: Dysphagia due to Pharyngeal Paralysis. 2.30 to 4.30 p.m. (Laryngological).—Dr. Jobson Horne: Cancer of the Vocal Cords; Dr. Watson-Williams: Familial Infectivity of Chronic Sinusitis; Sir St. Clair Thomson: Intrinsic Cancer of the Larynx operated through a Laryngofissure (internal demonstration). Fri., 10.30 a.m. to 12.30 p.m. (Otolological).—Professor Dr. Otto Mayer (Vienna): The Pathology of Otosclerosis; Dr. A. Lowndes Yates: A Working Hypothesis for Research in Otosclerosis; Mr. Harold Kisch: Temporal Muscle Grafts in the Radical Mastoid Operation; Mr. Douglas Guthrie: Ear Grafting in Mastoid Surgery. 4 to 6.30 p.m. (Laryngological)—Cases and Specimens. Dinner at the Hotel Victoria at 7.45 p.m., followed by a dance. Sat., Otolological Session—8.30 a.m., Cases. 10.30 a.m., Professor G. Portmann (Bordeaux): Vasomotor Affections of the Internal Ear; Mr. William S. Sharpe: The Influenza Ear. Cases and Specimens. There will be a display of instruments and apparatus during the Meeting.

ROYAL SOCIETY OF TROPICAL MEDICINE AND HYGIENE, London School of Hygiene and Tropical Medicine, Endsleigh Gardens, W.C.1.—Wed., 5.15 p.m., Dr. Joaquin J. Valleron, Roentgenologist to the Herriek Clinio, Panama, Lantern Demonstration: The Value of X-Ray in Intestinal Amoebiasis.

### POST-GRADUATE COURSES AND LECTURES.

FELLOWSHIP OF MEDICINE AND POST-GRADUATE MEDICAL ASSOCIATION, 1, Wimpole Street, London, W.1.—St. Peter's Hospital, Henrietta Street, W.C.1: Wed., 2 p.m., Clinical Urological Demonstration; no fee. Royal Northern Hospital, Holloway Road, N.7: Thurs., 4.30 to 5.30 p.m., Clinical Demonstration; no fee. St. John's Hospital, Leicester Square, W.C.2: Post-graduate Course in Dermatology, every afternoon. National Hospital, Queen Square, W.C.1: Course in Neurology for two months; particulars and tickets from the Fellowship of Medicine. Copies of syllabuses on application to the Secretary.

LONDON SCHOOL OF DERMATOLOGY, St. John's Hospital, Leicester Square, W.C.2.—Thurs., 5 p.m., Skin Diseases of Animals Transmissible to Man. Fri., 5 p.m., Bullous Eruptions.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

WEST LONDON HOSPITAL POST-GRADUATE COLLEGE, Hammersmith, W.—Mon., 10 a.m. to 1 p.m., Genito-urinary Operations, Surgical Wards, Skin Department; 2 p.m. to 5 p.m., Eye and Gynaecological Departments. Tues., 10 a.m. to 1 p.m., Medical Wards, Demonstration of Venereal Diseases, Electrical and Dental Departments; 2 p.m. to 5 p.m., Gynaecological Operations, Throat, Nose, and Ear Department. Wed., 10 a.m. to 1 p.m., Children's Medical Department, Medical Wards, Pathological Demonstration; 2 p.m. to 5 p.m., Eye Department, Surgical

Wards. Thurs., 10 a.m. to 1 p.m., Neurological and Massage Departments; 2 p.m. to 5 p.m., Eye and Genito-urinary Departments. Fri. 10 a.m. to 1 p.m., Skin, Dental, and Electrical Departments, Medical Wards, Clinical Demonstration; 2 p.m. to 5 p.m., Throat, Nose, and Ear Department. Sat., 9 a.m. to 1 p.m., Medical Wards, Throat, Nose and Ear Operations, Medical Children's Department, Bacterial Therap Department. Daily of 2 p.m., Operations, Medical and Surgical Out-patient Departments.

### BIRTHS, MARRIAGES, AND DEATHS.

*The charge for inserting announcement of Births, Marriages, and Deaths is 9s., which sum should be forwarded with the notice not later than the first post on Tuesday morning, in order to ensure insertion in the current issue.*

#### BIRTHS.

BULMAN.—At Hillside, Hereford, on May 18th, to Dr. J. R. and Mrs. Bulman, a son.

GHAK.—On April 5th, at Nairobi, to Dr. and Mrs. R. U. Gillan (Ceraldine Sikes, M.B., Ch.B.), Scots Mission, Tumutumu, Kenya Colony, a daughter.

NEWHAM.—To W. B. Turner Newham, A.R.I.B.A., and Marjorie Newham, M.R.C.S., L.R.C.P. (née Auden), a son, on April 17th, at Windy Ridge, Waterkloof, Pretoria, South Africa.

PANTON.—On May 17th, 1928, at 35, Houghton Street, Southport, to Dr. and Mrs. J. Allison Panton (née Kathleen Heath), a daughter.

#### DEATH.

WALLER.—On May 16th, at "The Drachenfels," Nuneaton, Dr. Harry Mortlock Waller in his 57th year.

## GENERAL COUNCIL

OF

### MEDICAL EDUCATION AND REGISTRATION.

SUMMER SESSION, 1928.

#### THE BRITISH PHARMACOPOEIA.

THE PRESIDENT (Sir Donald MacAlister) made a lengthy statement to the Council on the report of the subcommittee appointed by the Committee of Civil Research at the instance of the Council to inquire into the existing law and practice relating to the preparation or publication of the *British Pharmacopoeia*. [This report was summarized at length in the *British Medical Journal*, May 26th, p. 915.] The Pharmacopoeia Committee of the General Medical Council, he said, found itself fully in accord with the first conclusion of the report—that it was not necessary or desirable to make any alterations in the existing law, but that the practice should be altered in conformity with the recommendations set out by the subcommittee. These recommendations appeared to be both practicable and likely to promote the better adaptation of the *Pharmacopoeia* to present and future conditions both in Great Britain and in the Dominions. He thought the Council would be well advised to approve generally of the recommendations, and to remit to the Pharmacopoeia Committee the duty of taking immediate steps towards carrying them into effect. The Pharmacopoeia Committee desired to place on record its grateful acknowledgement of the services rendered to the Council by the Lord President of the Privy Council in procuring the formulation of this report, and its readiness to give all needful assistance on the Council's behalf in setting up the improved machinery of preparation therein described. It was felt that the time had come when the services of the various experts, hitherto obtained individually, should be given in council. Such a method would be likely to result in a better *Pharmacopoeia*, one more representative of the requirements of medical practitioners, and embodying the latest knowledge. It was therefore proposed to set up a standing Pharmacopoeia Commission, which would have power to appoint subcommittees with special terms of reference—such, for example, as chemical nomenclature. A further proposal was that in future the *British Pharmacopoeia* should be revised at stated intervals of ten years, which was believed to be sufficiently long to justify reissue. Every now and then there would arise new drugs, new methods of preparing drugs, and new uses of old drugs, for which a standard must be set. It was decided that the *British Pharmacopoeia* should contain only standard drugs in general use throughout the Empire. In some parts of the Empire the *British Pharmacopoeia*

had been adopted by law as the essential standard; therefore it was desirable that the Dominions should have power, where local drugs or alternative preparations required to be sanctioned, to give effect by legislation to the use of local supplements.

Dr. H. H. DALE, as a member of the subcommittee, supported all that the President had said, and especially praised Mr. H. P. Macmillan's extremely able chairmanship. It had been a very hardworking subcommittee, taking pains to obtain evidence from every organization which was at all in a position to criticize the arrangements hitherto made by the General Medical Council. On every one of its constructive recommendations the subcommittee was unanimous. He believed that when this work was brought to fruition it would give general satisfaction and furnish the machinery which the Council needed to meet the growing and changing public requirements.

The Council agreed to convey to the Lord President of the Privy Council its thanks for the report of the Committee of Civil Research which he had caused to be produced and submitted to the Council; approved generally of the changes in practice recommended in the report; and authorized and directed the Pharmacopoeia Committee to take, on behalf of the Council, all necessary steps for carrying the conclusions and recommendations into effect.

#### DISCIPLINARY CASES.

The number of disciplinary cases on the programme of the summer session of the General Medical Council was unusually large. There were thirteen medical inquiries and three dental inquiries on the list. The case of Dr. Dorothy Logan excited a great amount of public interest, and during the hearing the press and public galleries were crowded.

#### False Statutory Declaration.

Dorothy Cochran Logan, registered as of Cavendish Place, London, N.B., B.S.Lond. 1912, M.D. 1915, was summoned on the following charge:

"That you were on November 7th, 1927, at the Mansion House Justice Room in the City of London, convicted of the following misdemeanour—namely, of knowingly and wilfully making certain statements false in material particulars in a statutory declaration made and declared by you on October 12th, 1927, under and by virtue of the Statutory Declarations Act, 1835, and were fined £100 and ordered to pay £10 10s. costs."

Dr. Logan conducted her own case, without the aid of counsel or solicitor.

Mr. C. Harper, the Council's Solicitor, in presenting the facts of the case, said that at the Mansion House Dr. Logan had pleaded "Guilty." He described the nature of a statutory declaration, an instrument of most solemn affirmation, created or at any rate clearly defined by the Statutory Declarations Act, 1835. The Council's own disciplinary procedure was largely based on statutory declarations, because it had no power to compel the attendance of witnesses or to put them on oath when they appeared. Accordingly every complaint of infamous conduct must be supported by one or more statutory declarations, unless, indeed, the complainants were a Government department, a public body, or a university, in which case statutory declarations might be dispensed with, obviously because it was assumed that there could be no complaint made

otherwise than in good faith by these bodies. He then narrated the story of the Channel swim hoax. A prize of £1,000 was offered by the *News of the World* under certain conditions, and Dr. Logan, taking the view, rightly or wrongly, that not all the supposedly successful previous swimmers had been genuine, resolved to attempt such a swim herself, and, if she failed, to represent for a time that she had succeeded, with a view to bringing home to the public by the eventual disclosure the need for more adequate supervision of swimming. The attempt took place on October 10th, 1927. After swimming for about two hours from the French coast Dr. Logan got into a motor boat, and, on arriving near the English coast, entered the water again. Two statutory declarations were signed before a commissioner of oaths, one by herself, and the other by her "trainer," and the cheque for £1,000 was presented. Her statutory declaration stated that she swam the whole distance unassisted. Within a few hours of receiving the cheque she found herself the subject of embarrassing congratulations, and disclosed the truth earlier than she had intended to do. She made no profit out of the incident, but on the contrary sustained a serious loss. Her defence was that she had not appreciated the importance of a statutory declaration. She had made a point of the fact that when she made her original statement she was not cross-examined upon it, but it might well be that those in the newspaper office and others concerned would not be inclined to cross-examine an "M.D." with an address in Harley Street, to determine whether she was speaking the truth. Moreover, they were all anxious to believe that an English woman swimmer had beaten a record previously held by an American. He desired not to overstate the charge, but it deserved the attention of the Council. It was not that practitioners were specially concerned with statutory declarations, as they were with certificates, but Dr. Logan was a citizen, and must be expected to have regard to truthfulness in such attestations, and, indeed, as a person on the *Medical Register*, to set a special example in this respect. To permit laxity in regard to statutory declarations would be a serious matter for the State, whatever the intentions might be. He added that as soon as the notice of inquiry was served on Dr. Logan she came to see him and discussed the case with the utmost frankness, but he would venture to suggest to her again that any investigation of the facts leading up to the conviction was not likely to help her, and that her wisest course would be to content herself with an explanation of why she made the false declaration, and to give an assurance to the Council that nothing of the kind would happen again.

The President said that this was a charge of having been convicted of a misdemeanour. Therefore the conviction must be taken as having been proved, and the sole question the Council had to consider was the gravity of the conviction as affecting the professional position of Dr. Logan.

Dr. Logan said that she had pleaded guilty at the Mansion House because she could not bring forward the witnesses who knew the circumstances under which she signed the document which proved to be a statutory declaration—those, namely, who had been at the newspaper office where the statutory declaration was signed and who knew exactly the nature of the proceedings. She would not ask the Council to go behind the conviction, but only to consider that she had unwittingly done this illegal act; she had been brought into it, and had not herself sought out the commissioner of oaths and allowed him to draw up a declaration which she knew to be false. She was not even aware that the commissioner of oaths was present. At the very worst hers was a technical offence. False pretences had never been suggested. The money never really came into her possession even for a day. She was told that the paper presented for her signature in the newspaper office was merely for the purpose of the insurance company. At the time, having scarcely recovered from the effects of an adventurous night in the Channel, followed by the blaze of publicity, her mentality was not quite up to normal. What she signed was not read over to her. She was sorry that she was "such an idiot" as to sign it, but she did not know that a mere ordinary typewritten document in a newspaper office, bearing no stamps or other signs, could be a legal instrument. She asked the editor of the paper what responsibility she took in signing it, and was told that she took none at all—it was only between the newspaper and the insurance company. Here the President intervened to remark, "No responsibility if it were true," to which Dr. Logan replied, "He did not say that." She agreed that she had done an extremely foolish thing, but she did not know it was an illegal act, otherwise she would have certainly thrown up the business.

Mr. Atkins, the managing clerk of the solicitors who had drawn up the declaration, was called, and said that he got particulars as to the times of the swim and so forth from the newspapers. He handed a copy to Dr. Logan, who said, "I suppose this is all right. I have not a lawyer here." The commissioner of oaths, who was present, was, he thought, introduced to her as "our solicitor." Mr. Watson, commissioner of oaths, also gave evidence, and agreed, on cross-examination by Dr. Logan, that he did not take any steps to see that she understood the serious nature of the document, beyond seeing that she read it over, and that he did not warn her that if anything in the document was untrue she was liable to proceedings.

Dr. Logan offered herself as a witness and repeated in the box the now familiar story. Asked why she did not draw back when it came to the question of the signature of a document, she said that to have done so at that moment would have turned what she believed to be a task with a serious purpose into a purposeless and tasteless joke. In reply to a question by Sir Robert Bolam, she said that she divulged the truth to Lord Riddell, with whom she sought an interview, not in his capacity as proprietor of the *News of the World*, but as chairman of the Royal Free Hospital, on the second day after the signing of the declaration. It was desired to keep the "story" for publication in the *News of the World* on the following Sunday, and the staff were in some trepidation lest any

journal should forestall them. The President asked if she signed medical certificates, and she replied that she had signed a great many of them and regarded them very conscientiously. "I am a Scottish doctor, and it is difficult for a Scottish doctor to put a pen to paper beneath that which is not true. You have no complaint before you as to my certificates."

Corroborative evidence was given by Mr. Carey, the "trainer," who said that he also only learned subsequently that a commissioner of oaths had been present on the occasion.

After a deliberation of fifty minutes in *camera* the Council's decision was announced by the President as follows:

Dr. Logan, I have to tell you that the Council have very carefully and seriously considered the conviction which has been recorded against you and which has been proved to their satisfaction. That conviction was for an offence against the Perjury Act, which is of a very serious character. They have also taken account of the explanations you have given by way of mitigation of the gravity of that conviction, and they desire me to say to you that they have formed the opinion that you, at the time, and perhaps even subsequently, have been very imperfectly realizing the responsibility which rests upon every citizen, and in a special degree, as a member of an honourable profession, upon a registered medical practitioner, to refrain from appending your signature to any statement of which you cannot vouch for the contents being true. They have, however, come to the conclusion that perhaps the punishment to which you have already been subjected for that offence against good citizenship, and the proceedings of to-day, may have enabled you to realize afresh and more fully the responsibilities which rest upon you, and, believing that in time to come you will never purport to attest, whether in a so-called legal document or otherwise, anything which you know to be untrue, and that your conduct henceforth will be worthy of the profession of which you are a member, they have decided not to erase your name from the *Medical Register*.

#### Adultery during Professional Relationship.

The case next considered by the Council was that of Harry Simpson Harling, registered as of Skipton Road, Ilkley, L.R.C.P., L.R.C.S. Ed., L.F.P.S. Glas., who was summoned on the charge that, being a registered medical practitioner, he abused his position by committing adultery with Mrs. Annie Belton, a married woman, with whose family he stood in professional relationship, of which adultery he had been found guilty by the decree of the Divorce Court in the case of *Belton v. Belton and Harling*, in which he was the co-respondent.

Dr. Harling was represented by Mr. Eddy, counsel.

In the absence of a complainant, the Council's Solicitor stated the facts, and put in a statutory declaration by Mr. Belton, to which respondent's counsel objected on the ground that Mr. Belton was not present to prove its truth. The President, however, ruled that the statutory declaration might be put in in the absence of the witness, more particularly as Mr. Belton had attended at the previous session of the Council in November, when the case was adjourned at Dr. Harling's request and in his interests.

It appeared that Dr. Harling had been in practice at Gainsborough, and had subsequently disposed of his practice there to another doctor. The Council's Solicitor had procured a ledger used by Dr. Harling in his practice, which showed entries under Mr. Belton's name from 1922 to February, 1926. It was asserted that he and Mrs. Belton lived together from May, 1925.

Dr. Harling, in evidence, strongly denied that any impropriety had taken place between himself and Mrs. Belton while he was in attendance on her family, though he knew her socially, was a friend of the family, and was called in to adjust differences which had arisen between Mr. and Mrs. Belton. Asked by the Legal Assessor whether the relation from 1922 to 1926 was anything more than that of doctor and patient, he replied that it was social friendship.

You were no more than an ordinary acquaintance?—As I understand the term "ordinary acquaintance," that is perfectly true. Yet you knew that Mr. and Mrs. Belton were living unhappily?—She and others told me so on many occasions.

Is that usually discussed in ordinary acquaintanceship? You mean that Mrs. Belton made you her confidant?—Yes.

During the whole time you were attending her family professionally, for four years or more, do you seriously suggest that nothing ever took place to lead up to your living with this woman in May, 1926?—Absolutely nothing.

Mrs. Belton and her sister gave evidence corroborating Dr. Harling's statement.

Mr. Eddy, in addressing the Council for Dr. Harling, complained of various irrelevant circumstances which had been introduced into the case, one being the separation between Dr. Harling and his wife, which took place in 1920, and had nothing to do with Mrs. Belton or any other woman, and another Dr. Harling's financial affairs, which again were quite outside the scope of the Council's inquiry. The Council was simply concerned with the point as to whether adultery had occurred during professional relationship. In his submission when adultery took place professional relationship had entirely ceased. It was shown that in February, 1925, Mr. Belton asked Dr. Harling to send in his account, a thing he had never done before, and this was taken by counsel as an indication that he wished to close the account and to have no more to do with Dr. Harling professionally.

After a long private session the Council's decision was announced by the President, who said that the Council had found that the facts alleged against Dr. Harling in the notice of inquiry had been found proved to its satisfaction. The Council had accordingly judged him guilty of infamous conduct in a professional respect, and had instructed the Registrar to erase his name from the *Medical Register*.

#### Improper Friendship during Professional Relationship.

On May 24th and 25th the Council was occupied with the case of Harold Foster Strickland, registered as of Wickham Road, Beckenham, F.R.C.S. Eng., L.R.C.P. Lond., who was summoned on the charge that, being a registered medical practitioner in professional relationship with a married woman and her family, he

abused his position by entering into and—notwithstanding the expositions of the husband—persisting, unknown to him, in maintaining a friendship of an improper character with the said woman.

The complainant was the husband, who was referred to throughout the case as "Mr. C." The President requested the press to refrain from mentioning the name should it be accidentally divulged during the hearing.

Dr. Strickland was represented by Mr. Neilson, K.C., instructed by Messrs. Hempsons, solicitors, on behalf of the Medical Defence Union, and the complainant by Mr. Carthew, counsel, instructed by Messrs. Le Brasseur and Oakley, solicitors.

Mr. Carthew, in opening the complaint, said that his client "Mr. C." was a barrister, married in 1914, and residing at Beckenham. The medical attendant of the family was Dr. Hope Murray, who, in 1913 or 1914, took Dr. Strickland into partnership. Dr. Hope Murray had been in the habit of attending the family personally, but in 1924, when he was away, Dr. Strickland attended "Mrs. C." in her confinement, and from that period, Dr. Murray retiring shortly afterwards from the practice, Dr. Strickland became the regular and sole attendant. In May, 1927, an estrangement occurred between Dr. Strickland and his wife, and from that time onwards Dr. Strickland paid many social visits to "Mr. C.'s" house. It was not until later, however, that "Mr. C." had any occasion to be suspicious. In the summer of 1927 Dr. Strickland spent a week-end at the seaside with the "C." family, and during that time attended "Mrs. C." for some trifling complaint. In the autumn "Mr. C." was forced to broach the matter to the respondent, but was assured by him that there was nothing in it. On Christmas Eve "Mrs. C." and another lady went out in their car, and having the curiosity to follow on his bicycle, "Mr. C." discovered that Dr. Strickland had also been in the car. "Mr. C." then talked over the matter with his wife, and it was arranged that she should go to Switzerland on holiday. During her absence, looking over some housekeeping papers, "Mr. C." discovered a letter written by Dr. Strickland containing many endearing expressions, such as "I feel our fondest hopes and wishes may one day be realized," and "I am yours, darling, absolutely and for ever." As a consequence the husband brought the complaint to the Council.

"Mr. C." in the witness-box, said that his recollection was that the social relationship with Dr. Strickland did not amount to anything until 1926. Dr. Strickland was their only family doctor from 1925 onwards. His accounts were paid up to the middle of 1926, after which the witness received no answer to his repeated request for the account.

Dr. Strickland, giving evidence on his own behalf, said that he had known the family for many years, had been at numerous parties with both "Mr. and Mrs. C." and as their children went to the same schools they met very often. The incident of Christmas Eve was quite unpremeditated. He met "Mrs. C.'s" car by accident, stood talking for a few moments in the rain, and was invited in by the ladies for the sake of shelter. He denied that he had ever met "Mrs. C." clandestinely, though he agreed that they had met at the houses of mutual friends, who, knowing their special friendship, had left them together for short intervals. Asked how he came to write the letter which had been put in, he said that it was because he loved "Mrs. C." He admitted that there was one other letter of a similar character. As for professional relationship, it was true that he attended "Mrs. C." on her confinement in 1924, but only during the actual delivery; the case was then taken over by his senior partner.

Sir Herbert Waterhouse gave evidence as to character. Dr. Strickland had been his dresser and house-surgeon, and he had seen a great deal of him. He regarded him as one of the kindest men he had ever known, as well as straightforward and trustworthy in every respect. He was one of the most brilliant young surgeons of the day. The President asked whether the letter had not altered his opinion, to which the witness replied that he had been amazed to hear the letter read, and could attribute it only to an overwrought mind.

Mr. Neilson, in defence, said that he had not known of a case in which a practitioner had been erased from the *Register* because he had been carried away by his feelings, and, however foolish he might have been, had stopped short of misconduct. In this case there was no misconduct at all. All that had happened was that Dr. Strickland had expressed his love for the wife of another man. There was no foundation for the charge that he had abused his professional position to get into the confidence, and presently into the affections, of a patient. Viscount Esher had said that "infamous conduct" was something which must be done by a medical man in the actual pursuit of his profession. This technical and legal expression could only relate to a qualified medical man acting as such. In this case the facts were so entirely different as to be outside the definition. The association of these people began in social intercourse. Isolated instances of attendance on the family had been quoted, but Mr. Neilson argued that it was only from the time a medical man was called in up to the time that the patient recovered, and discharged his obligation by paying his fee, that the person concerned could be said to be the doctor's patient. Unless there was a definite continuing appointment, as was sometimes the case, there was no professional relationship in the intervals between sicknesses. The former patient was under no obligation to return to the same doctor. In this case there was an attendance on "Mrs. C." in 1924, and after that nothing of any account at all. Dr. Strickland had not abused a professional relationship. All that had been said against him was regard this as sensible citizens. Those who had no warm blood in their veins would pass austere judgements. But if the affection did not proceed to misconduct, if it went no further than, as in this case, the writing of a foolish letter, he would ask the

Council to pause before saying that the conduct was dishonourable or disgraceful. He added that Dr. Strickland had not seen the lady since she went to Switzerland in January last, and had sold his practice at Beckenham.

Mr. Carthew said that it was by reason of his professional position that Dr. Strickland had gained entrance into this house. The essence of family practice was trust; a husband must have perfect confidence in the correctness of the practitioner's conduct towards his wife. As to infamous conduct, was it not infamous conduct to write such a letter to the wife as had been read, and at the very same time to be assuring the husband that there was nothing whatever in the intimacy? It was asked what Dr. Strickland could have done after falling in love with a married woman; the very least he could have done was to find some pretext for breaking off the professional relationship.

The Council went in camera. On the readmission of the parties and strangers, the President announced that the Council had found the facts proved, had judged Dr. Strickland to have been guilty of infamous conduct in a professional respect, and had directed the Registrar to erase his name from the *Register*.

#### *Alleged Canvassing to Attract Patients.*

The Council next considered the case of George Howard Shanley, registered as of Pelaw-on-Tyne, L.M.S.S.A., who appeared on the charge that he had sought to attract to himself patients, either directly or by an agent. Eight charges relating to individual canvassing were set down on the list, but only one of these was taken. It was understood that statutory declarations relating to the others had been distributed among members of Council, but in the absence of the witnesses they were not formally put in. It was also charged against Dr. Shanley that in April, 1927, whilst addressing the Wardley Lodge of the Durham Miners' Association, he invited the persons present to become his patients.

Dr. Shanley conducted his own defence. The complainants, the London and Counties Medical Protection Society, were represented by Mr. Carthew, counsel, instructed by Messrs. Le Brasseur and Oakley, solicitors.

Mr. Carthew said that Dr. Shanley came to Pelaw-on-Tyne and commenced practice in 1927. At that time there were two other doctors there, Dr. Stich and Dr. Thomson, practising in partnership. Shortly after Dr. Shanley's arrival Dr. Stich wrote him saying that he rather expected he would call upon him and his partner, and also drew attention to the fact that there had been a canvasser or canvassers making systematic calls at practically every house in the district on Dr. Shanley's behalf, and he could not imagine that Dr. Shanley was unaware of what was going forward. Dr. Shanley replied that the canvassing was entirely without his sanction, and that as soon as he heard of it he gave instructions that it must cease. He added that he valued his professional reputation at least as highly as did Dr. Stich, and that he understood there had been previous unsavoury incidents in the medical history of the town, which he hoped would not be repeated. Dr. Stich replied that if any further cause for complaint arose he would place the matter in the hands of his protection society. In April, 1927, Dr. Shanley attended a lodge meeting of the miners at Wardley and gave a ten minutes' address, during which, it was alleged, he gave them information as to how they might change their panel doctor, and indicated how persons who wished to become his patients could do so by leaving their names and addresses at his "call-house" (a name used in the North of England for a kind of branch surgery). He also urged on the same occasion the need for another colliery doctor to deal with compensation cases.

Dr. Stich, in evidence, said that he had been in practice in Pelaw since 1919. He agreed that he wrote to the London and Counties Medical Protection Society about what he had heard as to Dr. Shanley's canvassing. He would have approached Dr. Shanley privately on the matter had Dr. Shanley paid him the usual courtesy call. Asked whether he thought a practice could be built up by a man going round and asking people to become his patients, Dr. Stich replied that he did not know; that was not the way he had built up his own.

Three miners from Wardley then testified as to the speech made by Dr. Shanley a year previously. Their testimony was that they heard Dr. Shanley invite the persons present to become his panel patients. On cross-examination by Dr. Shanley they could none of them remember what their wages had been for that particular week, and yet their memory was unshaken, said Dr. Shanley, as to a much less vital matter to them—the exact words spoken in the course of an address. One of them said that he could remember a previous lodge meeting addressed by a doctor, but that was a long time ago. Another, who said that Dr. Shanley's actual words were, "If you want to change your doctor all you have to do is to fill up the form and hand it to me," admitted that his house was a "call-house" for Dr. Stich. The only one of the eight charges relating to individual canvassing which was proceeded with concerned a man named Joseph Bail, who gave an account of street conversations which were sharply challenged by Dr. Shanley, but the witness persisted in maintaining its essential truth.

Dr. Shanley then gave evidence on his own behalf. He said that he was asked to address the lodge meeting at the invitation of the secretary, in proof whereof he put in a letter from that official, who had told him it was a privilege extended to other doctors who had newly come to the district. He was told that an explanation of the position with regard to compensation and also as to change of insurance doctor would be welcomed. There was an impression at the colliery that Dr. Stich and Dr. Thomson alone could treat compensation cases. In what he said at the meeting he did not for one moment discredit or attempt to injure any other doctor. He explained the matters quite impersonally, and he was careful to say that a change of doctor could

be made from one practitioner to any other, not to himself. He agreed that when he first started in practice one person did, unknown to him, start canvassing on his behalf. This person had offered himself to him as a collector, but at that time there was nothing to collect, and the man, with a mistaken sense of doing him a good turn, went about trying to get him patients. He put a stop to the practice as soon as he learned of it. He added that, unlike the complainants, he could not afford to bring witnesses from Durham, though many there were willing to testify to the truth of his statements, and he had certain statutory declarations.

Mr. Carthew objected to these statutory declarations being put in in the absence of the witnesses, and his objection was upheld by the President. Dr. Shanley protested that, as the statutory declarations of absent witnesses for the complainant, though not formally put in, had been distributed to the members of the Council, and were doubtless in their minds, it was only elementary justice that his own declarations should be in some way produced. He had had legal advice in Newcastle that such declarations would be received in the absence of witnesses. Eventually Mr. Carthew waived his objections so far as two of the declarations were concerned, and these were read; they were from miners who had been at the meeting in question, not Dr. Shanley's patients, and affirmed that it was their recollection that Dr. Shanley made no request to the men to give their cards to him. Dr. Shanley also stated that on the previous Sunday the miners at Wardley had passed a unanimous resolution affirming that when he addressed them a year ago he did not give any personal invitation. He reminded the Council that the miners were strong trade unionists, they imagined medical men also were trade unionists, and they would not have been likely to tolerate any infringement of trade union principles. The chairman and other officials at the meeting were patients of different doctors, and had he said anything wrong in his address he would have been stopped at once. He alleged that this complaint had been brought out of malice, that the witness Ball had spoken demonstrable falsehoods, which he would bring to the attention of the Public Prosecutor, and added that, so far from being unmindful of the ethics of the profession, he had refused a position worth £500 a year because it was the subject of an "Important Notice" by the British Medical Association. His only ground of self-accusation in all those circumstances was that when he first settled in Pelaw he had not called upon Dr. Stich.

At the close of his address Dr. Shanley was overcome with emotion, and there was a painful interlude during which the proceedings of the Council were suspended.

Mr. Carthew said how much he regretted that the accusation of malice against Dr. Stich had not been made when Dr. Stich was in the witness-box, where he could have refuted it.

After a very brief consideration *in camera* the Council decided that in respect of the two complaints on which evidence was tendered the charge had not been proved. The case against Dr. Shanley was therefore dismissed.

#### Conviction for Felony.

The next case was that of Kenneth Albert Wilson, registered as of Wharnclyff Street, Newcastle-on-Tyne, L.R.C.P., L.R.C.S.Ed., L.R.F.P.S.Glas., who was summoned on the charge that in March last, at the Central Criminal Court, he was convicted of a felony—namely, of using an instrument to procure miscarriage, and was sentenced to eighteen months' imprisonment in the second division.

Dr. Wilson attended, accompanied by a warder, and was represented by Mr. Magid, counsel, on the instruction of Messrs. Martindale and Clark, solicitors.

The certificate of conviction was handed in, and leave was given to the Council's solicitor to amend the charge by the insertion of the words "to wit, a catheter or some other means" after the word "instrument."

Mr. Magid made a speech to the Council on behalf of Dr. Wilson, during which he was reminded more than once by the President that the Council could not review the evidence; all that it could do was to consider any mitigating circumstances. Mr. Magid emphasized the disadvantage of his client, who was a man of colour, in making his case understood by a British jury, and also said that application had been made for leave to appeal to the High Court, but the application had been refused. The President said that that must have been because the grounds of appeal were not relevant. Counsel added that Dr. Wilson was a most loyal subject of His Majesty, and had served under the colours during the whole period of the war.

The Council, finding the conviction proved, directed the Registrar to erase from the *Medical Register* the name of Kenneth Albert Wilson.

#### Cases Coming up for Judgement.

Four cases in which, at previous sessions, the facts had been proved, but judgement had been postponed to give the practitioners concerned an opportunity of considering their position, were now brought up to be finally dealt with. Three of the cases related to convictions for being drunk—namely, those of Percy Bateman, registered as of New Cross Road, S.E., Robert Moore, registered as of Mawney Road, Romford, and Duncan Miller, registered as of Washington, county Durham. These three practitioners now attended, and produced testimonials as to their sobriety in the interval, and gave assurances as to their future conduct. In all three cases the Council, having taken account of the testimonials and assurances, did not see fit to direct the Registrar to erase the name.

The fourth case was that of Frederick Joseph William Porter, D.S.O., registered as of the Army Medical Service, against whom it had been found that he had sought to obtain patients and to promote his own professional advantage by means of notices inserted in the Indian press.

Major Porter attended and produced nine letters from medical colleagues and others testifying to his excellent conduct since the hearing a year ago, and undertook that there should be no repetition of the offences with which he had been charged.

In this case also the President announced that the Council did not see fit to direct the Registrar to erase the name.

(To be continued.)

## NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

### Pathological Reports.

By BRISTOL: That subpara. (3) of the recommendation contained in para. 117 of the Annual Report of Council be amended by the addition of the words "and where no hospital facilities exist for the provision of pathological investigations for such patients" after the words "pay a fee."

### Scheme of the Spa Federation for Spa Treatment of Insured Persons.

By NORTH GLAMORGAN AND BRECKNOCK: That consideration of the recommendation contained in para. 128 of the Annual Report of Council be postponed until the position of practitioners practising in the town or area has been definitely defined.

### Assistant Medical Officers to Mental Hospitals.

By YORK: That (with reference to para. 93 of the Annual Report of Council) recommendations A to E be referred back to the Council for further consideration.

## Association Notices.

### COUNCIL ELECTION.

THE names of members already declared elected to the Council for the session 1928-29 in respect of the groups of home Branches in which there were no contests were published in the *Supplement* of May 12th (p. 208).

Contests took place in—

Group N, comprising the Aberdeen, Dundee, Northern Counties of Scotland, and Perth Branches, the candidates nominated being Dr. T. Fraser of Aberdeen and Dr. G. Smith Sowden of Elgin. Of the 641 voting papers issued, 260 valid papers were returned and 4 spoilt; 148 were in favour of Dr. Fraser and 112 in favour of Dr. Sowden. Dr. T. FRASER thereby becomes a member of the Council for 1928-29.

Group M, comprising the Kent, Surrey, and Sussex Branches, the candidates nominated being Dr. E. Rowland Fothergill of Hove and Dr. S. Morton Mackenzie of Dorking. Of the 1,798 voting papers issued, 758 were returned. Of these, 10 were spoilt, and of the remainder 409 were in favour of Dr. Fothergill and 339 in favour of Dr. Morton Mackenzie. Dr. FOTHERGILL thereby becomes a member of the Council for 1928-29.

### Representatives and Deputy Representatives of Public Health Service Members.

Only 5 candidates were nominated by the public health service members for the appointment of 4 representatives of that service in the Representative Body and 4 deputy representatives—namely, Dr. T. Eustace Hill (M.O.H., co. Durham), Professor Harold Kerr (M.O.H., Newcastle-upon-Tyne), Dr. R. A. Lyster (M.O.H., Hampshire), Dr. E. Ward (T.O., South Devon), and Dr. R. H. Wiltshaw (M.O.H., Worthing).

Of the 1,214 voting papers issued, 414 were returned, 4 of these being spoilt. The counting of the votes was by the single transferable vote system, the quota of votes to be obtained by any candidate to secure election being 83. On the first count Dr. Eustace Hill, with 156 votes, and Professor Kerr, with 93 votes, secured election. Dr. Lyster secured 61 votes on the first count, Dr. Ward 68, and Dr. Wiltshaw 32. On transferring Dr. Hill's surplus of 73 votes it was found that 46 of these went to Dr. Lyster, making his total 107; 15 to Dr. Ward, making his total 83; and 12 to Dr. Wiltshaw, making his total 44; with the result that Dr. Lyster and Dr. WARD, along with Dr. HILL and Professor KERR, were elected representatives.

Dr. WILTSHAW becomes deputy representative for Dr. Hill.

Under the By-laws the appointment of the three remaining deputy representatives rested in the hands of the Chairman of the Representative Body, who has appointed Dr. THOMAS of Swansea deputy for Professor H. Kerr, Dr. R. M. F. EVANS of Cardiff deputy for Dr. R. A. Lyster, and Dr. E. COLSTON WILLIAMS of Glamorgan deputy for Dr. E. Ward.

## TABLE OF DATES.

June 7, Thurs.	Names of Representatives and Deputy Representatives must be received at Head Office by this date.
June 13, Wed.	Council.
June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
July 4, Wed.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 20, Fri.	Meeting, Cardiff, 10 a.m. of 12 members of Council by must be received (at A.R.M., p.m.)
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Council, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff.
July 25, Wed.	Meeting, Cardiff, President's Address. Annual General Meeting, Cardiff. Conference of Honorary Secretaries, Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, Medical Secretary.

## BRANCH AND DIVISION MEETINGS TO BE HELD.

**BORDER COUNTIES BRANCH.**—The annual general meeting of the Border Counties Branch will be held at the County Buildings, Dumfries, on Friday, June 15th, at 3 p.m. Agenda: Branch Council's report and financial statement; report of the election of office-bearers for 1928-29; Dr. John Ritchie will give his presidential address entitled "Some primitive conceptions of disease and their bearing on public health."

**CAMBRIDGE AND HUNTINGDON BRANCH.**—Owing to the occasion of the opening of the new theatres at Addenbrooke's Hospital by Sir Berkeley Moynihan, Bt., P.R.C.S., to-day (Friday, June 1st), there will not be a meeting of the Cambridge Medical Society on that date. It is hoped that as many members as possible will attend the opening ceremony. In the event of any member not having received due notification of this, if he will kindly communicate with the honorary secretary of the Cambridge Medical Society the omission will be rectified.

**GLASGOW AND WEST OF SCOTLAND BRANCH: LANARKSHIRE DIVISION.**—A meeting of the Lanarkshire Division will be held at the Stonehouse Hospital on Wednesday, June 6th, at 3.30 p.m.

**KENT BRANCH.**—The annual meeting of the Kent Branch will be held at Acacia Hall, Dartford, on Thursday, June 14th, at 2 p.m. The presidential address will be delivered by Dr. M. W. Renton on the increasing influence of hospital practice and clinics on private practice. Dr. Renton invites members and their wives to a luncheon at 1 p.m. Messrs. Burroughs Wellcome and Co. have arranged an exhibition of micrographs of the commoner parasites and pathogenic organisms with reference to sero- and vaccine-therapy, and will entertain members and their wives at a garden party. The Tennyson Smith golf challenge cup competition will be held on the same day.

**LANCASHIRE AND CHESHIRE BRANCH: HYDE DIVISION.**—The annual general meeting of the Hyde Division will be held in the Hyde Town Hall on Thursday, June 14th, at 8.30 p.m.

**METROPOLITAN COUNTIES BRANCH.**—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 19th, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) presidential address by Dr. Christiano Murrell entitled "Our changing times."

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—The annual general meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., on Tuesday, June 5th. The next clinical meeting of the Division will be at the Metropolitan Hospital on Friday, June 8th, at 4.30 p.m.; tea at 4 o'clock.

**METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.**—The annual meeting of the Hampshire Division will be held at the Hampstead General Hospital on Thursday, June 14th, at 8.30 p.m., for the election of officers and Executive Committee.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—A meeting of the Hendon Division will be held at the Hendon Cottage Hospital on Friday, June 29th, at 8.30 p.m., when members are invited to show cases. The meeting will subsequently discuss the Supplementary Report.

**METROPOLITAN COUNTIES BRANCH: LAMBETH AND SOUTHWARK DIVISION.**—The annual meeting of the Lambeth and Southwark Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Wednesday, June 6th. Tea at 4.15 p.m.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, June 19th, at 8.45 p.m. Mr. J. M. Redding will read a paper on some points in the x-ray examination of the alimentary tract.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 12th, at 9 p.m. Dr. W. Langdon Brown will read a paper on endocrinology and the future.

**METROPOLITAN COUNTIES BRANCH: SOUTH-WEST ESSEX DIVISION.**—The annual general meeting of the South-West Essex Division will be held at the Wesleyan Schoolrooms, High Road, Leyton, on Tuesday, June 5th, at 3.30 p.m. Mr. Russell Howard will read a paper on some aspects of surgical emergencies.

**METROPOLITAN COUNTIES BRANCH: WANDSWORTH DIVISION.**—Two meetings of the Wandsworth Division will be held in the Town Hall, Wandsworth, to consider the Koch diagnosis and treatment of tuberculosis by means of tuberculin, together with a proposal for a collective investigation into the subject. The first meeting will be held on Friday, June 22nd, at 9 p.m., when Dr. Robert Carswell will read a paper on "History and diagnosis." At the second meeting, on Friday, June 29th, at 9 p.m., Dr. Robert Carswell will read another paper entitled "Treatment, and a proposal for a collective investigation." The meetings will be open to all members of the medical profession.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden Hospital, Harlesden Road, N.W., on Wednesday, June 20th, at 9 p.m. Dr. Margaret Emslie will discuss the care of the infant.

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The annual meeting of the Northern Counties of Scotland Branch is to be held at Kyles of Lochalsh on June 30th. This will be the first meeting of the Branch which has been held in the area of the Islands Division.

**SOUTHERN BRANCH.**—The annual meeting of the Southern Branch will be held at Queen's Hotel, Southsea, on Friday, June 8th. Supper will be served at 9 p.m., and there will then follow an address by Colonel Macarthur entitled "Some medical references to Pepsy," which will be illustrated by lantern slides.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, June 21st, at 8.30 p.m. Dr. A. H. Jacob will read a paper on tuberculosis from the point of view of the tuberculous officer.

**SUSSEX BRANCH: HASTINGS DIVISION.**—The next meeting of the Hastings Division will be held at the Hastings Infirmary, Frederick Road, on Tuesday, June 12th, at 3.15 p.m. Dr. Bower will conduct members over the infirmary, and after tea clinical cases will be shown.

**WILTSHIRE BRANCH.**—The annual meeting of the Wiltshire Branch will be held on Wednesday, June 27th, at 3 p.m., at the County Mental Hospital, Devizes, when a British Medical Association Lecture will be given by Mr. W. McAdam Eccles on the treatment of hernia by trusses, illustrated by their actual application.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH: HEREFORD DIVISION.**—The annual meeting of the Hereford Division will be held at 20, East Street, Hereford, on Monday, June 11th, at 3.30 p.m. Agenda: Election of officers, etc.; Annual Report of Council; instructions to representative; post-graduate lectures; correspondence.

**YORKSHIRE BRANCH: HUDDERSFIELD DIVISION.**—The annual picnic of the Huddersfield Division will be on Thursday, June 21st. The charabanc will leave York Place at 12.15 p.m. for Dovedale. Afternoon tea will be served at the Peveril of the Peak Hotel on arrival at 3.30 p.m. The afternoon will be spent in Dovedale, and the charabanc will leave Dovedale at 5.45 p.m. for Buxton, where dinner will be served at 6.45 p.m. at the St. Anno's Hotel. The party will leave Buxton at 8 p.m., and should arrive in Huddersfield about 10 o'clock. The inclusive charge for charabanc, tea, dinner (exclusive of beverages), and tips, will be £1 2s. 6d. per head; for those going in their own cars 10s. per head.

## Meetings of Branches and Divisions.

## BIRMINGHAM BRANCH: WEST BROMWICH DIVISION.

The quarterly meeting of the West Bromwich Division was held on April 24th at the West Bromwich General Hospital. The honorary secretary was instructed to ask Dr. Sansome, police surgeon, if he would approach the authorities in the matter of the suggested payment for police calls, and also to communicate with the coroner, Mr. Lyon Clark, regarding the suggested scale of fees for reports to coroner.

At the conclusion of the business meeting Mr. RUSSELL GREEN read a paper on the radiation treatment of cancer of the cervix uteri, illustrated by lantern slides. A vote of thanks, proposed by Dr. MITCHELL and seconded by Dr. ADAMSON, was accorded to the lecturer.

## BORDER COUNTIES BRANCH: DUMFRIES AND GALLOWAY DIVISION.

The annual meeting of the Dumfries and Galloway Division was held in the Royal Infirmary, Dumfries, on May 15th, when Dr. GEORGE R. LIVINGSTON, the chairman, presided.

The following officers were elected for the current year:

Chairman, Dr. J. D. Robson (Glasgow).	Dr. R. S. (Dumfries).
Wells (Kirkcubbin).	native in
Clinical Secretary,	in Repre-
Representative Body,	
Sanitary Body, Dr. J. D. Robson.	

Dr. CROMIE, in moving a vote of thanks to Mr. Livingston, the retiring chairman, emphasized the amount of work he had done, which had involved both time and money; he described him as an ideal chairman. The motion, having been seconded by Dr. JOHN KIRCHIE, was carried with acclamation.

Mr. LIVINGSTON responded and moved a vote of thanks to Dr. Cromie, expressing regret that ill health was the cause of his retiring. Dr. EASTERBROOK seconded, and emphasized the difficulties Dr. Cromie had overcome, especially on the social side. The motion was duly acknowledged by Dr. CROMIE.

The Division considered the Report of Council and instructed their representative in the Representative Body, especially concerning Clause 104, which was unanimously condemned.

Dr. ROBINSON, from the chair, initiated a debate on the present method of dealing with borderland causes, and Dr. EASTERBROOK

lucidly explained the law applying to Scotland. Several took part in the subsequent discussion, after which tea was provided by the retiring chairman.

#### EDINBURGH BRANCH: SOUTH-EASTERN COUNTIES DIVISION.

The annual meeting of the South-Eastern Counties Division was held at Newtown St. Boswells on May 9th. Dr. D. C. Graham was elected vice-chairman. Dr. J. S. Muir (Selkirk) was again nominated representative, with Drs. S. Davidson (Kelso) and McWhan (Duns) as deputy representatives. The appointment of the honorary secretary was extended. The annual report and financial statement for the year was approved.

The SECRETARY read a letter from the Medical Secretary on public education in health; it was agreed that the Division should take no action in the matter. The proposal relating to the capitation payment for services to juvenile Oddfellows was discussed and the representative was instructed.

Dr. FAIRFAX opened a discussion on over-certification.

#### EGYPTIAN BRANCH.

A CLINICAL meeting of the Egyptian Branch was held on April 25th in the School of Medicine, Cairo. Professor ALI BEY ISMAHIM demonstrated a case of bilharzial pancreatitis, a very unusual manifestation of the disease, in which exploratory laparotomy had been performed for a large epigastric tumour. After the exploration the patient was given a course of tartar emetic and the mass entirely and rapidly disappeared. Dr. HASSAN BEY SHAHEEN, surgeon to the ear and throat department of the Kasr-el-Aini Hospital, read a paper on the treatment of rhinoscleroma and incurable deafness. Having tried surgery, vaccines, tartar emetic, radium, x rays, and diathermy for the treatment of rhinoscleroma without any satisfactory results, he ultimately found in colloidal iodine, given intravenously, a possible specific. He showed three cases of rhinoscleroma treated in hospital. One patient, a boy aged 15, was completely cured; and two women, one aged 40 and the other 60, who were both still in hospital, showed signs of responding to the treatment. The nose, which previously was completely blocked in these two patients, had, under the influence of this treatment alone, subsided, and allowed the passage of air. The cases of deafness were shown and were examined by members of the section; the conditions concerned were chronic catarrhal otitis media and otosclerosis, both of very long standing. In each case an appreciable improvement was claimed, and in some instances the patients themselves stated that the improvement was remarkable. The result of the injection was often observed within twenty-four hours, both in its effect on the hearing and on tinnitus. Cases of internal ear deafness were also reported and improvement noted. Most of Dr. Shaheen's patients were treated in hospital. Professor A. K. HENRY showed a case of forequarter amputation for sarcoma, involving the right deltoid muscle, and described a simplification of the current procedure. Professor Henry also showed a patient from whom he had removed a tuberculoma from the left cerebellar hemisphere six weeks previously, using a straight mesial incision instead of the "crossbow" type. He described a simple way of steadying the needle during ventricular puncture, and demonstrated an extension to the Hudson drill which made that instrument suitable for cerebellar decompression, together with a lighted retractor in which the lamp and the case containing the battery could be sterilized in alcohol.

#### LANCASHIRE AND CHESHIRE BRANCH: MANCHESTER DIVISION.

The annual general meeting of the Manchester Division was held in the Milton Hall, Manchester, on May 18th. The annual report for 1927 was submitted and approved.

The following officers were elected for 1928-29:

Chairman, Dr. R. Boyd. Vice-Chairmen, Dr. J. D'Ewart and Dr. W. F. Dearden, J.P. Honorary Secretary and Treasurer, Dr. R. G. McGowan. Representatives in the Representative Body, Dr. R. Boyd, Dr. W. F. Dearden, J.P., Dr. J. D'Ewart, and Dr. A. Gregory.

The thanks of the Division were tendered to Alderman A. W. Chapman, J.P., for the valuable services rendered by him during the years he held the office of chairman of the Division. The Report of Council was considered, and the representatives were instructed to vote against the recommendation relating to a contract rate for juvenile Oddfellows.

#### METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.

THE St. Pancras Division held its annual general meeting on May 8th at the British Medical Association House, when Dr. ARNOLD VINEY was in the chair.

The annual report of the Executive Committee stated that the membership of the Division had increased to 215 ordinary and 4 associate members. The meetings held during the year had been very successful, and it was hoped to arrange a similar programme for the new session. It was proposed to repeat in the coming year the holding of a joint clinical meeting with the London Clinical Society. A subcommittee, consisting of Sir William Hamer, Dr. Geoffrey Evans, and Dr. A. J. Clarke, had been appointed to discuss with the medical officer of health for St. Pancras the question of educating the lay public in the prevention of disease, and to offer him the assistance of the Division. An honorary charities secretary had been appointed for the Division, and it was hoped that members would give support to the dependants of their less fortunate former colleagues. The report was adopted.

The following officers were elected for 1928-29:

Chairman, Sir William Hamer. Vice-Chairman, Dr. P. P. Dalton. Honorary Secretary and Treasurer, Dr. H. Fleetwood Walker. Charities Honorary Secretary, Dr. Percy Stocks. Representatives in Representative

Body, Dr. Kathleen Kitchin and Dr. W. A. M. Swan. Deputy Representatives in Representative Body, Dr. Kathleen Harding and Dr. Geoffrey Evans.

The annual report of the Central Council was presented and very keenly debated. The representatives were instructed to oppose the Central Council's recommendations regarding the provision of paying centres for infant hygiene, on the ground that there was no evidence of any considerable public demand for such centres, and that there were sufficient private practitioners able and willing to advise their private patients on these matters. They were also instructed to oppose the Central Council's recommendations regarding contract rates for juvenile Oddfellows.

The meeting closed with hearty votes of thanks to the chairman, Dr. Arnold Viney, and to the honorary secretary, Dr. P. P. Dalton.

#### METROPOLITAN COUNTIES BRANCH: SOUTH-WEST-ESSEX DIVISION.

A MEETING of the South-West Essex Division was held at Claybury Mental Hospital on May 15th. The salient points in the Annual Report of Council were explained by Dr. PANTING. There was some discussion on the reports on puerperal morbidity and mortality, lunacy and mental disorder, and the contract rate for juvenile Oddfellows, but no recommendation was put forward. Dr. Panting was reappointed representative in Representative Body. After tea Dr. BAHAM, medical superintendent, conducted members round the hospital, and showed the arrangements recently devised for private patients. The modern policy of making the surroundings of the patients cheerful and pleasing was especially evident in a recently built room for a single patient, with large French windows overlooking a terrace, and no obvious means of restraint. It was interesting to compare an old-fashioned single room, cell-like, with high grated windows. Later a series of cases was shown.

#### METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.

THE annual meeting of the Willesden Division was held at the Willesden General Hospital on May 16th. The annual report of the executive and the financial report were approved.

Dr. C. F. T. Scott was nominated for the post of honorary secretary of the Branch. The following were elected:

Chairman, Dr. F. R. Sturridge, M.C. Vice-Chairman, Dr. J. W. Brash. Honorary Secretary, Dr. William Paterson. Clinical Secretary, Dr. J. Freeman Neal.

The Annual Report of Council was considered, and the representative, Dr. Scott, was instructed.

The chairman, Dr. Brash, handed over the badge of office to his successor, Dr. Sturridge, and was accorded a hearty vote of thanks. Votes of thanks were also accorded to the honorary secretary, the clinical secretary, the honorary auditor, and the Willesden General Hospital.

#### NORTHERN COUNTIES OF SCOTLAND BRANCH: BANFF, MORAY, AND NAIRN DIVISION.

THE annual meeting of the Banff, Moray, and Nairn Division was held at Banff on May 12th, with Dr. JAMES TAYLOR of Keith in the chair. Dr. STEPHEN (Banff) raised the question of increased amount of work which the honorary staffs of hospitals were called upon to do for local authorities, instancing the number of tonsil operations performed, for which the education authority paid nothing. On the proposal of Dr. COWIE, seconded by Dr. D. G. CAMPBELL, it was agreed that the education authorities in the Divisional area should be asked to pay a uniform fee on the British Medical Association scale to the hospitals for all operations performed on cases recommended by the authorities for treatment at the hospital. On the proposal of Dr. CAMPBELL it was decided that local committees should be formed of the hospital staffs to obtain information as to the whole question of payment for services rendered to patients recommended for treatment or operation by any local authority. The Divisional annual report and financial statement were approved. The following were elected as office-bearers for the coming year:

Chairman, Dr. D. Grant (Hopeman). Vice-Chairman, Dr. J. Stephen, D.S.O. (Banff). Secretary and Treasurer, Dr. G. S. Sowden (Elgin). Representative in Representative Body, Dr. A. B. Murray (Banff). Deputy Representative in Representative Body, Dr. D. I. Walker (Banff).

Dr. JAMES TAYLOR was accorded a very hearty vote of thanks for his services as chairman during the past year. The Annual Report of Council was then considered, and the representative was instructed on several matters. With regard to the B.M.A. Charities Fund, it was unanimously decided to make a levy of five shillings per member, exclusive of those who already contribute to the funds. After the meeting, which was one of the most successful held in the Division, the members present, and their friends, were entertained to tea by the Banff members.

#### PUNJAB BRANCH.

THE first annual meeting of the Punjab Branch was held in the King Edward Medical College, Lahore, on March 24th and 25th.

The first lecture of the meeting was given by Major A. M. DICK, I.M.S., professor of ophthalmology and diseases of the ear, nose, and throat, King Edward Medical College, on electrical appliances used in the examination of the ear, nose, and throat. He exhibited a portable outfit used by himself which contained all the essentials for ordinary examinations, and could be worked from a small dry cell.

Lieut.-Colonel H. H. BROOME, principal and professor of surgery, King Edward Medical College, demonstrated various electrical instruments used in the examination of the bladder, urethra, and

rectum. He discussed the value of the cystoscope and sigmoidoscope, and explained the application of the urethroscopy to the treatment of gonorrhoea and strictures.

Lieut.-Colonel H. R. BOTT, I.M.S., professor of operative surgery, King Edward Medical College, gave a practical demonstration of the operative technique involved in dealing with a tumour of the thyroid gland.

A lecture demonstration on uterine fibroids was given by Captain S. N. HAYES, I.M.S., professor of midwifery and gynecology, King Edward Medical College, who exhibited many specimens of cases operated on by himself, and microscopical slides.

Major B. P. BARUCHA, I.M.S., professor of anatomy, King Edward Medical College, gave a lecture on the nervous system, detailing its development and the latest advances in its anatomy and physiology, with reference to practical points in diagnosis and treatment.

The meeting on March 25th opened with a lecture demonstration by Lieut.-Colonel J. J. HARPER-NELSON, I.M.S., professor of medicine, King Edward Medical College, on artificial pneumothorax in the treatment of pulmonary tuberculosis. There were also demonstrations in the pathology, physiology, entomology, and pharmacology departments of the King Edward Medical College.

The business meeting of the Branch was held at 3 p.m., when, in the absence of the president, Lieut.-Colonel R. WELLS, I.M.S., took the chair. The annual report was read by the SECRETARY and approved without alteration.

The following officers were elected for 1928-29:

President, Lieut.-Colonel H. H. BROOME, I.M.S. Vice-President, Lieut.-Colonel C. A. GILL, I.M.S. Honorary Secretaries, Lieut.-Colonel J. J. HARPER-NELSON, O.B.E., M.C., I.M.S., and Dr. G. S. CHAWLA.

On the proposal of Lieut.-Colonel C. A. GILL it was agreed, with acclamation, to place on record the appreciation of the Branch of the earnest work which had been carried out by Lieut.-Colonel J. J. HARPER-NELSON, to whose efforts the success which had been attained in connexion with the Branch during the past year was entirely due. The members were subsequently entertained to tea in the library of the College by the Branch.

#### YORKSHIRE BRANCH: YORK DIVISION.

The annual meeting of the York Division was held in the York Medical Society's Room on May 5th, when Dr. G. W. GOSLING was in the chair.

The HONORARY SECRETARY reported that the total amount provisionally promised in respect of the British Medical Association Science Prize for St. Peter's School was now just under £40. The matter was left in the hands of the Executive Committee.

Drs. EVERTS and TAYLOR reported on the result of the personal appeal in respect of medical charities, which was very satisfactory, and said that there were now twenty-five members subscribing through the Division amounts totalling £40, exclusive of those members who subscribed direct to headquarters or direct to medical charities. The CHAIRMAN, on behalf of the Division, thanked them for the satisfactory result of their efforts.

The HONORARY SECRETARY reported that as a result of a conference between representatives of the Division and Messrs. Rowntree it had been decided that the suggested scheme for attending their employees on a capitation basis was not practicable. It was unanimously decided to take no further action in the matter.

The representative was instructed to support the recommendation of the Council under the heading of medical defence and x-ray examinations.

The report of the honorary secretary for 1927 was unanimously approved.

The following officers were elected for the year:

Chairman, Dr. N. C. FOSYTH, Vice-Chairman, Dr. P. R. McNAUGHT. Honorary Secretary, Dr. J. C. LYLE. Representative in Representative Body, Dr. P. Macdonald. Deputy Representative in Representative Body, Dr. H. E. K. REYNOLDS.

In the absence of the newly elected chairman the vice-chairman, Dr. McNAUGHT, assumed the chair at this point of the proceedings. The HONORARY SECRETARY read the whole of the correspondence which had passed between the local secretary of the St. John Ambulance Association, the headquarters of the British Medical Association, and himself on the question of the giving of lectures free of charge. After discussion it was decided that a motion should be put down on the agenda for the Representative Meeting in the name of the Division.

The HONORARY SECRETARY read a communication from the secretary to the West Riding Local Medical and Panel Committee outlining a scheme for the establishment of a medical institute in Leeds for the provision of a meeting place for various medical bodies, facilities for social intercourse, etc., for members of the medical profession in Yorkshire. The honorary secretary was instructed to reply stating that, while approving the scheme, it was desirable to point out that members of the Division were already adequately catered for by the York Medical Society, and that it was unlikely that much support could be expected from the individual members of the Division.

The honorary secretary was authorized to seek an immediate interview with the town clerk on the matter of reports by medical practitioners at the request of coroners.

The honorary secretary reported that on a suggestion from junction with the local authorities the education of the public in health matters had been appointed to act in connexion with a scheme for a civic and health week in York this year, and that it had been decided to offer to provide a lecturer on some suitable subject during this week. The co-operation of the Division had been welcomed by the subcommittee, and the matter was now going forward.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Lieutenant Commander A. W. North to be Surgeon Commander. Surgeon Lieutenant G. Kirker to be Surgeon Lieutenant Commander.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenant Commander F. L. Cassidi to the *Rodney* for training. Surgeon Lieutenant H. E. Hall to be Surgeon Lieutenant Commander. Probationary Surgeon Sublieutenant G. O. Barber to the *Tiger* for training.

### ROYAL ARMY MEDICAL CORPS.

Temporary Lieutenant D. W. Stuart relinquishes his commission.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenant (Honorary Squadron Leader) F. W. Squair relinquishes his temporary commission on completion of service, and is permitted to retain the honorary rank of Squadron Leader.

The following are granted short-service commissions in the rank of Flying Officer for three years on the Active List: J. H. Cullinan, T. A. Edwards, A. R. French, F. J. Nyhan, and B. A. Porritt.

### INDIAN MEDICAL SERVICE.

The services of Lieut.-Colonel C. H. Reinhold, M.C., are placed at the disposal of the Chief Commissioner, Delhi.

The services of Lieut.-Colonel J. M. A. MacMillan, Civil Surgeon, Simla East, are replaced at the disposal of the Government of the Central Provinces.

Major H. K. Rowntree, M.C., is appointed to be Civil Surgeon, Simla East.

On reversion from foreign service under the Governing Body of the School of Tropical Medicine and Hygiene, Calcutta, Captain G. C. Maitre, I.M.S., of the Medical Research Department, is appointed to officiate as Assistant Director at the Central Research Institute, Kasauli.

Captains to be Majors: M. T. Khandwalla, J. Rodger, M.C., and G. A. Khan.

### REGULAR ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Lieut.-Colonel E. E. Ellery, having attained the age limit of liability to recall, ceases to belong to the Reserve of Officers.

#### SUPPLEMENTARY RESERVE OF OFFICERS: ROYAL ARMY MEDICAL CORPS.

Lieutenants C. W. Badger and C. C. H. Chavasse to be Captains. J. N. Leitch to be Lieutenant.

### TERRITORIAL ARMY.

#### ROYAL ARMY MEDICAL CORPS.

Major F. R. Harris, having attained the age limit, relinquishes his commission.

Major A. Morris, T.D., having attained the age limit, retires, and retains his rank with permission to wear the prescribed uniform.

Captain D. W. M. Mackenzie, R.A.M.C., to be Divisional Adjutant 47th (2nd London) Division and School of Instruction, vice Prov. Major W. S. Martin, M.C.

Captain R. H. Yolland resigns his commission.

Captain J. M. Chrystie to be Major, with precedence as from May 21st, 1927.

Lieutenant D. P. Levaek to be Captain, with precedence as from June 28th, 1927.

W. H. A. Dodd to be Captain, with precedence as from 1927.

Superannuation for Service with the O.T.C.—Second Lieutenant T. A. A. Hunter, from the General List, T.A., to be Lieutenant, with precedence as from November 26th, 1927, superannuation for service with the Medical Unit, University of London Contingent, Senior Division, O.T.C.

### TERRITORIAL ARMY RESERVE OF OFFICERS.

#### ROYAL ARMY MEDICAL CORPS.

Captain J. McC. Smellie, from the Active List, to be Captain. Lieutenant W. B. Balcanen, from the Active List (T.A. General List, Birmingham University Contingent, O.T.C.), to be Lieutenant.

## VACANCIES.

ALL SAINTS' HOSPITAL FOR GENITO-URINARY DISEASES.—(1) Resident Senior House-Surgeon. (2) House-Surgeon, Male. Salary for (1) at the rate of £200 per annum, and for (2) £150 per annum, rising to £200 on appointment as Resident House-Surgeon after three months.

AMBROSE INFIRMARY.—Resident Medical Officer. Salary at the rate of £150 per annum.

BIRMINGHAM AND MIDLAND HOMOEOPATHIC HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary £150.

BUNLEY UNION.—Resident Male Medical Officer at Primrose Bank Institution. Salary £300 per annum.

CAMBRIDGE UNIVERSITY.—PATHOLOGICAL LABORATORY.—John Lucas Walker Studentship. Annual value £300.

CHESTER CITY.—Assistant Medical Officer of Health. Salary £600 per annum.

COSSILLY MEMORIAL HOSPITAL, Kingswood, Bristol.—House-Surgeon (male). Salary £150 per annum.

COVENTRY AND WARWICKSHIRE HOSPITAL.—(1) Resident House-Surgeon. (2) Resident House-Physician. Males. Salary at the rate of £125 per annum each.

DONSET MENTAL HOSPITAL, HERRISON.—Junior Assistant Medical Officer (unmarried). Salary £300 per annum, rising to £350.

DUMFRIES AND GALLOWAY ROYAL INFIRMARY.—Junior Resident Medical Officer (male). Salary £100 per annum.

DORHAM COUNTY HOSPITAL.—Junior House-Surgeon (male). Salary £120 per annum.

ELIZABETH GARRETT ANDERSON HOSPITAL, Euston Road, N.W.1.—(1) House-Physician. (2) Obstetric Assistant. (3) Two House-Surgeons. Salary at the rate of £50 per annum each.

GLoucestershire ROYAL INFIRMARY AND EYE INSTITUTION.—House-Physician (male). Salary at the rate of £150 per annum.

HASTINGS: ROYAL EAST SUSSEX HOSPITAL.—Honorary Assistant Surgeon.

HOSPITAL FOR SICK CHILDREN, Great Ormond Street, W.C.1.—(1) House-Physician. (2) House-Surgeon. (Males, single). Salary £50 for six months. (3) Medical Registrar (male) in Out-patient Department; salary £250 per annum.

HOVE: LADY CHICHESTER HOSPITAL.—(1) House-Physician; salary at the rate of £100 per annum. (2) Junior House-Physician; honorarium at the rate of £50 per annum.

IPSWICH: EAST SUFFOLK AND IPSWICH HOSPITAL.—Assistant Ophthalmic Surgeon.

KING'S COLLEGE HOSPITAL, S.E.5.—Junior Aural Surgeon.

LONDON COUNTY COUNCIL.—Eighth Assistant Medical Officer (male) in the Mental Hospitals service. Salary £300 per annum, rising to £400 with fluctuating temporary additions.

LONDON UNIVERSITY.—University (part-time) Chair of Dietetics, tenable at St. Thomas's Hospital Medical School. Salary £1,000 a year.

LONOTOWN AND BORDEN JOINT HOSPITAL BOARD.—Medical Officer (part-time) for Infectious Diseases Hospital. Salary £100 per annum.

MANCHESTER: ANCOATS HOSPITAL.—House-Surgeon. Salary at the rate of £100 per annum.

MANCHESTER BUEN'S HOSPITAL.—Junior Resident Medical Officer. Salary at the rate of £50 per annum.

MANCHESTER CITY.—(1) Woman Medical Officer; salary £600 per annum. (2) Assistant Medical Officer at Baguley Sanatorium; salary £350 per annum.

MANCHESTER ROYAL EYE HOSPITAL.—Senior and Junior House-Surgeons. Salary £150 and £120 per annum respectively.

MANCHESTER ROYAL INFIRMARY.—Assistant Medical Officer to the Dermatological Department. Salary at the rate of £20 per annum.

MANSFIELD AND DISTRICT HOSPITAL.—Assistant House-Surgeon (male). Salary at the rate of £150 per annum.

MARSHOTE: ROYAL SEA-BATHING HOSPITAL.—Male House-Surgeon. Salary at the rate of £100 per annum.

MIDDLESEX HOSPITAL AND MEDICAL SCHOOLS.—Medical Registrarship. Salary £300 per annum.

MILLER GENERAL HOSPITAL, Greenwich Road, S.E.10.—House-Physician (male, unmarried). Salary at the rate of £125 per annum.

NOTTINGHAM: CITY MENTAL HOSPITAL.—Deputy Medical Superintendent. Salary £650 per annum, rising to £700. In addition £50 per annum for D.P.M. and £10 for M.P.C.

OLDHAM ROYAL INFIRMARY.—House-Surgeons in charge of (1) Women's and Children Wards, (2) Male Wards, (3) Out-patients and Special Departments. Salary at the rate of £175 per annum each.

QUEEN MARY'S HOSPITAL FOR THE EAST END, E.15.—(1) House-Physician. (2) Two House-Surgeons. (3) Obstetric House-Surgeon. (4) House-Physician and Casualty Officer.

St. Mary's HOSPITAL, W.2.—Assistant Director to the Surgical Unit. Salary £750 per annum.

SALFORD ROYAL HOSPITAL.—Honorary Assistant Physician.

SOUTHPORT (GENERAL) INFIRMARY.—Junior House-Surgeon (male, unmarried). Salary at the rate of £100 per annum, and additional £50 for services rendered in the Venereal Diseases Department.

VICTORIA HOSPITAL FOR CHILDREN, Tito Street, S.W.3.—Senior Resident Medical Officer (male). Salary £250 per annum.

WILKESDEN GENERAL HOSPITAL.—(1) Clinical Assistant to the Gynaecological Out-patient Department. (2) Two Clinical Assistants to the Surgical Out-patient Department.

WOODFORD MUNICIPAL DISTRICT, Alberta, Canada.—Municipal Doctor. Salary \$2,000 per annum.

WOOLWICH UNION.—First Assistant Medical Officer at the Plumstead and District Hospital. Salary £400 per annum, rising to £500.

*This list of vacancies is compiled from our advertisement columns, where full particulars will be found. To ensure notice in this column advertisements must be received not later than the first post on Tuesday morning.*

### APPOINTMENTS.

PATEY, D. H., M.S., F.R.O.S., Surgeon to Out-patients at the Hampstead General and North-West London Hospital.

SCOTT, Robert, M.B., Ch.B., Medical Referee under the Workmen's Compensation Act, 1925, for the districts of the Axminster, Honiton, Tiverton (Circuit No. 57), Exeter, Newton Abbot, and Torquay (Circuit No. 58) County Courts, vice J. R. Thomas, deceased.

CERTIFYING FACTORY SURGEONS.—H. V. Crabtree, M.B., Ch.B., Manch., for the Exeter District, Devon; J. W. Crawshaw, M.B., Ch.B., Vict., for the Tyldesley District, Lancaster.

### DIARY OF SOCIETIES AND LECTURES.

ROYAL SOCIETY OF MEDICINE.  
Social Evening.—Mon., 8.30 to 9 p.m. Reception by the President and Lady Berry. 9.15 p.m., Illustrated Address by Mr. C. Leonard Woolley: Recent Excavations at Ur of the Chaldees. Music and light refreshments.  
Section of Surgery.—Wed., 8.30 p.m., Annual General Meeting. Discussion: Hare-lip; to be opened by Dr. Victor Veau (Paris). Mr. C. H. Fagge, Mr. T. Pomfret Kilner, and others will speak.  
Section of Ophthalmology.—Fri., 4.30 p.m., Tea. 4.45 p.m., Cases. 5 p.m., Mr. Montagu Hine: Report on a Case of Neuro-fibromatosis of the Eyelid, and of a Case in which a Glass Ball burst in the Socket; Mr. F. Ridley: Lysozyme-antibacterial Body present in Cret Concentration in Tears, and especially its Relation to the Human Eye. 6.15 p.m., Annual General Meeting.

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall, S.W.1: Tues. and Thurs., 5 p.m., Croonian Lectures by Dr. Charles Bolton: The Interpretation of Gastric Symptoms.  
LONDON CLINICAL SOCIETY, London Temperance Hospital, Hampstead Road, N.W.1.—Thurs., 8.45 p.m., Macalister Lecture by Sir Berkeley Moynihan, Bt.: Medicine in Art.

### POST-GRADUATE COURSES AND LECTURES.

CENTRAL LONDON THROAT, NOSE AND EAR HOSPITAL, Cray's Inn Road, W.C.1.—Mon., 1.30 p.m., Examination of the Pharynx. Wed., 1.30 p.m., Examination of the Larynx.

EAST LONDON HOSPITAL FOR CHILDREN, Shadwell, E.—Thurs., 4 p.m., Clinical Demonstration.

NORTH-EAST LONDON POST-GRADUATE COLLEGE, Prince of Wales's General Hospital, Tottenham, N.15.—Mon., 2.30 to 5 p.m., Medical, Surgical, and Gynaecological Clinics; Operations. Tues., 2.30 to 5 p.m., Medical, Surgical, Throat, Nose, and Ear Clinics; Operations. Wed., 2.30 to 5 p.m., Medical, Skin, and Eye Clinics; Operations. Thurs., 11.30 a.m., Dental Clinics; 2.30 to 5 p.m., Medical, Surgical, and Ear, Nose, and Throat Clinics; Operations. Fri., 10.30 a.m., Throat, Nose, and Ear Clinics; 2.30 to 5 p.m., Surgical, Medical, and Children's Diseases Clinics; Operations.

ROYAL NORTHERN HOSPITAL, Holloway Road, N.—Tues., 4 p.m., Treatment of Prostatic Obstruction.

LIVERPOOL UNIVERSITY CLINICAL SCHOOL ARTE-NATAL CLINICS.—Royal Infirmary: Mon. and Thurs., 10.30 a.m. Maternity Hospital: Mon., Tues., Wed., Thurs., and Fri., 11.30 a.m.

MANCHESTER: ANCOATS HOSPITAL.—Thurs., 4.15 p.m., Treatment of Fractures, with Demonstrations. Tea at 3.45 p.m.

SHEFFIELD UNIVERSITY POST-GRADUATE CLINIC.—At Jessop Hospital: Tues., 3.30 p.m., Obstetrical Cases. At Royal Hospital: Fri., 3.30 p.m., Clinical Cases.

### NATIONAL HEALTH INSURANCE AS SEEN BY A CONSULTANT PHYSICIAN.\*

BY

A. S. WOODWARD, C.M.G., C.B.E., M.D., F.R.C.P.

WHEN I received an invitation from the Faculty of Insurance to give a brief address on a subject related to national health insurance, I accepted gladly, for I thought it would give me an opportunity of placing before those who are specially interested in the subject my impressions of certain phases of the work of approved societies, with which I have been associated for a great many years, from the standpoint of a doctor who acts as medical adviser to one of them. Having no responsibility for the administrative machinery or finances of an approved society on the one hand, nor for the work of the general practitioner on the other, I feel I may be able to express views with a degree of impartiality which is not always present when either one or the other deals with this subject.

It would be interesting and, indeed, profitable, if time permitted, to follow closely the history of sickness insurance. I can, however, do no more than briefly touch upon it. It had its origin in the voluntary action of workers to protect themselves financially against ill health by means of mutual aid societies. As this country was the first to develop industrially, it was perhaps natural that it should have been the pioneer of voluntary sickness insurance. The movement of the workmen was strengthened by the action of many employers in establishing welfare institutions, prompted, no doubt, to some extent by self-interest, but undoubtedly also by humanity and a sense of social duty. Yet though the need for central or Governmental action was certainly present from the early days of the industrial revolution, no step in this direction was taken by the State. It is not without interest, therefore, to remember that although Britain was the pioneer of voluntary sickness insurance, Germany was the first country to inaugurate a compulsory scheme. It is true that the German scheme was inspired by the political motives of Bismarck rather than by the needs of the workers, and was regarded with considerable suspicion by them as tending to weaken their allegiance to their

trade unions and attach them to the State; but while in this country the introduction of the Insurance Act in 1911 was a purely social measure, its reception by the trade unions and friendly societies could hardly be called enthusiastic. Compulsory insurance, nevertheless, needs no champions to-day; it is its own best advocate. In establishing the scheme we learned much from the experience of Germany, but we did not copy that country, and the Government of the day wisely used existing organizations for the purpose of administering health insurance.

The approved society system has its critics even now, but they are a gradually diminishing body; the societies have not only survived the criticisms of the past, but at the International Labour Conference at Geneva last year they or their equivalent were accepted by the Government representatives of thirty-seven of the forty-three countries represented as the most desirable type of organization for administering sickness insurance—surely a very remarkable tribute to the British system. A scheme of sickness insurance administered by the State is indeed a rarity. This is the more remarkable in view of the considerable extent of the State's activity in other forms of compulsory insurance. The fact that a compulsory scheme of sickness insurance should be allocated to these semi-independent bodies can only be explained, I suggest, by the nature of the problem itself and the peculiar difficulties presented in dealing with claims for benefit. Sickness is unlike unemployment in that whereas unemployment is an ascertainable fact, incapacity for work is a condition which varies with the individual and his occupation. There is need, therefore, for an individual and, I might say, a psychological test, and for that personal knowledge of the patient which can best be supplied by the family physician. Sickness insurance is a many-sided problem which calls for methods other than those which can be supplied by a State medical service or a public authority administration. It is not adaptable to formalism, but calls for sympathy, understanding, and initiative. To get the most out of it there is need for close co-operation between the medical and the administrative arms, and in this respect my experience teaches me that much ground has yet to be covered and a good many misunderstandings removed.

It is hardly a matter for surprise that so few people outside those associated with its administration realize that the scheme of national health insurance as originally laid down had a definitely preventive side as well as provision for curative measures. The general ignorance on

\* An address delivered to the Faculty of Insurance on March 31st, 1928.

this subject serves to emphasize how few of us really keep in touch with the legislative measures passed by Parliament unless we are brought into direct personal contact with them in some way. I cannot help feeling that approved societies themselves are in some measure to blame by reason of the strange nomenclature which they use in connexion with the preventive side. Why should funds declared at a valuation to be available for spending on preventive or treatment benefits be called a surplus? If this term is retained instead of finding a more convenient one, is it not inevitable that the general public, and even panel practitioners—not to say a Chancellor of the Exchequer—will think that these funds are something additional to the scheme, instead of being a fundamental part of it?

I have not a very intimate knowledge of national health insurance finance, but as a doctor I can appreciate the practical results of the existence of these surpluses as applied to individual sufferers—whether increased cash payments are made or they are supplied with surgical belts, given optical treatment, sent to convalescent homes, supplied with dentures, or nursed when they are sick. I read in the press recently that a sum of about £4,000,000 had been spent during the past year on treatment benefits alone. From the medical standpoint this is, of course, the best part of the scheme, as it approaches the problem of sickness from the right direction; it is because it is so valuable that I would like to see still further development. Insured workers are now entitled to a right to such medical advice and treatment as can reasonably be expected from general practitioners as a class, but because of the inadequacy of this I know that, in London at all events, an appreciable number are sent to a hospital for treatment. In this way they receive specialist treatment, but they get it, as it were, by the back door and not as a right; they do not pay for it, and I think it should be paid for. On the other hand, there are many insured persons who require specialist treatment much more urgently, but do not receive it. I cannot but feel that a scheme which does not provide specialist treatment is not only incomplete, but is only partially effective, and should be remedied. This is impossible at present, I am told, on account of the cost, and that brings me to another phase of my subject—namely, the heavy incidence of sickness claims.

Among my friends I have a number of actuaries connected with approved societies, and during the past year or two their time seems to be mainly occupied in studying sickness curves. When I remind them of the general improvement in the health of the community which has taken place over the past few years, they flourish a graph and say, "Not among our members." When they go on to say that the treatment and curative benefits of which I have just been speaking are in very serious jeopardy as a consequence of the sustained heavy claims, I must share their concern. This matter is also causing apprehension to the Ministry of Health, and is the subject of investigation between them and members of my own profession engaged in insurance practice. Happily I am not here to propound a solution, but as I see the papers of a great many claimants in the course of a year, in the nature of things I cannot help gaining certain impressions. In placing some of these before you I do so not without feelings of trepidation, and certainly in no unfriendly spirit. I have no desire to make a Roman holiday by offering myself as a sacrifice on the No Man's Land of improper claims, but I cannot help thinking that there may be many contributory causes for high claims, the reasons for which are not far to seek and the totality of which must be considerable, although the basic causes, whatever they may be, may only emerge as the result of prolonged investigation.

A doctor, however conscientious he may be, is a human being, and in the course of his practice he will meet with a number of instances that might well make a specialist hesitate to say whether the patient is capable or not; the more conscientious he is the more he will hesitate. To blame the average doctor for certifying a patient as incapable where there is so much doubt would not only be unjust, but would be unreasonable. Difficult cases, however, are relatively uncommon, and necessarily cannot be the

cause of the heavy sickness claims. It is my considered opinion that the heavy claims must arise from ordinary common ailments—we have no rare diseases in this country to-day—and I cannot help thinking that a part of the difficulty may be not so much in laxity in certification, but in a failure on the part of the doctor to make proper use of the machinery of certification. There is a space on the medical certificate upon which the doctor may enter the date when the patient should next be examined, but little if any use is made of this space; consequently many claimants may remain on the funds for a number of days in excess of their incapacity for work. If the patient takes the initiative and presents himself for examination he will no doubt be given a final certificate, but if he only presents himself for examination at the end of a week, although he may have recovered some days previously, he will not be declared "off" until the day of his examination. Many patients must be near recovery on, say, the date of the last examination prior to the date of declaring "off"; one would have thought such patients would be required to present themselves for examination before the expiry of another week, say in the mid-week, even though the might continue to require treatment. Yet, as I have stated, they are seldom so requested.

I should be interested to hear the views of others upon this particular point. From inquiries I have made personally, I am informed that there are a great many complete weeks of sickness, and I can only assume it is because the patients present themselves for examination at weekly intervals. This may be, and no doubt is, a very suitable arrangement for patients who are seriously ill, but in the case of minor ailments, or where the incapacity is drawing to a close, it is not sufficient. There is nothing in medicine that I know of to indicate that sickness should run in cycles of complete weeks, or that so much incapacity should come to an end on a Saturday prior to starting work on a Monday, or come to an end on the Thursday, if the week's work commences on Friday; yet experience would seem to indicate that this actually happens. As to the collective significance of these additional days in affecting the finances of the scheme as a whole, it is only necessary to mention that Sir Walter Kiernan informed the Annual Panel Conference in October, 1926, that if one additional week's sickness benefit were paid to each person on the sick fund in one year the additional benefit scheme of a proportion of approved societies must be withdrawn altogether, and a specialist service would be no longer possible within the scheme.

I gather from the reports in the *British Medical Journal* that doctors themselves have complained of their difficulties in connexion with refusing certificates, stating that they were unable to refuse the application of an insured person for a certificate, as the patient could immediately transfer to some other doctor and, in addition, would take the other members of his family. This may be a reason, but it can hardly be considered a justification for improperly granting certificates; and, while the new rule delaying the transfer of such a member for a fortnight may do some good, the real remedy must rest with the profession itself, and with it only.

Before I leave the vexed question of certification, there is one phase of it which to me has been somewhat surprising, and that is the tendency amongst some practitioners to grant monthly certificates to patients where subsequently the patient is actually found not to be incapable of work. I am speaking from personal knowledge of certain instances, not a few, where the patient has returned to work before the expiry of the certificate or has obtained a final certificate before the expiry of the previous one. It would have been thought that, since the patient is under the doctor's care for four weeks before a monthly certificate may be granted, the practitioner would have been familiar with his condition, yet the facts point otherwise and seem to indicate a lack of care on the part of the doctor. In connexion with the question of definite weeks there is a suggestion that the Ministry of Health thinks in terms of fixed periods; it issues four-weekly certificates, and in the case of parturition appears to standardize the period of incapacity at four weeks. In a few cases this

may be too long, but in many instances the mother is not fit to return to work so soon after the confinement and when she is still nursing her child.

Regarding certification I have heard doctors criticized for using vague terms in their diagnoses. The administrative branch will not allow such terms as "debility." It can be argued that this diagnosis may cover a large number of ailments which, if taken separately, would not be sufficient, but which will, taken together, certainly present a picture of incapacity for work due to debility. The term is, however, of no assistance to societies in discharging their obligation to safeguard the interests of the general body of members. Definitions are, as the great John Hunter said, "of all things the most damnable," and even to-day we have no satisfactory definition of what exactly is meant by the phrase "capable of work." In an effort to help the society regional medical officers will sometimes state that although a man is not fit for his ordinary work, he is fit for light employment, disregarding the fact that no legal authority has ever been able to translate such an expression into precise terms. In considering certificates I am also prompted to suggest that regional medical officers might with very slight alterations save a great deal of trouble and worry to societies, panel doctors, and their patients, if they would inform the societies whether a condition causing incapacity is, in their opinion, of a chronic character, so that no further reference need be made. It certainly would be an advantage to societies if regional medical officers could advise them as to the necessity for additional benefits.

For my part I am strongly of opinion that all societies should have medical advisers at their head offices; if this were the case then regional medical officers, panel practitioners, and patients would be saved many examinations that are irksome and unnecessary. I would go further, and plead that societies through their medical advisers should be given the benefit of making references to regional medical officers for consultative purposes on the understanding that the result should be communicated to the panel practitioner and medical adviser direct as a private and confidential document.

The duty of a doctor to his patients will, I feel sure, always remain unaffected by the exigencies of a particular scheme, but doctors who have much experience of workmen's compensation claims realize that the psychological element which manifests itself in such cases is often very remarkable. It is not infrequent in cases of severe injury that a surprising development towards recovery takes place so soon as a settlement is reached. This is not a matter of theory—it is a commonplace fact. It is of interest principally in showing how large a part mind plays in the health of a patient. I do not suggest that there is any conscious exaggeration of symptoms or condition on the part of the patient, but it is a phase of psychology which no student of medicine can afford to ignore. The explanation may be that so long as the patient has nothing to distract his thoughts, and no other interests in life than his health and his certificates, these of necessity lead to introspection that is antagonistic to recovery.

The insurance scheme is passing through a rather critical stage, having regard to the heavy and increasing expenditure on claims as compared with past years, and the need for getting to closer grips with the problem has become too insistent to be delayed any longer. No attempt to grapple with it that does not involve co-operation between the approved societies and the doctors is likely to be successful, whereas I believe that combined investigation on their part cannot fail to find the more immediate causes of the present serious position, and, perhaps also, to find a remedy. I have the fullest confidence that if practitioners can be brought to appreciate the full significance of the machinery of certification, as well as the desire on the part of approved societies to help, my profession will be found willing to co-operate with societies to their utmost capacity. As a first step the tendency on the part of both parties to indulge in long-range recrimination should be abandoned. I am, indeed, aware that a sympathetic understanding has already been reached between

many individual practitioners and representatives of approved societies, often to the great advantage of the insured. A doctor can frequently suggest an appliance or convalescent home treatment which the approved society can supply and thus enable the member to return to work. When this is done it not only relieves the doctor of attendance upon the patient, but is also a relief to the society's funds. This in itself shows the need for a mutual understanding and a working scheme between these medical men and societies.

I have already mentioned convalescent home treatment; this is a subject to which not nearly sufficient attention has been given. There are numerous cases, especially among women, of debility, anaemia, neurasthenia, etc., for which a cure can hardly be expected so long as the patient remains in her existing home surroundings; consequently a sufferer will continue on the funds for long periods. Yet if such patients could be sent away for convalescent home treatment and given fresh air, good food, and a complete change of surroundings, many of them would recover their normal health. Now I am well aware that there are not nearly sufficient convalescent homes in the country—in fact, there are, I understand, only about 130 available for general use by approved societies; further, some of these are closed in the winter and others will only admit certain types of cases, many of them rigidly excluding such cases as suspected tuberculosis, neurasthenia, asthma, heart cases, etc.—the very types which most need this form of treatment. Yet many patients whose complaints become chronic could have their working capacity restored were such homes available in the early stages of their convalescence. Apart altogether from the saving in suffering to the members, it would be a business proposition if these people could be given suitable treatment, and it is a phase of the preventive side of health insurance the development of which I would commend to your earnest consideration. I do not propose to reiterate the complaints regarding the present position of treatment and accommodation for tuberculosis patients. This subject has been so much ventilated as to render any comments on my part unnecessary.

Much heat and not very much light has been engendered by the suggestion that malingering may be taking place among claimants for benefit, and I am a little puzzled as to the cause of so much indignation. I am tempted to ask: "Has there been such an improvement in social conditions or moral outlook generally since the days when the friendly societies and trade unions were the only forms of sickness insurance, and when improper claims among members—so many of whom were of a better class—were not infrequent? Are such societies entirely free from improper claims on their private side to-day?" It would be interesting to know whether there is also a tendency on the part of the more comfortable sections of the community to understate their claims, say, under their fire insurance or burglary policies. The answer may be "Yes," but it would surprise me. Yet insured persons, many of whom think in making a claim for benefit that they are simply getting back what they have paid for, and that their claim is backed by the State, are assumed by some to be incapable of exaggerating their symptoms. Those who think so forget that the heaviest claims are amongst women, especially married women, and that many of them receive very low wages and have children to care for; indeed, the temptation to them to remain at home to look after their children whilst drawing benefit must often be severe. It is ridiculous to suggest that the amount of benefit is insufficient as a temptation, for it very often approximates closely to their weekly wages, and sometimes even exceeds them.

No consideration of the question of sickness benefit would be complete without a brief reference to the nature of those illnesses that are the largest contributory causes. I have taken the following figures from the latest available official figures.

In 1926, out of a population of 36,067,000 in England and Wales, there were 14,102,000 insured persons entitled to benefits under the National Health Insurance Act. Sickness and disablement benefits were expended for 28,250,000 weeks' incapacity, equivalent to the loss of the whole year's work of 540,000 persons. These figures do not include the first three days of illness, for which benefit is not payable.

The principal causes of every thousand deaths in order of mortality in 1926 were diseases of the heart and circulation (226), respiratory diseases (150), cancer (117), diseases of the nervous system (103), and tuberculosis (82). These five conditions are responsible for 64 per cent. of the death rate, and are the principal diseases which we have to overcome. If the community could be rid, in addition, of venereal disease and alcoholism, the sickness curve would be enormously reduced.

Malignant disease was the cause of 53,220 deaths in England and Wales in 1926—nearly one-eighth of all the deaths; the recorded death rate—namely, 1,170 per million—from this condition is steadily increasing.

In 1926 nearly one-twelfth of all the deaths in England and Wales was due to tuberculosis, numbering 37,525, although it is stated that the death rate from this disease has fallen from 3,189 per million in 1847 to 820 in 1926.

In connexion with syphilis, the Royal Commission on Venereal Diseases reported in 1916 that the number of persons affected by syphilis would not fall below 10 per cent. in large cities. Many leading authorities, however, dispute this extraordinarily high percentage.

Of the children in the London County Council blind schools 50 per cent. are blind through the effects of venereal disease. The navy and army, at home and abroad, lost the work of over 2,200 men who were off duty during the whole of 1923 from this cause.

In considering illnesses and deaths due to alcoholism, one has to remember that this poison may be a factor in many conditions that are not revealed on the certificates, and, further, the habit lowers resistance to disease and may impair mental efficiency. However, statistics show that sobriety is on the increase, in that convictions for drunkenness to-day are only one-third of what they were fifteen years ago.

In considering the merits and limitations of the Insurance Act scheme to-day, it would be well for all of us to remember what the conditions were before the passing of that much criticized and contentious measure. The average worker in the country could not afford medical advice and, consequently, many of them delayed going to a doctor or dispensary until permanent damage had been done to their health. The complete absence of income during incapacity caused the utmost anxiety, so as seriously to militate against a patient's recovery, and, indeed, his desire was to hasten back to work and to get the doctor to patch him up for the time being in order that he might do so. It is true that the village club or friendly society did, to some extent, mitigate the suffering caused by sickness to a limited number, but throughout the country as a whole the worker looked upon an illness as a calamity. Major operations to patients resident in rural districts were rare, and hospital accommodation in many regions was limited to the work-house infirmary, which has always been distasteful to the average worker, while the teeth of the poorer class generally were in a deplorable condition.

These days are, happily, far behind us. The sick workman has now an established right under the National Health Insurance Act to medical treatment and medicines for which he makes payment, thus protecting himself from any stigma of pauperism that might attach to treatment received other than as a right. He has the approved society to show him how to obtain his benefit and to assist him in obtaining admission to a hospital or to obtain such appliances or treatment as is supplied under the additional benefit schemes. In fact, there has been a new orientation in regard to health matters for the workers of the country to-day which I hope will in due course be extended to their wives and children. Time does not permit me to dilate upon the value of research; but this unquestionably will have to form part of the scheme when finances are available. Apart from the immense sums of money paid out in cash benefits yearly, which at least ensure a minimum of income, one society of which I have some knowledge gives dental benefit and optical treatment as well as convalescent home treatment and surgical appliances to well over 200,000 persons per annum. This is only one society, and most of the others, I understand, are doing the same sort of thing.

As a doctor with considerable experience of hospital work among both the insured and the uninsured I cannot but regard the establishment of the national health insurance scheme as a much needed blessing to the workers. I need hardly add that it is gratifying to be a member of a community which has made this great forward step in promoting health services, for, in the words of a great English writer, "The true greatness of a State consisteth essentially in population and breed of men."

## British Medical Association.

### CURRENT NOTES.

#### Some Work at Headquarters.

THE Dominions Committee had before it on May 25th reports on the satisfactory adjustment of minor difficulties in the medical services in East Africa and Palestine. In each case the matter in dispute had arisen out of the introduction of new regulations in the service concerned, and in both the Committee had been able to make representations designed to assist the Colonial Office in dealing with the matter. In the first case two medical officers who had joined the medical service in Tanganyika during the period of transition between the old and the new regulations for the East African Medical Service had, through some misunderstanding, been deprived of the special privileges attaching to officers appointed under both the old and the new regulations. They have now been granted the full benefit of the old regulations as from the actual date of their appointment. In the second case a group of senior medical officers in the Palestine Health Department have, after prolonged negotiations, made good their claim to promotion to Class I. The Committee is in correspondence with the Colonial Office as to the position of the medical service in the Windward Islands, which has long been unsatisfactory. Various adjustments have been made recently in service conditions in these islands, and the Committee considers that if the remuneration of the service can now be raised to a more adequate level it may become possible to regard the service as one which members of the British Medical Association need no longer hesitate to enter. The improved financial position of the colony, as indicated in the estimates for the present year, gives the Committee some ground for assuming that there is no longer any insuperable economic obstacle in the way of the desired reform. But until such reform is actually sanctioned the conditions cannot be considered such as to justify any practitioner who desires an opportunity for efficient professional work in seeking it in this service.

#### Sir Charles Hastings Clinical Prize.

The Sir Charles Hastings Clinical Prize, which includes an illuminated certificate and a money award of fifty guineas, will be open again for competition in 1928-29. As already announced, the award for the current year has been made to Dr. Ambrose W. Owen, Aberdare, for his clinical study entitled "Some renal conditions met with in general practice," and the prize will be presented to him at the forthcoming Annual Meeting of the Association at Cardiff. The following are the regulations governing the next award:

#### Regulations.

1. The prize is established by the Council of the British Medical Association for the promotion of systematic observation, research, and record in general practice; it includes a money award of the value of fifty guineas.
2. Any member of the Association who is engaged in general practice is eligible to compete for the prize.
3. The work submitted must include personal observations and experiences collected by the candidate in general practice, and a high order of excellence will be required. If no essay entered is of sufficient merit no award will be made.
4. Essays, or whatever form the candidate desires his work to take, must be sent to the British Medical Association House, London, W.C.1, not later than December 31st, 1928, and the prize will be awarded at the Annual General Meeting of the Association to be held at Manchester in July, 1929.
5. No study or essay that has been published in the medical press or elsewhere will be considered eligible for the prize, and a contribution offered in one year cannot be accepted in any subsequent year unless it includes evidence of further work.
6. If any question arises in reference to the eligibility of the candidate or the admissibility of his essay, the decision of the Council on any such point shall be final.
7. Each essay must be typewritten or printed, must be distinguished by a motto, and must be accompanied by a sealed envelope marked with the same motto, and enclosing the candidate's name and address.
8. The writer of the essay to whom the prize is awarded may, on the initiative of the Science Committee, be requested to prepare a paper on the subject of his essay for publication in the *BRITISH MEDICAL JOURNAL* or for presentation to the appropriate Section of the Annual Meeting of the Association.
9. Inquiries relative to the prize should be addressed to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1.

## NOTICES OF MOTION BY DIVISIONS FOR THE ANNUAL REPRESENTATIVE MEETING, CARDIFF, 1928.

*Contract Rate for Juvenile Oddfellows.*

By SOUTH GARNARVONSHIRE AND MERIONETH: That para. 104 of the Annual Report of Council be referred back for further consideration, and that meanwhile the Council obtain the views of the Divisions by direct circular, and also that the Local Medical and Panel Committees be consulted before any definite recommendation is arrived at.

*Assistant Medical Officers to Mental Hospitals.*

By YORK: That (with reference to para. 93 of the Annual Report of Council) Recommendations B to F be referred back to the Council for further consideration. (Corrected form.)

## Association Notices.

### TABLE OF DATES.

June 13, Wed.	Council.
June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL SUPPLEMENT</i> .
July 4, Wed.	Amendments and riders for inclusion in A.R.M. agenda must be received at Head Office by this date.
July 20, Fri.	Annual Representative Meeting, Cardiff, 10 a.m. Nominations for election of 12 members of Council by grouped Representatives must be received (at A.R.M., Cardiff) by this date, 2 p.m.
July 21, Sat.	Annual Representative Meeting, Cardiff.
July 23, Mon.	Council, Cardiff.
July 24, Tues.	Annual Representative Meeting, Cardiff. Annual General Meeting, Cardiff, President's Address.
July 25, Wed.	Council, Cardiff. Conference of Honorary Secretaries, Cardiff.
July 26, Thurs.	Meetings of Sections, etc., Cardiff.
July 27, Fri.	Meetings of Sections, etc., Cardiff.

ALFRED COX, *Medical Secretary.*

### BRANCH AND DIVISION MEETINGS TO BE HELD.

**BORDER COUNTIES BRANCH.**—The annual general meeting of the Border Counties Branch will be held at the County Buildings, Dumfries, on Friday, June 15th, at 3 p.m. Agenda: Branch Council's report and financial statement; report of the election of office-bearers for 1928-29; Dr. John Ritchie will give his presidential address entitled "Some primitive conceptions of disease and their bearing on public health."

**DORSET AND WEST HANTS BRANCH: BOURNEMOUTH DIVISION.**—The annual social meeting of the Bournemouth Division will be held on Saturday, July 14th, when a visit will be paid to the Pitt Rivers Museum, Farnham, Blandford, to be followed by tea at Larra Tree Grounds, Tolland Royal.

**EDINBURGH BRANCH.**—The annual meeting of the Edinburgh Branch will be held on Tuesday, June 26th. Luncheon at 12.15 for 12.30 p.m. (charge 4s.). Dr. Craig (Pathhead) has obtained the courtesy of the green of the Ford Valley Golf Club for the annual competition (stroke). He has also obtained the courtesy of the Pathhead bowling green. Visits have been arranged for Prestonhall Gardens, Crichton Castle, and Churley, and the Vogrie Nursing Home, the latter by invitation of Professor G. M. Robertson. At 4.30 p.m. Dr. Craig will entertain the party to tea. The business meeting will take place at 5 o'clock. Agenda: Report of Branch, treasurer's business, and annual report; election of officers; presentation of golf competition prizes; report of election of representative to the Central Council; election of vacancy on board of the Queen Mary Nursing Home; proceedings of Scottish Committee; Annual Report of Council and Annual Representative Meeting; amendment of Rule 4 (2) (g).

**KENT BRANCH.**—The annual meeting of the Kent Branch will be held at Acacia Hall, Dartford, on Thursday, June 14th, at 2 p.m. The presidential address will be delivered by Dr. M. W. Renton on the increasing influence of hospital practice and clinics on private practice. Dr. Renton invites members and their wives to a luncheon at 1 p.m. Messrs. Burroughs Wellcome and Co. have arranged an exhibition of microphotographs of the commoner parasites and pathogenic organisms with reference to sero- and vaccine-therapy, and will entertain members and their wives at a garden party. The Tennyson Smith golf challenge cup competition will be held on the same day.

**LAKESHIRE AND CHERE BRANCH: HYDE DIVISION.**—The annual general meeting of the Hyde Division will be held in the Hyde Town Hall on Thursday, June 14th, at 8.30 p.m.

**METROPOLITAN COUNTIES BRANCH.**—The annual general meeting of the Metropolitan Counties Branch will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 19th, at 4 p.m. Business: (1) Report of scrutineers on election of officers; (2) Annual Report of Council; (3) report of representatives of the Branch on the Central Council; (4) presidential address by Dr. Christine Murrell entitled "Our changing times."

**METROPOLITAN COUNTIES BRANCH: CITY DIVISION.**—A clinical meeting of the City Division will be held at the Metropolitan Hospital, Kingsland Road, E., to-day (Friday, June 8th), at 4.30 p.m.; tea at 4 o'clock.

**METROPOLITAN COUNTIES BRANCH: HAMPSHIRE DIVISION.**—The annual meeting of the Hampshire Division will be held at the Hampshire General Hospital on Thursday, June 14th, at 8.30 p.m., for the election of officers and Executive Committee.

**METROPOLITAN COUNTIES BRANCH: HENDON DIVISION.**—A meeting of the Hendon Division will be held at the Hendon Cottage Hospital on Friday, June 29th, at 8.30 p.m., when members are invited to show cases. The meeting will subsequently discuss the Supplementary Report.

**METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.**—A meeting of the Lewisham Division will be held at the Town Hall, Catford, on Tuesday, June 19th, at 8.45 p.m. Mr. J. M. Redding will read a paper on some points in the x-ray examination of the alimentary tract.

**METROPOLITAN COUNTIES BRANCH: ST. PANCRAS DIVISION.**—A meeting of the St. Pancras Division will be held at the British Medical Association House, Tavistock Square, W.C.1, on Tuesday, June 12th, at 9 p.m. Dr. W. Langdon Brown will read a paper on endocrinology and the future.

**METROPOLITAN COUNTIES BRANCH: WANDSWORTH DIVISION.**—Two meetings of the Wandsworth Division will be held in the Town Hall, Wandsworth, to consider the Koch diagnosis and treatment of tuberculosis by means of tuberculin, together with a proposal for a collective investigation into the subject. The first meeting will be held on Friday, June 22nd, at 9 p.m., when Dr. Robert Carswell will read a paper on "History and diagnosis." At the second meeting, on Friday, June 29th, at 9 p.m., Dr. Robert Carswell will read another paper entitled "Treatment, and a proposal for a collective investigation." The meetings will be open to all members of the medical profession.

**METROPOLITAN COUNTIES BRANCH: WILLESDEN DIVISION.**—A meeting of the Willesden Division will be held at the Willesden Hospital, Harlesden Road, N.W., on Wednesday, June 20th, at 9 p.m. Dr. Margaret Emslie will discuss the care of the infant.

**NORTHERN COUNTIES OF SCOTLAND BRANCH.**—The annual meeting of the Northern Counties of Scotland Branch is to be held at Kyle of Lochalsh on June 30th. This will be the first meeting of the Branch which has been held in the area of the Islands Division.

**NORTH OF ENGLAND BRANCH: SUNDERLAND DIVISION.**—A meeting of the Division will be held at the Royal Infirmary, Sunderland, on Wednesday, June 20th, at 8.15 p.m. Among the matters to be considered at this meeting is the question of the adoption by the Division of a resolution on the scale of minimum commencing salaries for whole-time chief medical officers of health.

**SOUTHERN BRANCH.**—A meeting of the Southern Branch will be held at the Royal Portsmouth Hospital on Wednesday, June 13th, at 3 p.m. Sir Archibald Reid will deliver a lecture on the treatment of intestinal toxæmia in relation to arthritis, neuritis, mental disorder, and diseases of the skin. The cases upon which the lecture is based will be shown to the meeting.

**SOUTHERN BRANCH: JERSEY DIVISION.**—A meeting of the Jersey Division will be held at the General Hospital on Thursday, June 21st, at 8.30 p.m. Dr. A. H. Jacob will read a paper on tuberculosis from the point of view of the tuberculosis officer.

**SOUTH-WESTERN BRANCH.**—The eighty-ninth annual meeting of the South-Western Branch will be held on Wednesday, June 27th, at 3.15 p.m., in Bromley's Café, Barnstaple, when Mr. Pickard will resign the chair to Dr. Harper, who will deliver his inaugural address entitled "The influence of William Smellie and William Hunter on obstetric medicine in the eighteenth century." The report of the Branch Council for the year 1927-28, and the financial statement for the year 1927, will be presented to the meeting, and the officers of the Branch for the year 1928-29 will be elected. Luncheon, by invitation of the President-Elect, will be taken at 1 o'clock at Bromley's Café, and after the meeting has concluded tea will be provided. The annual dinner of the Branch, to which medical and non-medical guests and ladies are invited, will be held at 7 o'clock at the café. Tickets, 8s. each (exclusive of wines), may be obtained from Dr. H. C. Jonas, Bouthport Street, Barnstaple. Accommodation for the night could be arranged if notice is given to Dr. H. C. Jonas, Bouthport Street, or Dr. Killard-Leavey, Litchdon House, Barnstaple.

**SURREY BRANCH.**—The annual meeting of the Surrey Branch will be held in the Town Hall, Kingston-on-Thames, on Wednesday, June 27th, at 2.15 p.m. The Kingston-on-Thames Division invites members to lunch at Nuthall's Restaurant at 1 p.m. Colonel C. W. Proffit will address the meeting on the British Empire Cancer Campaign in Surrey, and the president (Dr. H. R. Cran) will deliver his presidential address. After the meeting members will motor to Epsom to visit Epsom College; tea will be taken in Big School. The annual dinner will be held at Reid's Restaurant, Ashford Road, Epsom, at 6.30 for 6.45 p.m. (tickets 7s. 6d., exclusive of wines).

**SUSSEX BRANCH: HASTINGS DIVISION.**—The next meeting of the Hastings Division will be held at the Hastings Infirmary, Frederick Road, on Tuesday, June 12th, at 3.15 p.m. Dr. Bower will conduct members over the infirmary, and after tea clinical cases will be shown.

**WILTSHIRE BRANCH.**—The annual meeting of the Wiltshire Branch will be held on Wednesday, June 27th, at 3 p.m., at the County Mental Hospital, Devizes, when a British Medical Association Lecture will be given by Mr. W. McAdam Eccles on the treatment of hernia by trusses, illustrated by their actual application.

**WEST SOMERSET BRANCH.**—The annual meeting of the West Somerset Branch will be held at Deller's Café, Taunton, on Saturday, June 23rd, at 12.15 noon. Agenda: Induction of president-elect; annual report; election of officers, Branch Council, and Ethical Committee.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH.**—The annual meeting of the Worcestershire and Herefordshire Branch will be held at the Hospital, Hereford, on Thursday, June 21st, at 3.15 p.m. Agenda: Report of Branch Council; election of president for 1929-30; election of honorary treasurer and secretary. Dr. Naish will vacate the chair and introduce his successor, Dr. Hincks. A clinical meeting will then be held. Dr. Naish invites all members of the Branch attending to have lunch with him at the Green Dragon Hotel at 1.30 p.m. After the meeting tea will be provided.

**WORCESTERSHIRE AND HEREFORDSHIRE BRANCH: HEREFORD DIVISION.**—The annual meeting of the Hereford Division will be held at 20, East Street, Hereford, on Monday, June 11th, at 3.30 p.m. Agenda: Election of officers, etc.; Annual Report of Council; instructions to representative; post-graduate lectures; correspondence.

**YORKSHIRE BRANCH: HUDDERSFIELD DIVISION.**—The annual picnic of the Huddersfield Division will be on Thursday, June 21st. The charabanc will leave York Place at 12.15 p.m. for Dovedale. Afternoon tea will be served at the Peveril of the Peak Hotel on arrival at 3.30 p.m. The afternoon will be spent in Dovedale, and the charabanc will leave Dovedale at 5.45 p.m. for Buxton, where dinner will be served at 6.45 p.m. at the St. Anne's Hotel. The party will leave Buxton at 8 p.m., and should arrive in Huddersfield about 10 o'clock. The inclusive charge for charabanc, tea, dinner (exclusive of beverages), and tips, will be £1 2s. 6d. per head; for those going in their own cars 10s. per head.

## Meetings of Branches and Divisions.

### LANCASHIRE AND CHESHIRE BRANCH: ST. HELENS DIVISION.

The annual meeting of the St. Helens Division was held at the Fleeco Hotel on May 18th, when Dr. LATTAM was in the chair.

The following officers were appointed for 1928-29:  
Chairman, Dr. A. S. Wilson. Vice-Chairman, Dr. E. M. Reid. Honorary Secretary and Treasurer and Representative in Representative Body, Mr. A. A. W. Merrick. Deputy Representative and Charities Honorary Secretary, Dr. A. McL. Ferrie, M.C.

The Annual Report of Council was discussed. Strong exception was taken to the recommendation of the Council regarding contract practice for juvenile Oddfellows, and the representative was instructed to vote against it.

The matter of the suggested honorary staff at St. Helens Hospital was discussed, and a deputation was appointed in response to the hospital's letter asking for assistance in appointing and drawing up conditions.

### METROPOLITAN COUNTIES BRANCH: LEWISHAM DIVISION.

The annual meeting of the Lewisham Division was held at the Town Hall, Catford, S.E.6, on May 15th, when Dr. W. E. HILLMAN, M.C., occupied the chair.

The officers were elected as follows:  
Chairman, Dr. J. W. Miller. Vice-Chairman, Dr. G. W. Charsley. Honorary Secretary, Dr. C. J. B. Buchan. Representative in Representative Body, Dr. G. W. Charsley. Deputy Representative in Representative Body, Dr. C. J. B. Buchan.

It was unanimously agreed to instruct the representative at Cardiff to vote against the acceptance of 8s. 8d. per annum for juvenile Oddfellows, and it was agreed to support the nominations of Drs. Chase, Hallinan, and Thomson, the retiring members of the London Panel Committee, at the election in June.

### MIDLAND BRANCH: DERBY DIVISION.

The annual meeting of the Derby Division was held at the Derbyshire Royal Infirmary on Tuesday, May 15th, when Dr. S. J. PARKHILL was in the chair.

The following officers were elected for 1928-29:  
Chairman, Dr. G. A. F. Heyworth. Vice-Chairman, Mr. F. L. A. Greaves. Secretary, Dr. John A. Watt. Treasurer, Dr. H. Barber. Representatives in the Representative Body, Dr. H. A. Lavelle and Dr. J. B. Bart.

The Annual Report of Council was considered and the representatives duly instructed. It was resolved to support a minimum fee of 10s. for medical attendance on juveniles.

The appointment of a charities secretary was considered, and it was left to the secretary to consult with the present collectors for medical charities.

The secretary was instructed to write to the county clerk as to fees for reports to coroners.

### YORKSHIRE BRANCH: DONCASTER DIVISION.

The annual meeting of the Doncaster Division was held at Doncaster on May 17th, when Dr. HENRY J. CLARKE was in the chair.

The following officers were elected for the year 1928-29:  
Chairman, Dr. Henry J. Clarke. Vice-Chairman, Dr. F. W. Johnson. Honorary Secretary and Treasurer, Mr. L. Dougal Callander. Honorary Assistant Secretary, Dr. H. F. Renton. Representative in Representative Body, Dr. J. D. Evans.

The Annual Report of Council was generally discussed and adopted. The programme of meetings for the winter 1928-29 was approved.

## GENERAL COUNCIL

OF

## MEDICAL EDUCATION AND REGISTRATION.

### SUMMER SESSION, 1928.

(Concluded from page 232.)

#### EXECUTIVE COMMITTEE.

A MEETING of the Executive Committee of the General Medical Council, with Sir DONALD MACALISTER in the chair, was held on May 21st. Among the communications read was one from the Privy Council transmitting a copy of the *Dublin Gazette* of April 24th, which declared that the Register of medical practitioners for the Irish Free State was to be established on and from May 26th.

**Opticians Law in Jamaica.**—At a previous meeting an enactment registering opticians, recently passed in Jamaica, was considered, and the Registrar was instructed to send to the Governor for his observations the President's memorandum recounting the arguments against the Memorial Practitioners (Registration) Bill in this country. The Governor now replied that the conditions obtaining in Jamaica differed widely from those in Great Britain; in Jamaica there were very few medical men with ophthalmic experience, and for this reason alone it appeared to him that properly qualified opticians should have official recognition and protection. He added that since the law came into operation the itinerant vendors of spectacles had been completely eliminated, and the law was proving a very useful measure.

**Recent Ordinances in the Empire.**—An ordinance passed in October last in the Territory of North Australia was transmitted from the Dominions Office. This ordinance lays it down that no person other than a medical practitioner shall practice medicine or surgery in the Territory, or assume the title "doctor," under a penalty of £100, or imprisonment for six months, or both. The committee recorded its satisfaction that unqualified practice had been prohibited in the Territory. An ordinance amending a former proclamation has been passed in South-West Africa providing that if a person licensed under the provisions of any law to practise as a physician and surgeon, as a dentist, or as a chemist or druggist, has been found guilty of improper or disgraceful conduct, or conduct which, when regard is had to such person's profession, is improper or disgraceful, the Administrator may reprimand and caution him or direct that his licence be suspended for a specified period or cancelled.

**Calcutta University.**—It was reported that the examinations under the new regulations at the University of Calcutta, on a satisfactory report of which the Council is to consider the recognition of the degrees, were due to take place at the end of April, and that Lieut. Colonel J. W. D. Megaw, I.M.S., had been deputed to act as inspector. It was stated that candidates taking the final examination under the new regulations would receive a certificate distinct from those taking it under the old, thus obviating any ambiguity in the connotation of a degree granted in 1928 and 1929.

**Use of Drugs by Midwives.**—A communication was read from the Central Midwives Board in reply to the exception taken by the committee to the distribution to midwives for use in their practice of a schedule of drugs. The letter from the Board stated:

"It is essential that pregnant, parturient, and lying-in women should have all the care possible, and should not suffer unnecessarily. To deprive a woman of a drug—say opium—in a prolonged first stage of labour is to inflict unnecessary suffering upon her and even militate against her safety. To make her wait for the doctor may be to wait too late. The midwife should deal with the situation without delay. The administration of any drug requires judgement, and part of the training of the midwife is concerned with this.

"In the course of a quarter of a century only one woman has been reported to the Board for improper administration of a drug, and she was censured for it. The existing Rule E19 seems, therefore, to have been very effective, and the Board strongly objects to its limitation in the direction suggested."

In view of the announcement by the Ministry of Health that a committee was about to be appointed to deal with

the functions and training of midwives, the committee passed a resolution declaring that it would be glad, if opportunity were offered, to give evidence on behalf of the General Medical Council, the Council reserving to itself meanwhile the right to make such observations on midwifery training as it saw fit. A copy of the rules of the Central Midwives Board as amended, which had been transmitted by the Ministry of Health, was considered, and the committee raised no objection to the changes proposed in the rules, but doubted whether the definition of "abortion," as given in the explanatory matter, was sufficiently clear or accurate.

**Chiropodists (Registration) Bill.**—It was agreed to inform the Lord President of the Privy Council that the attention of the committee had been drawn to the bill introduced into the House of Lords relating to the registration of chiropodists and to the fact that the co-operation of the General Medical Council was therein mentioned. On behalf of the Council the Executive Committee stated that in the absence of further evidence that there was any necessity for this bill in the public interest, the Council was not prepared to be associated with it.

**Misdemeanours and Professional Discipline.**—The appeal of *Pickup v. The Dental Board* (*Journal*, May 26th, p. 922) was considered by the committee. The legal assessor to the Council (Mr. Douglas Bartley) pointed out that the penal section under which the Council derived its jurisdiction in respect to medical practitioners (Section 29 of the Medical Act) differed somewhat from the corresponding section of the Dentists Act, but the reasoning of the judges in this recent appeal seemed to apply with equal force to this section. The legal assessor continued:

"It is improbable that in view of the decision in *Pickup's* case a contention similar to his would now be successfully urged in respect of Section 29, for the word "misdemeanour" is used in the same sense in each Act, and the decision is consequently equally applicable to both.

"For the future, therefore, both the General Medical Council in respect of medical practitioners as well as dentists, and the Dental Board in respect of dentists, may consider that they have jurisdiction to deal with misdemeanours of every kind if committed by a registered medical practitioner or a dentist."

**Election of Direct Representative.**—The committee approved certain dates for the election of a direct representative in place of the late Dr. J. A. Macdonald. The notice of election is to be published on September 28th, the last day for nominations is October 13th, voting papers will be issued on October 20th, and will be returnable by October 29th, and the result will be notified on November 1st.

#### THE DIPLOMA IN PUBLIC HEALTH.

The rules, and especially the duration of study, for the Diploma in Public Health were the subject of a discussion in the General Medical Council on May 25th.

Sir JOHN MOORE, chairman of the Public Health Committee, said that the Conjoint Board had asked the following questions of the Council:

- (1) What evidence is a candidate supposed to produce showing that his "study of public health" has extended over twelve months, in accordance with the rule of the Council, when all the courses required by the Regulations have been completed in nine months?
- (2) Is it within the competence of the Committee of Management of this Board to determine what constitutes the "study of public health" for the purpose of making up the total period of twelve months over and above all the courses required by the Regulations?
- (3) Is every case in which a man has complied with the Regulations, so far as all the courses are concerned, in less than twelve months to be submitted to the General Medical Council for their decision as to whether his "study of public health" complies with the Regulations?

To these questions it was proposed to make the following answers:

- (1) Evidence of satisfactory attendance on the courses prescribed in Rules 3 and 6 should be furnished by the respective teachers of those courses, and fulfilment of the requirements of Rule 2 should be certified by the supervisor of the curriculum, or by some other competent officer representing the teaching body.
- (2) In view of the above answer to the first question, the second question does not arise.
- (3) Yes; any cases of difficulty arising in reference to compliance with the rules should be submitted to the General Medical Council.

Sir JOHN MOORE pointed out that this diploma was specially under the aegis of the General Medical Council, and any exemptions under the rules and regulations must

be considered by the Public Health Committee of the Council before being granted. By next January five years would have elapsed since the new regulations came into being, and his committee thought that the time had arrived for the visitation by the Council of the examinations held by the licensing bodies for the Diploma in Public Health.

Professor ARTHUR THOMSON was disposed to think that certain of the conditions were a source of irritation to those responsible for the conduct of the examinations. He urged that an informal visitation of the examinations should precede any inspection, so that information might be gained as to the peculiar difficulties of the licensing bodies in conforming to the rules laid down by the Council. The questions just mentioned by Sir John Moore, and the answers thereto, showed how real the difficulty was. The questions were very reasonable ones, and however complete the replies from a legal point of view, they were not very informing or helpful. He therefore suggested an informal visitation.

The PRESIDENT said that the difference between a visitation and an inspection was that the former was for the private information of the Council only, while the results of the latter were for general publication.

Professor THOMSON went on to speak of the disadvantage under which a candidate laboured, in that, having already spent five or six years in obtaining a registrable qualification, he had to wait two years after qualification before he could take the D.P.H., and had to do twelve months' study for that diploma. The PRESIDENT reminded the speaker that if he desired to propose any alteration of the rules he must give notice. Professor THOMSON said that his only point was that all the work could be done in much less time than that ordained by the Council.

Professor R. J. JOHNSTONE also thought that the reason for insistence on the full twelve calendar months was not very clear.

Mr. H. L. EASON said that it was the intention that there should be two courses of study, one of six months and the other of five months, and that the remaining month of the twelve should be a holiday. These courses should not overlap. If a man had completed these two courses in nine months he should not be allowed to go for examination, but should occupy his further time in public health study, just as the ordinary student in medicine, surgery, and midwifery occupied his surplus time.

Sir HOLBURN WARING said that in his experience there had been great difficulty in interpreting the rules and regulations of the Council. The Conjoint Board had tried conscientiously to carry them out, but had found that some of the difficulties had not been cleared up after correspondence with the Public Health Committee. It was quite a long time before replies were received, and when they were received they were not very clear. One of the difficulties in the regulations was that it could not be said whether the courses could be concurrent or not; presumably they could overlap. He was informed by representatives of the licensing bodies that the entire courses which the Council demanded could be carried through in nine months; the regulations said that they must be accomplished in twelve. He thought the Conjoint Board was entitled to more informative replies.

Sir JENNER VERRALL said that the Public Health Committee had devoted a considerable time to trying to escape from the dilemma which Sir Holburn Waring had just placed before them. The rules as drawn up precluded the possibility of getting through the courses in nine months. When the rules came up for revision it might be desirable to consider whether some compression of the course was possible, but under the rules as at present framed it was clearly not in order.

Sir GEORGE NEWMAN said that a few years ago it was relatively easy to obtain the diploma, and many took it with a desire simply to have an additional diploma for whatever it might be worth. When the Council decided to lay down some rules which would make the taking of the diploma more stringent, it was inevitable that there should be disappointment. The rules which were objected to really said two things—namely, that no man should take the D.P.H. until two years after his qualification, and that no man should take it until he had been twelve months—not

nine months—at the precise and particular study of public health as set out in the rules. The rules might be good or bad, but there they were, and the committee had no alternative but to administer them. The figures for the professional examinations held in 1927 for these qualifications as compared with ten years ago would show the difference the rules had made to the licensing bodies. The rules were designed by the Council to “turn off the tap” of the large number of men entering for the D.P.H. with no serious intention of taking up a public health career. It might be asked whether the “tap” had been turned off too far. But the fact was that there were candidates in ample number for public health appointments as presented in the advertising columns of the medical journals. It had been asked, What about the colonies? and the suggestion had been made that a compression of the course was specially desirable for students who came for this purpose from the Dominions. But this was a British diploma. The regulations for appointments in the colonies did not say that the D.P.H. must be held; sometimes it was said that preference would be given to such diplomates, but it was not a statutory requirement. He was afraid it was inevitable that when new rules were introduced there should be some disappointment, but the question was whether the public health service had been fortified, and whether enough candidates were forthcoming. On both issues there could be no doubt. He strongly denied Sir Holburt Waring’s statement that there was delay in answering questions from the licensing bodies. The procedure was that when a licensing body sent an interrogatory to the Registrar, the Registrar forwarded a letter to the chairman of the Public Health Committee, who immediately drafted a reply, which was sent to him or to Sir Leslie Mackenzie for endorsement, and was dealt with by them as quickly as the post would permit. Sir Holburt Waring had said that the answers were unsatisfactory, but he wished Sir Holburt himself would draft an answer. He (Sir George) spent the greater part of his life answering questions, and so far as the training for public health work was concerned he had charged himself with special responsibility, and all his resources at the Ministry of Health were available to any licensing body.

Sir NORMAN WALKER recalled that, many years ago, the Council attempted to draw up regulations for a curriculum of nine months for the D.P.H.—that was in days when the necessary requirements were much less complex than now—but Dr. David McVail pointed out that it would be of no use because the licensing bodies would immediately set to work to compress the nine months into six!

Dr. COFFEY asked why it should not be expressly stated in the regulations that the courses could not be completed in nine months. Why allow the licensing bodies to continue to think otherwise?

The PRESIDENT said that if study began on March 1st the student could not be admitted to examination until March 1st the following year, no matter how far his study had progressed.

Sir ROBERT BOLAM asked Sir George Newman, in view of his statement that there was an ample supply at the moment of qualified persons taking up the Public Health Diploma, whether he thought there was any danger of future lack of candidates arising out of the diminished numbers now entering the profession.

Sir GEORGE NEWMAN replied that he saw no danger. In 1927 the number passing the first examination under the new regulations was 208, and the final examination 161, out of totals of 294 and 225 respectively.

A recommendation, that the time had arrived for the visitation by the Council of the examinations held by the licensing bodies for the Diploma in Public Health, was carried.

#### GENERAL MEDICAL COUNCIL’S INCOME TAX.

Sir HOLBURT WARING (Senior Treasurer) presented the financial statement of the Council, which showed that the income of the General and Branch Councils for 1927 was £15,078, and the expenditure £12,046. The receipts for registration fees showed a decrease in England of £655, in Scotland of £302, and in Ireland of £500. The number of

practitioners registering, which decreased slightly in 1927 as compared with 1926, was likely to decrease for the next two or three years in consequence of the falling off of students which occurred markedly in 1923 owing to the new regulations. He reported, with regard to the question of income tax and the liability of the Council under Schedules A and D, that the unsuccessful appeal to the High Court last autumn had been followed by an appeal, equally unsuccessful, to the Court of Appeal. The Finance Committee was advised that there was no probability that a further appeal to the House of Lords would have any other result, and therefore additional expenditure on appeals would not be justified. The question of the Council’s liability had been under consideration since 1923, and meantime the payment of tax had not been made. The amount now due was £1,359, and the committee recommended that this sum be charged as an expenditure for the current year.

#### THE MEDICAL CURRICULUM.

Sir HUMPHRY ROLLESTON, chairman of the Education Committee, submitted a report on the progress made throughout the country towards the readjustment of the medical curriculum in accordance with the resolutions of the Council adopted in 1922. It contained merely the observations of certain of the licensing bodies.

Dr. BRACKENBURY desired to emphasize one point which he thought to be of considerable public importance. Statements had been made—outside the Council—that medical students were very imperfectly equipped for such services as ante-natal work, infant hygiene, minor ailments of children, and so forth. It had been part of the business of the Education Committee to point out the importance of these things to the teaching bodies—not, indeed, as new subjects in the curriculum, but as aspects of existing subjects. All these teaching bodies had now recognized in some way the importance of these matters, and had satisfied themselves that the students would be educated so that on qualification they would be able to undertake such services if they desired to do so. There was no excuse, therefore, so far as the Council was concerned, for public bodies or the medical officers of such bodies saying that in these particular fields other means must be taken, that the general practitioner was not educated in the performance of these duties, and that either, on the one hand, recourse must be made to whole-time specialists, or, on the other, that the duties must be entrusted to dentists, nurses, perhaps opticians, and osteopaths, as the case might be. The public could rely on the knowledge and trained ability of the general practitioner.

Sir JENNER VERRALL drew attention to the subject of medical ethics. He knew that the Council had not been slack in impressing on the licensing bodies the necessity of this particular matter, but the profession was desirous that enhanced importance should be given to it in the course of the medical curriculum. There was still a need for the various teaching bodies carefully and specifically to ask the attention of students, especially those on the point of becoming qualified, to this question.

A second report was forthcoming from the Education Committee on various matters remitted to it. Dealing with a resolution adopted at a conference on maternal mortality held in London on February 28th, calling for further training and experience in midwifery as a preliminary to general practice, the Education Committee stated that it was fully alive to the importance of medical students having satisfactory training and experience before taking the final examination in midwifery. It did not think any useful purpose would be served at present by proposing any changes in the curriculum, but it learned with gratification of the setting up of a departmental committee, and hoped that the Council would have the opportunity of offering evidence. The committee also expressed itself in sympathy with the resolution recently adopted and sent to the Minister of Health by the medical committee which he had appointed, asking that instruction might be given to medical students both in the social and scientific value of the official statistics of causes of death and in the practical construction of medical certificates.

A table was submitted showing that the number of practitioners registered during 1927 was 1,695 (942 from

English, 475 from Scottish, and 278 from Irish licensing bodies), and that the average length of the curriculum was five years and ten months.

Some discussion took place on the pre-registration qualifications of the student. Sir HENRY WAINING said that he did not think the pre-registration examination had worked out as well as the Council would have liked.

It was agreed to request the Education Committee to review the position of pre-registration examinations in their bearing on the medical curriculum, having in mind the different standards of instruction taken. From new regulations laid down at London University and by the Conjoint Board in London it appeared that in the first case a student could complete his curriculum after a maximum of fifty-four months—or even of fifty-one months in certain circumstances—and in the other case after fifty-seven months. The Conjoint Board seemed, in effect, to have gone back to the old regulations, under which a period of not more than six months spent at a secondary school or recognized institution could count as part of the curriculum.

#### RESULTS OF EXAMINATIONS.

Sir NORMAN WALKER, chairman of the Examination Committee, presented the yearly tables showing the results of examinations held in 1927 for qualifications admitting to the Register. The highest percentage of passes in medicine and surgery (85 per cent. in each case, with, respectively, 74 and 80 students entering) was obtained at Aberdeen University, and next in medicine came Dublin University, with 79 per cent. of passes, and in surgery Sheffield University, with 76 per cent. In the list of exemptions a feature was the number of holders of the degree of Bachelor of Science or of Arts of American universities, who claimed and obtained exemption from the first professional examination at the University of Edinburgh. The number of such was just upon forty. It was interesting, said Sir Norman Walker, that there should be a considerable number of young Americans who evidently thought that there were advantages in the study of medicine in the Old Country.

The committee proposed to present to the Council a report on the various examinations in materia medica, in respect of which there is a good deal of diversity.

#### ELECTION OF COMMITTEES.

During the session the following committees were elected:

**Executive.**—Sir R. Bolam, Sir G. Newman, Sir H. Rolleston, Sir J. Verrall, Sir H. Waring, Sir H. Young, Sir J. Hodsdon, Sir L. Mackenzie, Sir N. Walker, Dr. Dixon, Sir J. Moore, Mr. Sinclair.

**Dental Executive.**—As above, with Mr. Dolamore.

**Education Committee.**—Dr. Brackenbury, Sir F. Buzzard, Mr. Jamieson, Mr. Leathes, Sir G. Newman, Sir H. Rolleston, Sir J. Hodsdon, Dr. Mackay, Dr. Lorrain Smith, Dr. Dixon, Dr. Kidd, Mr. Sinclair.

**Examination Committee.**—Mr. Enson, Dr. Fawcett, Mr. Gamgee, Mr. Monsarrat, Dr. Stopford, Sir H. Waring, Dr. Mackintosh, Dr. Russell, Sir N. Walker, Dr. Coffey, Dr. Johnstone, Sir W. Taylor.

**Public Health Committee.**—Dr. Brackenbury, Mr. Eason, Sir G. Newman, Mr. Sheen, Mr. Thomson, Sir J. Verrall, Mr. Edington, Sir L. Mackenzie, Dr. L. Smith, Dr. Kidd, Dr. Magennis, Sir J. Moore.

**Pharmacopoeia.**—The President (chairman), Sir R. Bolam, Sir F. Buzzard, Dr. Dale, Mr. Leathes, Sir H. Rolleston, Sir H. Waring, Mr. Edington, Dr. Mackintosh, Sir N. Walker, Dr. Kidd, Dr. Magennis, Sir J. Moore.

**Finance Committee.**—Sir H. Waring (chairman), Sir G. Newman, Sir J. Hodsdon, Dr. Dixon.

**Business Committee.**—Sir N. Walker (chairman), Mr. Eason, Mr. Leathes, Dr. Magennis.

**Penal Cases Committee.**—Sir R. Bolam, Mr. Eason, Sir N. Walker, Dr. Coffey.

**Dental Education and Examination Committee.**—Sir J. Hodsdon (chairman), Mr. Ackland, Mr. Dolamore, Sir H. Waring, Mr. Guy, Mr. Sinclair.

The Education, Examination, and Public Health Committees are elected on the nominations of the Branch Councils. The President is *ex officio* a member of all committees.

#### REMOVAL OF NAME AT PRACTITIONER'S REQUEST.

The Council adopted a recommendation of the Executive Committee acceding to the application of Harold Dearden,

M.R.C.S.Eng., L.R.C.P.Lond., for the removal of his name from the Medical Register on the ground that he had ceased to practise. The Royal Colleges concerned had no valid objection to make.

#### DISCIPLINARY CASES.

##### Complaint with Regard to a Magazine Article.

The Council devoted a whole morning to the consideration of the case of Reginald Francis Edmund Austin, registered as of Wimpole Street, London, M.R.C.S., L.R.C.P., who was summoned on the charge:

That, being a registered medical practitioner, you sought to attract to yourself patients and to promote your own professional advantage by means of an article upon appendicitis written by you and published in the number for December, 1927, of the magazine *Health and Efficiency*, in which you extolled your own methods and depreciated those of other practitioners.

And that in relation to the facts so alleged you have been guilty of infamous conduct in a professional respect.

Mr. Melville, K.C., appeared for Major Austin, and Mr. Oswald Hempson, solicitor, for the Medical Defence Union, the complainants.

Mr. Hempson put in a statutory declaration by Dr. James Neal, general secretary of the Medical Defence Union, stating that the Council of that body had had the article under consideration, and believing that it constituted a case of self-advertisement and discredited the profession of medicine, resolved to bring it before the General Medical Council. Mr. Hempson said that a man must be known to some extent by his associates, and therefore he first called attention to certain advertisements in the publication in question, including many "cures" for various maladies, "gland treatment" for the renewal of youth, the electro-medical clinic of J. Stenson Hooker—a name which would be familiar to the Council—advertisements of chiropractors, and so forth. Major Austin must have been familiar with the character of this magazine, for he had been writing a series of articles for it since April, 1927. An editorial note at the beginning of the series said that readers would recognize the voice of one who spoke with authority. The article in question was headed: "Nature Cure Explained: The Truth about Appendix Operations: An Insane Medical Craze Exposed," and this was followed by the author's name and medical qualifications. On the first page of the article was a portrait of the late Florence Mills, "yet another victim of operation for appendicitis." He understood that with neither the title of the article nor the portrait and its caption had Major Austin anything to do. The article stated that, although in his younger days the author used to operate on appendicitis cases, for the last nineteen years, since reading an article in an American health magazine, he had not once advised an operation, and in no case had life been lost by his patients, even in gangrenous and pus cases. The article continued:

"Operative treatment frequently leaves the patient in bad health. . . . All this unnecessary operating to-day brings to mind a chestnut of my student days. 'What did you operate for?' inquired the medical student. 'For 100 guineas,' replied the eminent surgeon. 'Yes, but I mean, what did the patient have?' rejoined the student. 'He had 100 guineas,' said the eminent surgeon."

Could anything, Mr. Hempson asked, be imagined more insulting to the profession? Other extracts from the article were:

"Operation has become the accepted procedure, and the average medico no more questions its wisdom than he disputes the law of gravity. . . ."

"Surgeons when they operate in these cases work exactly opposite to Nature. And that is why the public so often hears that 'the operation was successful, but the patient died.' . . . all cases which rupture into the abdominal cavity are caused by the doctor himself in his efforts to make a diagnosis. He then, often points to the ruptured pus sac as evidence that the operation was 'just in time.'"

"Can there be any wonder that appendicitis is so fulminating in the hands of the orthodox medical man, or can there be any surprise at the high death rate?"

Mr. Hempson described the article as self-laudatory, full of the pronoun "I," and disparaging and insulting to the profession. In an editorial note in the same issue as the "appendicitis" article it was stated that "There is no denying that this is the 'golden age of surgery'—it is, for surgeons." The death of Florence Mills was mentioned—"dead, after being operated upon, at the age of 26; and on the other hand Major Austin, who never operates for appendicitis, has never yet lost a patient's life under his treatment. It is such cases as this one which arouse ordinarily quiet men to a kind of fury in reading such pernicious nonsense as that a patient is 'safer on the operating table than in crossing Trafalgar Square.'"

Major Austin, in evidence, said that he was 61 years of age and had been in practice for thirty-six years. Until 1921, with the exception of two years, his whole career had been spent in the medical service of the army in India, from which he retired with the rank of major, and entered private practice. He had been interested in "Nature cure" methods for twenty years; it was not a new or sudden interest on his part. Before these present articles he had never published anything in the lay press. What he said about "Nature cure" was the sincere expression of his views. He was sorry that his article should convey the impression that he depreciated his colleagues; he had not intended to attack the profession at all. The heading of the article was altered without his knowledge; the heading he had given was "Appendicectomy and Sanity." The portrait of Florence Mills was also inserted without his knowledge, nor could he accept responsibility for the editorial comment. Within a week of the publication of the article he protested to the editor against the way in which it was presented. This was before he heard from the British Medical

Association asking for an explanation. The other articles of the series, one of which was entitled "Nature *versus* the Knife in Cancer," had not been altered. He never saw the proof of the article; he was paid a small fee for writing it, but he had no financial interest in the journal.

In cross-examination Major Austin said that he had no intention to disparage men; his protest was against methods. The joke about the hundred guineas was a very old one, which he had heard made by Sir Arbuthnot Lane two years ago in a lecture on health; he had also seen it in medical journals, and it was frequently quoted at medical meetings. The remark, "The operation was successful, but the patient died," was also a common comment. Asked to justify his statement that all cases which ruptured into the abdominal cavity were caused by the doctor himself in his efforts to make a diagnosis, he said that this was true of every case that he had seen. He was aware of the nature of the magazine before he contributed to it; he had seen in it articles by Sir Arbuthnot Lane. The fact that a number of people who contributed to or advertised in it called themselves "doctor" had not troubled him. He agreed with the suggestion of his counsel, on re-examination, that the magazine contained many most reputable advertisements, and that the principal articles in this particular issue were of a kind to which no sort of objection could be taken. He had expressed himself in a way that he should not have done, but self-advertisement was the furthest thing from his mind. Asked why he contributed to a lay instead of a medical journal, he said that he had submitted to the *British Medical Journal* an article pointing out the value of "Nature cure"—an epitome of a lecture which he gave to a medical society in 1922—but it was rejected.

On behalf of the editor of *Health and Efficiency* a statutory declaration was put in bearing out Major Austin's statements as to the alterations which he (the editor) had made in the title of the article, the fact that no proof was sent to the author, and that Major Austin made a remonstrance to him a few days after the appearance of the article.

Mr. Melville, in a closing speech, expressed his client's great regret that he should have done anything which was not according to the accepted standards of the profession, and gave a solemn promise on his behalf that he would never contribute in future any articles to the lay press. In this article he had only been drawing on his experience as an illustration to justify him in declaring the "Nature cure" method to be the right one, and not with any idea of attracting patients. He had been in the army in India for twenty years, and he had perhaps not quite acquired that facility for precise expression which belonged very generally to the civil practitioner at home. The speaker thought that Mr. Hampson had over-emphasized the "joke." Many such jokes were told at the expense of the legal profession—more than at the expense of the medical—and he, for his part, never resented them.

After a brief period *in camera* the Council came to a decision which was announced by the PRESIDENT as follows:

Major Austin, I have to tell you that the Council has given very careful consideration to the charge brought against you, and the Council has found the facts alleged therein to have been proved to its satisfaction—namely, that you sought to attract to yourself patients and to promote your own professional advantage by means of an article in this magazine, in which you extolled your own methods and depreciated those of other practitioners. These facts, which have been proved, bring you within the terms of the Council's Warning Notice, which states that the practice of the Council, contrary to the public interest and discredit to the profession of medicine. The Council, as you will see from the terms of the Warning Notice, takes a serious view of such cases. In order, however, to give you time to realize your position in this regard, the Council has postponed judgement on the facts proved against you until the May session of 1928, when you will be required to send to the Registrar the names of written application from the Registrar, to testify by letter, addressed to him for the use of the Council, as to your conduct, especially in reference to this practice of advertising, in the interval of a year which will elapse. You will receive in due course a formal written intimation of what I have just announced to you, and the intimation will specify the date of the meeting to which I have referred, when you should be present; and you should understand that, in the event of any repetition of the offence during the interval, the Council may forthwith instruct the Registrar to erase your name from the *Medical Register*. The Council has taken account of what was said on your behalf by your counsel as to your error of judgement and your determination not to offend again, and your assurances will be recorded on the minutes.

#### Charge of Adultery during Professional Relationship.

The last case considered by the Council was that of Lewis Jones, registered as of Norfolk Street, London, M.R.C.S., L.R.C.P., who was summoned on the charge that he had abused his position by committing adultery with Alice Mary Braden, a married woman, with whom and whose husband he stood in professional relationship, of which adultery he had been found guilty by the decree of the Divorce Division in June, 1927, made absolute in December of the same year, in the case of Braden v. Braden and Lewis Jones, in which he was the co-respondent.

There was no complainant in the case, and the facts were laid before the Council by the Council's Solicitor, Mr. Harper. He said that Mr. Braden was married in 1918, and Dr. Lewis Jones attended both husband and wife from about that time until 1926, when he (the husband) became suspicious as to the relationship. Later the couple went away together.

Mr. Ronald Braden testified that he lived at Crouch Hill, and that his marriage was happy until 1926. Dr. Lewis Jones, who was in practice in the Hornsey neighbourhood, attended his wife's family before his own marriage. In 1919 the witness was discharged from the army and was instructed by the Ministry of Pensions to place himself under the care of a local practitioner,

and accordingly selected Dr. Jones. Letters to the witness from his wife and from Dr. Jones after they had gone away together were read. Bottles of medicine with the labels in Dr. Jones's handwriting and addressed to Mrs. Braden were exhibited; these were found in the house after Mrs. Braden had left her husband. In cross-examination Mr. Braden said that his wife was occasionally attended by Dr. Jessie Maxwell of Crouch End, but Dr. Lewis Jones was her medical attendant. Dr. Jones was actually treating her a week before she left home with him. He had asked Dr. Jones on more than one occasion to send in his account, but the reply was that he could not think of doing so—he was a friend of the family.

A letter was put in from the Ministry of Pensions stating that periodical claims had been made to the Ministry of Pensions for attendance on Mr. Braden by Dr. Jones up to 1923. A servant maid employed by the Bradens gave evidence as to the doctor's attendances at the house.

Dr. Lewis Jones, examined by his counsel, Mr. Davies, said that he was 54 years of age, and commenced general practice in Hornsey in 1910. He had never attended Mrs. Braden as her doctor, though on one or two occasions, when she was suffering pain after dental treatment, he gave her an aspirin. He had treated Mr. Braden under the pensions scheme down to 1923. Mrs. Braden, he knew, was attended by Dr. Maxwell. The medicines produced were made up for Mrs. Braden after she had come away with him, and were left inadvertently at the house when she returned to fetch her belongings.

Mrs. Braden and her sister gave corroborative evidence.

Mr. Harper commented on the fact that Dr. Maxwell had not been called, and also on the circumstance that at a time when Dr. Jones and Mrs. Braden were admittedly living together at a hotel bottles of medicine should be made up and labelled for Mrs. Braden and somehow find their way to Mr. Braden's house.

After deliberation *in camera* the Council found that the facts alleged against Dr. Lewis Jones in the notice of inquiry had not been proved, and the case was accordingly dismissed.

#### Convictions for Misdemeanours.

The Council considered the case of Robert Louis Portway, registered as of Long Acre, London, M.R.C.S., L.R.C.P., D.P.H., who was summoned on the charge that he had been convicted in 1924 of being drunk and disorderly, and in 1927 of being drunk whilst in charge of a motor car. The Council's Solicitor, in stating the facts, said that after his conviction in 1924 Dr. Portway was warned by the Council. It was stated that as a result of the second conviction Dr. Portway had resigned an appointment worth £750 a year.

Dr. Portway made a statement to the Council, saying that he knew it was useless to go behind the conviction, but he wished to point out that he was brought before a county bench which was notoriously hard on motorists; had the case gone before a jury he had every reason to believe he would have been acquitted. He was not driving the car at the time; he had pulled it up on some common land and gone to sleep, when he was roughly awakened by a policeman, and after protest on his part was led off to the police station, where he lost his temper and his discretion. Had he been left alone he would have been all right. He had been already punished out of all proportion, for he had resigned a position in the Civil Service as a consequence of the conviction, and, having applied for and obtained an appointment in the Colonial Medical Service, he was turned down for this, also from the same cause.

The Council found the facts of the conviction proved, but postponed judgement until the November session on the usual conditions as to the production of testimonials as to conduct in the interval.

#### THE DENTAL BOARD.

A SESSION of the Dental Board, under the chairmanship of the Right Hon. Sir FRANCIS DYKE ACLAND, took place from May 8th to 11th. Mr. Michael Heseltine, C.B., was appointed by the Minister of Health a member of the Board in place of Mr. L. G. Brock, resigned to take up his duties as chairman of the Board of Control.

In his address from the chair Sir Francis Acland referred to a motion before the Board for reducing the retention fee to £3. Every pound of retention fee means about £9,500 in income. The present income, with a retention fee of £4, was rather over £2,000 in excess of expenditure, and there did not seem to be much margin for reducing the fee during even the earlier years of practice. He discussed certain alternatives, and expressed the hope that the Board would be able to find some way of lightening the burden during the early years. With regard to clinics he refrained from any statement, as he understood that certain aspects of this question might soon be *sub judice*, except to say that all the members of the Discipline Committee were fully alive to the possibilities of the commercialization of dentistry which might be involved and to the danger to the public interest. Any action must be directed, not by the wishes of the profession or of the Board, but solely by the duty of the Board to see that the law and the code of conduct proper to dentists were maintained. It must not be thought that the possibility, or indeed the desirability, of action in certain circumstances had been ruled out.

After discussion it was agreed to amend the regulations to

provide that the annual retention fee be kept at £4, that the annual registration fee for 1929 and future years be fixed at £2, and that the annual retention fee for the two years immediately following original registration be £2.

The Board agreed that the grants in aid of dental teaching should be increased from £21,000 to £24,000. The number of students who had been assisted by grants and loans up to the present was 464, of whom 242 had qualified. A report was made on the dental health propaganda undertaken by the Board; this has taken the form of films, posters, transparencies in public vehicles, etc. The Research Committee brought forward a number of reports on investigations; these were "progress" reports from the committee of the Medical Research Council for the investigation of dental disease and the Dental Investigation Committee of the Department of Scientific and Industrial Research. A sixth series of post-registration lectures was arranged for next winter in London, Manchester, Sheffield, and possibly Glasgow. In reply to a request from the British Dental Association the Board reaffirmed a previous resolution that the insertion of appointments in local directories, even though no payment was made, was undesirable.

#### Disciplinary Business.

The Board had before it no fewer than 14 disciplinary inquiries. In only one case was it found that the facts set out in the complaint had not been proved, but in nine other cases the Board, while deciding that the facts had been proved, did not proceed to a "finding," but gave a warning to the practitioner or required him to appear with testimonials at a later session. Another case was that of Frank Ernest Cor, registered as of Defoe Road, Tooting, who had previously appeared on a charge that he had certified the completion of certain work to a society, and had been paid therefor, whereas no dentures were in fact supplied. When this case came before the General Medical Council (*Supplement*, December 10th, 1927, p. 227) the Council remitted it to the Board for further inquiry. The Board now, on further consideration, decided that Mr. Cor's name ought not to be erased from the *Register*, but added that Mr. Cor, who did not appear before the Board at the original inquiry, might have saved himself a good deal of inconvenience, and the Board some trouble, if he had appeared before it when he was called upon to do so in the first instance.

In three cases the Board found that the name ought to be erased from the *Register*, and made a recommendation to that effect to the General Medical Council. The first was the case of Laurent Eugene Deprimoz, registered as of Whitehorse Road, Croydon, "Dentist, 1921," who was summoned on the charge that he had abused his position by committing adultery with a married woman with whom he stood in professional relationship, of which adultery he had been found guilty by the decree of the Divorce Division in a case in which he was the co-respondent. There was a sharp conflict of evidence in the case, Mr. Deprimoz denying that there had been any professional relationship, except that on one occasion he had made a denture for the woman in question as a gift. The Board, however, found as stated, and when the case came before the General Medical Council on May 22nd, after hearing further Mr. Deprimoz's counsel and the Board's solicitor, the Council decided that Mr. Deprimoz had been guilty of conduct which was infamous or disgraceful in a professional respect, and directed the Registrar to erase his name from the *Dentists Register*.

The second case was that of Alfred Catlow, registered as of Westgate, Burnley, "Dentist, 1921," who was summoned on the charge that he had been convicted of certain misdemeanours—namely, that unlawfully and by a certain false pretence and with intent to defraud he had obtained from the Amalgamated Weavers' Association two sums of £1 each in respect to the alleged making of dentures. Mr. Catlow's defence was that the faults were those of his agent. The Board found that the name ought to be erased, and on the case coming before the General Medical Council on May 22nd the Council, after hearing the Board's solicitor, and considering a letter from Mr. Catlow, who was not present, decided that, Alfred Catlow having been found to have been convicted of the misdemeanours or offences alleged against him, his name must be erased from the *Dentists Register*.

The third case was that of Henry Patrick Jones, registered as of Woodlesford, Yorkshire, "Dentist, 1921," who was summoned on the charge of having canvassed for the purpose of procuring patients. The complainants were the Public Dental Service Association. It appeared that the respondent had been warned by the Registrar with regard to certain methods he had adopted in his practice, and gave an undertaking to discontinue them, but broke the undertaking for reasons which seemed to him to be sufficient—namely, that a certain approved society had convinced him that he was not canvassing. The Board came to the conclusion that Mr. Jones was not only canvassing, but was doing so in breach of his undertaking and in defiance of the Board, and found that his name ought to be erased from the *Register*.

On the case coming before the General Medical Council on May 22nd a long hearing was given to it, and counsel for the complainants and solicitor for the respondent addressed the Council. The Council, in order to give the practitioner some time to realize his position, adjourned pronouncing judgement until May of next year, when he would be required to produce evidence from his professional brethren and others of standing in his neighbourhood as to his professional conduct generally and in particular with regard to his conduct in relation to the practice of canvassing and of making unprofessional attempts to procure patients.

## Correspondence.

### Examination of Vagrants for Small-Pox.

Sm.—The Current Note on page 221 of the *Supplement* of May 26th about examination of vagrants for small-pox comes rather late in the day. One quarter is past and paid for. I made arrangements with my board on fair lines, and they agreed.

The arrangement that I have made is that they pay the usual fee for a visit in the immediate neighbourhood (under one mile)—that is, 5s.—and I see any casual or casuals; they vary from one to eight. This seems reasonable to me, and I am satisfied with the remuneration. There are, on an average, casuals to be seen on four or five days a week. The work does not take long. It certainly ties one up to a slight extent, since I try to visit the casual ward as early as possible.—I am, etc.,

Woolley R.S.O., Herefordshire, May 27th.

JOHN S. CLARKE.

## Naval and Military Appointments.

### ROYAL NAVAL MEDICAL SERVICE.

Surgeon Lieutenants R. R. Baker to the *Vindictive*; W. D. M. Sim to the *Pembroke* for the R.N. Infirmary, Chatham, temporary; R. W. Higgins to the *Tamar* for R.N. Hospital, Hong-Kong; D. R. Campbell to the

service) W. P. E. McIntyre has transferred

as Surgeon Lieutenant (short service) and appointed to Haslar Hospital for course of instruction.

### ROYAL NAVAL VOLUNTEER RESERVE.

Surgeon Lieutenants H. E. Hall and W. J. Payno to be Surgeon Lieutenant Commanders.

### ROYAL ARMY MEDICAL CORPS.

Major C. R. Nislar, D.S.O., to be Lieutenant-Colonel, vice Lieut.-Colonel E. E. Parker, deceased.

Major E. Varvill, M.C., retires on retired pay.

Captain T. H. Twigg to be Major (prov.) and remains seconded.

Temporary Captain J. W. Fell relinquishes his commission and resumes the rank of Captain.

Temporary Lieutenant J. D. Cooper relinquishes his commission.

### ROYAL AIR FORCE MEDICAL SERVICE.

Flight Lieutenants P. D. Barling to Headquarters, Middle East; A. F. Cook to No. 2 Armoured Car Company, Middle East.

The following Flying Officers are promoted to the rank of Flight Lieutenant: P. H. Perkins and S. F. Heatley.

### RESERVE OF AIR FORCE OFFICERS: MEDICAL BRANCH.

Flight Lieutenant F. K. Wilson is transferred from Class Dii to Class Di.

### REGULAR ARMY.

Lieut.-Colonel and Brevet Colonel (Temporary Colonel) J. C. Kennedy, C.B.E., K.M.P., from R.A.M.C., to be Colonel.

## VACANCIES.

ASHTON-UNDER-LYNE UNION.—Medical Superintendent of Lake Hospital and Medical Officer of Darlton House, also Second Medical Officer. Salary £300 and £150 per annum respectively.

BIRMINGHAM HOSPITAL.—Resident Medical Officer. Salary £200 per annum. BIRMINGHAM AND MIDLAND HOMOEOPATHIC HOSPITAL AND DISPENSARY.—Resident House-Surgeon. Salary £150.

BIRMINGHAM GENERAL HOSPITAL.—Assistant Surgeon. Honorarium £50 per annum.

BRIGHTON: ROYAL ALEXANDRIA HOSPITAL FOR SICK CHILDREN.—House-Surgeon (male). Salary at the rate of £120 per annum.

BRISTOL GENERAL HOSPITAL.—Honorary Clinical Assistants.

CAMBRIDGE UNIVERSITY: PATHOLOGICAL LABORATORY.—John Lucas Walker Studentship. Annual value £300.

### British Medical Association.

#### CURRENT NOTES.

##### Reports on Deaths furnished by Doctors at the Request of Coroners.

THE Medico-Political Committee at its last meeting had before it a report from the Divisions which had taken action to persuade local authorities to authorize their coroners to pay a fee to doctors for furnishing, on request, information in regard to sudden deaths which might enable them to dispense with inquests. The report showed that most of the Divisions which had taken action had succeeded, but there are still many areas where no action has been taken. Those Divisions which have not yet made their effort should be encouraged by what has been done, and remember that they have a very good argument on which to base their request—namely, that of economy. An expenditure of 10s. 6d. is well worth while to a local authority if it results in information which obviates the cost of an inquest, not to mention the possible additional cost of a *post-mortem* examination. Doctors should wait for the coroner's request for information before supplying a report.

As soon as it can be shown that more authorities are paying these fees than are not, it will be possible for the British Medical Association to approach the Home Office with a view to persuading that Department to bring pressure to bear on the areas that are not paying, or in the alternative to make a general rule applying to the whole country.

##### Help to Individual Members.

The Association is in possession of a very large amount of information on all matters affecting medical practitioners in their professional lives. It is thus often able to help members individually in difficulties of a professional nature, and doing so constitutes a considerable part of its daily work. The Medical Department alone has some 5,000 files, dealing with all branches of medical activity. The Intelligence Department, besides assisting

in the collecting and recording of information, has a supply of press cuttings on matters concerning the profession, and this information, together with that arising in the course of correspondence, is so far as possible filed in such a way as to be readily available for the assistance of members through the medium of the Editorial and Medical Departments. Inquiries by members, whether through the honorary secretaries of Divisions or Branches, or otherwise, on any matter of doubt or difficulty affecting them in their professional capacity are welcomed; such inquiries should be addressed to the Medical Secretary. Expert opinion on income-tax questions as affecting the profession is published in the *British Medical Journal*. The Solicitors of the Association are consulted when legal matters arise which affect the general interests of the profession.

BRITISH MEDICAL ASSOCIATION HOUSE: COURT OF HONOUR.

##### Medical Appointments Abroad.

The head office of the British Medical Association has a good deal of information placed at its disposal by its Branches overseas, which may be very useful to those proposing to accept medical appointments abroad. Practi-

tioners are cordially invited to apply to the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, for any information that may be available regarding overseas appointments in which they may be interested.

#### British Medical Association Library.

The Association's Library contains more than 30,000 volumes, including books in all branches of medical literature. It is open on weekdays from 10 a.m. to 6.30 p.m. (Saturdays from 10 a.m. to 2 p.m.). The librarian and his assistant are always ready to help members to find books or references. Besides the facilities afforded to members for consulting monographs, periodicals, and works of reference in the library, books in all branches of medical literature and many in general science can be obtained on loan by members resident in the British Isles, free of charge (other than postage), from the lending department. The books issued include latest editions, new books and new editions being made available as soon as possible after publication. Books can ordinarily be kept for twenty-eight days. Inquiries about the library and lending department should be addressed to the Librarian, British Medical Association House, Tavistock Square, London, W.C.1.

#### Middlemore Prize, 1929.

The Middlemore Prize consists of a cheque for £50 and a certificate, and was founded by the late Richard Middlemore, F.R.C.S., of Birmingham, to be awarded for the best essay or work on any subject which the Council of the British Medical Association may from time to time select in any department of ophthalmic medicine or surgery. The Council is prepared to consider an award of the prize in the year 1929 to the author of the best essay on the following subject: "The clinical study of the vitreous body, its swellings, contractions, opacities, and reactions to toxic invasion; with special reference to glaucoma and detached retina." Essays submitted in competition must reach the Medical Secretary, B.M.A. House, Tavistock Square, W.C.1, by December 31st, 1928. Each essay must be signed with a motto and accompanied by a sealed envelope, marked on the outside with the motto, and containing the name and address of the author. In the event of no essay being of sufficient merit, the prize will not be awarded in 1929.

#### Access to the B.M.A. House.

The private roadway and pavements leading into the British Medical Association House from Tavistock Square are now entirely closed for traffic while excavations are in progress, and the Association can take no responsibility for accidents occurring to persons who may pass through the site of the work now proceeding. A covered wooden passage has been constructed to form an entrance to the building for foot passengers from Tavistock Square. Members and others who do not wish to use this covered way, or who wish to bring motor cars or other vehicles into the Association's premises, must proceed southwards down Tavistock Square, turning left at the bottom of the Square into Tavistock Place, turning left again into Marchmont Street, and again left round Cartwright Gardens, thus entering the courtyard of the B.M.A. House through the archway under the Great Hall.

### Association Notices.

#### PROPOSED AMALGAMATION OF GLASGOW CENTRAL, GLASGOW EASTERN, GLASGOW NORTH-WESTERN, AND GLASGOW SOUTHERN DIVISIONS, TO FORM A "GLASGOW DIVISION."

NOTICE is hereby given of the following proposals made by the Glasgow and West of Scotland Branch:

(1) That the existing Glasgow Central, Glasgow Eastern, Glasgow North-Western, and Glasgow Southern Divisions of the Glasgow and West of Scotland Branch be amalgamated, and their total area extended, to form a "Glasgow Division," coterminous with the City of Glasgow, the areas of the Dumbartonshire, Lanarkshire, and Renfrewshire and Buteshire Divisions being modified accordingly.

Or alternatively, in the event of the foregoing proposal for formation of a "Glasgow Division" not being approved:

(2) That the boundaries of the Glasgow Central, Glasgow Eastern, Glasgow North-Western, and Glasgow Southern Divisions be adjusted so as to make the total area of these Divisions correspond with that of the City of Glasgow, the areas of the Dumbartonshire, Lanarkshire, and Renfrewshire and Buteshire Divisions being modified accordingly.

Written notice of the above proposals has been given to the existing Divisions above mentioned, and the matter will be determined in due course by the Council of the Association. Any body, or member, affected by the proposed changes or either of them, and objecting thereto, is requested to write, giving reasons, to the Medical Secretary, British Medical Association House, Tavistock Square, London, W.C.1, not later than July 9th, 1928.

ALFRED COX, *Medical Secretary.*

#### TABLE OF DATES.

June 21, Thurs.	Meetings of Constituencies must be held between this date and July 20th to instruct Representatives.
June 30, Sat.	Supplementary Report of Council appears in <i>BRITISH MEDICAL JOURNAL</i> SUPPLEMENT.
